subsidiaries. Even before this time, during 1940, any payments due were withheld as long as possible and then only paid after assurances that there was no basis for withholding them. The royalty payments, when they were made, were reported simply in amounts in dollars so that there would be no possibility of anyone knowing how much of any commodities was going to any particular field. Since the materials are used in many nondefense fields, the possibility of foreigners obtaining information as to amounts used for any particular purpose was thus avoided.

The company has been anxious to have any funds due to Germany frozen, and of their own initiative, before the President's recent order, withheld money due abroad. They employed various schemes to delay and to avoid making payments abroad whenever possible. A letter from the secretary of the Federal Reserve Bank of Philadelphia to the chairman of this committee, dated May 22, 1941, reads:

FEDERAL RESERVE BANK OF PHILADELPHIA,
May 22, 1941.

The Honorable CHARLES KRAMER,
Chairman, Committee on Patents,
House of Representatives,
Washington, D. C.

SIR: Mr. S. C. Kelton, secretary of Rohm & Haas Co. and the Resinous Products & Chemical Co., 222 West Washington Square, Philadelphia, has shown me your letter to the Rohm & Haas Co. of May 16, 1941, in regard to the Click article inserted in the CONGRESSIONAL RECORD of May 14, 1941, by Hon. A. J. SABATH, of Illinois.

You might be interested to know that about July 1 of last year Mr. Kelton took up with me the question of whether any freezing orders had been issued by the President prohibiting the transfer of royalties or other funds to Germany. The Rohm & Haas Co. and Mr. Kelton appeared to be strongly in favor of having such an order issued. At least half a dozen times since then I have discussed the matter with Mr. Kelton, who hoped that such an order would be issued.

I advised Mr. Kelton each time he saw me me that no Executive order had yet been issued which would relieve United States business houses from any obligation they might be under for making payments, such as royalty payments, to Germany. Mr. Kelton told me that his company was withholding the royalties on plastics at the end of each quarter for several months with the hope that such a freezing order would be issued.

Mr. Kelton mentioned to me that you had kindly written to him, and if I had no objection to his doing so, he would like to advise you that he had discussed the question of the freezing of these royalty payments with me. It is for this reason that I take pleasure in sending you this letter.

Very truly yours,
ARTHUR E. POST,
Secretary.

The true picture of the Rohn & Haas Co., as evidenced by the testimony before the committee, although only a small part is referred to here, indicates that the company has always acted as a patriotic American organization and that the industries established and developed by the company, and the products it has introduced and manufactured, have proven to be an asset to our country as a whole and to the national-defense program in particular.

I am satisfied the committee was gratified to have had an opportunity to examine into this matter at some length, and I feel that a magazine article of this kind presents a grossly unfair picture of a company which has been cooperating with the national-defense program. An article of this character, maliciously attacking the reputation of this company, can serve no useful purpose; to the contrary, by creating discord, it could amount to an unintentional sabotaging of the efforts of this company to cooperate with our Government.

Many who first read an article of this kind, without obtaining all the facts, may be led to endorse what on the surface is apparently accurate, but actually contains vicious and untrue inferences.

Mr. SABATH. Will the gentleman from California yield?

Mr. KRAMER. I yield to the distinguished dean of the House.

Mr. SABATH. I note what the gentleman from California has stated. Personally, I inserted the article in the CONGRESSIONAL RECORD some months ago bearing on the Rohn & Haas Co. which appeared in the Click magazine. This was only after I had received assurances that the statements carried therein were based on facts. Acting on such representations and feeling that it was high time that we should stop feeding Hitler, I felt it my duty to insert the article for general information. However, since that time Mr. S. C. Kelton, secretary of the firm, called on me and satisfied me that the charges contained in the article were not founded on facts. He further assured me that none of the moneys handled by his company was diverted abroad and I am informed that the State Department and the War Department are satisfied that the firm is complying in every way with our laws and is not guilty of the accusations contained in the article.

Referendum on War and Convoys

REMARKS
OF
HON. KNUTE HILL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

Mr. HILL of Washington. Mr. Speaker, as the leading and most momentous question before us today is whether we should participate in the war across the sea, 2 weeks ago I sent a questionnaire to 96,000 registered voters in my district, asking them two questions.

One was whether we should participate in the war across the ocean, and, secondly, whether we should send convoys. Up to the present time we have received about 15,298 cards in reply. For sending convoys there are 2,903, and against convoys 11,679, or 75.2 percent opposing the sending of convoys. On the question of participating in the war there are 1,925 favoring going into it and 12,720, or 84.9 percent, against participating in the war. Some of my very good personal friends in letters take issue with me on my stand against participation in war on foreign soil and sending convoys. But their letters are very fair, and they express respect for my having convictions and having the courage to state them frankly and openly. However, a few of the letters favoring participation and convoys are so bitterly partisan and viciously personal that they are not fit to print. It is rather strange that honest difference of opinion should cause some otherwise sensible people to lose their courtesy and sense of decency. The many letters—enclosed with ballots—opposing participation and convoys not only show a full understanding of the issue involved and the inevitable consequences of such participation but they express the sincere desires of a patriotic people. It is my firm conviction that the percentages against participation and convoys would be the same throughout our splendid State of Washington should a like poll be taken. They believe in billions for defense of the Western Hemisphere but not one cent for aggressive warfare in either Europe or Asia. In other words, the great majority of the rank and file of our people do not want our boys to go across. They remember, thank God, the aftermath of the A. E. F. of the first World War. They hate communism, fascism, and nazi-ism alike. They feel that wars brought on with periodic regularity in Europe without our consent or making should be fought out by those who instigated them or failed at crucial times to so act as to stop the dictators before it was too late. Possibly many of them believe with Al Williams, whose article, Oceans Are Wider, printed in this Appendix, is right in assuming that if we had a strong separate Air Department in the Cabinet functioning efficiently and successfully no Hitler nor group of Hitlers could invade the Western Hemisphere. I am personally gratified that so large a percentage of my constituents in the Fourth Congressional District of Washington have expressed themselves as supporting my stand. More than ever I shall use my efforts and vote to represent this majority. This will be with not the least resentment nor recrimination against those who honestly express their disagreement with my views. This is still America, and may we hope that the "four freedoms" may be guaranteed for decades to come in this land of ours.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

LETTER FROM N. R. DANIELIAN, DIRECTOR, ST. LAWRENCE SURVEY

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

DEPARTMENT OF COMMERCE,
OFFICE OF THE UNDER SECRETARY,
Washington, July 28, 1941.

Hon. JOSEPH J. MANSFIELD,
Chairman, Committee on Rivers and Harbors,
House of Representatives,
Washington, D. C.

DEAR JUDGE MANSFIELD: In the course of the hearings on the St. Lawrence project many members of the Committee on Rivers and Harbors have inquired from the St. Lawrence survey of the Department of Commerce concerning the effect of this project upon the American coal industry.

The survey has made an extensive study of this problem and I wish to present herewith the results of our study so that you may place them in the record of the proceedings before your committee.

Our study considered the effect of the St. Lawrence seaway upon the domestic market for coal in the United States, and upon the demand for American coal in the Canadian market, and the effect of the hydroelectric project upon the consumption of coal.

Generally, the survey finds that our domestic market for coal will be unaffected; that the Canadian market will remain unaffected and may even increase; and that the consumption of coal in the generation of electric energy, as well as for industrial uses, may be greatly increased on account of the low-cost hydroelectric energy that the St. Lawrence will make available.

THE DOMESTIC MARKET

That the domestic market for coal in the United States will be unaffected by the St. Lawrence seaway is patent from a comparison of the total imports into the United States with total production. In discussing this matter it must be kept in mind that there is no tariff in this country on imports of coal, and that our principal markets on the Atlantic, Gulf, and Pacific coasts are open to foreign shipping, coming from all the principal coal producing areas of the world. In spite of this, the total imports of coal into the United States in 1932 were less than 800,000 tons compared with total domestic production of nearly 360,000,000 tons. In relative terms the imports in that year were 22/10,000 of 1 percent of domestic production. In 1939 total imports were slightly over 650,000 tons as compared with domestic production of 445,000,000 tons, or about 14/10,000 of 1 percent—admittedly an infinitesimal amount.

If the point is made that these figures are not relevant since the St. Lawrence would be utilized by ships coming back from Europe in ballast, it may be pointed out that the usual balance of cargo between United States and European ports shows ordinarily an excess of export tonnage over import tonnage. A large amount of empty space on ships coming back from European ports to the United States is a normal condition. In 1939 the tonnage of exports from the North Atlantic district ports to the United Kingdom was 1,470,000 and the imports 631,000, indicating the availability of over 800,000 tons of shipping space on the way back from England—space that was not apparently utilized for the transportation of coal to the North Atlantic district. The same relationship exists between all North European ports and North Atlantic ports.

If British coal is unable to compete with American coal in the North Atlantic districts of the United States in spite of the absence of a tariff, in spite of the availability of unutilized shipping space, by what reasoning can one expect an influx of foreign coal into the Great Lakes industrial area where the shipping costs from abroad would be greater than to North Atlantic districts, and the costs of hauling American coal from the West Virginia, Ohio, and Illinois mines would be much less than it is to the northeastern industrial area? The argument that such an influx can take place is equivalent to the argument of "carrying coal to Newcastle."

THE CANADIAN MARKET

To understand the effect of the St. Lawrence seaway upon our Canadian market for coal it is necessary to state certain basic facts. Canada obtains its coal principally from the United States and Nova Scotia. Great Britain supplies but a small portion of the Canadian needs.

The following tabulation presents the 5-year annual averages, 1932 to 1937, inclusive, of imports to the Province of Ontario and the Province of Quebec from United States, Nova Scotia, and Great Britain:

	United States	Nova Scotia	Great Britain
	Net tons	*Net tons*	*Net tons*
Anthracite to Ontario	1,334,824	----------	501,877
Bituminous to Ontario	8,771,275	803,949	----------
Total to Ontario	10,106,099	803,949	501,877
Anthracite to Quebec	334,564	----------	824,936
Bituminous to Quebec	753,399	1,847,020	192,944
Total to Quebec	1,087,963	1,847,020	1,017,880
Grand total	11,194,062	2,650,969	1,519,757

This tabulation shows that the total average annual export of coal to Canada during 1932 to 1937 was 11,194,062 tons, whereas in the same period Great Britain exported to Canada an annual average of 1,519,757 tons, and Nova Scotia 2,650,969.

A break-down of American exports by destination indicates that an average of 1,087,963 tons went to the Province of Quebec in competition with the British anthracite and British and Nova Scotian bituminous, in spite of the fact that the Canadian tariff on imports of coal from the United States is 75 cents per ton, whereas on British coal it is 30 cents per ton, and in spite of the fact that presumably some of the British coal came as ballast on returning grain carriers, whereas a good portion of American coal sent to Quebec Province is transported by rail at very high freight rates.

Since the Province of Quebec is east of the proposed seaway and already accessible to ocean shipping, the coal market there could not be adversely affected by the seaway. On the contrary, if the large economical lake carriers can go from Lake Erie points through to Montreal and Quebec, it is not unlikely that the American market in the eastern Province of Quebec may expand as a result of the seaway, barring, of course, any artificial impediments by the Canadian Government. This is particularly true since the United States already sells almost four times as much bituminous coal in the Province of Quebec than Great Britain, even though British coal has all the advantages in Quebec Province which the opposition to the seaway anticipates for Ontario. Average American exports from 1932 to 1937, inclusive, to the Province of Quebec amounted to 753,399 tons as against 192,944 of British coal. If British bituminous coal cannot compete with American bituminous in the Province of Quebec, why should we expect British coal to have a greater advantage in the Province of Ontario west of the seaway where British coal would be more expensive and American coal a dollar cheaper?

The argument that ships coming back in ballast from England will bring coal cheaply into the Great Lakes fails completely in view of the fact that there is and always has been available empty shipping space between British ports and eastern Canadian ports. Montreal is the largest grain-exporting center in the world, and the balance of cargo for the port of Montreal and European ports is always in favor of east-bound traffic, which means that there is always available shipping space from European ports to eastern Canada. In spite of this, however, British bituminous is unable to compete with American coal on an equal basis in the Province of Quebec.

There is no reason to expect that empty shipping space and ballast rates from Europe to Great Lakes ports after the seaway is built and available for the transportation of coal will be any greater or any cheaper than the shipping space under such conditions ordinarily available from the same European ports and to North Atlantic and Canadian ports. The amount of space required for the eastward-bound grain trade, part of which comes back in ballast, will not be much different when the seaway is available than without it. The only difference will be that some of these ships will come back into the Great Lakes, whereas now they stop at Montreal or New York. If these ships are not economically able to bring coal into New York or Montreal to compete with American coal, it is difficult to see why these same ships can carry coal more cheaply farther inland, nearer to the source of American coal. This expectation is particularly difficult to understand in view of the price advantages of American coal in the Ontario market even in relation to Nova Scotian coal. American bituminous has ranged between 50 cents and $1 below the price of Nova Scotian coal at Toronto, which receives about half of the American exports of coal to Canada. Next to Toronto the largest market for American bituminous is in Windsor and northern Ontario, where, of course, British or Nova Scotian coal would be at much greater disadvantage.

The conclusion is then that American coal may obtain a further advantage in the eastern Province of Quebec and will be at no greater handicap in the Province of Ontario. The reasons as stated are that space at ballast rates is not now utilized for the importation of British coal to North Atlantic and Canadian ports and hence there is no reason to expect that it will be utilized to a greater extent in the Great Lakes area where American coal costs about $1 less than at Montreal.

Nova Scotia mines are now operating at capacity of about 8,000,000 tons a year, and it is unlikely that this can be more than doubled within a short space of time under economical conditions of operation. Furthermore, Nova Scotia would have no greater advantages by the seaway in the movement westward than American producers would have in the movement eastward, for both now use small canal carriers in this trade and both would be able to use larger, more economical bulk carriers in both directions. On the basis of the past trade records and in view of limitations of capacity of Nova Scotia mines, one is justified in concluding that there is no foreseeable danger to the American market of coal in the Province of Ontario.

DISPLACEMENT OF COAL BY WATER POWER

Technically it is true that a given amount of hydroelectricity has an equivalent value in terms of coal. The St. Lawrence project would make available a total of 13,200,000,000 kilowatt-hours of electricity to be divided equally between Canada and the United States. The Canadian half cannot be considered a substitute for coal for the reason that the Province of Ontario would probably develop other water-power sites if the St. Lawrence River is not developed. The American share—6,600,000,000 kilowatt-hours would be the equivalent, on the conservative basis of 1 pound of coal per 1 kilowatt-hour, of 3,300,000 tons of coal.

It is erroneous, however, to consider this a loss of an existing market for coal. In the experience of the last 8 years it has been proved that low-cost water power creates its own market for energy which would not exist otherwise. Furthermore, low-cost electricity expands the market for coal because

of the response of domestic consumers to low rates, where a 50-percent reduction in rates often causes a 100-percent expansion in consumption of electricity. At the same time low-cost electricity encourages industrial expansion which in turn utilizes more coal. For these reasons in the Tennessee Valley area in 1934 only 540,000 tons of coal were consumed in the generation of electricity, whereas in 1940 this consumption had increased to 1,891,000 tons, an increase of almost 250 percent, in spite of the fact that during that period the States in this area increased hydroelectric capacity to a very considerable extent. Hence the St. Lawrence hydroelectric project should be looked upon not as displacing coal consumption but as a method of encouraging the utilization of electricity and expansion of industry which will inevitably require the installation of additional steam-generating stations in order to meet the expanded demand.

For the reasons given above the St. Lawrence Survey of the Department of Commerce has come to the conclusion that the claims of the coal operators and the mine workers concerning the disastrous effect of the St. Lawrence project upon the coal industries are unfounded in fact, unsupported by past experience, and completely erroneous.

Very truly yours,

N. R. DANIELIAN,
Director, St. Lawrence Survey.

Brotherhood of Electrical Workers Support St. Lawrence Project

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

Mr. VOORHIS of California. Mr. Speaker, the Rivers and Harbors Committee of which I am a member has been holding exhaustive hearings on the St. Lawrence project. In this connection I am glad to include with my remarks the following article from the Journal of the Brotherhood of Electrical Workers and Operators:

[From the Journal of Electrical Workers and Operators of July 1941]

HUGE POWER OUTPUT INVOLVED IN ST. LAWRENCE—SEAWAYS CONTROVERSY DEPENDS ON TRANSPORTATION AND HYDROELECTRIC DEBATE

Once again the St. Lawrence project has come into the limelight of public attention—this time, perhaps, to stay until the plan becomes a reality.

The St. Lawrence development contemplates a combination seaway and hydroelectric power project. The seaway plan would provide for a unified water route from the Great Lakes to the Atlantic Ocean, a distance of 2,687 miles. By far the greater portion of this extensive marine highway, however, is already in existence. It consists of the natural waterways of the lakes and rivers, plus the locks and canals which are the product of man's industry. Only 258 miles, less than 10 percent of the total, remain to be completed. The uncompleted sections would require the construction of additional locks to accommodate vessels to the varying water levels which aggregate approximately 580 feet between Lake Superior and St. Lawrence tidewater, and the dredging of channels in certain places to a minimum depth of 27 feet.

CONSTRUCTION REQUIREMENTS

Original or additional locks would be required at the following points: in the St. Mary's River, connecting Lakes Superior and Huron; in the International Rapids section of the St. Lawrence River, bordering New York; and at the Soulanges and Lachines Canals, both of which are in Canada. Additional dredging would be required in the St. Mary's River, in Lake St. Clair and its two connecting rivers, and at the Welland Canal between Lakes Erie and Ontario.

PRODUCTION UPS LIVING STANDARDS

The desirability of a navigable waterway from the Great Lakes to the sea by way of the St. Lawrence has long been recognized by many people in both the United States and Canada, the first proposal therefor having originated more than a century ago. An appreciation of power aspects of the St. Lawrence project, however, naturally depended upon the development of applied electricity and accordingly was of more recent origin. But in later years, especially since the beginning of the century, the power side of the project has received an ever-growing emphasis.

The International Brotherhood of Electrical Workers has long advocated the development of hydroelectric resources. This policy is based upon the proposition that the first step on the way to an increase in living standards is an increase in productive capacity. In the field of economic production, electric energy is the most versatile and boundless force subject to man's control.

Consistent with its general policy, therefore, the I. B. E. W. has supported the St. Lawrence hydroelectric project. As long ago as 1924, I. B. E. W. International President James P. Noonan served on the St. Lawrence Commission of the United States under the chairmanship of the then Secretary of Commerce, Herbert Hoover. The Commission submitted an exhaustive report, based upon a 2-year study and a consideration of the many earlier engineering and social reports, in which it recommended both the construction of the St. Lawrence-Great Lakes seaway and the St. Lawrence power project in cooperation with the Dominion of Canada. This report, as all those preceding and following likewise did, recognized the special benefits which New York would derive from the program and, accordingly, recommended a formula wherein the State of New York would bear a proportionate share of the cost. This point is emphasized because some opponents of the program foster the impression that the cost of the power development would be distributed on all taxpayers without regard to benefits, an impression contrary to realities.

ACTION DEFERRED

Every administration since Wilson's has favored development of the St. Lawrence, and both major parties have adopted recommendations to that end. President Hoover negotiated a treaty with Canada which provided for its joint development by both countries, which was submitted to the United States Senate in November 1932. Thereafter there were extensive hearings and debates. The United States Department of Commerce, the Federal Power Commission, the Power Authority of the State of New York, 13 State governments, and numerous commercial and industrial interests and private associations went on record in favor of proceeding with the seaway and power projects.

The development was opposed by representatives of internal waterways, railroads, and Atlantic and Gulf coast ports on the grounds that they would be injured by such a seaway and that its benefits would not justify its cost. Finally, in March 1934, the treaty was submitted to a vote. In the meantime the depression was taking its toll and the cost factors had assumed relatively greater importance. Though a majority of the Senate voted in favor of ratification, the measure failed for lack of the required two-thirds vote. A new emergency now brings the entire subject once again to the foreground.

The hydroelectric project calls for the construction of a power plant at the International Rapids section of the St. Lawrence River. The water flow at the rapids averages about 220,000 cubic feet per second, capable of producing about 1,650,000 kilowatts, of which the United States' share would be approximately 820,000 kilowatts. It is estimated that from this capacity an annual average upwards of 5,700,000,000 kilowatt-hours could be produced for the United States and an equal amount for Canada.

By themselves these figures fail to reflect the profound social and economic significance of the power project. Substantial though it is, the relationship of the St. Lawrence potential capacity of 820,000 kilowatts and potential annual production of 5,700,000,000 kilowatt-hours, to total United States capacity of approximately 41,000,000 kilowatts and total United States production of about 147,000,000,000 kilowatt-hours, may easily lead to an underestimation of the importance to the American economy of the St. Lawrence power development. More revealing in appraising the value of the project is the fact that the defense program is actually confronted with a power shortage. That shortage is bound to grow increasingly acute within a very short time for the reason that real defense production, as distinguished from planning and tooling, is only now beginning to get under way. Electric power is the most universally essential element in modern industrial production. Yet estimates of electric-power requirements for the near future disclose a capacity shortage of from fifteen to twenty million kilowatts—subject to indefinite revision upward.

This actual and prospective power shortage may be the gravest impediment to our defense effort, even as it constituted a serious difficulty during the last war and is causing increasing difficulties in Canada's present struggles. Power is more important today than ever before because of the great metallurgical and chemical industries engaged in the production of aluminum, magnesium, and metal alloys. The Office of Production Management has estimated that aluminum production alone will absorb 1,000,000 kilowatts in additional capacity. The United States is now importing 234,000 kilowatts of capacity from Canada in the Buffalo-Niagara area, in spite of which there is a shortage of power for existing requirements in that vicinity. But the increasing burden which the war has imposed upon Canada, especially since the loss to Great Britain of the electro processing which had formerly been done in Norway, has made the power problem additionally critical there. Canadian industry has not been able to participate fully in aiding Great Britain because her industrial expansion is conditioned upon a power expansion. Since it is probable that Canada will shortly be obliged to cease the exportation of electrical energy to the United States, which she has the right to do under existing agreements, the situation in the Buffalo-Niagara area will be even further aggravated.

The New York area is not the only one faced with power shortages. Many sections of the country are having a similar experience. The defense program has expanded so rapidly that estimates of future loads become obsolete within a period of 2 or 3 months. The problem confronting those responsible for United States defense is therefore crucial. And as the horizon is searched for fifteen to twenty million kilowatts of additional power sources the St. Lawrence looms as the largest single source available. Its potential capacity makes it the second largest single dam

power source in the world, exceeded only by Grand Coulee.

The St. Lawrence project has been condemned by certain groups on the grounds that the urgency of the defense needs make the development impractical. It is contended by those opponents that the St. Lawrence would require workers and materials of all kinds which could be assigned to such project only at the expense of more vital defense needs. Opponents also insist that the construction could not be completed soon enough to be of value in the present emergency. There are other grounds of opposition, too, including those which reject the program as being uneconomical because it would injure some communities to a greater extent than it would benefit others.

It is curious that the same emergency arguments were used in the period of World War I, and yet during the years of depression the project was dismissed as one which was unnecessary and which we could not afford. The premises purporting to support conclusions that the St. Lawrence development will be too late to affect defense beneficially have been disclosed as gratuitous assumptions. Last month the council of the Office of Production Management—which includes the Secretaries of War and of the Navy in its membership—went on record in favor of "both the waterway and electric-power phases of the project as part of the all-out defense effort.' President Roosevelt has shown the lack of logic of those who oppose the St Lawrence program because it will require about 4 years to complete, while they endorse a battleship-building program which requires at least as long. Moreover, by the President's allocation last October of $1,000,000 of defense funds to the Army engineers and the Federal Power Commission for preliminary borings, soil analyses, and surveys, it has been estimated that a full year has been saved in the time required for completion of construction.

It is obvious that the St. Lawrence project will not of itself meet the Nation's power demands. But as the most important remaining source of undeveloped hydroelectric power, it cannot be neglected. Furthermore, it would serve one of the most highly industrialized sections of the Nation. The Federal Power Commission and the New York State power authority have concluded that St. Lawrence power can be economically transmitted 300 miles. This would include not only upper New York but the entire State, northern Pennsylvania and New Jersey, and most of New England, an area with a population of 13,000,000. In an emergency it could serve the area bounded by Chicago, on the west, Washington, D. C., on the south, and Boston on the north.

The economy with which the St. Lawrence power can be developed is no less important than its volume. The cheapest power source in the United States today is Bonneville, where the at-site rate is $14.50 per kilowatt-year. This in turn compares with the typical charge of $26.75 per kilowatt-year from the Niagara Falls power plant, which is also one of the cheapest power sources. Yet the Federal Power Commission's engineers estimate that the cost per kilowatt-year of St. Lawrence power will be less than $12.50. Such economical production makes the dispersion of its use over a great area economical, for even with the added cost of transmission, the power will sell for less than in any other region.

Nor would this project destroy the value of existing generating facilities. The present peak load in the area primarily to be served is about 3,800,000 kilowatts. It is conservatively estimated that by 1945 the requirements will reach 5,394,000 kilowatts, a load far in excess of prospective capacity. In terms of economical cost, which concerns the entire Nation since so great a proportion of the defense industry is located in that area, the St. Lawrence assumes even greater importance. The commercial rates of electricity in New York State are the highest in the country, and except for some Niagara hydropower, it has industrial electric rates higher than most States.

In relation to defense or to normal peacetime industry, therefore, the St. Lawrence project has unique virtues. Because of its urgencies, most of the figures here presented relate to defense. But here is a significant indication of the power development's effects in normal times. Because of the present high cost of electricity in New York State, the residential use of electricity there is lower than that of the United States as a whole. The average residential consumer in New York State uses less than half of the electrical energy used by the average residential consumer in the communities served by the T. V. A.

The benefits of the St. Lawrence project promise to stimulate industry by economic production and at the same time increase the American standard of living. These benefits will not be at the expense of other industries or of other communities. Cheaper production based on sound economics benefits all markets reached by such production, and the interchange of products between all regions of the United States is such that all will benefit.

If the narrow standards of private profit are to be relied on, however, the St. Lawrence project will never be undertaken. But standards of private profit are not valid if economic production is the objective. Private profits are too frequently increased by reducing production. On the other hand, economic production will always destroy disproportionate profits. The American economy, including its emergency defense program, has already suffered severe jolts because of the "do nothing" complacency of those whose habits and training led them to confuse profits with production.

Likewise, there is no merit in the bland and appeasing counsel that the St. Lawrence project should be put off until a sunnier day. There is a power shortage now. There is an airplane shortage now. There is a transportation shortage now. There is a shortage of processed light and heavy metals from which the instruments of defense must be made. Without the needed power, without the needed airplanes, and without the needed ships, there may never be a sunnier day.

National Aeronautic Association Advocates Single Department of Defense With Air Force Being Given Deserved Importance

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

Mr. RANDOLPH. Mr. Speaker, the fight for a separate air force is continuing with increased vigor. Latest support comes from the National Aeronautic Association, which is, as Jack Purcell said in the Washington Times-Herald today, a "long step forward in the congressional drive to create an independent air force."

INVINCIBLE AIR FORCE NEEDED

Action of this body was taken by the board of directors. It is believed by this largest and oldest aviation group in America that such a department, with three divisions of land, sea, and air, will best insure the development of "an invincible air force," in the opinion of the board, whose membership is drawn from all branches of aviation. The resolution follows:

The present war has revolutionized methods of warfare and shown the vital necessity for the closest cooperation and unity of command between all fighting forces, with emphasis upon air power.

The War Department has recently reorganized the Air Corps, creating a semiautonomous air force within the Department. While this reorganization is a step forward, N. A. A. believes it does not offer a solution to the national-defense problem. It does not guarantee the fullest cooperation, coordination, and development which we believe necessary in the land, sea, and air forces.

N. A. A. therefore recommends that the President of the United States promptly call upon the proper executive officers and Members of Congress to make a study looking to reorganization of the War and Navy Departments with a view to consolidation into one Department of National Defense, headed by a Cabinet officer, and subdivided into three divisions of land, sea, and air, each headed by an Under Secretary. Such a single Department of National Defense, we believe, will best serve the country by insuring the development of an Army and Navy of highest efficiency, together with an invincible air force, all properly coordinated.

AVIATION LEADERS DRAFT REPORT

The resolution was drafted by a subcommittee of the N. A. A. board appointed last month under the chairmanship of Frank A. Tichenor, of New York. Other members of the subcommittee are: Earle L. Johnson, Cleveland, Ohio; Franklin K. Lane, Jr., Washington, D. C.; Lt. A. H. Near, Louisville, Ky.; and Wayne Parrish, Washington, D. C.

I know these men and can say sincerely that their judgment is highly important. Their recommendations will be regarded with favor.

Mr. Speaker, I commend the National Aeronautic Association for its courage and foresight by its resolution to establish a single department of national defense. We should have a streamlined and unified department of national defense instead of the now separate War and Navy Departments. Under legislation which I sponsor these departments would become important segments of a single defense command and our air force would become a separate part of the unified whole. Our three important fighting forces—Army, Navy, and air force—should be welded into one efficient defense machine under leadership of one coordinating head who would sit at the Cabinet table and speak for all branches of our fighting forces. There may have been a time when we could afford the luxury of separate War and Navy Departments. Such a time has become history with the swift-moving conflicts of the last 20 months.

AIR POWER NEEDS ITS OWN HOME

Our air power cannot be developed under the framework of land power and

sea power. It should be given a home of its own. It must be controlled and directed by men whose entire life has been devoted to the art of preparing and waging war from the air. The soldier and the sailor is no more qualified to direct the building of America's air strength and to control its employment in war than either is qualified to guide the destinies of the other. Until we realize that vital fact, our air force can never become a highly potent factor in the defense of this country.

We must liberate our air-fighting power from under the bushel that is now hiding its true light. I know the Army and Navy have not placed sufficient emphasis on air power.

The National Aeronautic Association is to be congratulated for its forthright declaration on this increasingly important subject. I am sure other Members of Congress who sponsor separate air force bills join with me in commendation of the leadership of this organization in the fight which is being waged with vigor.

We are all interested in making certain that future development of United States air power will be placed in the hands of those who have only one responsibility—maximum development. We can make the United States air force the most efficient and powerful in the world, and to achieve this I feel every military plane in the Nation should be under one command. That is real unity—the essence of our national defense.

A HEARING IS NEEDED NOW

Mr. Speaker and my colleagues, there is a determined effort, and I hope a successful one, to see this issue adequately gone into by a committee of this House. We must join forces in seeing to it that no proper steps are overlooked in gaining this goal. Now, not later, is the time to go forward. Our Nation's fighting strength is our chief concern.

Extension of Selective Service and Training

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

RADIO ADDRESS OF HON. FRED BRADLEY OF MICHIGAN

Mr. BRADLEY of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address I made over radio station WSOO, Sault Ste. Marie, Mich., July 23, 1941:

Prior to the President's message of Monday a great many of you anxious and distressed mothers and fathers whose sons are in the Army, either through the medium of the selective service or through the National Guard, had been writing me asking whether or not your sons will get out of the service after their year of training is over. I predict the answer will be, "No." You ask whether or not they may be sent overseas. I must reply bluntly, "Yes." Then you complain that you were deceived into thinking that your sons were merely going into training and that if the Congress now keeps them in uniform it will be breaking faith with those boys and with you. That is probably true in the first part only. You were cruelly deceived by both Presidential candidates last fall and by many political spokesmen. However, the National Guard and selective service so-called training acts both stated that these boys might be kept in service after a year "if the Congress then thought that necessary." I fear powers which always had belonged to the Congress but which have lately been usurped by the President have been exercised by him to put us into such a precarious position that we cannot now back down. It is very true that most of our Army still is but very little trained and very poorly equipped, but the coach has trotted our team out on the field just as it is, the whistle is about to blow, and it is too late to pull the line of trainees off the field and trot out another team without even uniforms and which never even saw the game before. Where would our veteran Regular Army backfields run with the ball then?

Last fall we had two coaches asking you for the job. We had a Presidential political campaign in progress. Did either or both of these coaches fool you with false promises and golden words? Have you a right to feel you were being deceived by what you were told or what you read during that campaign, and particularly when Congress was debating the Selective Service Act? Let us see what made so many of you write me then, protesting my stand in opposition to warlike moves which I felt sure would eventually lead us into active participation in somebody else's war; and I recall also those many letters in which so many of you told me that you thought the "universal training" bill would be a good thing. You were being kidded by political candidates, by administration or warmonger controlled news writers, and other war-minded speakers who told you that your boys would benefit from a year of military training, from a year of hardening up, from learning how to shoot a gun to defend our country in case of need. Would they be sent overseas; would they be permitted to serve outside of the Western Hemisphere; were we going to fight again in Europe's constantly recurring wars? Oh, no; then that was out of the question because any war-minded candidate who had dared to tell you then what they have advocated since would have been shouted off the platform. Now, I do not want to be unfair so let us look at the record.

In Boston over a Nation-wide radio hook-up on October 30, 1940—just at the very end of the campaign, when the political iron was red hot—Candidate Roosevelt said this: "And while I am talking to you fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again, and again, and again. Your boys are not going to be sent into any foreign wars." Could anything be much plainer than that as a promise? Were you not being deceived? Again, in Philadelphia, just a week earlier, Mr. Candidate Roosevelt said this: "We are arming ourselves not for any purpose of conquest or intervention in foreign disputes. I repeat again that I stand on the platform of our party: 'We will not participate in foreign wars, and we will not send our Army, naval, or air forces to fight in foreign lands outside of the Americas, except in case of attack.'" Was that not deception in view of what has been happening steadily since last fall's election? Can we by any stretch of imagination include Iceland, or possibly even Greenland, as part of the Americas? Are we not coming very close to participation in foreign wars when we are now putting 70,000 of our troops side by side with the belligerent British troops as a garrison for Danish Iceland, 2,000 miles away from our shores? Were you then told that our outposts would cover over three-fourths of the earth? Were you then told that our Navy would be given orders 10 months later to force surface ships or submarines to come to the surface and be recognized or be shot at? Were you then told that hundreds of American Army pilots would be stationed in England today as "observers" when it has been known for months that hundreds of our latest fighter planes have never been removed from their shipping cases since landing in England on the pretext that it was necessary for American Army mechanics to assemble them? Were you told then that within a year the United States Army Air Corps would be ferrying American-made bombers to England in a steady service routine? In fact, was it then even so much as intimated to you that within 2 months after election America would become the arsenal for democracy, which now means that we give all aid possible to blood-thirsty, atheistic Russia? No; you were not told anything about these all too clear warlike moves, and there are unquestionably many more moves which have already actually been made and about which we shall learn sooner or later. And unquestionably many commitments have been made from which we shall in all probability be unable to back down without having to shoot our way out. There is—there can be—no question that you were deceived by Candidate Roosevelt last fall.

Now, there was another Presidential candidate last fall; another man wanted to coach our team on which your boy is now playing. What did candidate Willkie have to say during the campaign? In Boston and over the National radio hook-up October 12, 1940, Willkie said this: "To begin with, we shall not undertake to fight anybody else's war. Our boys shall stay out of European wars." Was that not plain enough? Were you not being deceived? Again among many other similar statements he said this: "I have given you my pledge many times over. I will work for peace." Has he worked so hard for peace ever since? Was he guilty of deception? Of course he was. Did he then, or at any other time by his word or tone of voice, indicate to you that from the very end of the campaign he would be advocating the sending of our sons overseas to take part in somebody else's war in order to defend America? Did he tell you then that within 10 months he would be advocating that we establish Army bases in Ireland or belligerent Great Britain itself? Did he tell you then that within 10 months he would be advocating the sending of our American Army to garrison the British Isles, not as a fighting force but as a home guard in order that British troops themselves might be released for active fighting duty elsewhere? And, in passing, may I ask you if there was ever a greater insult handed the American Army or a greater challenge to its courage? Well, after all, perhaps, Mr. Willkie may be pardoned for his deception practiced during the campaign because he may have been misled by someone or by some selfish interest.

I do know that I was a member of a Republican congressional delegation which went to Philadelphia prior to the convention and urged the adoption of a strong peace plank in our platform. I know also that I was among many Republican Congressmen who wired and wrote and urged Candidate Willkie to actively oppose peacetime conscription and the attendant fraud and deception being handed to you with it. Yes; perhaps, it would be charitable to say that Mr. Willkie may have been misled or misadvised, but I charge him with deliberately and maliciously mis-

leading you, because he later said before a Senate committee that these statements and others were but "mere campaign oratory." Personally, I feel that today, more than ever before in its history, America needs sincere honest convictions, sincere honest effort, and sincere honest patriotism far more than it needs mere campaign oratory. No; I cannot personally accept his brazen explanation, and, as far as I am personally concerned, I repudiate any allegiance to Mr. Wendell L. Willkie. He is not my Republican leader and has not been for many months.

During that campaign I too was a candidate for reelection. I told you that I would continue our aid to Britain policy as far as consistent with our own defense requirements but that I considered our own rearmament of the paramount importance. I said that I would cast no vote for anything which I considered would be a further step toward war for us. Now, we were considering the conscription bill toward the end of the primary campaign in which I could take no active part because of our duties in Washington. As I have said, when I expressed my opposition to it—because I felt that voluntary enlistment had not been given a fair chance, and the facts proved that we were not then able to uniform, equip, and train the volunteers as fast as they were coming to our defense—I learned from letters that many of you were being deceived as to the true intent of the conscription bill, and hence I tried to warn you of the consequences in my weekly news letter of September 5, 1940, which as usual I sent to every newspaper in our congressional district for publication. I hold in my hand the copy of my home-town paper, the Presque Isle County Advance, from which I quote that news letter as follows:

"In the first place, many of my correspondents seem to have the idea that such boys as are inducted into the service will be there simply for training purposes, and therefore they assume that they will go to training camps for some intensive training in new methods of warfare in a manner similar to that carried out during the World War. Nothing could be further from the truth, under present plans. (And then I told you why, as follows:) The facts are, as stated by General Marshall, there are insufficient noncommissioned and commissioned officers in the Regular Army, the National Guard, and the Reserves who are sufficiently trained themselves in modern warfare to undertake the training of these 400,000 trainees in separate camps and as separate units without emasculating the present established units of the Regular services. Therefore, these boys—as drafted—will be assigned directly to standing units in the Regular Army and National Guard for service anywhere within the Western Hemisphere. They may conceivably, therefore, serve not only in the United States and its island possessions but also in Alaska, Canal Zone in Panama, and even in Central and South America or in Canada as the future needs may determine. In other words, for a period of 1 year, and longer if Congress later determines they are necessary, they will actually be full-fledged members of the Regular Army of the United States under arms for the defense of this Nation."

Thus I warned you over 10 months ago that your boys were going into the Regular Army and that they might not get home at the end of the year. Of course, they went into training—but just to the same extent that every other rookie from time immemorial has had to go into training. But your boys were then inducted into the Army, they will be again tomorrow, and the day after, as often as the Commander in Chief and his advisors call for them; but the point is they are not going into anything but the Regular Army. As usual when an unpopular decision has to be made, when a bitter pill has to be swallowed, the President passes the buck back to the Congress and theoretically the Congress will decide whether or not it is "necessary" to keep these boys in the Service and in all probability whether or not they may serve outside the Western Hemisphere—even though the President now blandly has ruled that to be but an imaginary line.

Well, my friends, as one Member of Congress, I do not see what choice the Congress can make. The boys are already serving on outpost duty over three-fourths of the globe. We are already established in what Germany has long since declared as a combat zone, in Iceland. As a matter of fact, our troops are already in Trinidad, British Guiana, and may soon be in Brazil. Our Navy is patrolling each of the seven seas with orders to stop all suspicious craft for identification or to be shot at. Many of our Army pilots are in England and wherever England fights, as observers, but with American planes crated up nearby awaiting assembly by American mechanics. Our naval aviation is at full war strength and is right behind Britain in getting priority of new American planes as they come off the production line—and that naval air force is at sea with orders to protect, along with the Atlantic Fleet, all shipments of all war materials as far as Iceland—and that includes Britain's war matériel. And so my friends, don't you see—we have our team on the field. It is on the field admittedly half trained in some instances—half equipped, in more instances. But that team is on the field awaiting the whistle. The coach put them out there. How can you expect the Congress, which now is only the cheer leader to pull the partially trained line off the field and leave those experienced backfield men with nothing but an entirely untrained line ahead of them—yes, without even a uniform for them? No, my friends, I think your boys are in the Army line for the duration. I don't like to tell you that but I would be false to you if I did not speak out frankly in answer to your letters.

Discrimination Against Private Utility Industry

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

ARTICLE BY DAVID LAWRENCE

Mr. ROBERTSON of North Dakota. Mr. Speaker, while the Congress is being bewildered by legislation that comes to the floor of the House, in all probability the handiwork of experts at the White House, our American plan of life is being endangered by agencies of the New Deal as they wildly cruise their course, bent on the destruction of private enterprise. Yes; the Congress is bewildered. We are asked to appropriate $35,000,000 for a war building, and countless other items come to us for attention shrouded with the sugar coating of defense. Much of it, unfortunately, is the fulfillment of the ambitious program of the New Deal. It is that continuous "emergency" that found its inception with the New Deal.

The distinguished columnist David Lawrence, in a recent syndicated article, points out the dangerous route that we are following. The whole program of New Deal electric-power development is based on the principles of the department headed by Mr. Ickes of gaining control of industrial power for political purposes. It is a dangerous situation that might well attract the attention of Democrats and Republicans alike.

DAILY WIRE ON NATIONAL AFFAIRS

(By David Lawrence)

WASHINGTON.—America's $12,000,000,000 private utility industry is in danger of being taken over permanently by the administration with the war emergency as the excuse for the fulfillment of a plot that has been evolving for the last 8 years.

Violating the promises solemnly given to the investors who own the utility stocks and bonds of operating companies as well as holding companies, the squeeze by the Government to force the private companies either to sell out or go out or business has begun. The tremendous power of priorities in equipment and materials is being used already in discriminating against private companies and the Government power project directors are being compelled on orders from Washington to take steps that will force the private companies out of existence.

On September 21, 1932, President Roosevelt in a campaign speech at Portland, Oreg., said:

"State-owned or Federal-owned power sites can and should properly be developed by Government itself. When so developed private capital should be given first opportunity to transmit and distribute the power on the basis of the best service at the lowest rates to give a reasonable profit only."

On July 6, 1941, the Seattle Times in a news article on its front page said:

"Secretary of the Interior Ickes believes there is no place for the Puget Sound Power & Light Co. and similar power companies in the State as private utilities, says Abe Fortas, newly appointed public power division director. Private power is a 'handicap' to the Ickes program."

Already the officials of the Bonneville project are refusing to make a contract with the Portland General Electric Co. for the continuance of power supply unless the latter agrees to sell out the company to the Government. Having discouraged the private power companies from their normal expansion, the administration refuses now to assure these companies that the power they are now getting from Bonneville will be sold to them as in the past, and hence arrangements are on a month-to-month basis — a death-sentence leverage.

Meanwhile there is a big demand for power for defense. It might be assumed that the present shortage justifies the building of the T. V. A. and the Bonneville projects. But the fact is that the reliance of the country on hydroelectric plants is dangerous and already drought seasons in the Southeast have demonstrated how much more secure the Nation would have been had the private utilities been permitted to balance expansion between steam plants and hydroelectric developments as in the past.

What really has happened will some day be recognized as a major political scandal. In their anxiety to get power loads for the big hydroelectric projects, the New Dealers used their influence at Washington to compel the locating of big defense plants and industries near the big dams of public power, thus taking away from the normal industrial growth of the area the power it might have had and ignoring the big power reserves in and around New York and Chicago and other midwestern and eastern points. Senators and Representatives from these States have been asleep even as Congressmen from far Western States have jeopardized the expansion of the normal industrial operations in their own areas.

Then, too, through rural electrification money furnished by Congress, transmission lines are being duplicated in several places, notably Texas, so that the markets of private power companies are being raided. Coincidentally the Federal Power Commission is sending its agents around the country to reduce the valuations of existing operating companies and thus cut down potential income that can be earned under State regulation of rates. This, together with the growth in taxes, is suffocating the operating company financial structures and making it difficult for them to raise new money.

A feud is on, moreover, between the Federal Power Commission and Secretary Ickes for control of the big public power systems. Mr. Ickes already has his clutches on oil and is now after the job of dictator in the electrical power industry. This together with control of coal and mining would make Mr. Ickes the most powerful man in Washington next to the President and build up a political machine for his use in 1944.

As for the investors they stand to lose far greater sums through these new Government holding-company maneuvers than they ever did in the days of the manipulators of high finance back in 1929. It is estimated that if the war goes 3 years, the private utility industry will disappear within that time. Under public opinion calls a halt it may be doomed anyway by the Government competition which now demoralizes operating companies and by the strangulation process now being applied to holding companies by the S. E. C. Thus is America introduced slowly to state capitalism and national socialism.—Copyright 1941.

"Hot Wheat"

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

EDITORIAL FROM THE ONTARIO (OREG.) ARGUS

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Ontario (Oreg.) Argus:

[From the Ontario (Oreg.) Argus of July 17, 1941]

"HOT WHEAT"

Newspaper reports tell of ranchers who now face the penalties of noncompliance with wheat quotas. Along with these stories are others revealing the extent of the bumper crop that is in the process of harvesting. It appears now there will not be sufficient space in the terminal elevators for the golden grain threshed from the fields of the United States and Canada.

At first blush one is inclined to sympathize with the man who sowed the wheat he now cannot sell save by paying the penalty of 49 cents per bushel. But second thought erases the sentiment of sympathy.

This second thought arises from the natural answer to the question: Why did the farmers plant this excess wheat in the face of the knowledge that the application of the law was a risk he had to take along with that of adverse weather?

Did he not plant it in the hope that wheat prices would follow the pattern cut in the years 1914 to 1918, when wheat went to more than $2 per bushel, with the result that he would make a "killing"? The chances are he did.

If that was the thought behind the excessive planting there is no occasion for sympathy. It is too bad for that particular farmer or group of farmers, but they were not farming when they made that decision. They were gambling, taking a chance that adverse weather elsewhere might so reduce the crop that the quotas would not be applied. They lost! That is all there is to it.

"Blessed Are the Peacemakers"

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

Mr. LUDLOW. Mr. Speaker, about 1,900 years ago the Son of God, who was then on earth, walking among men, went up into a mountain.

And when He was set His disciples came unto Him and He opened His mouth and taught them, saying, among other things:

Blessed are the peacemakers, for they shall be called the children of God.

The Son of God was also the Prince of Peace. This title, which has been applied to Him throughout the ages, is an eloquent tribute to His godliness of character. St. Luke, who was a competent reporter, tells us that while the baby's mother was wrapping Him in swaddling clothes and laying Him tenderly in the manger, a multitude of the heavenly host appeared and sang to the shepherds watching the flocks in the field near Bethlehem—

Glory to God in the highest and on earth peace, good will to men.

See St. Luke ii:14.

Thus from His bed of hay, where He first rested in His infancy, the Son of God was introduced to the world with heavenly sanction and joyous angelic acclaim as the emissary of peace and good will. He came not to destroy, but to bring to men the peace that soothes and heals. Such a leader! Shall we forsake Him now, when the world is crying for His leadership?

MAN'S INHERITANCE

In searching our souls to decide where our duty lies in this supreme crisis of the world, when vast numbers of people are in the grip of war madness, and paganism is sweeping entire continents, let us first take a look at man's inheritance from the loving Father of us all. That inheritance is a cosmic commonwealth of infinite beauty. Vast, fertile plains to yield the things that sustain life, great rivers that flow in majesty to the seas, cascades that dance and sparkle in the sunlight, mountain slopes that rise in towering grandeur to the very feet of the Creator. Vineyards and orange groves, and the sunshine and the shadows chasing each other over waving fields of wheat and corn. In the depths of the earth God deposited untold billions of tons of coal to warm the human family, in the waterfalls he placed power without limit to drive the wheels of commerce. All things that make for prosperity, welfare, and happiness of the human race are embraced in God's gift to man on the morning of creation.

MAN'S OPPORTUNITY

Now let us turn from man's inheritance to man's opportunity. The Creator of this beautiful world made plenteous provision to sustain the lives of all the millions that might ever inhabit it. There is enough land lying uncultivated and fallow to support all human beings on the earth if they would but forget their hatreds, put down their guns, and go to work. The prospect for humanity's deliverance from the unspeakable conditions that now beset the world depends on how far men are willing to go in accepting the doctrine of the fatherhood of God and the brotherhood of man. If this conception of divine origin should be accepted as the order that should rule the world, there would be no such thing as economic insufficiency in any country, for when love is planted in the place of selfishness in human hearts there will be enough of the means of life to go around.

HUMANITY'S GREAT NEED

What the world needs now to lift it out of hell and to sweep it back to safety and sanity is a revival of religion and something more than that. It needs a Niagara-like resurgence of religion. It needs what Franklin D. Roosevelt, our President, years ago declared it needed, when he said:

No greater thing could come to our land today than a revival of the spirit of religion—a revival that would sweep through the homes of the Nation and stir the hearts of men and women of all faiths to a realization of their belief in God and their dedication to His will for themselves and for their world. I doubt if there is any problem—social, political, and economic—that would not melt before the fire of such a spiritual awakening.

There are 64,501,594 church members in the United States who, humbly kneeling at God's sacred altars, have professed their loyalty to the living Christ. Now is the time to show that loyalty. Let us, here in America, bring into the morbid world picture a leader who has been sadly neglected in the saturnalia of world hatreds and strife, a leader infinitely greater than all of the dictators combined, Christ, the savior of men.

Let us rally under His leadership and consecrate ourselves to the task of trying to bring about the world order that He envisioned, based, not on mass murder and wholesale destruction, but on the Christian teachings that we who belong to the church have accepted as the highest attainable rule of life.

CHRISTIANITY IS LAME AND HALT

It seems to me, and I say it with sorrow, that Christianity in America is not rising to the occasion. It is lame and halt. It is not meeting the challenge imposed upon it by this greatest of world debacles. It is not showing a realization of its responsibilities. It is not backing its leader, the Savior of mankind, as it should.

It is the duty of the church that represents the living Christ to be doing something about ending this horrible war.

Such a movement, if given the strength and direction that is possible through capable leadership, will be supported magnificently by the American people, for, as Cardinal O'Connell so well says in a telegram to me:

There is no doubt in my mind that the American people desire a cessation of this stupid and brutal war.

INDIFFERENCE AND LASSITUDE

This is no laughing matter. This is a grand assize and sooner or later people must stand up and be counted, either for Christ or against him. The indifference and lassitude exhibited by many Christian leaders, organizations, and publications is appalling. We find that there are preachers who are ardent interventionists and who if they could have their way, would put America into a shooting war, as if peace could be promoted by adding to the already consuming hatreds of the world and as if a fire could be put out by pouring oil on it. We actually find some preachers who have embraced Senator Glass' sanguinary formula: "Let's go over and shoot hell out of 'em." These pulpit militarists are the exception and not the rule but there are far too many of them.

WHERE ARE YOUR VOICES?

There are 21,284,455 Roman Catholics in America. Cardinal O'Connell, who enjoys the faith and confidence of millions, has spoken out in clarion tones against the mass butchery that is going on, but what are the archbishops and bishops of the Catholic Church doing to stop the war which threatens to destroy civilization and set the world back a thousand years into the dark ages? There are 7,377,487 Methodists in the United States and, being one of them myself, I have a right to ask what the bishops of the Methodist Church are doing to restore peace to a sorely afflicted world. What are the Baptists doing? There are 8,603,675 of them. What are the Presbyterians, the Episcopalians, the Disciples doing? What are the religious organizations and the church publications saying and doing? Hundreds of the world's greatest clergymen are Americans.

Sometime somebody will call off this list of distinguished names and say to these eminent churchmen: "Where are your voices?"

If they reply that there is nothing they can do about it they will be asked, as Christ asked his disciples after the storm on the Sea of Galilee: "Where is your faith?"

NATIONAL PEACE CONVENTION PROPOSAL

I speak gloomily, but that is because I passionately love my country and my fellowmen. Some outstanding person or organization in our church life needs to take the lead toward swinging the religious forces of the Nation into action behind the living Christ in an effort to bring about mediation that will stop the war insanity and save civilization. This leadership might well be assumed by such organizations as the Council of the Churches of Christ in America, the Methodist Board, or the Catholic hierarchy, or all jointly. If this leadership would call a grand convention of all of the religious forces of America, to be held in some central place, to initiate steps to end the war, the world would take notice, and the day of liberation from the tyranny of war would come nearer. When 64,501,594 church members pray and act in unison to get the peace machinery in motion something is going to happen.

TEXT OF MEDIATION RESOLUTION

I ask the Christian people of America to examine a resolution I have introduced, known as House Concurrent Resolution No. 20, a resolution which proposes a practical plan by which Christian forces may proceed in an effort to bring peace to the world. This resolution is as follows:

Whereas it is the overwhelming desire of the American people that the United States shall remain at peace with the world and free from foreign entanglements, while it faithfully performs its duties as a good neighbor; and

Whereas if the world ever needed a peacemaker it needs one now; and

Whereas with war engulfing a large portion of the globe and threatening to draw other nations into its vortex, there is a real opportunity for the United States to demonstrate its sincerity as a good neighbor by assuming the role of a peacemaker; and

Whereas there is a possibility, faint though it may be, that the New World under the leadership of the United States, might be the means of freeing the Old World from the miseries of war and reestablishing peace and tranquillity on earth: Therefore be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress of the United States that the President shall be requested to invite the American republics to send delegates to a conference to be held at the earliest practicable date in the city of Washington to offer to the nations now at war the services of the Western Hemisphere as a mediator, to the end that the blessings of peace may be brought to a distraught world.

SEC. 2. This concurrent resolution shall be known as the peace resolution of 1941.

The introduction of this resolution is predicated on the belief that the best thing that could happen to the world now would be successful mediation to stop the war, to be followed by reconstruction on a basis of fundamental justice. When the present cataclysm is over there must inevitably be a large-scale readjustment that will take into consideration the needs of the entire human family. If we stay out of the war and chart the way to peace, America will have the opportunity of being of inestimable service to mankind in building a new and juster world out of the ashes of the present conflict. If we yield to intervention pressure and enter the war that opportunity will be lost forever.

THE FACE OF CHRIST STILL SHINING IN THE ANDES

High among the snow-crowned Andes Mountains the face of Christ shines in the bright sunlight. To my imaginative mind, the heroic statue of the Prince of Peace, on the borderland between Chile and Argentina, sends out on the ether waves of love and friendship its mute appeal for the mediation resolution I have introduced. That statue is deeply rooted in the sentiment of the American republics, because it was erected by the two nations to celebrate an accord that was reached after long and intense bitterness. It stands in towering majesty on a spot 13,000 feet high. It can be seen for a hundred miles and all who come near it are enthralled by its beauty and grandeur. The story of the Christ of the Andes has been told many times, but to a world stricken with war, or living in constant fear of war, it cannot be told too often. The statue bears this inscription:

These mountains must crumble to dust before the Argentines and the Chileans shall break the peace which they have sworn to maintain at the feet of Christ, the Redeemer.

Would it not be a grand thing if the moving hand of history were to write into the record of civilization this memorandum:

In the year 1941 a great Christian President of the United States, with the assistance of the 21 American republics, brought a warring world to the feet of Christ, the Redeemer.

Is it not worth trying?

America's Defense Is Up in the Air

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

RADIO ADDRESS OF HON. FRANK C. OSMERS, JR., OF NEW JERSEY

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a speech which I made on July 23 over the red network of the National Broadcasting Co. on the subject of a separate air force:

Napoleon once said, "Proper organization is the most important of all military functions." You don't have to be a Napoleon to know that no army, navy, or air force, or in fact, any defense can rise above the quality and character of its administration.

It is obvious to all that unless we have air power, real air power, unified, purposeful, and strong, we will never be able to defend America—in a war-mad world. Because of the threat to our national security, real or implied, every citizen must take it upon himself to examine and judge our defense position. Many will say that they are unqualified as individuals to discuss or judge military and naval problems. Let me say to them that the application of plain common sense to these problems by everyone will help considerably toward proper solutions.

In the United States we now have four air forces, Army, Navy, Coast Guard, and Marine. I have proposed to the Congress that with the exception of the water-borne planes of the Navy, these four be combined into one great fighting air force under the leadership of a Secretary for Air in the President's Cabinet.

If we have learned anything at all from the war in Europe, we have learned that nations without real air power are wiped off the map after attack. Secretary of War Stimson, has admitted, and I quote him:

Air power has decided the fate of nations. Germany with her air armada has vanquished

one people after another. On the ground large armies have been mobilized to resist her, but each time it was that additional air power that decided the fate of each individual nation. End of Secretary Stimson's quotation.

For real defense America must have the greatest air force in the world, commanded not by Army and Navy brass hats who regard air power as a side issue, but by real air men. The second best air force is no good in the world at all. The danger to America lies not in invasion by land or sea, but solely in attack and invasion from the air. Therefore, we must look with closest scrutiny upon our Nation's efforts to develop the air power so necessary to the safety and security of us all.

The present split command has produced confusion, chaos, and danger. Army and Navy leaders, because of their early training in land and water combat seem to make a distinction between the air that lies over water and the air over the land. The sooner we all realize that air is one vast ocean covering the entire globe, the quicker we shall understand that the defense in that vast ocean must be a single command, not one butchered into four parts.

Supposing we should be attacked. In view of traditional jealousies and rivalry between the Army and Navy it is conceivable that the Navy will fight air invaders while they are over the water and the Army will then go to work when the shore line is crossed. Or possibly, the high command intends to use the Army and Navy air forces on alternate weekdays and Sundays. As the citizens who are being bombed, we would derive as much humor from this situation as the average Frenchman derived from a study of the fall of France.

Public clamor for the creation of a separate and unified air force has finally broken through the heavy insulation of the War Department. To silence that cry and at the same time to maintain the sacred status quo, Secretary Stimson has ordered a reshuffling of the air force. It was a sly move to trick the public into a false confidence that it was being given a separate and unified air force. Autonomy is not unification. Actually what Secretary Stimson's gesture meant in combining the General Headquarters air force and the office of the Chief of the Army Air Corps was that the air force went back to the same status it held in November 1940.

In the past 21 years there have been 19 distinct investigations into the organization of the Army Air Corps. This, says General Arnold, chief of the Army Air Corps, "is indicative of the acknowledgment that the proper air organization has not yet been discovered."

Courageous, far-sighted military leaders like Billy Mitchell have paid dearly for their foresight. Court martial and disgrace were his rewards for speaking out in behalf of his country's defense. Others of similar courage in the Army and Navy have been relegated to insignificant assignments for daring to favor the consolidation of our air forces.

In addition to the main purpose of my bill I have proposed to the Congress that we establish a United States Air Academy similar to West Point and Annapolis. Nearly every flight training center is now called the West Point or the Annapolis of the Air. They are no such thing. They are fine flying schools, but we need a full 4-year course of air command training for our future flying officers.

The evidence in support of a separate and unified air force is written daily in bold type across the front pages of every newspaper in the world. Small wonder it is that many of us are impatient and fearful.

How long would Britain last without a strong, unified, and separate air force to combat the invader? Hitler would still be making speeches instead of conquests if Germany's air power were dispersed into three or four branches. So long as any other nation on earth possesses bombardment planes with sufficient range to reach the United States, there necessarily is the implied threat that one day our coasts will be bombed, our people murdered, and our industries and our homes destroyed and our way of life exploded.

In this day we can afford to trust no one. We must make ready to defend ourselves against any and all. How long will the American people stand silently by, watching the tradition-bound politicians of the Army and Navy play chess with our first line of defense? Only yesterday Admiral Towers complained to the Naval Affairs Committee of Congress that Army competition was slowing down the production of Navy aircraft. How long is this silly competition for men and machines to continue?

During one raid in London recently 5,000 fires were started in a period of a few minutes. Planes loosed thermite bombs which spread fire after fire indiscriminately among military and civil targets. As the gallant London firefighters rushed to the frantic task of quelling these quick-spreading blazes, the bombers with 1- and 2-ton high-explosive bombs were upon them. We cannot afford to place our destiny and the destiny of future generations of Americans in the hands of those who place uniform, rank, and the romance of the regiment first.

At our present rate it will be years before we are ready to fight a major air engagement. Our air forces must be commanded by air officers. The Army says that it recognizes the need for strength in the air, yet out of 408 officers on the General Staff, only 19 are air men. The dismal picture of American air power cannot be brightened by optimistic propaganda concerning the possible power we may have some day.

Whether the fighting-plane equipment now leaving our plant lines is up to the standards set by this war is seriously open to question. Despite the thousands of planes we have sent to Britain, the news dispatches still report only the activities of hurricanes and spitfires in the defense of that country.

Some will say that a separate and unified air force will make for a lack of coordination. Such a contention is ridiculous in the light of Germany's experience with its separate air force.

Air power today is no longer an experimental plaything. It is no longer the last romantic stand of the knight-errant. In the World War swashbuckling daredevils flew canvas coffins and shot at each other with sputtering machine guns. Air power today is an integral, vital part of any nation's defense with strategy, tactics, and mission all its own. No longer is it used solely for reconnaissance and for nuisance value. Today it is artillery, transport, and home defense.

What has kept the morale of London, Liverpool, Coventry, and Plymouth at such a remarkable level? The innate courage and stolidity of the Briton? That, of course, but even more it has been the bark of his antiaircraft guns shooting it out for all they are worth against the Nazi bombers. And even more than that, the heartening zoom and roar as the spitfires and the hurricanes take off to pour the wrath of eight machine guns into the steel hides of the enemy death ships.

How long do you suppose the morale of England would last, or England itself if German planes did not meet a swarming, stinging nest of English fighters spitting death from the barrels of machine guns each time they came up the Thames estuary?

Let us pray God that we in America may never go through the same ordeal of fire and shell to which the cities and citizens of England have been subjected. But let us not say it is impossible that we may not, and trust alone to the bulwark of the Atlantic and Pacific to guard our industry, and cities, our children and ourselves.

The best and greatest guaranty that enemy bombers will not reach these shores is that American fighters will meet and shoot them down before they do. And if and when that bleak and fatal day comes, we do not want to have our defense chiefs debating what type of plane we are going to use, who should man it, or from whence it should fly. We want our air force ready, eager, and capable. We want no bickering about policy when the enemy is loading his bomb racks to drop tons of explosives on our homes and factories. We want him shot down before he gets here. And the best way to insure that our air force will be eager, ready, and capable is to have it in under a separate command which understands the job of aviation and is ready to do it. England found that out, and will give thanks to her dying day to the heroes, the machines, and the skill of the R. A. F.

And should the enemy bombers come and write their frightful message on our doorsteps in letters of blood, we want to know that at least all that can be done is being done for the civilian population. We want to know that we have adequate air-raid shelters, adequate antiaircraft, adequate firefighting equipment, and we want to know that all this has been planned and organized well in advance so that every man and woman knows his or her task when death begins to rain from the skies.

We will never get it by the well-meaning helter-skelter and pandemonium of what we are now calling civilian defense. We will not get it by the mincing, dilettante efforts of politicians trying to do too many things at once. But we will get it if there is a plan far in advance and that plan is carefully and intelligently executed. My bill provides for an assistant secretary of air defense who would be charged with the adquate protection of the civilian population, not in time of war when it is too late, but now, when we can plan and execute it without the feverish, fatal rush of the unready democracies across the sea.

In addition to my own bill there are other measures in Congress that will accomplish this same purpose. All of these bills now languish in congressional committee too tired or too busy with piddling politics even to hold hearings. There is a growing suspicion here that the Army and Navy high commands are deliberately sabotaging efforts to bring this matter before the public. If true, we have reached a sad state of affairs in our defense effort.

I urge you all to write your Congressman and demand action and results before it is too late. Remember well, a second best air force is no air force at all.

Joint Income Tax Returns

EXTENSION OF REMARKS

OF

HON. PHILIP A. TRAYNOR

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

LETTER FROM WALTER W. RICHARDS

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

WILMINGTON, DEL., *July 28, 1941.*
Congressman PHILIP A. TRAYNOR,
House Office Building,
Washington, D. C.

DEAR DOCTOR: To the many criticisms I presume you have received of the attempt to make mandatory the filing of joint income-tax returns by husband and wife, I wish to add my own protest of this suggested provision.

Undoubtedly you are familiar with the various arguments that have appeared in the public press and, while not meaning to minimize those that have to do with the moral side, it seems to me that the important angle is the impracticability of attempting to assess discriminatory and class taxation against people who have seen fit to marry—a perfectly natural state which should not be penalized.

Furthermore such taxation would not only be unsound but definitely unconstitutional. The Supreme Court already has rendered a decision that it is unlawful to measure the tax to be assessed against one person by the income of another and, according to all the information I have been able to obtain, the principle involved in this decision never has been questioned.

The weakness of the position of the House Ways and Means Committee in deciding to recommend that this provision should be embodied in the proposed tax bill is shown by the fact that, according to the latest information I have seen in the papers, the vote on the matter was relatively close—I believe only 15 affirmative votes against 10 negative. Thus, if only 3 members of the committee voting affirmative had cast negative votes, the provision would not have remained in the proposed tax bill.

Further weakness of the proponents of this feature of the proposed legislation is evidenced by the following. One of the reasons stated for the mandatory provision is the desire to change the rights of citizens living in the so-called community-property States, where, under State laws, a husband and wife have the right to file separate income-tax returns, even though their income is all received by only one of these. Is there not enough gray matter in Congress to accomplish this objective, if it is a legitimate one, without attempting to do so by such a shotgun method as now is proposed, which would affect not only the citizens of community-property States but also all married citizens where the husband and wife each have separate incomes? It seems to me that if Congress cannot find a means of correcting the community-property State situation without affecting citizens living outside these States, this is the best proof available that even the rights of citizens in community-property States should not be tampered with.

Another reason that has been cited for the proposed legislation is that while filing separate returns is permitted under the existing law, the committee recommends that this be prohibited to prevent married persons from evading the higher surtaxes proposed in the new bill, this for the purpose of increasing Government revenue without raising surtaxes to everybody as high as otherwise would be required. This is a strange and totally indefensible philosophy. In the first place, it is not correct to say that husbands and wives now are permitted to file separate returns. This is an inherent right—not a permission that has been granted—as is shown by the Supreme Court decisions referred to above; also, there is no justification for punitive tax legislation affecting a special class of citizens in order to soften the tax burden to be carried by the remaining and much larger group of citizens, i. e., single individuals or married couples without separate incomes.

The husband is naturally the head of the family, and I am sure that in most instances where the husband and wife each have separate income it is primarily the income of the husband that supports the home and the life of its members. If mandatory joint returns are legislated, there must be numerous instances in which the tax to the husband would be so high that he would not have remaining sufficient income to support the home, and likewise in many of such instances the wife would be unable to contribute to the maintenance of the home and its members because of other obligations.

Why should husband and wife, for purposes of taxation, not be recognized as separate persons when they are so recognized for practically every other Government purpose? The income of a wife cannot be attached for the personal debts of the husband. Why should it be merged with the husband's for purposes of taxation?

I know your sense of justice and philosophy of life too well to believe that you could lend your offices to the support of legislation that savors so strongly of political dishonesty.

With best personal regards, I am,

Cordially yours,

WALTER W. RICHARDS.

Peace or War?

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

ADDRESS BY REV. DR. JOHN A. O'BRIEN

Mr. GRANT of Indiana. Mr. Speaker, among all those Americans who have carried the fight to save our beloved country from participating in another shooting war in Europe, no one has contributed more than the Reverend Dr. John A. O'Brien, of my own alma mater—Notre Dame. The following is a recent address by Father O'Brien:

America stands today at the crossroads, facing the road to war and the road to peace. Which will she choose? Upon that choice hinge the lives of millions of American boys and the civilization which we have built by two centuries of toil.

I am asking my fellow countrymen to choose the road to continued peace. For it is only by walking along that road that we can effectively assist the distressed peoples of the Old World and preserve our freedom and our democracy. The path to war means not only national impoverishment but the loss of our freedom and democracy. It is the path to bloodshed, ruin, and death.

Because I have a profound solicitude for the lives of our youth and the welfare of our country, I leave the cloistered quiet of the university to raise my voice against those forces which daily are seeking to edge us closer to the flames of the European conflict. In pleading for the peace of America, I wish to make it clear that I am speaking neither for Notre Dame nor the Catholic Church, but in my own name as an American citizen. I have abhorrence for Hitlerism, sympathy for the victims of aggression everywhere, but devotion to America and our own people first of all.

"If this war is fought to mutual exhaustion," I heard the English labor leader, Arthur Greenwood, tell an Oxford University audience, "the British Empire will experience a degree of impoverishment the like of which we have never known. And at the end of the road of all our bloodshed and sacrifice, we shall find not a democracy but an authoritarian regime of the right or of the left." Uttered during the early months of the war, these words should be placed before the people of America that we, too, might see what awaits us at the end if we take the road to war.

STALIN—A DESPOT

With the entrance of Russia into the fray, and the removal of any immediate threat of a German invasion of Britain, the last pretense for dragging America into the tangled, stupid, brutal European strife is gone. For the American people can't be driven by propaganda, trickery, or deceit into fighting to maintain the Christ-hating despot, Stalin, in his tyranny over 180,000,000 enslaved people.

The propaganda that we must eventually enter the war to save democracy and Christianity has now received its death blow. For in duplicity and cruelty, Stalin is the equal of Hitler and surpasses him in his hatred of Christianity, of our system of private ownership, and of our democratic way of life.

In asking the American people to turn our weapons against brave little Finland, the one country which has honored its obligations to America, to maintain on his bloody throne the worst butcher of Christians in the world, Churchill does violence to the feelings of our people.

We must demand protection from this form of insidious propaganda which threatens our peace and our welfare not less than the propaganda of the Nazis. We want to believe that we are still governed from Washington and not from 10 Downing Street. This is not lack of sympathy with Britain, but ordinary loyalty to America and devotion to her interests above those of any foreign empire. We want no union now or ever with any foreign monarchy.

In spite of the smoke screen of war propaganda laid down by the handful of interventionists, the voice of the overwhelming majority of the American people is being heard with increasing clarity throughout the land—even in Washington.

That voice is shouting: Don't sentence America to national impoverishment. Don't sentence millions of American boys to death on foreign battlefields, fighting a war that is not our own. Don't condemn the American people to national suicide. Don't crucify the youth of our land on the cross of another European war. Don't go berserk with the bodies of other people's sons. End the slaughter by bringing the leaders to the peace table.

NO STAGED INCIDENT

That such is the sentiment of more than 80 percent of the American people no honest and informed person can deny.

Instead of being weakened by interventionist propaganda and the provocative acts and speeches of governmental officials, American public opinion has become more vocal and insistent that no staged incident be permitted to pull the nation through a back door into an undeclared war.

The American people are sick at heart at the spectacle of an administration which instead of lubricating relations with European powers has made them yield spark after spark with the apparent intention of setting off the explosion of war.

STEP BY STEP

Step by step, an administration solemnly sworn to keep the nation in peace has paralyzed by subterfuge and evasion the plain purport of the neutrality law and of the Johnson Act and has dragged us to the very brink of war. Only the thunder of the masses against public betrayal prevented the use of convoys and certain entrance into a

shooting war. That protest must continue until the battle for peace is won.

What did America gain by her participation in the World War of 1914–18? Absolutely nothing. She asked for nothing, and she got nothing. Oh, yes; she got a bill for millions from Britain for transporting our boys to save her from destruction.

She got a bill from France for the use of the trenches—for all except the front-line trenches. "Uncle Shylock" they called us when we asked for a small payment on the loans we furnished with the reckless abandon of a drunken sailor.

We poured billions into that orgy of bloodshed and destruction. We lost 244,086 men from all causes in that ghastly involvement in European feuds. We helped the Allies sink the fangs of hatred into a prostrate foe. We set the stage for the worst depression in our history. We gained nothing. We lost everything. We did not help Europe. We did not help ourselves.

What about the Wilsonian shibboleths, "Make the World Safe for Democracy," "Fight a War to End All Wars," for which we were allegedly fighting? They became nightmares of disillusionment. What a mockery. Europe called us "Uncle Sap."

Shall we ignore that costly lesson burnt into our bodies and our minds by that ghastly departure from the traditional American policy of minding our own business? Shall we ignore the voices of our soldier dead pleading with us not to crucify their sons as we crucified themselves on the cross of a foreign war?

NEVER AGAIN

"No," respond the American people with almost a single voice. "Never again." We shall give our treasures and our blood for the defense of America. But never again shall we be tricked under the lure of dulcet-sounding slogans about democracy into the ever-erupting volcanoes of European feuds and congenital hatreds.

America's destiny lies in the Western Hemisphere. Here is her legitimate sphere of influence. Here she has a chance to translate those great ideals of democracy, freedom, equal opportunity for all into living realities.

In this New World, providentially raised up out of the western seas, thousands of miles from the flaming hatreds of the Old World, America has the opportunity of rearing the shining temple of her hopes and dreams. Let us make it the sanctuary of peace, freedom, and democracy. Let us elevate the torch of liberty high into the sky that when all the lights go out in Europe mankind will know that the flame still burns in the West and that from this undying flame their lamps can forever be rekindled.

HOW CRUSH?

The slogan of the interventionists, "We must crush Hitler and the Nazis now," is seldom, if ever, translated into American lives and fortunes. They simply shout: "We must stop Hitler." "How?" I ask. "What more could we give Britain? Are we not stripping our own defenses naked and bleeding ourselves white in sending her the bulk of our munition products?"

To crush Germany, Europe would have to be invaded. Britain has lost every major campaign and cannot think of such an invasion. That would be the role left for America.

If Germany, with her superior air force and air bases and greater military machine, cannot land a force in England only 22 miles away, how could we with an inferior air force land troops on a continent 3,000 miles away? To invade Nazi-dominated Europe and face Hitler's highly efficient mechanized army of 6,000,000 men would require us to send at least 5,000,000 men in addition to the British Army.

TEN YEARS TO BUILD

To be effective they would have to be landed quickly. This would require 40,000,000 tons of ships. It would take 10 years to build such an armada. Even at the end of that period there would be little prospect of landing them successfully.

For thousands of bombing planes would be likely to blow them to bits. The advantage would all be with the forces defending their own shores. While this tells strongly against an American invasion of Europe, it tells not less strongly against any Hitler attempt at invasion of America. He too would require 10 years of building and then would be facing sure destruction on this side of the Atlantic. The logic of modern air-force development commands Europe and America to stay in their own hemispheres.

The British method of blockade of food, effective in the previous war, now misses fire and results not in the starvation of Germany but only in that of the overrun countries. For Germany has virtually all Europe to draw upon for food, and her people will be the last in Europe to feel the pinch of food shortage.

Britain seems to be in greater peril from the blockade than Germany. Requiring the daily importation of 50,000 tons of food, her vessels attacked by planes and submarines, and vastly inferior in air force, she is in a far different position than in 1914–18.

Yet she gives evidence of being able to stave off indefinitely a Nazi land invasion because of the overwhelming advantage resting with the defenders fighting on their own shores with their supply bases close at hand. Russia's entrance further removes all danger of any near attempt at invasion of Britain.

COST IN MEN

American involvement would mean, therefore, the sending of our boys by the millions to fight a Hitler-dominated Europe. No one knows where or how they could be landed. The chances are overwhelming that their transport ships would be blown to bits and they would be drowned like rats. They would be facing, if any succeeded in landing, the greatest military machine in all history. Behind it are the resources of most of the Continent of Europe.

In the Pacific we would be exposed to attack from Japan, pledged to support the Axis, if we enter on the side of Britain. While we have a splendid navy, our naval experts are the first to declare that we do not now have, and could not have for years, an adequate two-ocean navy.

Above all these considerations looms the stark fact of our utter unpreparedness. Nearly a year will be required to throw our armament-production plants into high gear to catch up with the needs of our own defense equipment.

We do not now have equipment in tanks, planes, and guns for 300,000 men to face a similar number of Germans, to say nothing of facing 6,000,000 of them. Another year will be required to turn out equipment for 1,500,000 men. We have no substantial air force of the modern type to compare with Germany's armada of the sky. This is the equipment which the present war has shown to be of supreme importance.

WANT NO WAR

Back of all our military unpreparedness is the lack of morale of our people for war. Wars require not only weapons but the will to fight. This was lacking in the people of France and lies back of her collapse. The American people want no involvement in this foreign war.

Men are willing to train for the defense of America, but they have no zest, but only a loathing, for war in foreign lands. Millions for defense but not one cent for aggression in other continents. Millions of men for the defense of American shores, but not one American life for the defense of any foreign empire whatsoever.

I have mingled, perhaps, as freely as any man among the youth of our land. Young men who will have to do the fighting and the dying have no zest for fighting for the British Empire in Europe, Asia, and Africa.

Elder statesmen who fight with words and stay 3,000 miles from falling bombs might change their tune if they were to be sent to the foreign battlefields to which they are so ready to sentence American boys to fight and die. Youth is asking that we do not betray them to the fate meted out to their fathers in the ghastly blunder of 1917–18.

HURT BRITAIN

America's entrance into the war at this time would not help Britain. It would hurt her. It would deprive her of the enormous supply of war material which we are now sending, because we would need that for our own military operations. Otherwise we would have an army whom we would be expecting to fight with naked hands.

American entrance now would work irreparable injury to our Nation. Our boys would be led like sheep to the slaughter on the battlefields of all the world. For with the exception of Britain and the question mark of Russia, we would be sending our boys out to fight the major powers of Europe, Asia, and Africa.

Millions of American boys would be killed, millions wounded, blinded, gassed, and crippled. Our national economy would suffer pernicious anemia. Poverty, hunger, and disease would stalk our land. The civilization that we have prided ourselves upon would be a shambles.

PATH TO RUIN

To save America, to keep our democracy and our freedom, we must stay out of the inferno now devouring the peoples and the civilization of Europe. War is not the path to the "four freedoms." It is the sure path to the destruction of all the freedoms. In all the thousands of years of human history man has devised no means of destroying more effectively freedom of speech, freedom of worship, freedom from want, and freedom from fear than the institution of war. To appeal to modern total war to secure such freedoms is to fly in the face of all history.

Modern total war means mass destruction, mass slaughter. It means the reduction of civilization to a shambles. To appeal to a method for the butchery of the largest number of human beings as the method of securing spiritual values betrays a strange concept of the sanctity of human life and the dignity of the human personality. Modern total war is better described as a form of mass insanity.

STARK REALITIES

In the light of the stark realities of the European scene, American intervention would not tip the scales as in 1918. It would not help Britain, nor America. That is the conclusion reached not by wishful thinking but by careful analysis of stubborn facts.

Let us suppose, however, that by some unexpected circumstances, American resources and American lives thrown with prodigality into the inferno should effect an invasion of Nazi-dominated Europe and eke out a victory after some 10 or 20 years of combat. What would we have gained?

Europe would be a desert. America would be bankrupt. Civilization would be reduced to dust and ashes. Fifteen or twenty million human beings killed. Disease, want, hatred would be rampant.

Who would the real victors be? Destruction and death. A high-powered microscope would be required to distinguish the nominal victors from the vanquished. So sunk in misery, want, and woe would both sides be.

Every dictate of common sense, of solicitude for the war-torn peoples of Europe, of devotion to our own country, commands us, therefore, not to plunge the resources and the lives of the American people into the bottomless pit of Europe's inferno. By remaining an island of peace and sanity in a war-mad world, by making democracy work

at home, by establishing the four freedoms first among our own people, we shall render the greatest service to Europe, America, and to all the world.

I spent the first year of the war at Oxford University, England. I am in sympathy with the common people of Britain as I am with the common people of every land. For a year I witnessed the daily sending of a stream of propaganda to American shores, all designed to drag our Nation into a foreign war as they did in 1917. That propaganda aims to sell us the fairy story that this is our war, that they are merely fighting for us. Despite the help of governmental officials and magnates of great wealth, the American people recognize it for what it is—a yarn and a tall yarn at that.

AMERICAN GULLIBILITY

I hope it will not be construed as unsympathetic with Britain if I say that many cultured English people, among whom I lived, marveled at the gullibility of Americans who could be swindled into believing that a war not of our making, about which we were not even consulted, 3,000 miles away, was "our war," and that we ought forthright to jump in, clothes and all.

My friend, Hillaire Belloc, gives in the Cruise of the Nona an amusing picture of this in the first World War. "The most comic part of the affair," writes Belloc, "was the attitude toward America. We dared not insult America, for we were naturally as keen on getting American help as is a drowning man on catching a deck chair.

"In their ignorance, many people came to believe that it was the duty of the Americans to come over and help, and what was more astonishing still, it was represented to them as a matter of life and death—not to us but to themselves.

"The Americans were told (heaven knows whether any of them believed it) that if the Germans, Turks, Austrians, Bohemians, Slovenes, Croats, Bulgarians, etc., won in their push against the English, French, and Italians—that if the half-baked won against the baked—the next thing would be a sailing of the conquerors over the sea for the rude domination of Scranton, Pa. Fiddlesticks!

"But the people did really talk like that. They shook their fingers at the United States and said, 'It will be your turn next.'"

History repeats itself. Today we have them doing the same thing. And the comedy or rather the tragedy is that many of our governmental officials have swallowed the bait—hook, line, and sinker. Thank God, however, the people have not.

WAR SETTLES NOTHING

On moral grounds there isn't a shred of justification for our entering the war. Moralists demand that before a nation enters a war she must exhaust all pacific means of settling the dispute. What have we done but to call names and shake fists? Moralists demand likewise that the good effects must outweigh the evil effects, otherwise the war must not be waged.

Who will say that the good effects remotely equal the incalculable destruction, agony, and death in modern total war? Not Hitler. Not Daladier. Not Roosevelt. For before the outbreak all declared that the only victors would be destruction and death.

His Holiness, Pope Pius XII, expresses the mind of humanity the world over when he declares: "Nothing is gained by war that cannot be achieved by peace; in war all is lost." The nation that tries to solve its disputes by proving it can destroy more cities, slaughter more people than its opponent is foredoomed to failure. "War," declares His Holiness, "settles nothing." Herein lies the tragedy of war—it is meaningless, utterly and abysmally meaningless.

After cities are laid waste, civilization reduced to a desert, and millions of human beings slaughtered like cattle, what has all the sacrifice yielded? Nothing. Absolutely nothing. After all the destruction and killing are ended, a little group of diplomats gather around a table. "You take this territory, and you take that," they say.

Then, wearing spats and boutonnieres in their Prince Alberts, they put their papers back into their portmanteaus and go home. But there are some things they do not put back. Among them are the precious lives of the millions of young men whose broken bodies rotting beneath the soil proclaim them to be the tragic victims of war—the bankruptcy of statesmanship.

COURAGE TO SAY "NO"

What message would we address respectfully to the President today? I suggest this: "But all the wisdom of America is not to be found in the White House or in the Department of State; we need the meditation, the prayer, and the positive support of the people of America who go along with us in seeking peace. * * *

"At this late date, with the wisdom which is so easy after the event and so difficult before the event, we find it possible to trace the tragic series of small decisions which led Europe into the Great War in 1914 and eventually engulfed us and many other nations.

"We can keep out of war if those who watch and decide have a sufficiently detailed understanding of international affairs to make certain that the small decisions of each day do not lead toward war, and if, at the same time, they possess the courage to say 'no' to those who selfishly or unwisely would let us go to war."

PATH TO PEACE

These are your words, Mr. President, uttered on August 14, 1936. We respectfully ask that you put them into practice. We ask you to have the courage to say "no" to the warmongers, the interventionists. By so doing you will win the everlasting gratitude of America and the world. Turn from the path to war. Lead us, as you swore you would, along the path to peace.

If you will not listen to those authentic voices of the American people—Lindbergh, Wheeler, Nye, Clark, Johnson, Brooks, and all those valiant pleaders for peace—I beg you, Mr. President, listen to that venerable prelate Cardinal O'Connell, when he pleads: "There is no doubt in my mind that the American people desire a cessation of this stupid and brutal war, and I may add that no one can doubt their desire to keep out of the conflict."

By putting into practice your own wise admonition and hearkening to the pleaders for peace, you will win greater renown than all the generals who ever lived. You will win the eternal gratitude of humanity the world over. For you will have made your foreign policy mirror the deathless truth expressed by the Prince of Peace when He said: "Blessed are the peacemakers, for they shall be called the children of God."

How Can the American Businessman Pay His Taxes?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

ARTICLE FROM THE CHICAGO TRIBUNE

Mr. HOFFMAN. Mr. Speaker, the tax bill is up. United States citizens are expected to dig down not only to the bottom but far below the bottom of the pocketbook to meet the expense of the national-defense program, so-called. In reality we are making gifts not only to Britain but to other countries of millions of dollars and millions of dollars' worth of materials. All to be paid for by the American taxpayer, and while this overwhelming additional burden is being saddled upon the backs of our own citizens, the Government is making it more and more difficult for the taxpayers to meet the additional burden.

Here is what is happening to a manufacturing concern in the Fourth Congressional District. I take the clipping from the Chicago Tribune of July 15. It is as follows:

[From the Chicago Tribune of July 15, 1941]

BRITISH RUBBER FOR SALE IN UNITED STATES; EMBASSY REPLIES TO CRITICISM

FIRM TO PROTEST

A small rubber-manufacturing company, facing shut-down through Government curtailment of civilian rubber consumption, has received a letter from a British firm offering to supply any type of rubber product, an official disclosed yesterday. The official is William H. Boyd, treasurer of the Vail Rubber Works, Inc., of St. Joseph, Mich., which manufactures highly specialized rollers for paper mills, tanneries, and meat packers.

His company, Boyd said, is being strangled by a Government order issued in June that crude-rubber consumption must be cut 20 percent in the next 6 months. He said he will protest to the Office of Production Management as the result of the letter from Anglo-American Equipments, Ltd., Birmingham, England.

All kinds of rubber goods

It is dated and postmarked June 19, the day before the Government reduction order was disclosed. The letter says the firm is "in a position to supply you with all kinds of rubber goods, either finished or unfinished, which are manufactured in this country."

"As you know, there is a great deal of export trade at the present time," the communication continued, "and we shall be very pleased to receive a definite inquiry from you, to which we will give our immediate and best attention."

Boyd said he is going to ask Federal authorities why the British, apparently plentifully supplied with rubber, should profit by forced American scarcity.

Asks rubber in return

"We're doing everything we can to help the British, but what are we receiving in return?" he said. "Why don't they give us some of that rubber in return for all we're giving them?"

Boyd said he could not explain how the British firm obtained the name of his company. As far as he knows, he said, there is nothing to prevent his doing business abroad if he chooses since Anglo-American Equipments offered finished and unfinished materials, and the reduction order applies to crude rubber.

Boyd said his company probably would be forced to close because of the specialized nature of its business.

It manufactures only on custom order and, consequently, has used relatively small amounts of rubber in the last year. Supplies generally have been obtained in quantities sufficient only to turn out orders on hand.

The firm's principal customers are devoting an estimated 70 percent of their productive capacities to rearmament contracts, Boyd said, and would suffer loss of time and money using other types of rollers.

The Vail works has 16 employees.

CLAIM EXPORTS CUT

WASHINGTON, D. C., July 14.—Great Britain, denying today she was taking advantage of American lease-lend aid to promote her own export trade, asserted she had cut her exports to the bone.

The British Embassy issued a statement in reply to criticism in Congress and elsewhere. Representative JAMES F. O'CONNOR (Democrat of Montana) had asserted American exporters had complained the British were selling American steel and other lease-lend goods to Latin America. He called for an investigation of such "double dealing."

Reports drop in exports

The Embassy said it would not be in the interest of Americans for Great Britain to abandon its export trade entirely. By exporting, the statement explained, Britain earns foreign exchange to help pay her way and thus her dependence upon lease-lend aid is reduced. It added, however, that the lease-lend program makes Britain less dependent upon exports and these are fast being reduced as standing orders are filled.

On the question whether lease-lend material supplied to Great Britain might be reexported, the Embassy said that American authorities must be satisfied as to the ultimate destination and use of all these goods.

Goods called similar

"It should not be assumed," the embassy said, "that the mere fact we are exporting goods of one sort or another which may be more or less similar in character to goods which we are obtaining from America under the Lease-Lend Act or by cash payment is an indication of any violation of the spirit of the Lease Lend Act or is in any sense a violation of the letter or spirit of our obligations to the United States."

British shipments to all South American markets have been drastically restricted, the embassy said, except to the Argentine, where large-scale British purchases of meat have to be paid for. Argentine trade is being reduced to about half what it formerly was, it was stated.

Britain to get United States corn

Great Britain will take about 2,250,000 bushels of Government-owned corn under the lease-lend program, Agriculture Department officials said.

It was said the Commodity Credit Corporation, owner of the corn stock, would transfer this amount to the Surplus Marketing Administration by July 27 for British use.

It was described as a "cash sale" to the Surplus Marketing Administration, which purchases surplus commodities for Harry L. Hopkins, lend-lease administrator. Details of the transaction with Britain were withheld. The Commodity Credit Corporation reported it owned 201,000,000 bushels of corn and held 95,000,000 bushels under loan.

Indiana

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

Mr. LUDLOW. Mr. Speaker, by unanimous consent of the House, I present for printing in the CONGRESSIONAL RECORD a beautiful little cameo of literature entitled "Indiana." The author is an esteemed constituent of mine, Mrs. Frances B. Brundage, of 3345 Park Avenue, Indianapolis. The poem is as follows:

INDIANA

I love you, Indiana, with your prairies, dunes, and hills.
I love your verdant valleys and your sparkling, rippling rills;
The lordly sun above you smiles down on your fair face;
I adore you, Indiana, you have every charm and grace.

Your heroines and heroes far surpass all those of Greece;
Your Junos and your Jasons and their quests of Golden Fleece;
I extol you, Indiana, every river, each blue lake;
And I bend my knees before you—here's my heart and soul to take!

I salute you, Indiana, fair land that gave me life;
May my children and your children praise you through all storm and strife,
May God keep you, Indiana, 'neath the shadow of His wing,
And may noble statesmen guard thee, praise of thee we'll ever sing.

L'ENVOI

With banners bright and garlands thy halls we'll decorate,
And of thy honor and thy fame we'll early sing and late;
Fair queen of all thy sister States, with laurel now we crown thee;
Sanctuary of democracy, a halo clings around thee.

—*Frances B. Brundage.*

Oceans Are Wider

EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

ARTICLE BY AL WILLIAMS IN WASHINGTON DAILY NEWS, JULY 28, 1941

Mr. HILL of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, Oceans Are Wider, by an outstanding airman, Al Williams, which is revealing as well as convincing. He proves conclusively than an air force is the supreme fighting force both in offense and defense.

The present conflict in Europe has shown the superiority of the air force over the army and the navy.

We should have a separate and distinct air department. For years Billy Mitchell fought for this against great odds, which persecuted him to his death. At his side stood Major General Arnold, urging a separate air department. Today the fight for such a separate department is led by Al Williams.

Today, more than ever, this change is necessary. The air force is now handled by four departments or branches: The Army, the Navy, the Marines, and the Coast Guard. The result is confusion, jealousy, and lack of cooperation. In the present emergency nothing would be more conducive to the success of our defense program than the creation of a separate air department, when it could really expand, develop, and function to the fullest extent. We all want the most adequate defense possible. I sincerely hope the Army and the Navy will join with this public demand for so necessary a change in our fighting defense program.

The article follows:

[From the Washington Daily News of July 28, 1941]

OCEANS ARE WIDER

(By Al Williams)

Air power as we know it today has widened our oceans, militarily, instead of narrowing them. There's something to chew on. We have always depended on the oceans to protect us against everything but enemy warships—and that's the way it is right now. Beyond a few demonstration bombers—and there are mighty few in the world capable of the Atlantic round trip—what else besides warships need we fear coming to attack us over the Atlantic? They—warships—are the only European weapons that might in the wildest conception attack our shores with the idea of effecting a landing for an expeditionary force. Where does the "widening of the oceans" come in? Well, it's the major point proved in Europe's war, the point that no warships can withstand attacks from shore-based air forces. Therefore, since the British Navy—the mightiest in the world and 10 times the strength of the German outfit—could not maintain control of the North Sea or the Mediterranean, and now confesses its inability to rule the seas a thousand miles out in the Atlantic in the face of German air power and submarines, why cannot we plan to work the same factors against any fleet—no matter how great—that might contemplate attacking our eastern seaboard?

With any decent force of bombers we can stop any sea fleet 500 miles off our shores. It must be remembered that a sea fleet is one thing. It takes years to build. It would have to move with all its strength—as a unit. Therefore, it is one bull's eye for the air power designed to bomb it. Assuming that the British Fleet were still at its pre-war strength, plus all the warships the Germans possess and whatever the Italians have left—is there anyone who dares maintain that a thousand American bombers could not smash that armada as effectively as European air power routed British sea power?

A thousand bombers are by no means a great force in view of what is considered air power today. But they constitute, far and away, enough striking power to smash the daylights out of any sea fleet. Why, that job would be a joy ride—especially since all the aircraft carriers of Europe would be smashed as soon as they came within range of our patrolling bombers.

With European aircraft carriers smashed, the ultra-vulnerable sea fleet with its train (and a vast number of supply and cargo ships would have to accompany a fleet of warships aimed at attacking us in such fashion as to effect a landing of army forces) would be wide open to our bombers.

These are not only my thoughts but the sound and technically supported opinions of the best military and naval minds in this country. And I believe that with their own war lessons strongly in mind, European strategists would agree. In the event of such a sea invasion attempt, the holocaust would be the most disastrous affair ever waged and staged by sea power. The result would leave us commanding the entire Atlantic—and Europe without warships.

Freedom Stops When War Begins!

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

Mr. BURDICK. Mr. Speaker, while the United States is the cradle of democracy and the hope of millions in foreign lands, our past experience has shown us that when we are engaged in war, democracy stops working and a military dictatorship takes its place.

Freedom of speech is assured in this country by the Constitution, and enforced by decisions of the Supreme Court, but when war comes, freedom of speech disappears.

At the present moment the Secretary of War cannot wait until we are actually at war, but takes it for granted that we are in and immediately starts to throttle free speech. If he had his way we would be in the war, but he has spoken out of order. We are not yet in. The Secretary indicts Senator WHEELER and convicts him himself for sending out cards to the public urging them to make their wishes known to Congress. These cards were not sent out to selectees under the draft law, but to the public long before the selectees had entered training. It appears that a few cards were remailed to the selectees in camp. This was the natural thing for postmasters to do.

Mr. Speaker, there was absolutely nothing wrong about sending these cards to the public. Everyone in the possession of his normal senses knows that. But the Secretary of War says this act is close to treason! His exact statement about the matter was:

> Some matters have come to my attention today, including two circulars franked by Senator WHEELER. Without expressing legal opinions, I will simply say that I think that comes near the line of subversive activities against the United States, if not treason.

This is a fair sample of what will be done to the average citizen when we get into war. If a Secretary of War can launch such outrageous charges against a Member of the United States Senate, when we are not at war, just contemplate, Mr. Speaker, what would happen to the average citizen and his right of free speech when war actually comes.

The Secretary of War is so determined to have war that he becomes impatient and loses his sense of balance when confronted with any force, which, to his obviously prejudiced mind, tends to interfere with what he wants done. A wise Secretary of War, before saying anything in this case, would have first looked up the facts. If he had done that, no such expression would have come from him. But his mind is so keyed to actual war that he couldn't wait to find out the facts, but jumped to conclusions all of which are now known to be erroneous and false. After making this monumental blunder and knowing that the effect of his statement has injured Senator WHEELER in the eyes of the public, the least the Secretary can do is to publicly withdraw his statement, apologize to Senator WHEELER and resign his position. I do not believe that the American people want any such "powder box" at the head of the War Department.

Every citizen knows that he cannot be deprived of his life, liberty, or property without due process of law. Yet in time of war, this due process of law is lodged, not with the courts, but with the military authority. Does anyone doubt that in time of war private property can be taken without due process of law? Right now, before we are actually involved in a war, is private property being taken without due process of law?

There is absolutely nothing in the Constitution, the Bill of Rights, or subsequent amendments that cannot be suspended in time of war, and the Government exercised by military authority.

For all of these reasons the people of the United States do not want any war except a war of self-defense. They do not mean that "self-defense" constitutes going across the Atlantic or the Pacific to fight with American soldiers. They will support the Monroe Doctrine, but they do not think the Western Hemisphere extends to England, Germany, Italy, Africa, and Japan.

In a straight war of self-defense the American people are one solid unit. They will offer their property (which they will soon do in "takes"), and their lives for the defense of this land, but they cannot understand why we must fight to defend every so-called democracy on earth before we can defend ourselves.

There is great sympathy for England in this country—aside from the British propaganda—but the American people cannot understand just what England is trying to do in this war. England has refused to declare her war purposes. The nearest she has come to it is to approve something our representatives have said.

It is difficult to understand what Churchill is trying to do. Just at present he drools down his shirt front for Russia, but here is what his views about Russia were a short time ago:

[From The World Crisis, volume 4, The Aftermath, by Winston Churchill]

[Chapter IV, Russia Forlorn (p. 71)]

> But Russia had fallen by the way and in falling she had changed her identity. An apparition with countenance different from any yet seen on earth stood in the place of the old ally. We saw a state without a nation, an army without a country, a religion without God. The Government which claimed to be the new Russia sprang from revolution and was fed by terror. It had denounced the faith of treaties, it had made a separate peace, it had released a million Germans for the final onslaught in the west. It had declared that between itself and non-Communist society no good faith, public or private, could exist and no engagements need be respected. * * * The old Russia had been dragged down and in her place there ruled "the nameless beast" so long foretold in Russian legend. Thus the Russian people were deprived of victory, honor, freedom, peace, and bread. Thus there was to be no Russia in the councils of the Allies—only an abyss which still continues in human affairs.

[P. 75—Lenin]

> "A Russian statistical investigation" writes Professor Sarolea, "estimates that the dictators killed 28 bishops, 1,219 priests, 6,000 professors and teachers, 9,000 doctors, 12,950 landowners, 54,000 officers, 70,000 policemen, 193,290 workmen, 260,000 soldiers, 355,250 intellectuals and professional men, and 815,000 peasants." These figures are endorsed by Dr. Hearnshaw, of King's College, Cambridge, in his brilliant introduction to A Survey of Socialism. They do not, of course, include the vast abridgements of the Russian population which followed from famine.

[P. 80—The Supreme Committee—1917]

CROCODILES WITH MASTER MINDS

[P. 99—Chap. V.—Intervention]

> The Bolsheviks who, on January 4, had joined with the French and Swedish Governments in recognizing the independence of Finland, invaded Finland and captured Helsingfors on January 28, 1918. This was no ordinary war of troops and cannon. The Soviet Red Guard advanced by moblike methods, and before them, more deadly than carnal weapons, sprang up the local forces of Communist propaganda and revolt. Two horrible pages in Finnish history were successively written. On March 1, a treaty of peace and amity was signed between the Finnish Republic and the Soviet. A "red" terror followed in Finland. But here the Germans intervened as rescuers. * * *

[Chap. V. Intervention * * * p. 102.—The Ukraine]

> Everything is relative. Everyone tries to remember (and tries to forget) the German occupation of Belgium. Here in the Ukraine these same Germans came as deliverers and were spontaneously recognized as such, not only by the general population, but by those patriotic elements most hostile to the invaders of Russia. A dose of communism induces a desire in any population to welcome any other form—even the hardest—of civilized authority. With the arrival of the German "steelhelmets" life again became tolerable.

We will suppose that Russia defeats Germany and starts an invasion of Germany. What will Churchill do then? The natural thing for him to do—and I venture the prediction that he will do it—is to revert to his former opinion of Russia, voiced in his book and quoted above.

Russia receives the applause of England today because she is fighting Germany, not because the English have anything in common with the Russian Government. England has a capitalistic government; so has Germany. Russia has not. Russia is a government where state ownership has supplanted private ownership or capitalism.

England would not be fighting Germany today if Germany had not defied the English monetary system. Germany has no gold or silver standard. She bases her dollar on labor, but at the same time allows the capitalistic system to function under a new monetary system. Germany has defied the Bank of England and seems to function very efficiently under a different system.

In this country those who are loudest in their demands for war are the most concerned with maintaining the Bank of England's scheme of finance. The present monetary system in the United States is duplicated in the monetary system of England, and because of this duplication there is a close unity between the powers that govern both countries.

We often hear it said that we should get into this war to preserve our civilization. That is not what these people mean at all. We should get into this war to save the money system of England and the United States.

We are not now at war, thank God, and I can say what I actually think on the floor of this body. I shall speak the truth as I see it and run the risk of being labeled a Nazi, Fascist, Bolshevik, or any other appellation. I know myself that I am an American and will fight to the last breath for the protection of our territory.

I say to you right now that in this world struggle one of two things must happen eventually. If it does not happen at the close of this war, it will happen some time and there will be more wars as soon as the people are able to fight on. There will either be governments which operate under the capitalistic system, under a free monetary system, or there will be no capitalistic system at all. We can take our choice.

Here in the United States we should change our monetary system now and divorce it from the Bank of England. We should base our dollars on labor and not on a false standard of any metal. When we have done that we shall not have hunger in the midst of plenty; we will not have millions looking for work where there is no work. Our country will then serve the people as a class and not a few that now own it all. With this system in operation, we can pledge our property and our lives to defend that democracy which our forefathers intended it should be.

The people of the United States should not be fooled by paid British propaganda now running into huge millions, and which, through our lease-lend bill, we will pay ourselves. Remember we are not in this second World War and will not be if the people themselves keep their feet on the ground and do not consume the war hysteria now so rampant in this country.

Remember also we had to whip England twice before we could secure our own independence. Remember that the agents of Great Britain now have the gall to come to this country and say that our Members of Congress are not to be compared with those of England, where they only elect their intelligent and influential men to Parliament. For the present, forget England and remember the United States.

The Most Important Question

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

LETTER FROM A CONSTITUENT

Mr. GEHRMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received from one of my constituents:

MEDFORD, WIS., *July 21, 1941.*

THE MOST IMPORTANT QUESTION

When will Uncle Sam cease "Santa Clausing" the foreign warring nations at the expense of the citizens of the United States in amounts of many billions of dollars?

This is a question of utmost importance at this time, when the United States of America is approaching the brink of World War No. 2, by sending ammunition and other war supplies to Great Britain on credit. Great Britain, on account of credit extended prior and after the World War armistice, owed the United States $4,600,000,000, according to agreement by the World War Foreign Debt Refund Commission, and A. Geddes, His Britannic Majesty's Ambassador Extraordinary and Plenipotentiary, which agreement was signed on June 19, 1923, by A. W. Mellon, Secretary of the Treasury and ex officio Chairman of the World War Foreign Debt Refund Commission, and was approved the same day by Warren G. Harding, President of the United States (vide record of proceeding of said Commission, pp. 108–113). Under said agreement, Great Britain was to refund the $4,600,000,000 in 62 annual installments, the first installment of $23,000,000 to be paid December 15, 1923; the last one of $175,000,000 to be paid December 15, 1984. The first 10 installments were to bear 3-percent interest, the last 52 installments to bear 3½ percent interest. The interest was to be paid in gold coin or gold bullion of equal value at the Treasury of the United States or at the Federal Reserve Bank in New York City. All interest was to be paid semiannually.

How did Great Britain carry out this agreement?

A report from the Treasury Department, dated July 14, 1941, signed by Charles Schwarz, Director of Public Relations, shows that on June 30, 1941, Great Britain owed the United States a total of $5,805,850,288.81 on account of World War No. 1. This consisted of $4,368,000,000 of unpaid principal and the balance of unpaid interest. Thus, Great Britain, on June 30, 1941, owed the United States $1,205,850,288.81 more than they did June 19, 1923.

JOHN GAMPER.

United States Selectee-Parents Legion Against Involvement in European War

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

LETTER FROM THE UNITED STATES SELECTEE-PARENTS LEGION

Mr. HESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

UNITED STATES
SELECTEE-PARENTS LEGION,
Cincinnati, Ohio.

Honorable MEMBER OF THE CONGRESS:

Respectfully we ask you, sir, to use all of the command and influence of your high office to keep our sons out of Europe.

We are not yet the self-anointed saviors of the world, nor yet breathed upon to make the world safe for democracy, again; we are concerned most vitally with preserving democracy in these United States, rather than impressing our way of life upon Europeans, or Asiatics, who may choose to decide their own way of life.

We do not believe it is our lot to determine the balance of power in Europe, as between imperialism on the one hand and dictatorship on the other. We have no irrational dreams of a world empire.

Mothers and fathers of sons enlisted or selected will march to defend these United States. We believe in the best military training, under auspices of Uncle Sam's own men, as we believe in maintaining at all times, not only in times of political expediency, adequate preparedness to keep our United States secure from all combinations of foreign powers.

While he may have the power to commit our beloved country to war, declared or undeclared, we are of the opinion our President has not the right, under our laws and under international law, to do and say those things which force us into Europe * * * which mean another expeditionary force to Europe, with more plowing under of the flower of young United States American manhood, our sons.

Most powerful in these United States is the family group. Who betrays first and destroys secondly this same family group, helps tear democracy apart and outrageously ignores the will of the fathers and mothers, who, all over our land, are most emphatically opposed to having their sons blown to bits in foreign battlefields. To these parents, in Boston last October, our President said: "I give you one more assurance. I have said this before, but I shall say it again, and again, and again; your boys are not going to be sent into any foreign wars."

Convoys of war supplies into combat zones by our ships and men spells war; we fathers and mothers of sons know it and want none of it. Hon. C. W. TOBEY's bill, to ban such acts, should be approved.

May we depend, sir, upon both your respect for and your support of our will in these matters, as we depend upon the Congress to represent the people * * * while we give all we have for defense of the United States, in the United States?

Very sincerely yours,

GEO. ALBERT SHIVES, *President.*

PRINCIPLES AND PURPOSES OF THE UNITED STATES SELECTEE-PARENTS LEGION

First. To organize and establish a national incorporation of parents and wives of soldiers, with national headquarters at Cincinnati, Hamilton County, Ohio, which headquarters shall thereafter, upon petition received and approved by the national body, further establish State associations to be known as departments and community associations to be known as home-defense units throughout the United States;

Second. As hereafter provided, national and local activities shall be determined by the national headquarters board of governors, assisted by the national board of control, which latter board shall consist of one representative of each State department, each of whom shall be elected by one elector each from the several home-defense units of each State represented;

Third. To admit to membership in this national organization, upon application and approval thereof, any person or persons being parent or wife of a selectee, draftee, enlistee, or being parent or wife of a person who, during any period of emergency as declared by the Congress of the United States, may be called into the armed forces of the United States, or any person or persons standing in or taking the place of the natural parent (loco parentis), provided nevertheless that such person or persons shall be agreeable to and abide by the principles and pur-

poses for which the United States Selectee-Parents Legion stands united;

Fourth. Steadfastly to preserve, protect, and defend the principles of American democracy, as stated in the Constitution of the United States and as exemplified in the historic traditions of our country; in war or peace, we stand for the preservation of the democratic way of life, with government truly of, by, and for the people.

Fifth. To maintain by all means of assistance at the disposal of our members an impregnable, all-inclusive defense of and for the United States of America, without special privilege and with no one escaping the duties and obligations necessary to such object, within the limits of his or her ability and means;

Sixth. To use all lawful means and effort of our membership and our national organization to prevent using or sending our youth again to fight or making war in foreign lands, for any cause whatsoever;

Seventh. To strive to avoid the participation of this Nation in any war except one of absolute self-defense, and to keep the power of decreeing war, declared or undeclared, in the Congress of the United States;

Eighth. To protect, defend, and sustain the moral and civil rights and the spiritual, mental, and physical life of our youth, now and hereafter;

Ninth. To assist, by all lawful means, in extending humanitarian aid to all oppressed peoples of the world, so long as that aid does not weaken adequate economic and military security of the United States of America:

Tenth. By example, rather than by interference, to help show Europe and Asia that people can lay aside national animosities and live in peace, when government is indeed of, by, and for the people;

Eleventh. To do all things necessary and incidental to accomplishment of the foregoing and matters related, best to maintain the welfare and the future security of the United States of America;

Twelfth. To perpetuate this national organization, so that the voice of parents and those nearest in interest to our boys may be heard as never before provided.

United States Selectee-Parents Legion, National Heaquarters, Cincinnati, Ohio.

Hearings on Air Force Bill

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

ARTICLE BY CHARLES T. MALONE

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article on the subject of a separate air force by Mr. Charles T. Malone, president of the American Glider Association, as follows:

[From the Washington Evening Star of July 11, 1941]

ASKS HEARING NOW ON UNIFIED AIR FORCE—GLIDER ASSOCIATION HEAD REVIEWS HISTORY OF LONG DEBATE

(By Charles T. Malone, president, American Glider Association)

The question of whether or not to unify our air services, first seriously raised in 1919, has reached its majority. It is old enough to vote, but it has not yet been voted upon.

Following the return of our boys from the battlefields of the World War, a great discussion arose among our pilots relating to the value of air services attached to the Army and to the Navy as against the value of a combined air service such as the Royal Air Force of England. It was argued that the combination of the Royal Flying Corps and the Royal Naval Air Service at the height of the war saved England—and that we should follow suit. Another serious subject of discussion of that period concerned the future of the aircraft industry which had grown up during the war and was abandoned forthwith upon the cessation of hostilities. The English, it seems, had subsidized both manufacturers and air-line operators—and other European nations were doing likewise. We, however, feeling that the growing industry could take care of itself, were content to let things slide.

Bills were introduced in both the United States Senate and the House of Representatives which provided for the unification of all Government air services into one group—and also provided for Government encouragement of the commercial manufacturers and operators. Hearings were held on the House bill by a subcommittee presided over by Representative F. H. LaGuardia, acting chairman. Many prominent men testified, and the weight of the evidence indicated that the proposed legislation should have been passed—but it wasn't!

The next really serious attempt to obtain legislation unifying the air services resulted in the appointment of a select committee of inquiry into operations of the United States air services by the Speaker of the House of Representatives. This committee, known as the Lampert committee, examined more than 150 witnesses under oath, and its work extended over a period of 11 months, terminating on December 14, 1925. The parade of witnesses passing before this committee was indeed an aeronautical who's who. Here was presented evidence to prove that Gen. William Mitchell's airplanes had succeeded in sinking the German battleships in the 1921 tests, and evidence to prove that the battleships would not have been sunk if there had been fire power aboard when the bombers flew overhead. General Mitchell testified several times, and several admirals testified to opposing facts. It was indeed a battle of the giants.

Since the question of a unified air corps is becoming of increasing interest to the public who, after all, must pay the bill, it should prove interesting to ascertain the results of the Lampert committee hearings. These are probably best expressed by Representative Reid, of Illinois, a member of the committee and the person chosen by General Mitchell to represent him when the general was tried by court martial for insubordination, in his special concurring report, which was painstakingly documented. A few of the choicer paragraphs are quoted herewith:

"The testimony—Army, naval, and civilian—before the committee is unanimous in support of the 'indispensability' of aircraft, both alone and in cooperation with the military forces, and the bulk of it is clearly to the effect that 'the potentialities of aircraft * * * are almost incalculable' and that 'our national defense must be supplemented, if not dominated, by aeronautics.'

"Considering the probable increase in the power of aircraft in the future, this opinion must outweigh certain testimony placing aeronautics as a mere 'adjunct' or an 'auxiliary' to land and sea operations.

"The uncontroverted evidence presented in support of this indispensability and potentiality is so definite and overwhelming that one is convinced that its importance demands that, at least, air power must have a "coordinate voice in the councils of the nation with sea power and land power.'"

With respect to the suggested unified air service, Representative Reid had the following to say:

"Considerable divergence of opinion is found among those who favored the secretary for air controlling military, naval, and civil aeronautics (or the Air Corps as an intermediate step) and those who were definitely against either but favored maintaining aeronautics in the Army and Navy under the present system, or under the present system but placed under one secretary for defense.

"In addition to general objections to the unified air service * * * specific objections were registered.

"As to the specific objections, it is believed that they represent merely unwarranted anticipations of minor difficulties."

Congressman Reid's keen analysis of the problems raised with respect to "unity of command" is represented in part by the following:

"The opponents of the unified air service are horrified at the idea of a 'trinity of command' which the 'proposed organization creates,' and it is argued that 'another uncoordinated national defense force in the field of battle' would be a catastrophe, yet the cooperation between the Army and Navy is claimed to 'be very good.'"

"One is forced to believe that unified national defense effort is obtained only by the unified air service proposal, with the Army, Navy, and air under one secretary of defense."

In 1925, when the Lampert committee hearings were held, air power was practically unknown—at least air power as we know it today was not even dreamed of by the average man or, one suspects, by the average general or admiral.

The unified air force question, or the department of defense question, is of sufficient importance to warrant public hearings being held immediately, before we become active participants in the current war.

It is recommended that the President immediately request the Speaker of the House to appoint a select committee of 9 members, in accordance with the Mundt resolution, House Resolution 228, for the purpose of holding hearings and conducting an investigation into the advisability, if any, of giving the air forces of this country a coordinate standing with the War and Navy Departments either by the creation of a Secretary of Air Defense having equal rank with the Secretary of War and the Secretary of Navy or by the consolidation of all defense establishments of the Government under a Department of National Defense with heads of the Divisions of War, Navy, and Air as Assistant Secretaries of Defense. Certainly this proposal is worth a hearing.

Investigation of the National-Defense Program

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, July 29 (legislative day of Monday, July 28), 1941

RADIO PROGRAM ENTITLED "THE CONGRESSIONAL MAILBAG"

Mr. BREWSTER. Mr. President, I should like at this time to submit for the

Appendix of the RECORD the script of a radio program sponsored by the Committee of Americans and participated in by the Senator from Missouri [Mr. TRUMAN] and the Senator from New Hampshire [Mr. BRIDGES], and Hugh A. Fulton, chief counsel for the National Defense Committee.

The program, called The Congressional Mailbag, was broadcast July 22 last over the Nation-wide facilities of the Columbia Broadcasting System. It was the third in a series of programs designed to reacquaint Americans with the work and importance of the legislative branch of our Government.

Mr. Berkley Thomas, of New York City, is president of the Committee of Americans. Royce Powell, of Washington, acted on behalf of this committee as master of ceremonies for the broadcast.

There being no objection, the script was ordered to be printed in the RECORD, as follows:

ANNOUNCER. The Columbia Broadcasting System presents tonight the Congressional Mailbag in cooperation with the Committee of Americans. This is the third in a series of broadcasts brought to you from Washington by the Committee of Americans. Tonight we look at the mail of two members of the Special Senate Committee Investigating the National Defense Program, and of a member of the Senate Military Affairs Committee. What is the concensus of American opinion about the various aspects of national defense? Let's have a look at the contents of the Congressional Mailbag and see. Presiding over the letter opening will be Royce Powell, of the Committee of Americans.

Mr. POWELL. This is Royce Powell in Washington about to open the Congressional Mailbag. Tonight the Committee of Americans presents two United States Senators, members of committees especially concerned with national defense. They obligingly have agreed to let us have a look at their mail from back home and hear their comments upon it. It is a pleasure to announce the following guest speakers: Senator HARRY S. TRUMAN, of Missouri, chairman of the Special Defense Committee; Hugh Fulton, chief counsel for the Special Defense Committee, who is pinch hitting tonight for Senator MEAD, of New York, a committee member, who has been unavoidably detained; and Senator STYLES BRIDGES, of New Hampshire, a member of the Senate Military Affairs Committee. In the order named, I am going to ask each of these gentlemen to give us the general contents of his mail from back home. Senator TRUMAN, as chairman of the special committee, generally known as the Truman committee, you're from Missouri. So will you, therefore, lead off by showing us your mail and what it shows you?

Senator TRUMAN. Yes, Mr. Powell, I'm from Missouri, both actually and in the sense that I have to be shown. In that sense, all of us concerned with national defense should be from Missouri. Each day the mail bags bring letters from all over the country to me and to my defense committee; we not only welcome these letters, we need them. It gives us a feel of the pulse of America. For instance, a worried mother writes to complain of conditions in her son's Army camp. Another is a penciled note from a man in Texas. He owns a small but well-equipped machine shop. He has tools needed for defense, and he knows how to use them, but he can't seem to get a Government contract. Priority regulations prevent him from getting materials to make every-day civilian things. He may have to close his shop. I get many, many letters like that one. Here's a telegram from my own State of Missouri. It reads in part, "there are thousands of small shops such as ours with idle equipment because we can't get defense work on the one hand nor material to make nondefense products on the other." In this connection, Mr. Powell, I would like to assure this Nation-wide audience that the whole question of defense contracts is a paramount consideration of the National Defense Committee. We are going to make sure that the defense contracts are so drawn and so executed that Mr. Taxpayer gets his money's worth.

Mr. POWELL. I'm sure all we taxpayers are happy to hear that promise, Senator TRUMAN, for we will soon get the tax bill. Thank you, Senator Truman. Before asking you for a further outline of your mail and your opinions on it, I would like to ask Mr. Fulton about what the postman drops on the desk of the Senator from New York. Mr. Fulton?

Mr. FULTON. Mr. Powell, during his 22 years in Congress Senator MEAD has observed great changes in both the mood and volume of his mail. There was a time when he could personally attend to each item of correspondence. Not any more. Whereas mail used to arrive in pouches it now comes in carloads. For every one letter received before the war and before we launched our national-defense program, there are now hundreds of letters. Everybody seems to be Government-conscious. The cry is "Write your Senator!" And believe me they do. During one particular week his office was smothered with 20,000 letters and telegrams every day. To handle such bulk we need an electric gadget just for opening envelopes and two special clerks working at top speed. Even so Senator MEAD cannot begin to acknowledge all of it. There are such extraordinary demands on his time these days that he can personally read only a few hundred a week. His assistants must read the rest and tell him their contents. Nevertheless, he warmly welcomes all this mail from home. By that, he means however, that he welcomes the honest, straightforward, and constructive type of mail because very often criticisms, suggestions, and ideas offered by constituents prove most helpful. Unfortunately though, he gets barrels of the other kind, too—letters obviously inspired by pressure groups, letters that are abusive or threatening or demanding.

Mr. POWELL. Mr. Fulton, just what is Senator MEAD'S run-of-mine mail all about?

Mr. FULTON. Well, Mr. Powell, when you consider that the State of New York has more than 13,000,000 inhabitants representing just about every race, creed, and walk of life, you can well imagine that the contents of Senator MEAD'S mail runs the gamut of what people want, think about, and worry over. Flood control, droughts, the milk strike, defense contracts, jobs, taxes, airports, and harbors. Those are but a few of the subjects. And there are the more bizarre requests. Senator MEAD has been asked to review poetry, to settle bets, to advise the lovelorn, to sign notes, and to lend money. One morning he even received a crate containing an ailing dejected-looking chicken. The owner wanted the Senator to diagnose the illness.

Mr. POWELL. I presume that chicken had merely mislaid an egg. But seriously, Mr. Fulton, what about the mail dealing with defense?

Mr. FULTON. This mail Senator MEAD feels to be the most important of all during this crucial hour for America. Senator TRUMAN just a moment ago referred to these letters and he has mentioned how much the defense committee is concerned over them. I mean the letters from businessmen and manufacturers who can no longer get the raw materials to make the things they have all along been making * * * for the reason these raw materials are needed for tanks, bombers, helmets, and hand grenades.

Mr. POWELL. I believe the congressional mailbag audience would like to hear about this in some detail, if you will. But first, if I may, I would like to call on Senator STYLES BRIDGES, of New Hampshire, for a brief index of his daily mail. Will Mr. Fulton yield?

Mr. FULTON. Gladly, Mr. Powell.

Mr. POWELL. Thank you, Mr. Fulton. Then, to hear next from Senator BRIDGES, of New Hampshire.

Senator BRIDGES. My experience has been identical with Senator MEAD'S. My mail from New Hampshire and New England simply pours in nowadays. To be sure the people back home are profoundly concerned with the violent events in Europe, but they are even more concerned with the huge defense effort here in America. And being hardheaded New England Yankees they want the facts about this defense job, and they want their facts undiluted. Furthermore, they want action, not excuses or promises. You'll have to admit that we have seen lots of promises made and broken, and lots of excuses offered as substitutes for efficiency.

My friends in New England aren't easily fooled, and if I do say so they are past masters at reading between the lines. For example, all sorts of optimistic reports have appeared in the papers and over the radio. One official says our tank program is well ahead of schedule. Another says the same thing about our airplane production. Those announcements listen well, but they're too pat for comfort.

Mr. POWELL. Thank you, Senator BRIDGES, for these introductory remarks which promise some very interesting listening a bit later. At the moment and for the benefit of many, perhaps like yourself, who are not fully acquainted with work of the Senate Defense Committee, I would like to call again on its chairman, Senator TRUMAN. Senator, would you briefly sketch the character and work of this special committee?

Senator TRUMAN. Well, Mr. Powell, we who are on the Special Defense Committee are assigned to the job of finding the logs that jam the flow on our vast river of national defense. When we find these logs we try to discover how they got there. And then we try to ascertain the best and quickest way to pry them loose and dig them out.

Mr. POWELL. As a matter of fact, Senator, didn't this committee play a principal part in the settlement of the April coal strike?

Senator TRUMAN. Well, Mr. Powell, it took the participation and cooperation of a lot of persons and agencies to effect that settlement. Our committee acted as a sort of clearing house of information where opinions were crystallized and issues threshed out in the open. Several hours following the close of a stormy public hearing, we received word from the White House that terms of agreement had been reached. So the answer to your question, Mr. Powell, is that the committee did not directly settle the strike. But it helped to get those miners back to their digging. And that's the important thing.

And right here, Mr. Powell, I would like to point out that the national-defense committee does not seek to substitute its judgment for that of other governmental departments or agencies of defense. They have their own jobs to do. However, we can and will and do ascertain the facts about what they are doing and why they are doing it. And we bring these facts to light and suggest that they consider changes or different courses of action whenever we think it necessary to the effective working of the defense program. We leave the determination up to them, but we want to be very certain that no stone is left unturned. And, Mr. Powell, every citizen in this great Nation during this great emergency has a stake in that. And furthermore, these defense contracts must be distributed in such a way that every person who can do his share, gets his share of the work. This defense job includes everybody, big and small, the plain, unvarnished people as well as the wealthy and influential.

Mr. POWELL. Senator Truman, would it be possible to sum up in a single definition the character of this committee? That is, is it a dictatorial oligarchy of legislative punitive powers vested in a hierarchy of bureaucratic solons, or is it——

Senator TRUMAN. Whoa, Mr. Powell.

Mr. POWELL. Thanks for stopping me.

Senator TRUMAN. Briefly put, you might say our committee is a benevolent policeman. We play no favorites, and we don't propose to whitewash the walls of any office. Ours is the painstaking labor of sifting the truth from the masses of evidence. We must be circumspect in our attitude and fair in our judgment. As important considerations present themselves we hold public hearings. Also from time to time the committee Senators make speeches explaining their findings from the Senate floor. Periodically, too, the committee submits reports to the Senate. For example, we did that in the case of aluminum. We heard all sides of that situation. And when we got through we realized that there was not onl, a serious shortage of that light, precious metal, but also that there was delay and lack of cooperation right down the line. Senator MEAD spoke out sharply about aluminum from his Senate desk. And in our report we reemphasized the need for greater speed and better teamwork. We rapped some knuckles to be sure, but we tried to do it in a constructive way. We didn't take the easy course and blame the President. We want aluminum, not excuses. The same goes for anything else that's not coming down the river of defense. The goods either will come down or we'll know the reason why. Mr. Powell, I'm from Missouri.

Mr. POWELL. So is the whole country, Senator. And thank you very much. I would now like to ask Mr. Fulton if he would resume his earlier discussion of the problems facing business hit by priority rulings involving shut plants and unemployment.

Mr. FULTON. Yes; I was pointing out that some business, long engaged in peace industry, can no longer get raw material now going into implements of war. Fortunately some of these businessmen and manufacturers have been able to convert their machines and equipment. This makes them eligible for defense contracts and raw materials. Thus they can help make the helmets and hand grenades. However, many—all too many—seem unable or unequipped to do that. What happens then? Well, let's take a hypothetical case. Here is a small, peaceful, and prosperous community. The one large factory in this little town makes, let us say, garden implements. Many hundreds of the town's inhabitants work in that factory. Now along comes the defense program and priority regulations. The factory in the little town can no longer get all the steel needed to make garden implements. Rakes, trowels, and sprinklers aren't needed very much for defense.

At first gradually, and then in increasing numbers, men are laid off. Soon the factory shuts down altogether. Whole families of good Americans face a perilous future. And at a time, moreover, when their skills and determination are needed most.

Mr. POWELL. I gather, Mr. Fulton, that Senator MEAD's concern over this perplexing dilemma is occasioned in good measure by what he hears from home.

Mr. FULTON. Yes, indeed, Mr. Powell. He's getting letters in increasing numbers from people facing this tragic possibility. They all ask their Senator for a quick, fair solution. It isn't one easily arrived at. It will be reached, however, because America must finish this defense job and still stay in business when the war is over. For instance, we are locating the bottlenecks caused by defense demands, so they can be opened, thus holding the defense plan at express-train speed. We are studying how we can quickly put to work available tools and machines usable for defense. In other words, we want to see to it that this big job is so spread out that everyone can roll up his sleeves, spit on his hands, and pitch in. In that way our imaginary little town will be saved. The machinery and tools in the factory will be readjusted. Instead of rakes and trowels it will produce actuating pins for hand grenades and buckles for helmet straps. Gradually the workers will return to their jobs and life in our little community will go busily on.

With it all, Mr. Powell, Senator MEAD's mail does include a chuckle now and then. The man with his chicken, and then there's always the ingenious scientist who secretly tells us about a mysterious, all-powerful, death-dealing device almost ready for sale. Yes; the mail bag is always full and he'll probably never get caught up with it. He's still glad to get it. It's part of the way of life we're striving so hard to maintain.

Mr. POWELL. Thank you kindly, Mr. Fulton. And now to hear further from Senator BRIDGES, of New Hampshire, who indicated earlier in the program that his people back home were a bit skeptical about optimistic reports and headlines on the defense program. How about it, Senator?

Senator BRIDGES. Yes; they are skeptical and there are reasons, despite the fact we seem to have a booming defense industry. To get an accurate, over-all picture, we must realize that for this year we are planning to produce only $17,000,000,000 of defense materials, or about one-fifth of our total income. At best this is a modest schedule. But we're even 20 to 30 percent behind on that. And remember Hitler turns more than 45 percent of German capacity to war use. Yet only last week our Under Secretary of War made the statement that—and I quote him—"I doubt that more than 15 percent of America's productive endeavor is devoted to defense work." There's your true situation and it's not one to write home about. But you can readily see why people write to me about it here in Washington. Here is a typical letter. I quote: "Why aren't we moving faster? Why are we still so far behind on all our effort, when a year has passed since we started on this major program? Billions have been spent, but with insufficient result. Senator BRIDGES, what is the answer to this—that's what we people here in New Hampshire want to know."

Mr. POWELL. And Senator, what is the answer to that letter?

Senator BRIDGES. The answer, I am convinced, and I'm not injecting a partisan note here, lies in the lack of a single unifying agency responsible directly to the President, yet having full power to get this job done right. All too many Government units are now operating and often at cross purposes. If we don't adopt some intelligent way of pulling this whole thing together, America is heading for trouble. Let me refer to the situation on aluminum. I understand that when all the evidence placed before the Truman committee had been gathered, separated, and weighed they found that there was no one individual or agency upon whom the blame could be placed. All they knew was that there was a serious shortage with no one responsible for seeing to it that the shortage was made up. The same holds true of our machine-tool capacity. Fifty percent of such capacity is still idle this very day. That couldn't happen with responsible administration.

Mr. POWELL. Senator BRIDGES, do you not find that your constituents feel that the national program is not a thing apart, but very much an integral element of their daily budget? That is to say, Senator, that the people back home, the taxpayer, if you please, wants to be reassured that his extra tax dollars are not being spent for those things which are not basically part of our defense program?

Senator BRIDGES. Yes, Mr. Powell; the mail I receive which does not directly deal with Government contracts for defense orders, reflects a genuine concern on the part of the average voter as to whether there is not room for economy even in a super super spending program.

Mr. POWELL. You mean, Senator, to put it another way, that the rank and file of America has billions for defense business, but not one cent for monkey business.

Senator BRIDGES. Put it that way if you will, Mr. Powell, but in the words of those from whom I hear, America wants an accounting of its tax dollars.

Mr. POWELL. I see, sir. And what do you think the Congress ought to do in this respect?

Senator BRIDGES. It is hard to say, with the new revenue bill not yet out of the House Ways and Means Committee, but I am convinced that the new revenue bill should directly call upon the executive branch of the Government to specify wherein cuts can be made in Federal expenditures to the benefit of both taxpayer and the defense program.

Mr. POWELL. In other words, you feel the President himself should indicate to Congress how it can prune and where?

Senator BRIDGES. I do, indeed.

Mr. POWELL. Well, if I'm not talking out of turn, those are exactly the sentiments of the large membership of the Committee of Americans. And, in fact, the membership of this committee, individually and collectively, has urged upon the House Ways and Means Committee that a resolution accompany the new three and a half billion dollar revenue bill calling for a restriction of spending on all items not directly contributing to national defense.

Senator BRIDGES. Mr. Powell, I hope you're right, and I don't think your group or anyone intelligently seeking a cut in nondefense spending is talking out of turn.

Mr. POWELL. Thank you, Senator. What do people up your way consider as a typical nondefense expenditure?

Senator BRIDGES. No. 1 on the list of unnecessary things should be the proposed St. Lawrence waterway. This project would probably cost around $1,000,000,000. It would require from 6 to 8 years to complete. It would divert to a questionable project men and material vitally needed to build planes, ships, tanks, and guns.

Mr. POWELL. Aside from the vast cost of this project, do you feel, as a member of the Military Affairs Committee, that it might turn out to be a military liability instead of a military advantage?

Senator BRIDGES. I do feel it would be a liability. I have sat in committees and listened to the testimony of experts. I have talked with our military leaders, who have stated that if this country were invaded the best way for a foreign power to invade it would be down the St. Lawrence, splitting this country in two. In other words, if we should build the St. Lawrence waterway, we should be offering to any hostile invading power a paved highway to the heart of America.

Mr. POWELL. Thank you very much Senator BRIDGES. We have a few minutes left and in this interval, I would like to recall the chairman of the Special Committee Investigating National Defense, Senator HARRY TRUMAN, of Missouri. Senator TRUMAN, you said that your mail brought an inquiry from a mother who wondered whether her boy was comfortable at camp.

Senator TRUMAN. Yes, Mr. Powell, I have received not one, but many such letters.

Mr. POWELL. Fact is, Senator TRUMAN, I understand that your committee has been conducting an extensive investigation into Army-camp construction and partly because of the pressure from back home. Just what do you and your defense committee hear from back home in this respect?

Senator TRUMAN. I have been hearing plenty, Mr. Powell. I have received a surprising number of communications from persons who are shocked at some of the waste and negligence that they have seen. Also, I have personally inspected several of the camps and talked to the soldiers themselves. After all you can't expect an electrician, for example, who has been drafted at $21 a month to find pleasure in watching an Army camp building being completely wired three times. And you can't blame soldiers who were professional carpenters before the Army got them, for being indignant when they see a gang of highly paid novices standing around leaning on their ladders.

I do think that we all have to expect a certain amount of waste because of the tremendous emphasis on speed. But I for one have been amazed at the extent of this waste. In fact at the present time Senator WALLGREN, of Washington, a member of our defense committee, and Charles P. Clark, the committee's associate chief counsel, are out on the West coast investigating the defense situation out there.

I attribute this waste largely to the lack of proper planning. The Army had 20 years to prepare for this emergency, and, like most other Americans, I had always thought that when M-day came around the Army would simply open its files, take out carefully prepared plans, and quickly provide the necessary construction along lines predetermined long ago.

Mr. POWELL. But that wasn't the case, Senator TRUMAN?

Senator TRUMAN. No; the fact is that M-day or mobilization day came and they didn't even know it until several months later. And then it turned out that the plans available were all based on assumed facts. The assumed facts proved false, and hastily improvised plans had to be substituted.

Mr. POWELL. If you please, Senator TRUMAN, give us just one "for instance" to illustrate what you mean.

Senator TRUMAN. Very well. For instance, one camp site was presumably chosen because it was in an area having an adequate supply of water. It developed subsequently, though, that the same site had to be abandoned because of the actual inadequacy of the water supply.

Mr. POWELL. It certainly is no joking matter, but it would seem the situation you describe practically turned M-day into thirst day.

Senator TRUMAN. I can't exactly subscribe to that, Mr. Powell. But it was just one of those things which you are bound to find in a democracy which overnight girds itself to meet dictatorship. We start slowly, but we finish fast.

Mr. POWELL. I know you are perfectly right there, Senator.

Senator TRUMAN. Moreover, Mr. Powell, I am glad to be able to say that the Army did get the camps constructed in time; that they were in fact very good camps; and that the soldiers, furthermore, are today well housed, well fed, and well taken care of.

Mr. POWELL. Then your criticism, Senator TRUMAN, is what?

Senator TRUMAN. My criticism of camp construction is limited to criticism of the high cost, the waste, and the inefficiency. And you and I are going to have to pay for the cost, the waste, and the inefficiency in the form of increased taxation for years to come.

Mr. POWELL. Senator TRUMAN, the clock tells me I must forbear asking you and Senator BRIDGES and Mr. Fulton any further questions with respect to our national-defense program. But I see I have a few seconds to pay my grateful respects to you all. In this connection, and on behalf of Dean Emeritus Roscoe Pound, of Harvard, who is chairman of the Committee of Americans, I wish to thank you most appreciatively for your joint contribution of this third presentation of the Congressional Mailbag. Joining with me in this expression of gratitude are Prof. Edwin Kemmerer, of Princeton, and Berkley Thomas, who are respectively vice chairman and president of the Committee of Americans.

Senator TRUMAN. Mr. Powell, if I may have a second, I wish to say that we on Capitol Hill who have followed these programs of the Committee of Americans, bringing the legislative branch closer to its constituents back home, are happy to have the opportunity offered.

Mr. POWELL. Very kind of you, Senator TRUMAN, and thank you, Senator BRIDGES and Mr. Fulton for your part in the development of this program, the Congressional Mailbag. This is Royce Powell saying good night.

ANNOUNCER. You have just heard from two United States Senators appearing on a presentation of the Committee of Americans entitled "The Congressional Mailbag." This program marked a third in a series of programs brought to you from Washington and featuring Members of both Houses of Congress who read from and comment on the mail they receive from back home. On tonight's program were Senator STYLES BRIDGES, of New Hampshire, a member of the Senate Military Affairs Committee, and Senator HARRY S. TRUMAN, of Missouri, chairman of the Special Senate Committee Investigating the National Defense Program, and Hugh A. Fulton, who spoke in behalf of Senator MEAD, of New York, a member of that committee. Royce Powell, acting for the Committee of Americans, presided over the opening of the Congressional Mailbag. For copies of this broadcast, write to Committee of Americans, 122 East Forty-second Street, New York City.

Unlimited Emergency

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

RESOLUTION OF PACIFIC NORTHWEST CONFERENCE OF SAVINGS AND LOAN ASSOCIATIONS

Mr. ANGELL. Mr. Speaker, the Pacific Northwest Conference of Savings and Loan Associations recently met at Gearhart, Oreg., at which conference approximately 300 people were present, representing the savings and loan associations from the States of Washington, Oregon, Idaho, Montana, Wyoming, and Utah. The conference adopted a resolution, which I ask to include in my remarks. The resolution follows:

Whereas there exists an "unlimited emergency" as declared by the President of the United States, it is incumbent upon us as citizens to consider well to what extent and in what manner we may best contribute to the welfare of the Nation:

First. By placing our personal time and talents at the beck and call of our leader, President Roosevelt;

Second. By placing the institutions which we represent in a position—

(a) To assist in furnishing housing in defense areas,

(b) To continue to finance homes in our several communities to the extent that such construction is justified by a healthy demand for housing,

(c) To use to the fullest extent the facilities of our institutions for the distribution of United States defense bonds;

Third. By anticipating the effect upon our industry of the national emergency and making recommendations to the Congress and to the administrative and independent agencies of our Government so that regardless of conditions, we may make the maximum contribution to our Nation's welfare during the emergency and also during the difficult transition from a wartime to a peacetime basis which will follow: Now, therefore, be it

Resolved, That this conference urge the immediate enactment of such legislation as is necessary for the further purchase of shares in building, savings, and loan associations by the H. O. L. C.

That a revolving fund be established consisting of the present unexpended portion of the prior appropriation, together with any and all future appropriations for such purchase; and be it further

Resolved, That the president and secretary of the Pacific Northwest Savings and Loan Conference send a copy of this resolution to each Member of Congress from the States comprising the eleventh home-loan bank district; to the Honorable Jesse H. Jones, Federal Loan Administrator; to the Honorable John H. Fahey, Chairman of the Federal Home Loan Bank Board; to the Honorable James Twohy, Governor of the Federal Home Loan Bank System; and to Mr. Morton Bodfish, executive vice president of the United States Savings and Loan League.

Lord Halifax Should Be Sent Home

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

EDITORIAL FROM THE GAELIC AMERICAN, NEW YORK, JULY 26, 1941

Mr. SWEENEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Gaelic American, New York, July 26, 1941:

[From the Gaelic American, New York, July 26, 1941]

LORD HALIFAX SHOULD BE SENT HOME

Lord Halifax never tires in his task to inveigle America into the present war to protect and extend the British Empire. Wherever he can secure a tolerant gathering, generally at luncheons, he tells his audience that his country is fighting for world freedom and democracy and he never fails to couple the United States as an actual ally of his country. Already the leaders of England talk as if the United States were their partner in the war against what they call the domination of the world by Hitler.

In their estimation Hitler is the big bad wolf and on the highways of the world they are denouncing him and begging aid from America and other countries for his defeat. So far they have been unsuccessful in their appeals and it is doubtful if they had any important part in bringing about a rupture between Germany and Russia. From the start of hostilities in Europe, Russia seemed to be

unfriendly to Germany. In the early stages of the war Russia moved her forces toward the German frontier and gobbled up a part of Poland after its people had been defeated by the German Armies. In the Balkan war she increased her forces on her Balkan front and though she did not actually interfere her forces remained as a constant menace to Germany which she regarded at least as a powerful rival. This threat remained so menacing and constant that war was inevitable for many months before Germany turned her armies eastward and invaded Russia.

England has pinned her hope of victory in American intervention and her officials in this country, including Lord Halifax and his aides and propagandists have redoubled their efforts to involve America in a foreign war.

Lord Halifax, the English Ambassador, speaking on July 18 at San Francisco, at a luncheon of the Commonwealth Club, coupled the United States with his own country. After paying a tribute to the Russians, he said, in part:

"If Hitler's campaign against Russia goes according to his calculations, and it certainly has not done so yet, we may expect that he will turn to us and make an offer of specious terms of peace. What are these likely to be? He may announce that, having conquered Europe, his ambitions are now satisfied; that Europe must remain a closed continent in which he must be allowed to do as he pleases, that he will leave the British Empire and the United States in peace, though trade and commerce would necessarily, in some circumstances, have to be carried on on his terms."

He said it is the settled policy of the British Government, and also the Government of the United States, to do all in their power to preserve peace in the Pacific.

Lord Halifax, if his words are to be accepted as sincere, regards the United States as an ally of his country in her war against Germany. As America has not yet declared war, this assumption on the part of Halifax is at least premature More than 80 percent of the American people are opposed to intervention in Europe's imperialist war and they are unalterably opposed to spilling American blood or wasting American treasure in a conflict which has no concern for them. Of course, Lord Halifax can fall back for justification of his statements on the words of Knox, Stimson, and other high-ranking members of the Washington administration. Our warmongers assert that England's war is our war and that she is protecting us against German invasion. The administration spokesmen take no note of the fact that Germany's hands are full, perhaps more than full, in her colossal campaign against Russia on her eastern frontier and with the British Empire with her colonies and possessions in every continent, facing her in other directions. Under such circumstances it is either foolish or dishonest to speak of Germany as a prospective invader of America. The warmongers go so far as to say that the invasion may come through Siberia, Alaska, and Canada. An invasion from the east is as impossible as an invasion from the west over the 3,000 miles expanse of the broad Atlantic. In the gigantic struggle waged at present in Russia we read that the German forces have been delayed in their progress by rivers, such as the Dnieper and lesser rivers. Has not the 21 miles of the English Channel prevented for nearly 2 years the invasion of England by Germany's Armies? In the World War the French rivers delayed the onward rush of the German legions? The talk of the invasion of America by Germany with the thousands of miles of ocean separating America from Europe is propaganda which can only deceive the credulous and uneducated. England's propagandists, in their efforts to create hysteria among Americans, are going to great lengths in spinning fairy tales of invasion via Siberia, Alaska, and Canada. The vast Atlantic is regarded as a rivulet by the scaremongers, but its waters remain as an insuperable obstacle to invasion from Europe.

At one time Lord Halifax and his hordes of propagandists would be called to task by a virile American Government for their stunts to involve this country in a war to protect the British Empire. In Grover Cleveland's time an English Minister, Lord Sackville West, was promptly sent home because of his interference in an American election. Today an English Ambassador and his aides are permitted to roam the country unchecked and unafraid in their frantic efforts to involve our young men in imperialist wars, and, furthermore, they are backed up by the Knoxes, the Stimsons, the Ickes, and the entire Washington Cabinet. Is the age of patriotism and Americanism gone?

EXTENSION OF REMARKS
OF
HON. ZEBULON WEAVER
OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

EDITORIAL BY DAN TOMPKINS, EDITOR JACKSON COUNTY (N. C.) JOURNAL

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Hon. Dan Tompkins, editor and owner of the Jackson County Journal, published at Sylva, N. C. The editorial is as follows:

[From the Jackson County (N. C.) Journal of July 24, 1941]

V-5

The symbols are appearing everywhere in the German-occupied portions of the continent of Europe. V, the first letter in victory, is also the Roman figure 5. Hence the numerous variations, the figure 5, the Morse code for victory, the playing of the Fifth Symphony, and so on, has spread throughout the continent like wildfire. Hundreds of arrests have been handed out. And yet the V symbol appears everywhere, on buildings, is tapped out in Morse on the tables of cafes, is heard on radio receivers, appears on windows, walls, sidewalks, barns, outbuildings, on the backs of German soldiers, on the German Embassies in Rome, Istanbul, Madrid, and every conceivable place from the fjords of Norway to the blue waters of the Mediterranean. For V stands for victory for democracy and Christianity over this new tyranny and new paganism. The V's are said to irk the Germans no end. It is the pledge of man to man and woman to woman that the freedom-loving peoples will continue to struggle until the light once more wipes away the darkness of this new night that has settled like a miasmic mist upon Europe, the cradle of our race. It also causes the Germans to tremble for it is the living symbol of unconquerable mankind, a token of the great caldron of wrath that is brewing. "Mine eyes have seen the glory of the coming of the Lord. He is trampling out the vintage where the grapes of wrath are stored."

Little would one have dreamt, a few years ago, that history would so far repeat itself as to recur to the days when Christianity was living underground in the catacombs of Rome; when the symbol of the fish was the shibboleth by which the followers of the light, that was brought into the world by the Nazarene and spread throughout the empire by the fishermen of Galilee, made themselves known to each other and defied the temporal power of Rome to forever imprison the souls of men or to keep light and liberty in hiding beneath the ground.

There is a marked similarity between the then and the now; between the V and the fish. Both quietly hurled their defiance to the tyrant and his cohorts, and brought the rays of hope to the hearts of sorely oppressed men and women.

There is one difference. The Christians of the catacombs were waging their campaign alone except for the power of God, who always bides His time and brings better days when the fullness of time arrives. The V army in Europe has behind it the power of the British Empire, the blessings of the United States of America, and the prayers of the sons of liberty everywhere.

V stands for victory. And a British victory is the hope of the restoration of liberty to men and women, of a return to sanity and the days when a human being will be recognized as the most valuable of all earth's riches. Liberty and Christianity are again going through the fiery trials. The aim of the Hitler revolution is to wipe both from the face of the earth; and Hitler indicts himself of that charge in his own words:

"Two worlds are in conflict, two philosophies of life. One of these worlds must break asunder. Can a dynamic revolution stop at a sharing of the world? Must not the struggle continue until the final world dominion of a single nation? My motto is 'Destroy by every means.' So-called international law will not check me—one is either German or Christian. You can't be both."

There you have the truth, the meaning of all this titanic conflict, and from the lips of Hitler himself. Germany has set about to blot out the Bible, both Old and New Testaments, to destroy by every means known to man or devil, Judaism, Freemasonry, and Christianity, for the reason that the teachings and philosophies of these stand in the way of his hopes of enslaving the bodies and the souls of men, of substituting totalitarian frightfulness for fredeom, and of forcing all Germany to do the will of Hitler, and all the world to do the will of Germany.

Winston Churchill has said that the mightiest weapon the Empire has is the spirit of the people That is profound truth. It is impossible to overcome spirit by physical force. For that reason, of all the diabolical weapons used by Hitler, the propaganda is the worst, for it is directed not against physical armaments but against the spiritual bulwark of the free peoples. By cunning lies, frequently repeated, by half-truths reiterated, the way was paved between 1918 and 1939 for the present assault by Germany upon the free institutions of the world. How cunningly that propaganda was devised, how potent it was, is proved every day. It enervated France until she folded up like a mushroom when the attack by force came. It held the British people within its grasp until the real truth was so apparent that anyone could read, and until it was almost too late to retrieve the threatened liberties of the peoples of the Empire. It was taught in the schools in America, preached from the pulpits, hurled at our ears over the radio, published in our papers and magazines, and spoken from the platform, until the voice of sanity and of the traditional love of liberty in America was almost drowned out. Its manifestations became a national disease and a national scandal. Youth movements that recognized not the ancient landmarks of freedom as set up by our fathers swarmed over the land like a pestilence. Pacifist groups were so powerful that the American Legion could not make its voice heard in the councils of the Nation.

The majority of Americans actually believed that the Treaty of Versailles was an atrocity, although our country was not a signatory to it, and although a young German had been sent to a concentration camp for

an indefinite time for expressing the opinion that its terms were not nearly so harsh as those that would have been imposed had Germany won the last war. Many Americans, the majority, we believe, came to the conclusion that American participation in the last war was a mistake, that our leaders were duped into entering it, that those of us who waged it in mortal combat were imbeciles and fools, and that our country was actuated by the low motive of trying to save somebody's money (whose, it was never said, except for the indefinite term "international bankers") instead of the high purpose of preserving the liberties that had been so dearly won for us by our forebears. It brought about, in 20 years or less, a complete reversal of the thinking of a great Nation regarding practically every principle upon which our country was founded and for which it had ever contended. In other words, it made us a different nation, for, "As he thinketh in his heart, so is he."

When the physical onslaught came France fell, Britain had to again find her soul, and America had to regain her high principles.

The V in Europe, the spirit of the British, and the reawakening of America are the answer to the German horror. The spirit of freemen will again sweep the world clean of this unutterably filthy thing that Germany has set up for all the world to worship.

A Slight Case of Confusion

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

EDITORIAL FROM THE ROXBURY (N. Y.) TIMES

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Roxbury (N. Y.) Times of July 26, 1941:

[From the Roxbury (N. Y.) Times of July 26, 1941]

A SLIGHT CASE OF CONFUSION

It is no novelty, to be sure, to find various departments of government working at cross-purposes. But political thinking on the subject of the automobile industry's place in defense offers a particularly interesting current example in this line.

It was only about a year ago that the Federal tax on gasoline was raised 50 percent to meet defense needs. Now a further jump of 65 percent is being debated.

Meanwhile an administration spokesman is talking in terms of gasless Sundays and other measures to cut down the use of automobiles. Proposals are also advanced to cut down the production of cars even more drastically than originally planned and to place a tax on the sale of each new and second-hand car—the latter a deterrent tax aimed more at cutting down purchases than at raising revenues.

It may be naive in this period of Alice-in-Wonderland economics to invoke simple rules of mathematics and logic. But it is hard to see how the Government proposes to raise higher revenues by raising tax rates and then greatly curtailing the operations that are being taxed. In otherwords, you can't take the cake and then expect to have it given to you, too.

The International Situation

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

LETTER OF HON. JOHN J. O'CONNOR, FORMER MEMBER OF CONGRESS, TO THE EDITOR OF THE WASHINGTON TIMES-HERALD

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely letter by our former colleague, Hon. John J. O'Connor, of New York, to the editor of the Washington Times-Herald. When metropolitan newspapers pose the question, "What the hell is going on, anyhow?" it is time for the Representatives of the people in Congress to forget their partisanship and find the answer to what is going on in many of the responsible agencies of our Government.

WASHINGTON, D. C., *July 24, 1941.*

EDITOR, WASHINGTON TIMES-HERALD,
Washington, D. C.

DEAR SIR: The editorial in today's issue titled "President of the World?—Maybe," winds up with "What the hell is going on, anyhow?'

That question should be the keynote expression of all thinking Americans. Some of us have been saying it for a long, long time. It should serve to counteract the prevailing slogan of surrender, "What can you do?"

The latter cowardly expression plays right into the hands of those who intend to do what they want to do—lead us into war.

"What can you do?" now fall from the lips of even Republican leaders in Congress—and out. Our leading citizens of both parties seem to have succumbed to this apathetic attitude—"planned that way."

At least one of the fallacies pervading the whole situation, as evidenced in the recent about-face of some leading columnists, for instance, is that each step taken becomes an irrevocable premise. "There's no going back" they say, even though the start was all wrong. "There's no stopping now." Let the drunkard drink himself to death. He shouldn't have got drunk in the first place—or was it "the second place"?

That logic of keeping on going after the first false step—or even many—seems to pervade our best minds.

There was a day, however, when some men were big enough to call a halt, long enough, at least, to say, like you, "What the hell is going on, anyhow?"

"What is all this?"

"What got us into this mess?"

"Let's pull one foot out of the mud before the other gets in."

"Let's call a halt."

There still must be heaps of people thinking that way, who, with a little encouragement, may yet dare to stand the "smear" of "Roosevelt hater," "appeaser," "pro-Nazi," etc.

Schicklgruber was O. K. when Mr. Roosevelt telegraphed him to go ahead with the Munich plan and swallow Czechoslovakia.

Big Joe was N. G. when he was tied up with Schicklgruber. Now he's aces.

It all makes one dizzy—and, of course, that also plays into the hands of the dreamers of Union Now and a World-Wide Democracy with such "democratic" components as the British Empire, China, Greece, Russia, et al.

However disappointing it may be to Mr. Roosevelt, I now nominate "Pal Joey" as the most logical, best qualified head of that potpourri.

Keep up the good work.

Minorities have often been right.

Sincerely yours,

JOHN O'CONNOR,
Former Congressman.

Declaration of Independence

EXTENSION OF REMARKS

OF

HON. WILLIAM B. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

EDITORIAL FROM THE BROOKLYN TABLET

Mr. BARRY. Mr. Speaker, I recommend the following editorial from the Brooklyn Tablet, entitled "Declaration of Independence," to my colleagues as worth-while reading during this hysterical period through which we are now going:

DECLARATION OF INDEPENDENCE

Next Friday Americans will celebrate the Fourth of July. We shall commemorate the signing of the Declaration of Independence which is reprinted on another page. This epoch-making document announced to the world that the American people, then numbering but 3,000,000 people, were able to run their own affairs. They told foreign governments to clear out of the country, that this Nation no longer depended on Europe for its life.

As we celebrate this eventful day in the year of our Lord 1941, Americans should once more tell the world that ours is a free and independent Republic and no invasion or external interference with our life will be permitted.

The Declaration of Independence on this year takes a new face because the United States is threatened, aye, is suffering, from a new invasion. There are foreign agents here galore; there are organizations in defiance of our Constitution, insisting on "Union Now"; aye, there are those who think the United States should be run from 10 Downing Street, London; and on the air we hear British officials in London telling us what to do, when to do it, and how to do it. As a matter of fact, more is suggested to us than if we were one of the dominions.

On July 4, 1776, Americans expressed their desire to be rid of foreign entanglements. They wanted the world to know that this Nation was independent of foreign rule, of the hates, divisions, jealousies, and wars of ancient nations.

The tablet follows the ideals set forth by our forefathers. We think it was a blunder to have entered the World War in 1917. We

stated mixing in foreign entanglements was not only contrary to the lessons taught by our forefathers and contrary to the Declaration of Independence but was an outrage on the American people. For more than 2 years before the present war commenced, and ever since, we have consistently stood for the sound teachings of the fathers of the Republic. We have received direction in the Holy Father's message; namely, "Nothing is gained in war that cannot be achieved by peace; in war all is lost." For these reasons, among others, we have said, and the common people overwhelmingly support our position, that the stupid suicide of Europe is something we should avoid.

Do not Sunday's events prove once more the sound judgment of the vast majority of the American people? Two of the dictators have fallen out. The vicious Hitler attacks the equally vicious Stalin—leaders of two corrupting regimes which all true Americans denounce and in which they will have no part. Several hours after those two totalitarians got together, Winston Churchill, Prime Minister of Great Britain, in a typical blood-curdling dictatorial speech, threw off the mask. The British Empire, which we have been told was fighting for the highest ideals for civilization, liberty, and even God, as Mr. Churchill said, grasped the hands of Stalin as an ally. Here is Stalin, his hands dripping with the blood of Christians and Jews, the worst persecutor of Christianity since Nero, the foe of the family, and the champion of nihilistic revolution, the partner who gave Hitler the go-ahead signal to start the war, the invader and robber of large sections of China, of Finland, of Rumania, of Poland, and the aggressor who seized all of Lithuania, Latvia, and Estonia, and the man who sent his agents all over the world plotting the destruction of Christian civilization, this man now becomes the ally of Great Britain, the one whom Mr. Churchill is pleased to embrace.

Is not Churchill's expediency about the same as Hitler's, Stalin's, and Mussolini's? Is he not as cold-bloodedly anti-Christian in violating pledges, in ridiculing ideals, in championing anti-God?

What is more degrading is the brazen effrontery of the Prime Minister in telling the United States—this Nation dedicated to God and freedom of religion—to follow his lead in marching alongside of Stalin, Satan's satellite. In this respect it was shocking to Americans to read that President Roosevelt on Tuesday accepted Under Secretary Welles' tortuous reasoning that the end justifies the means, that expediency is superior to principles; that the Soviet beliefs are immoral but the Soviet aims are godly. Only recently, on May 27, 1941, President Roosevelt in his radio address in speaking of the possibility of a Nazi victory, said: "Even our right to worship would be threatened. The Nazi world does not recognize any god except Hitler, for the Nazis are as ruthless as the Communists in the denial of God. What place has religion which preaches the dignity of the human being, of the majesty of the human soul, in a world whose moral standards are measured by treachery and bribery and 'fifth columnists'?" Now, however, the President indicates that American treasure and goods will be made available for an anti-American, Christ-hating government which is the antithesis of everything for which freemen stood. Soon, perhaps, it will be bundles for Moscow, then a change on our coins from "In God we trust" to "In Stalin we trust," then the placing of Browder on a throne of fame, and finally American blood being shed abroad because a boat was sunk at Vladivostok or "Siberia is our first line of defense."

In the war which now has degenerated into a fight between Hitler and Stalin, with England but an onlooker, any aid we give to either of these tyrants means that morality is gassed, liberty shelled, the four freedoms mined, Christianity sabotaged, and American civilization betrayed.

Americans should stand as one in saying we cannot have any part in this imperialistic and hypocritical championing of Soviet Russia. We have sympathy for the suffering Russian people—like Churchill has—and we have sympathy for the suffering German people—which Churchill has not—but we have no support, no friendship, for the gigantic Russian liquidating machine which has been a curse to humanity. The traditions, the history, the ideals, and the sound sense of our American people forbid any truckling, any partnership, any support even indirect, with these Communist and Fascist destroyers of life, liberty, and the pursuit of happiness. Catholic Americans in particular cannot have any part in supporting the master of the Kremlin for, as Pope Pius XI said in his Encyclical on Atheistic Communism.

"See to it, venerable brethren, that the faithful do not allow themselves to be deceived. Communism is intrinsically wrong, and no one who would save Christian civilization may collaborate with it in any undertaking whatsoever. Those who permit themselves to be deceived into lending their aid toward the triumph of Communism in their own country, will be the first to fall victims of their error. And the greater the antiquity and grandeur of the Christian civilization in the regions where Communism successfully penetrates, so much more devastating will be the hatred displayed by the godless."

Aside from assisting Stalin in Europe abroad we must not forget the vast, well-organized army in the United States dedicated to the furtherance of the socialistic aims of Soviet Russia. By joining with Russia, as Churchill wishes, we clasp the hands of the Communists here for the purpose of defeating the paperhanger menace. Joining with Russia means a Declaration of Independence for the "reds" in America from all the ties which bind civilized, Christianized, and democracy-loving people who love America first.

Sunday's events once more tell Americans we should keep out of this insane war and indict the judgment of those who favor giving our substance and pledging our future to either side in the war. If Germany conquers Russia, we have the triumph of the hated nazi-ism; if Russia defeats Germany, we have the triumph of the hated communism. We want neither. We stand for America and America at peace. Keep America out of war; keep war out of America. Uphold our Constitution, which includes, "Treason against the United States shall consist only in levying war against them or in adhering to their enemies, giving them aid and comfort" (sec. 3, subdivision 1, of art. III).

The Declaration of Independence was founded on a united America, free of obnoxious ideologies which have made Europe a playground for war. Our forefathers hated no nation. They loved freedom and peace and for this reason they resolved to mind their own business and to listen only to Europe's appeals for charity. It was this spirit which made America strong, self-reliant, and not a cringing supplicant or a reckless and stupid spender of the lifeblood and patrimony of its future children. Make 1941 a great day for celebrating our American independence and tell the defeatists, who think this Nation cannot defend itself, and the international warmakers, who would sacrifice American youth abroad, and the "Union Now," "Hands Across the Sea" groups, as well as the Communists, Fascists, Nazis, you have no place here. This is the American Nation—land of the free and home of the brave—and not a group of automata or sheep, fit to be ruled but not to rule. Away with war, away with foreign entanglements. Let that be the Declaration of Independence, of peace and defense in 1941.

POEM BY EMMA LAZARUS

Mr. DICKSTEIN. Mr. Speaker, this week marks the ninety-second anniversary of the birth of Emma Lazarus, an American poetess, who died at the untimely age of 38.

Miss Lazarus' name appears in many anthologies, and she is best known for the poem which adorns the Statue of Liberty at the entrance to the New York Harbor, and which reads as follows:

THE GOLDEN DOOR

Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore,
Send these, the homeless, tempest-tossed to me:
I lift my lamp beside the golden door.

Remedy Versus Subsidy for the Farmer

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 30 (legislative day of Monday, July 28), 1941

ADDRESS BY HON. GUY M. GILLETTE, OF IOWA

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by me on the subject Remedy Versus Subsidy for the Farmer.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Unfortunately in the past the farmer has had to pay for the wars. I hope that we can arrange matters better next time. The farmer has had to pay for them, because, unlike industry, he is not organized to take care of himself in the great economic upheaval which wars create.

Obviously I am in favor of helping the farmer in these great emergencies by Government subsidy or any other means which are necessary for his survival, and have consistently supported such proposals in the Congress, but I am far more interested in relieving the causes of his distress rather than in treating the symptoms. One of the potent causes is the great, closely integrated business organizations, on the one hand, and the disorganized farmers on the other, which results in the farmer both selling and buying in controlled market when all of the cards of the game are stacked against him.

The whole pressure of the present emergency is against the interest of the farmer. We must keep down food prices in the interest of the consumer; we must follow the good-neighbor policy with Latin America by holding down prices and perhaps taking some of their farm surpluses; we must absorb the domestic surpluses arising from reduced exports by a policy of low prices; and under the defense program we must throw more and more of our raw materials and labor into the war machine to the detriment of the farm population which must buy from the pool of depleted necessities.

In the long run we may have to assist the farmer in this unbalanced emergency even more than under present provision of law, but I should prefer to treat the disease first rather than the symptoms; namely, to open up free rather than controlled markets for the farmer's products and reduce the prices through some competition in the things the farmer must buy.

The farmers are approximately the only group yet remaining who must produce all they can and sell at any price the buyers offer. The industrial world, on the other hand, is in a position to decide in advance how much it will produce and what the price shall be. A few great companies in each of our major industries are in a position to dictate price and production policy.

I should like to emphasize this point with a few figures. The iron and steel industry turns out products valued at about $8,000,000,000 annually; yet a dozen or 15 steel companies dominate the whole with 3 or 4 companies producing 75 percent of the total. Petroleum products amount to about $2,500,000,000 annually, with 20 companies covering most of the field, of which a half-dozen are dominant. Rubber products run to $1,000,000,000 annually, with 4 companies producing 80 or 90 percent.

Contrast this concentrated control of industry with the farm situation. There are approximately 7,000,000 farms in the United States supporting a farm population of around 35,000,000 people, producing farm products valued at approximately $7,500,000,000.

Stated in other and more startling terms, ten to twelve million farmers produce products valued annually at something less than the values produced by 15 or 20 steel companies. I submit we should do something about this situation before we talk about the burden of subsidizing the farmer. One chance in a million as compared with the large industrial organizations are odds against the farmer that should be reduced.

But what shall we do about it? The first and most obvious step is to call for a more vigorous and pervasive enforcement of our antitrust and monopoly laws. In the long run, we may require more legislation to break up some of the great industrial organizations which are hampering trade, but I agree with the representatives of the Department of Justice that with a little money we can go a long way toward breaking up these log jams without passing more laws.

There are all stages of legal and illegal organizations which dominate American industry to the detriment of the farmer and the consumer. I shall start in with perhaps the most innocent one from a superficial point of view; namely, large size. Fancy anyone trying to make headway in a competitive struggle against the United States Steel Corporation, the Standard Oil Co., or the Aluminum Co. of America. It is true that they may allow competitors to exist, but only on sufferance.

Another form of the same problem is the dominance of these large concerns over prices. It is taken as a matter of course that when the United States Steel Corporation or Bethlehem—or even Republic or National Steel—announces a price of $50 per ton for black sheets, that is the prevailing price. Of course, no small company can sell sheets a dime a ton more, and they would be foolish to price them at a dime a ton less if they sold enough to attract attention. The dominance of this force, which the economists call "price leadership" can scarcely be overestimated. What fixes the prices even under the most innocent circumstances, not to mention monopoly agreements, of such products as gasoline, tobacco, chemicals in a hundred forms, cement, lumber, agricultural implements, beef and pork, and cattle and hogs? The answer is both simple and startling. A single, large, dominant corporation announces the price at 10 o'clock some morning and that's the price for the United States until further notice. This is a long way from our old standby, supply and demand.

In a few industries the number of producers is sufficiently numerous to cause the leadership method of price fixing and control of the industry to be somewhat awkward. When there are 50 or 100 concerns, they sometimes get their wires crossed. This situation, however, is readily taken care of by the device of trade associations. Fancy a midwestern farmer competing with a great trade association. I assume that most of the trade-association activities are technically within the law, but I am speaking of the broader problem of industrial organized control as against the chaos of the farm situation. A few well-placed statistics put out by trade associations can do wonders toward keeping the boys in line. Some of them go so far as to show the individual position of each producer each week or each month. If one gets out of line on his production or price, a telephone call can usually take care of that.

Still within the framework of technical legality we next have the fair-trade laws in 44 of the 48 States to hold the price lines from the producer through the wholesaler and jobber down through the local retailer to the consumer. Imagine what a furor would be created if I should introduce a bill enabling the farmer to fix the price of a Poland China hog or a Hereford steer all the way from the farm through the slaughterhouse, to the regional distributor, down to the butcher shop in the sale to the consumer. That, I submit, would be downright socialism or something equally reprehensible. Yet Swift & Co. and Armour can do it under the fair-trade laws, if they want to, after they have stamped their brand on the beef or the pork.

The next step in the organized control of industry is still within the framework of the law, in many cases, regardless of the shady details. This method of control is through patents. Apparently what can be done through a patent control is scarcely less than startling. We have been taught to believe that patents are the very foundation of our industrial supremacy; that poor but honest inventors contrive machines, patent them, and thus lead the whole community to prosperity. As a matter of fact, that apparently is not the way the patent racket is run. In the first place, the overwhelming percentage of patents are taken out by great corporations on the broad chance that the stream of them which comes out of their shops and laboratories may be useful to the company for various purposes, including forestalling and blackmail. In the second place, the great majority of them may be found to be not fundamental improvements, but mere gadgets added to a machine to control its price.

I understand from those familiar with the patent situation that after a basic patent on an important product has expired—perhaps 50 years ago—there will be found a constant stream of minor improvements released in anticipation of the 17-year patent law, to keep control of the price of the product for several generations. In fact many firms have a reserve bank of patentable gadgets which will carry the control into the next century. For example, the farmers look forward to the development of the frozen-food industry in the United States as a means of freezing their surpluses in a different sense than we now talk about freezing the cotton surplus. I venture to predict, however, that the frozen-food industry will benefit the farmer only to the extent that the several owners of the patents will decide it is wise to do so.

The same sort of problem confronts the farmer with respect to many other food processes. I understand that the few great dairy companies either secured their start or are perpetuating their control through patents on many dairy processes. The cheese dealers took a new lease on life when one of the great companies patented the process for making "processed cheese." Ice cream has had its share of patent control. Milk containers, which are less cumbersome than bottles, are now patented. Even doughnuts are now subject to a levy for the doughnut machines. As for the new flour—the so-called reinforced or vitamin flour, I shudder to think what someone will do with the patent process on this product unless there is timely control of the situation.

The patent control on food processing is, of course, only half the story. The other half is the strangle hold the patent monopolists have upon the products which the farmer buys. This extends all the way from the unending series of patented gadgets on agricultural machinery down through the various patented processes for making gasoline to the patented chicken feed which he feeds the hens. Even the medicine which he gives his children is likely to be patented or controlled by other means which makes it equally expensive.

After patents comes the indefinite stream of industrial controls which are not reputable enough to have a name, except the blanket ones of monopoly and collusive agreements. It would be impossible for me to name them in the short time available, even if anyone could know a fraction of the details. In the case of livestock and meat products, for example, a generation ago the Government forced the packing houses to divest themselves of the control of the stockyards. The packers turned this necessity to good account by going out to the farms and buying the livestock at prices prevailing on the day they reached the market. Then, with the big buyers out on the farms instead of in the terminal markets, the stock was sold to a few dealers at ruinous prices and used as a basis for settlement on the arrivals. This sounds complicated, but it is quite an easy and effective way for beating down farm prices of livestock. The same thing happens, I understand, with much of our fruit and vegetable products. Huge quantities will start toward the market priced on-arrival basis. When they arrive, the big buyers step out from under and let the hucksters quote prices on the ruinous surplus in the market. In the case of cheese, I understand, the game is much better organized. At 2 o'clock each Friday afternoon 10 or a dozen great cheese dealers meet for lunch in Plymouth, Wis., a village of about 4,000 population. After lunch they meet for a few minutes and fix the price of American cheese for the whole United States for the coming week.

In the case of milk the procedure is more complicated, but perhaps equally certain. The farmer will get 4 or 5 cents a quart for his milk, the distributing dairy will get 6 or 8 cents' margin, and the consumer will pay 12 to 14 cents.

In the case of truck crops, the farmer is usually no longer a farmer but a hired man working for the great fruit and vegetable dealers in the terminal markets. They tell him how much potatoes, tomatoes, or cabbage to put out, how much fertilizer to put on them, how to pack them, when to deliver them at the railroad or truck station, at which point they take charge of the proceeds of his labor. From then on the railroads, the truckers, and the various groups of dealers all take out their share. If there is

anything left, the farmer gets a part of the remainder. If there is nothing left, as is often the case, the dealers will lend the farmer money for the next year, because they have got to have the supply as the seasons roll around.

This procedure, of course, is essentially characteristic of the whole agricultural industry. If there is anything left, the farmer gets a part of it. If not, he goes in debt.

If you will look at the price charts of most finished products made from agricultural commodities, such as the various cuts of meat, lard, vegetable oils, fruits, and vegetables, and canned goods of all sorts, you will see that the price curves go up and down violently as if there were a lot of competition in these industries. If you will look a little deeper, however, the basic tendency is for each of the several processors and handlers to take out their share of the market value at as near a constant figure as possible and leave the tail end, namely, the farm price, to take care of itself. This, of course, is the very essence of control—being able to get yours and let the fellow below shift for himself.

What can be done about these industrial organizations against which the farmer and the consumer are largely helpless? I think the activities of the Antitrust Division of the Department of Justice in recent years has pointed the way to the answer. Primarily we do not need new laws but adequate enforcement of the old laws to break up these log jams in the manufacturing and distributing processes. Beginning in 1938, the Antitrust Division had 265 defendants in court and 923 complaints of monopolistic practices in its files. This activity grew throughout 1939, and with some substantial increase in appropriations for 1940 there were nearly 2,500 defendants in court and almost 3,500 complaints in the files. According to present estimates for the year 1941, there will probably be more than 3,800 defendants before the year is over. Speaking more specifically, the Antitrust Division, in addition to a multitude of what might be termed "run of the mill" cases, has made organized drives in several lines of industry with a view of getting away from piecemeal enforcement into the more effective prosecutions covering an industry as a whole or groups of related industries.

During the past year there have been a number of indictments in the lumber industry, for example, on the grounds of price fixing, restriction of output, and the improper use of the grade markings on the lumber. These cases have retarded the rise of lumber prices during the present emergency when the great demand for Army cantonments and defense factories has strained the resources of the industry.

Another significant group of cases brought by the Antitrust Division are those covering the whole fertilizer industry. A total of several hundred firms and individuals have been indicted, and in spite of threatened shortages due to the elimination of foreign sources of supply of some fertilizer materials, such as potash, the price structure has held an even keel under the observation of the Department of Justice. In some areas of the country there have been net decreases in the price of fertilizer materials in spite of the abnormal conditions.

The Division's unified drive on the petroleum industry has also been beneficial to farmers as well as to other consumers. In the Washington area, for example, which operates directly under the eye of the Antitrust Division, prices have ruled about 2 cents per gallon of gasoline less than the regular prices throughout the country. The filling stations call this 2 cents a "discount due to price wars." As a matter of fact, it is an approach to reasonable prices of gasoline due to some competition among local filling stations. This figure of 2 cents can run into an enormous sum of money for the country as a whole. On the basis of an annual consumption in the United States of about 25,000,000,000 gallons, 2 cents per gallon amounts to $500,000,000. Taking into consideration farm tractors, trucks, and the family car, a saving of 2 cents per gallon, especially on a cash outlay, is an important sum to the American farmers.

The present abbreviated drive of the Antitrust Division on food processing and distribution will aid the farmer in two ways: First, as a consumer of these processed products; and, second, in offering him a freer market in which to sell his products. This term "free market" for farm products sounds too general and theoretical to carry much weight to the average man. Perhaps a more concrete meaning of the term will be more significant In many areas of the country, as motor trucks hauling the farm products to market approach the city limits, they are met by representatives of the truckers' union. In some cases, the farm truck may have to be unloaded and the produce transferred to a union truck. In other cases the union driver climbs up beside the farmer and rides into town for a fee of $8 to $10. In other cases four men, at high wages, must unload crates that one or two men can handle.

In other cases the farmer may deliver the product to the market but he cannot deliver it to the buyer; he must stop in the middle of the street and have a union truck transfer it at a high price, and perhaps deliver it the remaining distance across the street. In still other cases the terminal distributors have agreed with the union truckers that they will neither accept delivery of farm products from any other trucks, nor will they sell to anyone who uses nonunion trucks to haul it away. Stated in these terms, the lack of free flow of goods from the farmer to the consumer has a definite and sinister meaning. I am told that a 3 months' investigation of the food-distribution problem in the city of Philadelphia last summer has done more to clean up a bad situation in getting the food from the farm to the table than anything else that has occurred in a generation in that city.

With these concrete examples before us as to what a little enforcement of the antitrust laws can do in the way of aiding the farmer and getting his products to those who need them, the way is clearly marked for a solution of many of the important farm problems. I therefore am in favor of a substantial increase in the appropriations for the Antitrust Division, especially in view of the fact that during the past year it has gone far enough into the food-distribution problem to know its far-reaching consequences and to be able to throw a large group of men into the field at a minimum of time and with a well-organized program which has been developed gradually during the past year. Speaking specifically, I take Mr. Arnold at his word when he says that he needs at least a million dollars more to develop his campaign against restraint of trade in the vital industries of the country in the present emergency.

No A. E. F.

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, July 30 (legislative day of Monday, July 28), 1941

ADDRESS BY HON. GERALD P. NYE, OF NORTH DAKOTA

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the senior Senator from North Dakota [Mr. NYE] on Saturday, July 19, 1941, over the facilities of the National Broadcasting Co.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It may seem ages ago that America was quite unanimous and vociferous in its cry of "Never again," meaning there would be no toleration of effort to move our country into another European war. But it was really only 2 years ago when memories of our last experience in Europe were still sufficiently clear to let us see what folly it would be to let ourselves be taken again into the wringer across the Atlantic. But propaganda and its children (emotionalism, hate, and fear) have so dimmed those memories that we have had fastened upon us a wartime spirit which at once threatens with another American expeditionary force.

Go back to the beginning of this propaganda blitz which has brought dullness to our memories; go back to 1938 and 1939, when Europe was showing first inclination to suicide. Starting there, trace those innocent short-of-war steps, beginning with repeal of the arms embargo. It was following that step that the President vowed a determination to keep Americans and their ships out of war-infested waters. But our steps since, by the same President, have our boys and ships in Iceland now, just a hop from the battlefields of Europe, a hop waiting, perhaps, only for approval of the present pending request of the President for the surrender of more power to him by Congress.

But, going back 2 or 3 years, survey, if you dare, what has been happening to our sight, our hearing, and our thinking—changes which put to shame the accomplishments of the man on the flying trapeze.

Back there in 1939 our cry was: "Save France!" Today we consent to starve France.

Less than 2 years ago our hearts bled for courageous little Finland. Today we speak harshly about the same Finland, because she takes the one means at hand to win back the sovereignty she lost in 1939.

Russia, a few months ago, was counted a terrible creature waiting to eat the flesh of a Europe that was killing itself. Today, well, today we fold our arms about her.

One year ago the "best" of our American society started knitting, sewing, and bundling for Britain while it deplored the awfulness of Russia and her aid to Hitler. Today we cheer Russia, and if only she will continue to hold her own against the Nazi hordes, we'll soon be playing the game of "bundles for Russia" while we condemn Finland and Germany for their war upon "blessed Russia."

Of course, all these gyrations are in the interest of democracy, in the name of humanity, and dedicated to the salvation of civilization.

What manner of thing is it that has so turned us upside down and inside out?

What is it that had folks like Dorothy Thompson chasing communistic Russia all over the pages of American newspapers just a few months ago and then, of a sudden, had her writing this: "The Communist revolution has not been a real menace anywhere."

What is it that causes Walter Winchell to thirst for European blood (blood to be drawn by other Americans than himself, of course) when in 1939 he was writing:

"Once again Europe is rolling the loaded dice of destiny. And once again America is asked to play the role of international sucker. The time has come for us to pause and consider. If we must have another Unknown Soldier, let us not ask him to die for an unknown reason: And just what will be accomplished by dying in the mud? He will not increase America's resources; the last war nearly ruined our fertile lands. He will not increase America's wealth; in the last war we

loaned our gold and were gold-bricked in return. America must learn that her sons abroad will bring monuments to her glory—but her sons at home are a monument to her common sense. The future of American youth is on top of American soil—not underneath European dirt."

What it is that has done these things to us and opened our mind to consideration of another A. E. F., of course, is propaganda and her children—hatred, fear, emotionalism. It is propaganda made bold and brazen by the encouragement of our country's top officials. So bold and brazen have become the foreign propagandists operating in our land that they dare to berate and question the Americanism and the integrity of such Americans as will not consent to the pouring of America's best blood and her wrath into the destruction Europe again visits upon herself.

This propaganda, plus a hunger for war profits, has so successfully blinded us that we've consented to step after step to war while the interventionists preached that they were only steps to peace, steps to avoid war.

At the moment this blindness has our Government in danger of breaking faith with hundreds of thousands of American men and boys who have been giving a year to the tuning up of our preparedness for the worst that might come out of Europe's war. Likewise, creeping up on us is the demand for new powers for the President, power to send our troops and our ships wherever he chooses to send them. We may expect in these next 2 weeks an unmerciful pounding by propaganda. Indeed, it is already started.

General Marshall, great soldier, but no relation of the Col. Thomas Marshall who fought so gallantly in the American Revolution to win freedom from the tyranny and power politics of Europe, is at this time pleading that power be vested with the President to let the President ignore the restrictions written by Congress as to where our boys shall and shall not be sent, without a declaration of war by Congress. The general also begs that the National Guard Reserve officers and draftees be kept in the service beyond the year which the Government assured them would be the time they would need plan to give.

If his Commander in Chief, the President, has wished him to do what he has done with respect to these things, no one is going to hold it against the general. But it would seem that in the argument advanced by the general he should refrain from unjustified grounds. Much emotionalism has already resulted from General Marshall's representation that to let the Guard and the draftees return home when their 1 year of service was up would mean a mass exodus from our machinery of preparedness.

Naturally no one determined that our country shall make strong and maintain a constant preparedness in these hours wants mass exodus from our military forces. And if the public will be permitted the facts, it will be readily seen that keeping faith with the draftees and letting such as wish to return to their homes and their chances at making a normal place for themselves in a nation still at peace, will in no sense constitute a mass exodus.

It was a feature of the conscription plan that not all the trainees would come in and go out of the service at the same time. Induction in the service was to be staggered. As those who finished their year of training would be turned back into private life, new draftees would be brought in to take their places.

Now, we are told that this operation is going to cripple and leave our Army a mere skeleton. That representation is not borne out by the facts. The facts are deserving of presentation.

Induction of the draftees commenced last October. Additional numbers came in during each month since, until nearly 600,000 are now in service. Assuming that we keep faith with these draftees, the year of service will end next November for, in round numbers, 13,000 men; next December for 5,000 men; next January for 73,000; next February for 90,000; next March for 153,000; next April for 123,000; next May for 56,000; and next June for 79,000. Only 19,000 men need be mustered out before next January. By that time these men can be replaced by new selectees.

How is such a process going to cripple the Army and leave it only a skeleton? It will be skeletonized only in the degree that the Army is skeletonized now. It can actually be strengthened to the extent that the authorities will take more draftees already authorized in the future months than it has taken in the past.

As for the National Guard, there is no mass exodus occasioned by demobilizing at the end of 1 year of service because, here again, mobilization was staggered through the last 10 months. Under the plan in operation the 156 units in the field now would be demobilized and returned home as follows: 25 units in September, 15 in October, 14 in November, 3 in December, 47 in January, 37 in February, 6 in March, 7 in April, none in May, and 2 in June. How, in fairness, can this be called mass exodus?

On the first of this month only 55,000 of the 100,000 eligible Reserve officers in the Army were on active duty. Shall we call it mass exodus if through the months those in service drop out and are succeeded by other Reserve officers who have not yet been called?

If it is a professional Army we want, why not go about organizing it in a cards-on-the-table manner? A few days ago General Marshall testified that it was estimated that the Army would need at the present time between 640,000 and 800,000 3-year volunteers, and that the Army already has 476,000. This is quite remarkable, this voluntary enlistment, since the Army has been refusing to allow men to enlist until they had completed their 13-week training period, and since there has been no real serious enlistment program undertaken. A genuine effort, it is apparent, would surely bring the 800,000 total 3-year enlistments declared to be the maximum need, only 300,000 more than are already enlisted.

Why all this alarm about needing the draftees, Reserve officers, and National Guard longer than a year if we would avoid crippling our Army? If our emergency today, while we are at war with no one, is more desperate than it was when these men were called to service, then our preparedness effort of the past year must have left us worse off than we were before we started. There is no greater need for concern today than a year ago—I would say not as much, since we have had chance to prepare for emergencies which might arise.

Where are we going to use this professional army, pray tell. Are we not told again and again that we will not send our boys into Europe's war? Hasn't this been declared to be a policy of preparing against war which might be brought to us? Then why the fear of "crippling" our Army by excusing the draftees when their year is up and inducting new draftees, even more than leave, in their places.

There is too much reason to believe that the suggested plans to keep men in the service beyond the 1-year limit and to destroy the limitations upon where these troops shall be sent is indication of plans to put American troops onto the European battlefields, even though 75 and 80 percent of the people of America are determined that shall not come to pass. It all looks too much like a new A. E. F. plan—far too much so for comfort.

Fair play, realization of the sacrifices made, the question of morale, and the fact that not even Canada has yet found it necessary to conscript trainees for more than 4 months—all these seem to demand that our Government keep faith with the boys in the service. Respecting Canada, it should also be said of their 4 months' compulsory military training program that their service abroad is only upon a voluntary basis.

If we would prevent another A. E. F., another dangerous play without proper authorization, then American fathers and mothers had best be making themselves heard. It is timely to be suggesting that simply because someone thousands of miles away doesn't bring a war to us, is not good reason for us to go hunting for it. To do that is too much like the Irishman at the Saturday-night dance, back in the rough days, who grew impatient when 10 o'clock came without a fight. He straightway took off his coat, dragged it behind him upon the floor as he marched about calling: "Ten o'clock and no fight? Won't someone please step on me coattails?"

"Red" Tentacles in America

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, July 30 (legislative day of Monday, July 28), 1941

ADDRESS BY ALEXANDER I. RORKE

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have printed in the RECORD an excellent address by Alexander I. Rorke, an attorney of New York City, at the annual communion breakfast of the Holy Name Society of the Sanitation Department of the City of New York, on Sunday, May 11, 1941, the subject of the address being "Red" Tentacles in America.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today many millions of affectionate American mothers are justly proud of the achievements and patriotism of their sons; but no mothers' sons are better American patriots than the members of the Holy Name Society who, like you, have pledged their loyalty to the flag of the United States and to the God-given principles of freedom, justice, and happiness for which it stands, and who in peace or in war loyally support all lawful authority, both civil and religious.

These sons—steadfast followers of Christ the King—are not only the religious bulwark and shield of His Excellency the Catholic Archbishop of New York; they are also the first line of patriotic defense of the Government of the United States of America.

Now that the specter of the war abroad seems to be casting its ugly and realistic shadow upon the United States, that many men in high places, who appear to have no such hatred of war as that expressed by the President, are variously advocating and insisting that the United States take such action as may involve us in the century-old disputes and wars of Europe, patriotic American mothers are prepared, if needs be, to offer their sons for service in the military, naval, and air forces of the Nation.

They and their sons, have but one national loyalty—that loyalty is to the United States alone—first, last, and always; and they owe

no loyalty, and will render none, to any other country or countries on the face of the globe.

Once the United States, whether rightly or wrongly, enters the conflict, Catholic soldiers, without question, will stand by the flag and the principles and institutions that it represents with the same loyalty that Catholics have exhibited in every conflict that beset America from the days of the Revolution to the Treaty of Versailles and will sacrifice life, liberty, fortune, and honor in order that the United States may continue to exist as a democratic republic, guaranteeing freedom of speech, assembly, press, and religion to all citizens who live and breathe under the aegis of our country.

But today American religious mothers and their soldier sons have reason to be apprehensive for the future welfare of the American Commonwealth and its democratic-republican institutions.

They have made vast contributions to the good and welfare of America both in the colonial and the Federal periods of its history.

They are Christians, Protestants, and Jews in a country whose courts have taken notice that ours is a religious nation.

They are zealous in behalf of the freedom of religion and the institutions of their country.

They elect men to office to protect and defend their freedoms, and they have a right to insist that those for whom they may be called upon to make the supreme sacrifice shall be Americans, who will zealously safeguard those rights and liberties while they are at the front; that those who hold key positions in cabinets, offices, bureaus, and other departments of our national, State, and municipal governments shall be men and women who are loyal first, last, and always to the United States and its democratic forms; that the professors in seats of learning—conducted at public expense—shall not be "reds" of the right or left wing of the Socialist Internationale, who teach hatred of God and religion and hatred of the Government of the United States, who advocate the destruction of church and state and who plot to establish a "red" government here as another red ruby in the national treasure chest of European socialism, but shall be loyal, patriotic men and women who believe in and support the Constitution and Government of the United States.

What a travesty today in America! Loyal soldiers of God and the United States asked to go forth and die for disloyal, traitorous "reds," who are bound by every tenet of the "red" terror to destroy the Christian religion and all other religions and the very Government that Americans are loyally bound to uphold and support.

"Reds," who obtained everything they possess from the United States, particularly their higher education in American colleges and universities, founded by patriots and maintained and supported by the donations made and taxes paid by patriots—taxes and benefactions that were diverted from loyal teachers to pay the salaries of domestic and imported radical professors—are and have been openly and surreptitiously instilling into American youth the licentious doctrines of free and unmarried love, the socialistic contempt for religion and the Government of the United States, and designedly neglecting to teach them that they owe loyalty to the Government of the United States that fed and nursed the "red" vipers biting at its entrails.

Does any sane man in private life or in public office, especially those who have coddled them, believe for one moment that the indoctrinated "red," "pink," and "yellow" so-called intelligentsia will, while our American youth are offering their lives on foreign fields and on the seven seas, stand loyally by our democratic republic, a form of government they hate, while America is engaged in a life and death struggle with the socialistic governments of Europe that they adore?

I ask in all sincerity, Can the "reds," "pinks," and "yellows" serve two masters? Will they be loyal to the so-called capitalist Government of the United States? Or will they be loyal to the socialist governments of Europe that will be fighting against the United States? Will they not hate the one and love the other?

But what of the "reds" whom "red" professors and students have taught to destroy religion and the capitalist governments? Will they stand loyally by the sons of American mothers who patriotically wage war for America?

They are the "red, pink, and yellow" workers in our tool shops, in our munitions and powder factories, in our airplane, engine, tank, and gun-making establishments. Can they be relied upon to lend loyal support to an America which they regard as capitalistic in a contest with the socialistic, totalitarian, economic states of Europe which they regard as the ideals of government?

Will they, in the rear, loyally strive to keep up the supplies for the army of patriots at the front? Will they hamstring the Government in the devious ways prescribed by the manifestos and proclamations of the heads of their parties? Will they labor 24 hours a day and serve 7 days a week to win victory for the United States? Will they follow the "red" mandate and sabotage the job, slow down the output, put sand in the gears, fling monkey wrenches into the machinery, create defects in the tools, and sit down in our defense industries in order to invite national tragedy for America? They are bound to do so.

And what of the many "reds" holding key positions and other jobs in our Federal, State, and municipal governments?

All Americans who have kept abreast of the recent times know that the disciples of Marx, Lenin, Novimersky, Engels, and others of their ilk have bored into our patriotic labor unions, our Army, Navy, and merchant marine and into the departments, bureaus, and cabinets of our city, State, and Federal governments. As they were advanced to key positions by politicians who had profited by their votes they brought into the service other men and women who, like themselves, were "red" and placed them in positions of power and authority over patriotic men and women.

What a spectacle! Loyal and capable American men and women, boys and girls who are always ready to sacrifice everything for the Government of the United States literally kicked aside and out to make way for "reds" in vital key positions controlling the very life stream of the Republic, and who, despite the earnest efforts of patriotic men and women in the past few years to get them out, are still retained in those positions by the responsible officials of the Nation, the States, and the municipalities—a situation that impels the ordinary everyday average American citizen to ask whether or not our Government today is a democratic Republic or a semisocialistic state.

Has the United States in the recent past been quietly changing from the type of government established by the founding fathers to a form of economic socialism that they would have abhorred? Have the responsible officials of our Federal, State, and municipal divisions knowingly or unwittingly aided the "reds" in a move to peacefully and unobtrusively take over our Government? Have they, within the democratic-republican structure of our Government, introduced, accidentally or by design, a socialistic economic state that they have neither the inclination, the will, the courage, nor the cunning to cast out? Have they permitted the "red" camel to stick its ugly snoot under the walls of the American tent, and is it now on the inside insidiously easing the American owners out, as it ousted the too-trustful patriots of France?

The men and women of America who are going to fight this threatened war, when, as, and if it is declared, have a right to demand now and do demand that none but American patriots, loyal to the American democratic republic shall teach our youth, handle our war supplies, and stand guard over its destiny in public office.

The "red" professors may claim the right to academic freedom—they already have that on the soap boxes and in their bloc and cell meetings; but paying them to preach hatred of religion and disloyalty to American youth out of public funds or manipulating the rules of civil service to give "reds" point advantages over really loyal Americans with long years of patriotic service should be made a criminal offense.

They may claim that they display the red, white, and blue flag in their shops, their clubs, their meetings, their homes, and their parades, but, in the hearts of them, only the red stripes of the Star-Spangled Banner appeal to them, and they long for the day when the "red" flag will float from every public building in our land.

What a pity the Rapp-Coudert committee bill was vetoed at Albany last week. That committee—like the Dies committee—is badly needed.

Catholics are peaceful because they follow the Prince of Peace; but they want an America geared and armed to the teeth—an army, navy, and air force that will annihilate any invader or invaders that will dare join battle with America. Should war come, they will rally 'round the flag, but they demand security for the democratic republic government and institutions that they defend.

So long as a single "red" occupies a post in our Government America is insecure.

American public officials who know that the "red" flag denotes mortal antipathy to religion and to our Republic and who place the followers of the "red" flag in red schoolhouses and colleges and in the public services of our country are open to the same charge as that made against Benedict Arnold who bargained to betray West Point in the Revolutionary War.

France and Holland allowed the reds to penetrate; so too did many other European nations; the United States may well gain advantage from their sad experience.

If these remarks be treason, let those whom the shoe fits take up the challenge; if these observations be patriotism, let Americans profit from them, ere it be too late.

Ickes on Lindbergh

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, July 30 (legislative day of Monday, July 28), 1941

ARTICLE BY WESTBROOK PEGLER

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Westbrook Pegler which appeared in the Washington Post on July 18, 1941, entitled "Ickes on Lindbergh."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of July 18, 1941]

FAIR ENOUGH

(By Westbrook Pegler)

ICKES ON LINDBERGH

With the major part of Harold Ickes' latest tirade against Charles Lindbergh it is impossible to disagree, except on grounds of propriety, but that this swollen little man, himself a greedy authoritarian and a fighter for his own brand of national socialism, should denounce another as a Hitlerite is almost beyond understanding. Ickes' hatred of Lindbergh for the reasons given would be utterly confusing but for the fact that he himself is a Hitlerian socialist, which explains everything. The Hitlerian socialist, or brown Bolshevik, and the "red" Communist are alike in most things and absolutely identical in their redoubtable inconsistency. Thus an Ickes, devoted to state control of the lives and property of the people and the stealthy substitution of the one-party system under a pretense of social reform, can swing out into space chattering shrilly against another whom he perceives to be sympathetic with the same ideas. He probably sees no inconsistency in this, for that is the way of the political malady from which he suffers.

Here we have a powerful and self-important official of our own maturing socialistic dictatorship, corresponding in rank and in some of his official functions to Joseph Goebbels, of Germany, inciting himself to frenzy against another man on the ground that the other man is friendly to the Nazi regime of Germany.

But Ickes obviously cannot be anti-Nazi in view of the fact that the Government of which he is a militant part obtained its power first by shameless misrepresentation of its objectives and since then has adhered closely to the methods of the German Fuehrer in establishing state control over industry, over labor through the state's moral subsidy for brutalitarian unions, over agriculture through bribery and regimentation of the farmers, over the elections by bribery of the voters and false gifts to the union leaders, and over the whole Government by bribery and intimidation of Congress.

Ickes has worked tirelessly ever since the day when, by some absurd accident, he first obtained his job, to promote in the United States a rough duplicate of the essentials of Hitlerism. He has succeeded better than most Americans realize.

All Americans know that Lindbergh's fortune was thrust upon him and that he might have had a hundred times as much for the mere taking. Ickes also acquired a fortune by means certainly no more manly than Lindbergh's, but, nevertheless, was thrifty enough to sponge on the American people for two sojourns in a public hospital in which he had no legal right to be, and for a vacation fishing trip on a warship, whose log for that occasion would reveal evidence that he regards himself as a prince of privilege.

These are trivial items of expense incurred for the personal benefit and economy of Mr. Ickes when compared with the billions that he has delighted to spend toward the destruction by bankruptcy of the American system of government. But the incidents reveal in Ickes an attitude irresistibly comparable to that of the favored nobilities of the Hitler regime. They show how his thoughts run.

But it is when Ickes attacks Lindbergh for associating with Hitlerians and for failing to deplore the brutalities of the foul regime that he reveals most alarmingly that inconsistency which more plainly than any other trait identifies the Bolshevik—"brown" or "red." For if Lindbergh has had any traffic with the Nazis, Ickes, in even more cordial way and in flagrant contempt of the American way, has been guilty of notorious association with the Communists, who have been working here for the same objectives. And if Lindbergh has been silent on the atrocities of the Hitler Government, Ickes has avoided equally tempting opportunities to denounce a regime which, in Russia, far outscored even Hitler himself in cold ferocity and has killed in two decades more human beings than the American Armies have lost in all the wars of the Republic from 1776 to the date of these presents.

Perfunctorily Mr. Ickes said he deplored communism and national socialism equally, but that remark does not even expunge his record of open association with Communists and their fellow travelers. He reserves the right for himself to associate with "red" Bolsheviks but attacks Lindbergh for associating with the brown.

None of which abates the fact that the regime of which Ickes is so furious a spokesman has been adopting, consistently and insidiously, the national socialism which he, nevertheless, takes frequent occasion to deplore.

Well, that is Hitlerism, too. Hitler constantly told the German people that his only purpose in enslaving them was to make them free.

Mayor LaGuardia on the St. Lawrence Project

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

STATEMENT BEFORE THE COMMITTEE ON RIVERS AND HARBORS

Mr. RANKIN of Mississippi. Mr. Speaker, we are gradually winning our fight for reasonable electric-light and power rates for the people of this country. We still have a long way to go, but we are making progress.

We are also winning our fight for rural electrification. If the bill which I have introduced (H. R. 4931) is enacted into law, we can electrify every farmhouse in America within the next few years.

Several days ago Mayor LaGuardia, of New York, appeared before the Committee on Rivers and Harbors of the House to testify on behalf of the St. Lawrence project, and I am inserting in the RECORD that portion of his testimony in which I did the questioning.

I hope every Member of the House and of the Senate, and everyone else who scans this RECORD, will take time to read these questions and answers.

The matter referred to follows:

The CHAIRMAN. Mr. Rankin.

Mr. RANKIN. Mayor LaGuardia, just before you and I came to Congress——

Mayor LAGUARDIA (interposing). They did not get along so well then, did they?

Mr. RANKIN. They did not.

Cleveland, Ohio, the city from which the gentlemen from Ohio comes, also made an investment, and at that time it had one of the most distinguished men in this Nation as its mayor, Tom Johnson, whom you and I always revered. They put in a municipal light and power system, and I have the record of it before me now. They have invested $12,688,641, and it has been paid down to $2,745,352. They have the lowest rates of any city east of the Rocky Mountains outside of the Tennessee Valley area, and that is the same system, as I understand it, that you have been advocating in the city of New York; is that correct?

Mayor LAGUARDIA. That is right.

Mr. RANKIN. Now, I have pointed out time and time again that if all of the people of Ohio received their electricity at the same rates provided by this municipal plant in Cleveland they would save around $40,000,000 a year, just the people in Ohio.

Mr. BENDER. And there have been Republicans operating that all the time.

Mayor LAGUARDIA. It is true that either a Republican or a Democratic administration can run a power plant economically for the benefit of the people, just as it is true that it makes no difference where your power gang is, whether you have a Republican or a Democratic administration, they get away with it.

Mr. RANKIN. I will tell you what they will do; they will go out and pick out a Democrat and nominate him for President, the Power Trust will. I have seen them do it in the last year. I say that advisedly.

Mayor LaGuardia, I think you and I understand each other on the power question, because I expressed my views a while ago, and I have heard you express them time and time again when you were in the House. They talk about going down into the Federal Treasury and getting money to develop this power. As a matter of fact, this power, sold at the rate mentioned by the Army engineers, would pay this entire investment back to the Government, would it not, over a period of 50 years?

Mayor LAGUARDIA. Forty or fifty, which is it?

Mr. RANKIN. Fifty years.

Mayor LAGUARDIA. Fifty years.

Mr. RANKIN. And, that would leave them one of the greatest developments of ancient or modern times.

Mayor LAGUARDIA. That is right.

Mr. RANKIN. Now, I have just looked at the figures of the Army engineers, General Robins, who is sitting behind you, and it shows that this power can be delivered to the city of New York at 3.132 mills per kilowatt-hour or, we will say, 3.14 mills per kilowatt-hour. That is wholesale.

Now, that is much cheaper than any of this power in the Tennessee Valley as turned over to the municipalities in that area.

The city of New York is just as capable of distributing this power if turned over to them as Cleveland, Ohio, or Tupelo, Miss., is it not?

Mayor LAGUARDIA. Absolutely.

Mr. RANKIN. So, if this power were turned over, if it were delivered to the city of New York, if you had a municipal system, as you will have without doubt ultimately, and this power were laid down there at that price, you could distribute it at the Ontario rates or the T. V. A. rates, or the Bonneville, or Tacoma rates, without loss on your investment, could you not?

Mayor LAGUARDIA. It is my feeling we could.

Mr. RANKIN. I have just gone over the rates with you here, and it shows that the householder in the city of New York, or throughout the State of New York, only uses about 65 kilowatt-hours of electricity a month. I do not know what it is throughout the T. V. A. area, but in my town it is 178 kilowatt-hours a month. That is residential.

Mayor LAGUARDIA. They use it for cooking, too?

Mr. RANKIN. We use it for cooking and washing, refrigerating, and also heating our houses.

Mayor LAGUARDIA. You will find that the difference in our city is we use mostly gas for cooking, and there is no reason for that.

Mr. RANKIN. Another reason is that your rates are so high.

Mayor LAGUARDIA. That is right.

Mr. RANKIN. That you cannot use it for heating purposes at all, and many families cannot use it for refrigerating.

Mayor LAGUARDIA. And do not forget that the same interests own the gas companies.

Mr. RANKIN. Certainly, and that exactly the same persons are down here and they have the same agents down here to fight this project just as they had them down here to fight the T. V. A. While we were having those hearings we had one excited gentleman come before this committee who said that he represented the railroad brotherhoods, and went back and wrote me a letter against flood control on the Tombigbee River, as if it would hurt the railroads. I am going to read it again. I understand that he is going to testify in opposition to this, and I am going to read it then.

Now, I have some figures here that I want to call your attention to. I have the rates for the city of New York. I believe you would call it the Queens, would you not?

Mayor LAGUARDIA. Queens is a part of New York City.

Mr. RANKIN. In Queens; and I also have the rates here for the T. V. A. area—the T. V. A. rates.

Mr. BENDER. Mr. Chairman, you will notice that I am not objecting to any of this.

Mr. RANKIN. You ought not to, because this is on the subject.

Mr. BENDER. What subject?

Mr. RANKIN. I want to call this to your attention if I may.

For instance, in the city of New York, 40 kilowatt-hours of electricity per month costs $2.24; in Tupelo it costs $1.

One hundred kilowatt-hours a month in New York, that is, Queens, costs $4.69; in Tupelo it costs $2.25.

In New York 250 kilowatt-hours a month costs $8.67; in Tupelo it costs $4.25; and 500 kilowatt-hours in New York City costs $13.47, and in Tupelo $6.18.

Now, those are the rates to residential consumers.

We turn over now to the commercial consumers—the forgotten men in this electric game are the men who pay commercial rates, and I find that 1,500 kilowatt-hours a month in New York City costs $88.17.

Probably I had better go back and say 150 kilowatt-hours a month in New York City costs $8.28, in Tupelo it costs $1.75; 375 kilowatt-hours a month costs $19.57 in New York—that is, for the merchant, the hotel operator, the restaurant operator, the filling stations, garage operators, people who pay commercial rates. If they use 375 kilowatt-hours a month, it costs them $19.57, in Tupelo it costs $8.28; 750 kilowatt-hours in New York City costs $44.54, in Tupelo it costs $13.28; 1,500 kilowatt-hours a month in New York City, or in Queens, costs $88.17; in Tupelo it costs $21.90.

That is the reason they do not like to hear me talk about electricity on this committee.

Now let us turn over and see what it costs a man who pays in the higher brackets.

A commercial consumer in Queens, who uses 6,000 kilowatt-hours a month, pays $179.54 a month; in Tupelo, where you have the T. V. A. rates, instead of paying $179.54 he would pay $78.

Now, that gives you an idea of the difference in what it means to have the St. Lawrence inland waterway developed and this power made available to the people of New York, and what it means to let it run waste to the sea throughout the next few generations.

Mayor LAGUARDIA. That is right.

Mr. RANKIN. I find that in Jacksonville, Fla.—I want to call your attention to this—Jacksonville, Fla., has one of the great municipal systems of this country. It only makes one mistake. It tries to make money out of it.

Mayor LAGUARDIA. Most of the city's income comes from their electric plant.

Mr. RANKIN. They use it to pay taxes on vacant lots and on the other fellow's property.

In other words, they pick the pockets of the consumers, you understand, to pay the taxes on the other fellow's property, and that is exactly what we protested against and that is what we have prevented in the Tennessee Valley area.

Jacksonville has a plant valued at $15,224,000. The debt on that plant is $3,873,000.

It has rates which compare with or are lower than the rates in the Queens.

Last year the city of Jacksonville produced and sold electricity to the amount of $4,134,838. Its operating expenses were $1,519,041. It made a gross, had a gross earning of $2,216,797; gross earning only.

Then for depreciation it allowed $42,157. That left a net earning out of $4,134,838—left a net earning of $2,573,000.

Jacksonville hauls its fuel from Louisiana or California or Texas, because there is no fuel produced in Florida, and yet their municipal plant pays more than 50 percent; and has the lowest rates or among the lowest rates in Florida, and makes a profit of 50 percent or more.

It paid taxes to the amount, or it gave free service to the amount of $100,000.

It paid taxes of $57,090 and still turned into the city treasury $1,780,000.

Now, that gives an idea as to what can be done even on the rates you are paying in New York; but you cannot do it and keep up all of these holding companies, and finance all of this propaganda and finance all of these fake lawsuits, and hire all of these lawyers, and all of these agents that have been over the country to carry on the propaganda that they have carried on here in opposition to public power or to cheap rates ever since you and I have been working on this.

Mayor LAGUARDIA. You are telling me.

Mr. GREEN. Mr. RANKIN, in that connection, will you yield?

Mr. RANKIN. I will yield; yes.

Mr. GREEN. Down in Miami, Fla., where a private concern owns a plant, they pay the highest rates in the United States.

Mr. RANKIN. Yes.

Mr. GREEN. And, furthermore, in that connection, the power properties that they bought a few years ago were valued at about $21,000,000 or $22,000,000. They supplemented that investment by repairs and enlargements to the extent of some $3,000,000 and turned around and issued $48,000,000 worth of bonds and sold them and left no investment at all, and now they are making 100 cents on the dollar.

Mr. RANKIN. The day the Commonwealth & Southern was organized—and I am quoting now from the report of the Federal Trade Commission—they took four small holding companies and threw them together. They threw their securities together on their books and that day they amounted to $341,000,000. They organized the Commonwealth & Southern, which is neither commonwealth nor southern, and put those same securities, same securities on their books the same day at $872,000,000.

Now, that is the record of the Federal Trade Commission.

Yet every time we have attempted to do anything about this—which I consider the greatest racket of modern times—every time we have attempted to turn in the sunlight to show what electricity ought to cost the people; every time we have attempted to develop a natural resource from the Tennessee River to the Columbia, or the St. Lawrence, we have this barrage of propaganda against it and all of the misleading statements that they can accumulate.

Mayor LAGUARDIA. You must admit, though, that the opposition is becoming weaker all of the time and less effective.

Mr. RANKIN. Yes; because we are getting the facts to the American people and they understand them.

Mayor LAGUARDIA. You remember, the older Members will remember what we went through on Muscle Shoals. Most of you gentlemen were not here. It is almost unbelievable. This is easy sailing now. I think the opposition is pretty well shot now.

Mr. RANKIN. Mr. LaGuardia, you remember that they told us when we were fighting for Muscle Shoals, you remember when we passed a bill here in 1927 and tried to get President Coolidge to sign it, and he vetoed it——

Mayor LAGUARDIA. They were about to give it away. You remember that.

Mr. RANKIN. Yes; they were.

Mayor LAGUARDIA. Sure enough, a 99-year lease, or 999 years, I do not remember.

Mr. RANKIN. So at that time they said we had a surplus of power, did they not?

Mayor LAGUARDIA. Yes.

Mr. RANKIN. We were using 68,000,000,000 or 62,000,000,000 kilowatt-hours, and now we are using 118,000,000,000 kilowatt-hours, and if we had the T. V. A. rates all over the United States, we would be using 300,000,000,000, probably, and still there would not be a surplus, would there?

Mayor LAGUARDIA. People would live better, happier, and easier.

Mr. RANKIN. Now, Mayor LaGuardia, let me say this to you, because you know the answer to this proposition. We hear a great deal about slum clearance in New York and other big cities.

Nothing in the world would contribute more to that end than to deliver to those people an abundant supply of cheap electricity.

Mayor LAGUARDIA. It would be very helpful.

Mr. RANKIN. It would enable them to use the electric appliances that are necessary to make their homes pleasant and attractive and to lift the burdens from the shoulders of the housewife.

Mayor LAGUARDIA. Of course, you know in our city we have to have electric light. There is no other way. And we provide for electric light in our relief. We have to provide light in our relief allowances, and it is quite an item.

Mr. RANKIN. You do not have any coal in New York State at all?

Mayor LAGUARDIA. We have a little coal, have we not? It does not amount to much. All of our coal comes from Pennsylvania and West Virginia.

Mr. RANKIN. You have no oil in New York, do you?

Mayor LAGUARDIA. No.

Mr. RANKIN. No natural gas?

Mayor LAGUARDIA. No.

Mr. RANKIN. They have none in New England.

Mayor LAGUARDIA. No.

Mr. RANKIN. In New England they have no oil, or no coal.

Mayor LAGUARDIA. No.

Mr. HALL. We do up in our part of the State. There is some natural gas up in our State.

Mr. BEITER. We have natural gas and oil in Allegany County.

Mr. RANKIN. But you do not have enough to generate any electricity or to supply any of the cities.

Mayor LAGUARDIA. No; water power is our hope.

Mr. RANKIN. This water power is your hope to get cheap electricity to the people in that area?

Mayor LAGUARDIA. That is right.

Mr. RANKIN. Now, then, going to the amount generated. You do not know how much electricity the people in New York use a year?

Mayor LaGUARDIA. I did know, but I have forgotten.

Mr. RANKIN. Well, 15,000,000,000 kilowatt-hours or 15,600,000,000 kilowatt-hours.

It is true that this project will only generate about 6,000,000,000, and some of them are going to contend that that will not be sufficient to supply them all.

Mayor LaGUARDIA. All right.

Mr. RANKIN. But if it is used as a yardstick——

Mayor LaGUARDIA (interposing). Take your Cleveland illustration. There you have a privately owned and operated plant and the municipal plant.

Mr. RANKIN. That is right.

Mayor LaGUARDIA. But your rates came down.

Mr. RANKIN. The rates are the same.

Mayor LaGUARDIA. Yes.

Mr. RANKIN. Or practically the same. I have them right here before me.

Mayor LaGUARDIA. That is right.

Mr. RANKIN. In other words, if you build a line into New York City, and into every other city, and make electricity available, and then they know that you can get this power at this rate, it will force the power companies to come down to that level, will it not?

Mayor LaGUARDIA. Absolutely.

Mr. RANKIN. I will give you a concrete illustration. Tarrant City, Ala., and Bessemer, Ala., or what you might call suburbs of Birmingham—municipalities on each side of Birmingham.

Mayor LaGUARDIA. Yes.

Mr. RANKIN. We were enabled to get the T. V. A. power to those two cities. Frankly, I helped to do it. Members of the Alabama delegation came to see me, and I went to bat for them, and we got the T. V. A. power into those two cities. It immediately broke the rates in Birmingham a million dollars a year, and they are using power generated by coal out there at the Gorgas plant they took away from us when you and I were in Congress. You remember that?

Mayor LaGUARDIA. Yes.

Mr. RANKIN. Which was built for a stand-by for the T. V. A.

Mayor LaGUARDIA. Yes.

Mr. RANKIN. So if this power is developed it will not only pay for itself in 40 years or 50 years, but it can be used as a yardstick to force these rates down all over the State of New York?

Mayor LaGUARDIA. Yes.

Mr. RANKIN. And all over the surrounding States.

Mayor LaGUARDIA. All over that whole section.

Mr. RANKIN. That whole section.

Mayor LaGUARDIA. Quite right, into New England, as you say.

Mr. RANKIN. Do you know what the overcharge in the State of New York last year was, for the whole State?

Mayor LaGUARDIA. It was pretty big.

Mr. RANKIN. According to Ontario rates—Ontario, of course, is right across the river, and that is a public system. According to the Ontario rates the people in New York State last year paid in overcharges a sum amounting to $201,000,000.

Now, I know that the opposition is going to come back, just as they came back at you, about taxes. They are going to say that the Ontario system pays no taxes, which is true, but in 1936, according to the report of the Federal Power Commission, all of the taxes, cash contributions, and free services paid or rendered by all of the power companies, all electric utilities, both public and private, in the State of New York—and that includes income taxes to both the State and the Federal Governments, amounted to only $48,000,000.

The Federal Power Commission tells me that that situation has not changed.

Taking that $48,000,000 from that $201,000,000, it shows a net overcharge for which you get absolutely nothing in return in the State of New York alone amounting to $153,000,000.

Mayor LaGUARDIA. Well, you take your Jacksonville illustration. They charge themselves taxes there.

Mr. RANKIN. Oh, yes; they pay taxes.

Mayor LaGUARDIA. And it is a steam plant.

Mr. RANKIN. That is right.

Mayor LaGUARDIA. And still their rates are lower.

Mr. RANKIN. That is right.

I took the trouble to work out the figures for that whole area and I included the Niagara development, because there is a proposition incorporated in the bill which I have introduced for an authority in that area to cover both Niagara and the St. Lawrence Rivers.

A line 300 miles long from those two projects would cover practically all of New York, nearly all of Pennsylvania, nearly all of New England, and a large portion of Michigan and Ohio.

I took the troube to go into the overcharges and figured them out and also took the taxes paid for 1 year, and the overcharges paid in those, I believe, 10 Northeastern States, after deducting all of the taxes, cash contributions, and free services paid or rendered by both private and public utilities last year, still left a net overcharge for those 10 States of $401,000,000. That is enough to pay for this entire development and have considerable margin left.

The People Demand Immediate Embargo of Export of Petroleum Products to Japan

---

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

Mr. COFFEE of Washington. Mr. Speaker, I am the author of House Concurrent Resolution 30, which is identical with Senate Concurrent Resolution 10, introduced by Senator GUY GILLETTE, of Iowa, and which is now pending in the Senate.

Hearings were held on my resolution before the House Committee on Rules on June 5 and 6. Subsequently I made a national radio address on June 20, 1941, giving arguments supporting my contention that Congress should make a full and complete investigation as to the reasons why shipments of essential raw materials of war and munitions, metal products, and scrap, from which the United States already suffered a woeful paucity, were allowed to be carried on, seemingly with little interruption, to the Axis Powers and their vassals.

I quote from pertinent portions of this resolution:

Resolved by the House of Representatives (the Senate concurring), That there is hereby created a special joint congressional committee * * * to be composed of five Senators, to be appointed by the President of the Senate, and five Members of the House of Representatives, to be appointed by the Speaker of the House of Representatives. * * * It shall be the duty of the committee to make a full and complete investigation with respect to the extent to which, the sources from which, the manner in which, and the mediums through which, the so-called Axis Powers are obtaining or have obtained essential war materials from the Western Hemisphere. The committee shall report to the Senate and to the House of Representatives, at the earliest practicable time, the results of its study and investigation, together with its recommendations, if any, for necessary legislation.

Mr. Speaker, for years, the United States, despite the strenuous objection of 75 percent of the people, as shown in Gallup polls and other people's opinion polls, has carried on its course of trying to appease the Japanese by bribing them with the shipment to it of petroleum products in vast quantities. Long before this war, I repeatedly denounced this policy on public platforms throughout the country. In a previous Congress, I introduced a bill to embargo the sale of petroleum products and matériel of war to Japan on the ground that we were thereby assisting in the aggression against China. Tremendous sentiment was manifest through the length and breadth of the country in favor of my bill, but, though the House Committee on Foreign Affairs held hearings on the matter, and although distinguished figures of national prominence appeared before that committee to champion that legislation, our State Department frowned upon it and the committee permitted the bill to die aborning.

The State Department attempts to justify its course by claiming that this policy of appeasement toward Japan has prevented it from seizing the Dutch East Indies and invading Singapore, and perhaps Hong Kong.

I decry such a course. Long before World War No. 2 commenced on September 3, 1939, the American people had shown in no uncertain terms their disgust with this policy of furnishing Japan with the means of carrying on its ruthless war against its peaceful neighbor, the Chinese Republic.

The policy of appeasement has been repeatedly denounced by the State Department in relation to Holland, Czechoslovakia, Norway, and Yugoslavia. This administration has graphically pointed out the folly of appeasement toward the Axis, yet we are practicing it in this hypocritical, unconscionable, and shoddy business by tolerating, if not encouraging, the sale of war supplies to Japan. There is no support for such a policy throughout America except in certain isolated newspapers.

It is contended that realism justifies our course, but realism compels the conclusion that Japan will spread her aggressions to the Dutch East Indies, to Hong Kong, and to Singapore when and if she feels herself strong enough to do so, regardless of appeasement. Japan respects the presence of the United States Fleet in the Pacific. She has a strange habit of striking when the potential enemy's back is turned. She will hit at Siberia when she thinks the Soviet Union

is quivering and lying on its back from its wounds. In the interim we have been supplying Japan with the means by which our friends might possibly be subjugated.

If certain gentry in the British Foreign Office have approved, if not directed, this policy of appeasing Japan by furnishing her with vast quantities of war supplies, particularly petroleum products, that is not an extenuation or exculpation of our responsibility and liability.

The policy of appeasement proved a frightful failure in the case of Vichy France. England and the United States attempted to bribe her without avail.

The policy of appeasement proved a colossal folly in the dealings of Britain and the United States in the case of Franco in Spain. Let us have no more of it, lest we continue to delude ourselves by the comforting thought that Franco has been won over to us by our bribes to him. No; he is keeping technically at peace until he can squeeze the last drop of tribute from Great Britain and the United States, and when he has effectuated that objective he will invite the Fascists to use his territory as a base of operations. Mark that prediction.

Meanwhile, Japan is storing up huge quantities of surplus oil beyond her immediate war needs, all because our Government, in conjunction with that of Great Britain, has pursued its mistaken course. May our State Department and those who guide our foreign policy learn the folly of their ways before it is too late. May they crack down now and end this farcical partnership with our potential enemies. May they prohibit further business relations of the character mentioned, with Japan and thus restore the confidence of the American people in the consistency of our course.

To show that I am not alone in these views, I include certain newspaper statements which speak for themselves. There is tremendous support for my resolution in the editorial columns of the Nation's newspapers and for the objectives sought to be attained in such resolution.

From the Free Press, Burlington, Vt.:

How long, we repeat, is the United States going to try to "buy off" Japan by sending her oil which we may need at home and which may be used either to fly the planes which bomb China or to operate planes which may embarrass us elsewhere before we are through with this mess?

From the Call, Paterson, N. J.:

Certainly it is an injustice and bad policy to provide large shipments of oil to Japan, an Axis partner, which probably are later transferred to Germany and Italy, while at the same time creating a shortage in the most populous section of our own country that contains many defense industries. It is to be hoped that Mr. Ickes' latest order will be carried out and that oil shipments from the east coast to foreign nations be stopped.

From the Sun, Williamsport, Pa.:

Secretary Ickes has ordered a halt to preparations for the shipment of a cargo of oil bound for Japan, on the grounds that a threatened shortage of oil and gasoline in the eastern part of the United States makes it unwise to permit such shipments. One excuse may be as good as another, but a lot of Americans would prefer to see the shipment countermanded because of the use to which Japan is putting her oil supplies in her continued war upon China and because of the attitude which she is taking toward the United States. Why should we supply to Japan anything which can be used in war with China or in preparation for possible war with ourselves?

From the Mail, Charleston, W. Va.:

There is no more puzzling phenomenon before the American public than the impending threat of an oil shortage on the eastern seaboard while the Nation blithely ships vast quantities of oil from the west coast to Japan. Matters are not simplified, at least so far as the public is concerned, when the President proclaims a responsibility to arm China out of our arsenal of democracy and, at the same time, releases to Japan the very material which she most desperately needs to continue the aggression against China.

* * * * *

Whatever are the reasons for this state of affairs, they have not been made clear to the public. With no explanations offered, it is not unreasonable for that public to ask why it should be called upon to exercise care in the use of petroleum when the industry itself announces that there is an ample supply of oil for years to come to meet all of the country's normal as well as defense needs.

Presumably the real reason lies in the diplomatic maze of the State Department. It has been suggested that we allow Japan to have American oil as a sort of bribe to keep her from making a grab at the Dutch East Indies, the only other available source of supply. That reason, if it is true, smells suspiciously like appeasement. Assuming that it is this country's policy to preserve the status quo in the Pacific, it should be apparent from recent history that appeasement is a bad way to begin.

From the Record, Troy, N. Y.:

Could there be anything more completely cockeyed than our export policy of fueling the Japanese war machine?

Not unless it is our continued policy of supplying * * * Japan * * * with other war essentials in addition to oil and gasoline.

Amid all the talk about gasless Sundays here at home, and perhaps even more drastic restrictions on gasoline and oil, it is cold comfort to know that Hitler's far eastern partner still gets generous allotments of our petroleum products.

* * * * *

It is, in fact, about the most reckless, shortsighted course that could be imagined, particularly in view of the danger of our embroilment in the Atlantic.

We should drop this idiotic policy right now. We should impose without further perilous delay a tight embargo on shipments of oil and gasoline to the Japanese.

From the Evening Post, New York City:

Let us face the fact that the administration has embarked on a policy of appeasement toward Japan. Occasional gestures in the opposite direction do not obscure this fundamental truth. A bit of bellicosity now and then, never too much and never long continued, is a necessary part of every appeasement program. But when Japan's funds are not tied up, while Axis funds are, when oil flows freely to the Japanese, while it is shut off as against Germany and Italy, then we are appeasing Japan, and no other word can describe our policy.

* * * * *

We ask to be shown that appeasement works. We urge that no case has been made for it. We assert that it has been adopted without public approval. We say that the burden of proof is upon those who favor selling $3,500,000 of oil each month to an Axis partner. We say that no responsibility lies with the oil companies; all responsibility lies with the Government. We ask an embargo on oil.

From the Record, Greensboro, N. C.:

How much longer will Uncle Sam continue to play the Dr. Jekyll and Mr. Hyde role—supplying aid to the fighting democracies with one hand and passing out essential war supplies to the Axis aggressors with the other?

We favor a leak-proof boycott against the Japanese, the Germans, and the Italians.

The very least we could do to aid Britain and China, holding the line for democracy and for us, would be to stop selling fuel to drive the war machines that are smashing down upon them.

From the Star, Meridian, Miss.:

With one hand we lend China $100,000,000 to defend herself.

With the other, we send tanker-cargoes of gasoline to help Tokyo to bomb Chungking.

On one side, we supply our potential Oriental enemies with motor fuel to wage aggressive war.

On the other, we propose to deny our own people gasoline for the recreational or daily needs of peace.

Apparently, someone in Washington is slipping up.

"Consistency, thou are a jewel."

We respectfully refer these imponderables to Mr. Ickes.

From the Courier, Camden, N. J.:

Figures on oil shipments to Japan henceforth will be a military secret.

Roll out the barrels for the Mikado, boys—but do it softly.

Think this over:

In March of this year, latest month for which figures are available, we sent Japan 50 percent more oil than we sent her in March of 1940.

The total was 1,553,000 barrels.

* * * * *

It is the story of France, all over again.

France sold war materials to Germany up to the very day war began. Certain French business firms then kept on selling Germany war materials, through Spain.

To prevent those unpleasant truths from reaching the French people, a rigid censorship on such exports was proclaimed—

Exactly the way our own Department of Commerce has now proclaimed a censorship on all exports from the United States, which covers up completely the oil exports to Japan—partner of the Axis.

* * * * *

But it is impossible to sell the American people on the notion of doing without oil and gasoline, while our abundance is shipped to a member of the Axis we call the enemy of all civilization.

God spare us from the day when our motorists walk up to empty gasoline pumps and cry bitterly:

"Check my 'four freedoms.'"

From the Daily News-Tribune, Tacoma, Wash.:

The State Department has declined to embargo such shipments and Congress backed off mysteriously on its proposed investigation when an Assistant Secretary of State told Members that such a public airing of the question would be embarrassing.

* * * * *

The shortage on the east coast is due to the transfer of oil tankers to the registry of other nations. This could not have been done without the consent of the Government. The question has never been answered as to what these tankers are doing. Some of them are

carrying gasoline to Britain, but the charge has been made that others are taking their cargoes to the Axis.

This whole contradiction in policies ought to be cleared up. It has all the appearance of developing into a great national scandal.

From the Herald, Grand Rapids, Mich.:

But that is not the worst of it. There are plenty of tankers in the Pacific, but they are busy transporting oil to Japan, a nation with which we are likely to find ourselves at war almost any day, and a nation which is seeking to conquer China, to which we are giving material aid. So, perhaps we are to live in cold homes and enjoy gasless Sundays in order that we still may ship oil to a prospective enemy, at any rate to an enemy of a friend of our own.

It may well be expected that so long as this practice is continued and countenanced, gasless Sundays and cold homes will not be very popular in the United States. It may be found rather difficult to enforce such restrictions. So long as we have plenty of oil and the means with which to get it about the country if we would use the facilities we have instead of using them to supply others, including enemies, the people of the United States will not be inclined to cheer very loudly if ordered to hold down the temperature in their homes or to keep the family bus in the garage Sundays.

Aren't we a queer people, though?

From the Call, Allentown, Pa.:

In the meantime, though, there is a lot of question in the minds of people who dislike the idea of gasless Sundays or any such prohibitions as to continued exportations of gasoline to Japan. What is the idea, they say, in permitting continued exportations to Japan for an army and navy that are fighting our friends, the Chinese, and even may be stocking up for an attack upon the United States, if the people of this country are going to be put on short rations as to fuel?

It does all seem to be a paradox, and it can be assumed that if pressure be placed upon the people to save gasoline, pressure will in turn be put by the people on the Federal Government to do something about the exports to Japan.

From the Tribune, Chicago, Ill.:

There was quite a fanfare when last year an embargo was placed on iron and steel scrap going to Japan, after years of unprecedentedly large shipments. But little has been said about cutting off American gasoline from Japan. This is especially to be wondered at because the step-up in the flow of gasoline to Japan started in October last year, right after the Japs signed up with the Axis. Can it be that they are buying enough gasoline from us to supply themselves—with considerable left over for Germany? American gasoline may be an important item in the increased trade of Nippon with Hitler.

From the Plain Dealer, Cleveland, Ohio:

What, in this drama, has become of that good fairy, that angel of Oriental peace, the American policy of appeasing Japan with oil and other war materials? It has not only failed, like all appeasement gestures, it has enabled Japan to continue the war in China and to build up the means with which to attack the Indies and other European possessions.

This may spell disaster to the United States. From the Orient this Nation obtains not only the bulk of its tin and rubber, but a score of small yet important products, without which the inddustrial might of America soon would collapse. It is not too late to retrieve this error. When it comes to stamina in dealing with the aggressors of Asia, Washington can learn much from Batavia.

From the Intelligencer, Wheeling, W. Va.:

ENGLAND AND THE MAIN CHANCE

Some days ago this newspaper raised the question of whether or not the transfer of 50 oil tankers from the American coastal service to the British service was necessary to England's war effort. The question was pertinent, we felt, because the loss of these transport facilities threatened the eastern section of the country with an oil shortage despite the productive capacity of the country.

The Oil Weekly provides at least a partial answer, assuming the accuracy of its facts. "The public must realize," it says editorially, "that this situation (the threatened oil shortage with gasless Sundays and all that sort of thing) has come about solely because facilities which the industry has maintained for years, ample facilities, have been requisitioned by the Government and put into service moving foreign oil to England at a time when England still chooses to move oil from Iran, Persia, around the tip of Africa, in what is a 22,000 mile round trip, instead of taking the oil from nearer home."

If this be true, it would seem that the principal purpose to be served by the stripping of our own oil-transport system is to make it possible for England to carry on her foreign trade on the business-as-usual basis. That, we submit, is hardly a cause for which the American people should be asked to forego the usual Sunday automobile ride.

From the Capitol, Topeka, Kans.:

This latest move of the administration does not yet solve the problem of furnishing Japan the oil and scrap iron she is using to carry on Axis activities in the Pacific. We are steadily marching down the road to war, and Japan is obligated to attack us when Hitler orders, yet in May some 800,000 barrels of oil left our west-coast ports for Tokyo. To pay for oil and scrap iron Japan sends gold which we buy at a high price.

It would seem that this Government is shaking its fist at the Axis Powers, yet doing about everything it can to help a potential enemy get ready to harass our Navy in the Pacific if our aid-to-Britain program precipitates a shooting war in the Atlantic.

From the Union, San Diego, Calif.:

The removal of the 50 tankers from eastern commerce will, of course, curtail the delivery of oil and gasoline to certain sections in that area. But it certainly will not affect it in most of the rest of the country. On the Pacific coast, for example, most of the gasoline is transported by tank trucks. Most of the refineries are in the oil fields and the transfer of the refined product to the consumer is simplified and requires virtually no tankers. In many of the Middle Western States pipelines carry the needed fuel over long distances.

If we actually are to have a transportation shortage, let's call it that. If it affects certain areas of the country, temporarily causing a shortage of gasoline and oil for a day or so occasionally, why penalize the whole nation, particularly regions where supplies are plentiful and are moving normally? Let's hope that Mr. Ickes becomes oriented and realizes that he is administering the oil industry in the United States and not in Great Britain or some other country that produces none. That might go a long way toward solving his "problem."

From the Record, Philadelphia, Pa.:

Talk of gasless Sundays for the United States, of a possible ban on pleasure driving, of campaigns to reduce waste of gasoline by slower driving.

Japan, which is getting our oil by the million barrels, should reciprocate, we think. There ought to be gasless Sundays in Tokyo and Yokohama.

Perhaps, too, Japanese pilots flying over China could be taught how to reduce their gasoline consumption, so that the Chinese could be bombed with less gasoline per bomb.

But if we can't start such a drive in Japan, perhaps we can arrange a barter deal. We'll sell Japan oil in return for rickshas.

Then, on our gasless Sundays, we can go riding in our rickshas—pulled, we hope, by career men in the State Department.

From the Deseret News, Salt Lake City, Utah:

It does not seem consistent, under these conditions, that the American people should face a shortage of oil at home while shipping 800,000 barrels of oil to Japan every 30 days. With Americans warned that they will be called upon to discontinue unnecessary driving and to use less oil in their homes, with increases in gasoline and fuel-oil prices predicted, is it not foolish to use American ships to transport huge supplies of oil to a country that is not even friendly to the United States?

There are sound reasons why the United States Government should cease supplying Japan with oil. The oil is needed in America. The ships are needed. Under such circumstances, a ban on oil exports to Japan would not be punitive but dictated by American requirements. The problem is one that concerns the War and Navy Departments even more than it does that of the Departments of Commerce or the Interior.

From the Daily Times, Tacoma, Wash.:

Maybe, as Harry Hopkins, the President's right bower in the lend-lease set-up, says, we're "too dumb to understand."

Be that as it may, we, and other American simpletons of equal density, see something incongruous in the talk of gasoline rationing in this country while we still ship gasoline to Japan and Russia.

We're willing to do our share in defense of democracy, but we're not willing to miss a single Sunday picnic in order to help fill the oil drums of the dictatorships.

As Congressman JOHN COFFEE has told the House at Washington, the tankers still are crossing the Pacific westbound and loaded. And Japan and Russia not only frown upon us at present but are pledged to aid Germany and Italy.

Yesterday a Petroleum Industry Committee at the National Capital suggested "rigid restrictions" on gasoline usage, including "gasless Sundays." The committee forecast "acute shortage" by July 1. The report was made to Cabineteer Ickes, new defense oil czar.

For all of this there may be adequate explanation.

But if so, we haven't heard it—and neither has Congress.

A congressional committee, urged by COFFEE, is beginning a private inquiry today, we understand.

We wish the committee well.

And we hope the bureaucracy at the National Capital, burdened as we know it sometimes feels it is by the stupidity of the American public, will tell us why we must even talk of gasoline rationing while still shipping the fuel to our asserted potential enemies.

From the Post, Milwaukee, Wis.:

It is hardly likely that our State Department * * * can be so naive as to believe that these nations in the Axis or in the Axis orbit have suddenly become enriched to the point of buying extra-large quantities where they bought only moderate amounts before. The type of the exports themselves should be a severe indication of their purpose.

It seems that we are exporting to Hitler as well as to Japan. American businessmen re-

fuse to take the situation seriously, and they are nullifying a good deal of the work that the country in the main is trying to do. We are trying to be an arsenal for democracy. They are making of us also a warehouse for the Axis.

From the Tribune, La Crosse, Wis.:

With Americans being warned that they will be called upon to discontinue unnecessary driving and to lower the heat in their homes, with increases in gasoline and fuel-oil prices predicted, is it not foolish to use American ships to transport huge supplies to a country that seizes every opportunity to insult the United States?

If the United States Government does decide to stop supplying Japan with oil, it will have sound reasons. The oil is needed in America. The ships are needed. Under such circumstances, a ban on oil exports to Japan would not be punitive but dictated by American requirement.

But the problem is more in the field of the State, War, and Navy Departments than in that of the Departments of Commerce or Interior.

From the Express, Easton, Pa.:

The time has certainly come, in the circumstances, for taking a bold stand against Japan and for translating what we think and feel about the matter into forcible action—and if Japan doesn't like it, let her try to do what she can about it.

This country at the present time is not only attempting to aid Britain and maintain the traditional American principle of freedom of the seas but we are also trying, as best we can, to aid China in her efforts to oppose Japanese domination and thereby maintain for ourselves the policy of the open door in that vast country. These things being true, it behooves the United States to tell Japan and her belligerent admirals and bellicose generals where to get off—and stay off.

From the American, Austin, Tex.:

During the 4 years since the invasion of China, public sentiment in this country has been overwhelmingly in sympathy with the Chinese, whose courageous fight has meant much to the democratic cause throughout the world. Now that our oil shipments to Japan are seen in their proper relationship to the Eastern States' shortage of motor fuel, there is due to be a demand for a sharp change in policy.

From the Herald-Journal, Syracuse, N. Y.:

Each step by Washington to shut off supplies has brought a growl from Tokyo. There have been threats that such action would force Nippon to seize the Dutch East Indies to obtain needed materials. This would bring danger of involvement for the United States. Any clash with Japan would distract our attention from the job of supplying war materials to Britain.

* * * * *

It is easy to guess what Nippon's policy would be if the situation were reversed. It would make sure that its own needs were supplied first. Of course, the Nipponese will pull all the wires known to them to keep the oil stream flowing but if they are bluffing there is an excellent chance that the bluff will be called.

From the Journal, Lansing, Mich.:

The authorities at Washington seem to feel that somehow they can keep Japan satisfied until such time as the combined fleets of America and England are in condition to meet Japan on better terms in the Pacific. The onlooking citizen is beginning to doubt if that is so. They think that Japan is merely intimidating England and the United States and will keep up the intimidation as long as possible.

It is not agreeable to citizens when they find the matter of foreign policy reduced to terms of common blackmail. Perhaps the public—especially the seaboard public—would not think much of the matter if there were guaranty that there be no limit put upon the use of the family jallopy, Sundays and all.

From the Daily News, Miami, Fla.:

So in this weapon of embargo we have a threat of which little show has been made. Japan meanwhile gains domination of French Indo China, seeks the same in the Dutch East Indies, preaches the doctrine of Pan-Asianism in China, marks out her sphere of influence to include Oceania, which some geographers define as all the oceanic islands in the Pacific.

In addition, Tokyo as an Axis partner, must be presumed, and certainly has indicated this presumption to be correct, as ready for open hostilities with this country if the United States becomes actively embroiled with Germany or Italy.

We talk of an oil embargo against Japan, and Japan immediately presses southward for new oil supplies. Talk of a complete embargo might be more impressive, both to China and Japan.

From the Tribune, Scranton, Pa.:

In addition to stopping oil shipments from eastern ports, Secretary Ickes should take it upon himself to find out how many American tankers have been transferred to foreign registries and are engaged in carrying oil to Japan. It seems that the sensible procedure would be an administration order to prohibit all oil shipments from eastern seaports except those for Britain.

The whole problem of fuel exports to this country from Japan should be carefully examined. Japan gets almost 80 percent of her petroleum from the United States. In fact it is contended that she is receiving from the United States far more oil and gas than are required for her present needs, the theory being that she is storing it up—perhaps against the day when she may as an Axis partner use it to the detriment of this country.

In any event, the Ickes nonshipment order is a blow to the appeasement clique in our State Department. We have seen too much of the tragic futility of appeasement in our times.

From the Herald, Durham, N. C.:

There is the point, however, that transportation facilities have been depleted by transferring tankers to routes carrying oil to Britain, for reason that we have decided it is vital to us that Britain be supported against German aggression. And since Japan is a proclaimed ally of Germany, active enemy of our ally, Britain, and our active enemy in all except name, our people simply do not want Japan to accumulate stocks of American oil for use against American interests, ships, planes, etc.

From the Daily Advertiser, Montgomery, Ala:

Oil shipments to Japan are defended with the supine argument that she is so dependent upon us for her supply that she might get mad and do something desperate if it should be cut off. We heard the same sort of talk against the scrap-metal embargo, but nothing came of it. At best it is a novel explanation, that we must continue to provide our enemy with the sinews of war because he cannot get them elsewhere. It is on a par with saying that a law-abiding citizen and prospective victim should hand a gangster a gun, lest the thug attack him with his fists.

The State Department is reported divided over the wisdom of an oil embargo. Apparently some of these quill-drivers are inclined to accept Japan at her own estimate, to view her utterances as fraught with dire menace and disaster to this country, instead of the despairing squeal of a cornered rat.

Anyway, the United States has a bunch of ninny-nincompoops, under the generalship of chief ninny Breckenridge Long, in its State Department it could well do without.

While purging the Axis diplomatic corps in the United States, we might as well start purging our own State Department.

From the Sun, Lowell, Mass.:

The oil and gasoline which we sell to Japan will no doubt be delivered by her to the Axis Powers, or used by Japan as an ally of the Axis, in an effort to defeat the democracies of the world.

This is a policy which is so inconsistent that it should not be countenanced by the people of this country. Our Nation has given aid to China, and to the democracies, by way of supplies and money. When we sell oil and gasoline to the enemy of those democracies we are placing the weapon in their hands with which to defeat the same democracies which we have been attempting to aid. It is an unholy policy, to say the least.

From the Sacramento Bee, Sacramento, Calif.:

A fantastic state of affairs exists wherein Americans are straining their productive resources to the breaking point in order to supply Britain, China, and other foes of the Axis with desperately needed war supplies, and at the same time are permitting the export of petroleum, scrap metal, and other raw materials to Axis partners or friends.

Such a policy does not make sense to the citizens who are going to be taxed in the billions for all-out aid to the Allies.

From the Christian Science Monitor:

And up to a point they are certainly right. But the time comes when popular pressure cannot be ignored, even by brahmins in a state department. That time in relation to supplies to Japan came some months ago, and the State Department took apparent action to cut off airplane gasoline and the better grades of scrap iron. But the public has now found out that this action was largely illusive—that considerable quantities of both commodities continued to go to Japan and to Vladivostok.

Now, it may be that the State Department officials are quite right. But if they don't explain their reasons to the public pretty soon, they may one day find themselves in a very uncomfortable position. For popular indignation cannot be ignored forever. A good rousing demagogue in the Senate or House could make a lot of trouble for the State Department on this issue, and he might be a patriot as well as a demagogue.

Moreover, there is evidently great division between Government experts on the problem, with some officials and some departments supporting the popular side of the case. Harold L. Ickes, the new oil conservator, is obviously very anxious to cut off the shipments to Japan, and has already curbed some of them, whether the export-license officials of the State Department go along with him or not.

* * * * *

The people are beginning to suspect that other phases of the work of the Munitions Control Board are not all they should be, that proper vigilance has not been shown. What about shipments to Finland, to Spain, the public asks? This is a touchy point. Deep-seated popular distrust of governments and "international cliques" stems back very largely to the sale or interchange of valuable commodities between enemies just before or even in the early stages of previous wars. The idea that wars are not worth fighting, that they come from selfish economic motives and not from causes of national survival or basic ideals, feeds on just such situations. The hands of few of the belligerents were clean in

the last war, and the post-war revulsion which the world felt came greatly from revelations of sinister commercial motives. The hands of some belligerents were very dirty early in the present war. It appears that the United States hands, despite an elaborate control system established by Congress, have been none too clean this time. The public—everywhere I have talked with people across the continent these last 2 weeks—demands an explanation.

From the Daily Record, Stockton, Calif., in an editorial entitled "Our Strange Oil Policy":

One explanation is that Japan has stored up so much fuel for future use that curtailment now by Uncle Sam could not embarrass her. Hence there is no disposition in Washington to arouse her resentment by shutting off the supply. Also it is figured that American shipments will keep Nippon from reaching out in a Netherlands East Indies grab.

Washington diplomacy unquestionably is playing for big stakes in a perplexing world situation. It may be that the administration hopes to wean Japan away from her Axis alinement, for which her ardor seemingly has abated. Presumably the Washington government would not follow its enigmatic oil policy if it did not expect important returns. The American people, threatened with gasless Sundays and gas rationing, and witnessing the prospect of American fuel in Japanese hands being turned against American interests, will expect the returns from our policy to be important and valuable indeed.

From the Dispatch, Roswell, N. Mex.:

How any nation can continue to supply materials to a potential enemy is beyond the comprehension of the average American citizen. State Department officials report that they do not desire any embargo beyond that limited embargo already placed, for fear that Japan will take the Netherlands East Indies, a valuable and essential source of tin and rubber for this Nation. However, the Dutch of the Indies recently refused to grant Japan any additional imports of oil or petroleum products beyond that amount they had already been receiving. If the Dutch, directly on the spot of any possible Japanese aggression, have the courage to refuse Japanese requests, it makes a pretty weak case for this country, which would be only indirectly affected.

When a dictator nation goes to war, it goes to war in all directions. Democracy must find the way to counteract that fact by using something of the same method prior to actual hostilities. There is no reason that we should continue to arm or supply the Japanese with any of the materials of war—they may be used against us in the future.

From the Gazette, Charleston, W. Va.:

If there is any reason we should continue to "appease" Japan by sly help during loud talking for home consumption, we want to know what it is. As we have remarked before, WHEELER and his ilk would serve their country far better in calling for debate on such matters as this than by mumbling over the old bones of "we don't wanna fight nobody."

We don't want to fight unless we have to, but when it comes to the pinch that we must fight we certainly don't want our enemies stocked from our own supplies.

Unpack the State Department and get some sure enough Americans in there.

From the Statesman, Boise, Idaho:

Such mercenary activities, however, when proved to exist, should be throttled immediately. An example of such verified nonsense is America's supplying Japan with war sinews while grunting an extra groan to help China.

It is highly important to domestic morale to know to what extent America's effort to vanquish totalitarianism is being neutralized by material misdeeds that tend to sustain it.

From the Daily News, Albany, N. Y.:

Concretely, they think it is high time to stop furnishing Japan with oil and other supplies which are being used against those with whom we have taken our stand and which may one day be used against us. That seems to be simple common sense.

From the Daily Times, Louisville, Ky.:

Individuals, for private profit, you understand, are selling war materials to Japan. They are, probably, in some instances, individuals who expect to sell war materials to the Federal Government in its drive for defense and for stopping Hitler.

Senator GILLETTE demands appointment of a joint committee of Congress to investigate the manner in which Axis Powers are getting war materials from the United States. His demand seems reasonable.

From the Times-Star, Bridgeport, Conn.:

Embargo of certain materials has been ordered against Japan long since But the articles that would do her the most good, scrap iron and oil, we have been shipping to Japan freely.

* * * * *

So now exports of oil to Japan are to be blocked, or at least the President is preparing to exercise his power to block them. It's about time.

From the Spokesman-Review, Spokane, Wash.:

If this means, as it appears on the surface, that Americans must use less gasoline while gasoline continues to be shipped from this country to Japan, possibly later to be used in attack by Japan upon American troops and ships, then surely our Government moves in a mysterious way its wonders to perform.

From the Press-Telegram, Long Beach, Calif.:

Californians have been aware that Japan has been receiving immense quantities of oil from this coast, although such oil is supposed to be banned, except as licenses are issued by the National Government. There have been other reports that military supplies are slipping through Latin America direct to Germany and Italy.

Both British and American companies are said to be refining and transporting oil from Japan to the Axis Powers.

The facts should be known and appropriate action taken to prevent further American support to the enemies of democracy.

From the Dispatch-Herald, Erie, Pa.:

Much talk is heard of an oil and gasoline shortage being in sight, and stories are coming out of Washington to the effect that gasless Sundays are in prospect.

This suggests a question. If gasless Sundays and stricter productior controls are necessary to assure that "the supply of petroleum and its products will be accommodated to the needs of the Nation and the national defense program," as one official statement has it, then why in the name of reason does the United States permit gasoline and lubricating and fuel oil to be shipped—as it has been from west-coast ports for months at the rate of a tanker every 2 days—to an avowed ally of the Axis, Japan?

Chester Rowell, in the San Francisco Chronicle:

The situation now is that a Japanese attack on the region radiating from Singapore no longer depends on the mere immediate supply of American oil. They have enough of it stored up already for the purposes of that attack and they will have plenty more if they win it. They openly threaten that attack and are making visible preparations for it. We, on the other hand, are now committed, as we were not before, to resisting that attack. When or if the attack is made depends on the course of the war in Europe and on the course of politics in America. Whenever the Japanese are convinced that Britain cannot and America will not defend Singapore, they will move. Meanwhile they will blow alternately hot and cold.

So the time is up. The embargo on oil and gasoline, as well as all other war supplies to Japan, should be immediate and total. It will mean risk, of course, but only a risk which we have announced ourselves ready to take and less risk than would be involved in not doing it. And the time to do it is now, when we can still afford to keep our main battle fleet in the Pacific.

From the Chicago Daily Times, Chicago, Ill.:

We've been playing a rather shoddy game of appeasement with Japan by continuing to supply her with oil for her war machine while extending lease-lend aid to China at the same time. This has been excused as being the lesser evil of the choices confronting us. If we had stopped all oil shipments, Japan almost certainly would have moved into the South Pacific out of force of necessity.

It might be possible right now, however, acting jointly with our friends in the Pacific, on the one hand to threaten such an embargo and its consequence of war with the combined American-British-Dutch forces, and on the other hand offer some genuine inducements to Japan to withdraw from China and to break with the Axis.

To achieve a formula which would give China an honorable peace, save Japan's "face," and offer adequate guarantees that any agreement reached would be kept inviolate wouldn't be easy. But it's worth trying.

Of course, any withdrawal from China by Japan will entail some loss of face. But even the Japanese realize that sometimes there has to be a choice between a little loss of face or a complete loss of pants.

Congressmen, Be Warned!

EXTENSION OF REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

RADIO ADDRESS OF THE MOST REVEREND FRANCIS J. L. BECKMAN, S. T. D., L. L. D., ARCHBISHOP OF DUBUQUE

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered over the Columbia Broadcasting System by His Excellency, the Most Reverend Francis J. L. Beckman, S. T. D., L. L. D., Archbishop of Dubuque, Sunday evening, July 27, 1941:

I regret that circumstances arising in the wake of my recent broadcast have impelled me to this microphone again tonight. Oh, the misfortune of controversy over vital principle which in its fury spares neither friend nor feeling, which counsels deceit and crass

misguidedness, which cleaves to the bone the whole body of truth and makes of ignorance a virtue.

I am filled this evening, my dear Catholic and Christian people, with an indignation akin perhaps to that which Christ the Saviour demonstrated in the temple despoiled. In the past weeks we have witnessed an unholy merger of Christianity and communism under the guise of military necessity; we have seen what amounts to dictatorship pseudo-officially canonized by a brother cleric; we have witnessed the beginning of the end for pledges which however well given had not truth for their backbone. "Strategy," what crimes are committeed in thy name. The bland assurances of peace for the people it seems are so much honey on the lip. Step by step, my dear friends, just as surely as I stand before this microphone tonight, our unhappy Nation is being propelled into an honest-to-goodness "blood and tears and sweat" shooting war. A war not to end wars, forsooth, but, whether we know it or not, a war to make the world, and particularly this beloved America, safe for the new bolshevism.

I think at this time I might appropriately restate my position on this momentous issue of war or peace for the American people. From the beginning I have maintained that this war, however falsely represented, is an economic war based on greed, a vast struggle for power and possessions between two diametrically opposed systems of finance. The problem over which the warring nations have come to death grips is simply this: Whose economy shall be dominant in Europe, ours or yours? In short, who is to exploit whom? The entrenched internationalists had their day; they financed the world into eternal debt and milked whole peoples, grinding them down into the dust of ignorance, poverty, and abject despair. When the crimes of these vendors in human misery arose to confront them, when other nations dared to challenge their tyranny, then it was war—war in the name of democracy and a hundred other slogans—yes; even war in the name of God Almighty Himself. If it suited their purpose to call it a holy war, that was all right too. Anything to persuade the gullible millions to go out and do the fighting and the suffering and the dying that the system might survive.

So today the propaganda—smooth stuff it had to be this time for the American people were weary and disillusioned of "war to end wars." They had been fooled once and they knew it. Oh, for a new slogan! Then out of the mysterious somewhere was born that supreme insult to the intelligence of our people, "Aid to the Allies Short of War." This was a clever bait and, anxious to aid Britain, while remaining ourselves at peace, we swallowed it, hook, line, and sinker. A few saw into the hypocrisy of this proposition, but their warnings went unheeded. In no time at all "measures short of war" had become an established axiom. The foundation was laid, the course set, and, whether they liked it or not, the American people once again were on the spot for Britain. A few well-chosen words to mark the gravestone of our folly; a "slimy slogan" had done it again. Here is His Eminence the great William Cardinal O'Connell, dean of the American hierarchy, on slogans: "Of all the things in the world, I think what we have to be on guard against are these slimy slogans that mean nothing. They are insults to one's intelligence. And, worse than that, they are dishonest. 'Make the world safe for democracy.' 'The war to end wars.' Oh, how slick that is. It sounds so nice, 'the war to end wars.' Of course, everybody wants to end war, so they rush in to end the war that they began. We have had wars ever since. And the worst one the world has ever known has come about since this slogan was manufactured to fool the people. 'The war to end wars.' How lovely and glib it sounds on the tongue. And the poor people; what a crime it is to deceive the poor people. What a crime! To play on their generosity of heart and even their trust in those who govern them; to play on that, that is pretty vile. To bring about what? To bring about disunion, confusion, and, little by little, the loss of everything they hold dear, the loss of their own children, the loss of their possessions, the loss of their civil rights."

People, here is a stirring indictment of deceit and a glimpse of what we may expect if as a result of our folly we get into this war unto annihilation. I reaffirm to you that the present conflict is not a "holy war," least of all a just war; but a war of one imperialism against the other in which godlessness is incidental to all belligerents. Neither side is interested in God so much as gold or its equivalent. And there is no crusade for Christianity or democracy afoot anywhere in the world today either, all high-sounding slogans to the contrary notwithstanding. Further, we may be sure that abroad the "four freedoms" have a phony ring. To the war-weary people of Europe this slogan is just another mask for the imperialism of the new world.

Again I quote Cardinal O'Connell: "And there is one thing certain: we cannot—and we ought not try to—impose our form of government on the whole world. Why, they don't want it. If you are going to impose it on them, then you are doing an act of tyranny. I wonder if anyone really believes he could do that. If he doesn't believe it, and if he says it—I don't want to use the word. If he says what he doesn't mean, then you know what the adjective is; that is false. You can't in honesty try to deceive a whole people, much less the whole world. They know perfectly well what the American Government is, and most of them, many of them, don't want it. Their traditions are all the other way. Very well; it is for them to decide, not for us. But as for our going out and trying to impose our method of life on the whole world, it is not only nonsense and impossible, but because it is utterly wrong—it is tyranny."

No, my dear American friends this war is nothing more or less than a struggle to reestablish the shattered boundaries of international finance, and other things international, in countries which have had their fill of them and do not want them anymore. This is a struggle which if prolonged through our efforts, but for a miracle of God, may go on interminably until universal chaos and exhaustion encompasses the warring nations.

And chaos—there is a whirlwind for you—a wind to scatter the deadly communism like a plague through all the world. If we in this country sanction even by our silence the hatred and revenge which dwells in the high places and relentlessly, hypocritically prosecutes this war we may well fear for that super doomsday of a world disillusioned in its faithless leaders, hungry at the stomach and weary unto despair. The weight of a long and terrible war will crush and distort the human spirit, deprave and bestialize. Oh, my dear friends, not death but sin is the horror of war. Maimed bodies are but an external evidence of the mangled spirit within. And the spirit of whole peoples shattered by interminable warfare will prove fertile soil for the cockle of a new type of communism. This "new godlessness" I will call it, because it is like to be a composite of that paganism prevailing in high places everywhere today, is something I tremble to contemplate. I pray heaven that we shall all be spared so terrible an alternative to an early peace with justice.

But I do know that the business of this great land is the business of peace. Defense? Certainly defense—defense to the hilt, but let us not discard the moral armament of a peaceful and freedom-loving way of life pursued for the edification of all the world. The great Prelate of the East advises: "Teach them (the nations) by example." Yes; let them all learn to look to America as a great country, where people are contented and happy, and are working day in and day out for the welfare of their family, for the welfare of their Nation, contented, honest, upright, obedient to the laws. Let them learn that. By that example, show the world what a great, big united country like this can be, united of all the different races in the world, by love of their native land, of their country whether it is their native land or not, of their Nation to which we belong. And with God's help, God, who has showered His blessings upon this country, and from whom it seems He gets very little thanks; this breadth of land from ocean to ocean, the mines, the farms, the mountains, the hills and lakes. O, God, what a country it is; a country to die for in defense, yes; but not to fritter away or barter out, but to preserve as it came to us from those glorious founders, whose memory ought to be our great strength and support. That is what we mean when we say "defense." Yes; all out for defense and then keep out of these foreign wars. I say that; you say that. Well, Washington said it, and he was a fairly big man, one of the great men of history. And he was the one who began with the solid idea upon which this whole Nation rests, or at least ought to rest.

Ought to rest, indeed. Too long in this country the American people have been led around by the nose, told what to do, robbed, kicked, and abused by the high-and-mighty masters of international finance; too long have they tolerated corruption and dishonesty in politics; too long have the Christian people of this Nation remained divided on fundamental issues. Yes; I fear that we have been nothing more than pawns in the good old game of divide and rule. It seems we can't get together for long on any one thing, and small wonder with these past masters in the art of long division ruling the roost. It is high time that the Catholic Church in particular and all good Christian Americans put aside their differences, unite in the common cause of Americanism and by legal means, but do it, put out these pirates who would rob and despoil our people of their very birthright, milk the Nation and then go off to abuse and ridicule it for another 20 years.

And while I am at it I think this is a good time to lay an old ghost. In late years it has become the fashion of much of the secular and even the Catholic press to place official interpretations on the pronouncements of clerics newly returned from abroad. Every scrap of news which might be construed as comforting to the cause of the interventionists has been hungrily seized upon and used to further divide, confuse, and exploit the Catholics of the Nation. Sadly enough the flagpole on the White House lawn has never lacked for clerical adornment. This is a disgraceful condition of affairs—the Catholic Church being used to further the evil ends of a privileged group. I cried out against this abuse 2 years ago, and with all my strength I cry out against it now. No man speaks for the Catholic Church save the Holy Father himself, and he must of necessity remain far above all this controversy. I do not claim to speak for all the Catholic people in this country; but I am well-advised enough to know that the overwhelming majority of our people are unalterably opposed to participation in this war. I am prepared to risk the proof of that point, and in the wake of crumbling pledges I turn once again to the representatives of the people:

Congressmen, be warned. You know that the people of this Nation are overwhelmingly opposed to becoming embroiled in this war. In the past many of you have voted legislation which was represented as designed to keep this country out of war. Subsequent

events must have convinced you by now that the opposite appears to be true. Congressmen, the people of this Nation will never forgive, much less forget, a negligence which permits the stealthy maneuvering of this beloved America into war either by the front or the back door. God forbid; I do not wish to speak disparagingly or distrustfully of our highest magistrates. I concur that in these anxious hours of deliberation and decision they are deserving of our deepest sympathy and the comfort of our prayers. But there are powerful figures moving in the background of this picture, and powerful pressure is certainly being brought to bear upon positions of responsibility. The smack of totalitarianism, of secret counsels arriving at decisions which, as I have said before, will effect whole generations of the unborn—these are realities we may not ignore. Remember, the stakes are high, and a few in this country would pay almost any price for the vindication of their monstrous greed, hatred, and deceit—any price, that is, in the blood and treasure of the American people. These manufactured crises and prayed-for incidents bear witness to the point.

And our boys—those fine young lads who are the hope and promise of this land—must they spill their blood for Britain and Bolshevism? They have a right to decent, unequivocal leadership. They will not shirk discipline nor will they hesitate to sacrifice, yes, even to die if necessary in the cause of a strict defense of this Nation. But the interpretation of the phrase "national defense" has lately become alarmingly broad. At this very moment only a mere pledge and an incident stand between the American people and full-fledged warfare, declared or undeclared. Congressmen, your people entreat you to look well to this state of affairs. There is still time to circumscribe and temper the dangers which threaten us, to put on the brakes and stop for a last look around before we take the fatal plunge.

And if we but stop, look, listen, we see the strangest sights in this land of ours. Men of stanch patriotic convictions who dare to oppose our entrance into this war are immediately smeared and classified as Nazis, bundists, yes, even traitors to their country; and again I quote His Eminence: "I thought that we were all taught from our infancy that we must love America and love it more than any other nation in the world. And to bring that into question was supposed to be a rather mysterious sort of treason. And now, for saying that very thing, one is very apt to be smeared by somebody or other who, from his own reasons—God knows what they may be—seems to take offense at the fact that Americans ought to love America and ought, as it is their duty bound, to see that the welfare of America is nearest their heart."

Let no man say that the Archbishop of Dubuque has not the welfare of America nearest his heart. Everyone of us who is fighting to keep this Nation at peace is fighting because we love that Nation. Everyone of us has an abiding disgust and just hatred of nazi-ism, communism, all "isms" everywhere. But we love our country, this great America, above everything and we believe firmly that remaining at peace it has a superb destiny, a sublime mission in a world almost totally at war. "Our duty as Catholics and as Christians, is to help pacify the world," says Cardinal O'Connell, "yet to say the word 'peace' nowadays would be almost to bring down upon your head a torrent of abuse."

Indeed, matters have come to a pretty pass with all of this smearing of righteous men. And it is high time that we ask ourselves, men of the Congress, who are these people who dare to vilify decent Americans, calling them Nazis and bundist and traitors? And while we are on the subject, in this so-called great Christian democracy of ours, how can we account for the coddling of Communists in every responsible branch of our Government? Truly there is something rotten here. Again, Congress, be warned. These unmolested commissars are the disciples of that new order we may expect as masters if this country goes to war. These want war. I fear that we are already dangerously honeycombed from within; that we have been blind and criminally irresponsible in harboring these arch enemies of Christianity. Today, the mask is off; it is communism, communism, communism everywhere gaining ground. We are in danger of being slowly poisoned, debilitated, and disarmed by this monstrous malady. Now, in the name of the four freedoms, all aid to Red Russia is urged upon us while Britain in desperation has allied herself with a devil. So, Britain has been fighting the battle of Christianity—there is a fallacy exploded. If we go into this war now we shall be nothing more or less than a criminal nation, and let no one look to our Catholic people for comfort. In conscience we bishops are all bound to listen to the voice of Pius XI, who wrote in his renowned encyclical on Atheistic Communism: "See to it, venerable brethren, that the faithful do not allow themselves to be deceived. Communism is intrinsically wrong, and no one who would save Christian civilization may collaborate with it in any manner whatsoever." So, there can be no collaboration for communism as far as the Catholic Church in this country is concerned. We have been pushed far enough in this abominable game of aid to Britain and bolshevism. We are sick and tired of broken or badly bent promises, of hypocrisy and deceit, of false hysterias and manufactured crises. We want no would-be commissars occupying positions in our Government. We want no war declared or undeclared; no trumped-up emergencies.

Men of the Congress, the great majority of our people look to you for earnest, speedy, patriotic action on their behalf; action which, in concert with the executive branch of our Government, will preserve this great Nation at peace and insure against any wholesale frittering and bartering away of our vital resources. They have every hope that you will do valiantly that which needs to be done and undone. The will of your people is and should be a vital, throbbing, prevailing thing urging you on to magnificent decisions in the name of constitutional government. So long as you loyally reflect that will, we shall not lack for unity in this Nation or for strong arms to defend it. "On the question of defense we are all entirely united," vigilant, determined, unafraid; but "the vast majority of the American people who stand for the defense of our Nation also has gone on record again and again and again as being opposed to participation in foreign wars"—Cardinal O'Connell. Certainly the majority millions of our Catholic people are opposed to it, to the coddling of Communists, to aid for "red" Russia. In farewell tonight I would draw upon this great body of opinion, Catholic in particular, Christian in general, mutually American, and unequivocally patriotic. Three times I have come to the microphone to voice the sentiments of this body—not a pleasant duty in these days of abuse. Now I charge you, Catholic and Christian citizens, to do your duty. I charge you this very hour to sit down, mothers, fathers—you who have most to lose and most to gain—make yourselves vocal to the Congress. Get out the letters and the post cards and write, write, write. Let both your Senators and your Congressmen know where you stand in this matter now. Your right of petition implies also a sacred and a solemn obligation. It is your duty to exercise it freely, fearlessly, incessantly. In the very teeth of the slurs which have been cast upon that right I charge you to persevere. In the corridors of Congress make the welkin of petition ring today, tomorrow, and throughout all the years; for it is the sweet bell of liberty, my dear people, a deathless voice which is democracy.

Henry Ford at 78

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 30 (legislative day of Monday, July 28), 1941

EXCERPT FROM EDITORIAL IN THE WASHINGTON EVENING STAR AND POEM BY HORACE C. CARLISLE

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the opening paragraph of an editorial appearing in the Washington Evening Star of today entitled "Mr. Ford at 78," to be followed by a short poem by Mr. Horace C. Carlisle, a well-known poet of our Capital City, entitled "Henry Ford."

There being no objection, the editorial and poem were ordered to be printed in the RECORD, as follows:

MR. FORD AT 78

Time has not discouraged Henry Ford in his hopes for peace. On the eve of the seventy-eighth anniversary of his birth he told newspapermen: "I believe that, right now, a new world is being born—a very different world * * *. Contrary to what appears on the surface, this war is bringing the people of the world together as never before. It touches every race and people on earth. The radio and the airplane are bringing communication and transportation such as has never been before. Every race and people is getting to know more about other races and peoples. They're beginning to see that you can't build anything permanent on hate. The world is learning tolerance as never before. We're right on the verge of a federation of the whole world. There'll be more tolerance in the world, because there'll be more understanding."

HENRY FORD

(1941)

Seventy-eight years ago there was born into being,
In a humble but honorable home,
One, to be later blest with the power of seeing
Things that are and that are apt to come—
In his earlier struggles for just recognition
'Mongst the powers-that-be, he ignored
All their insolent slights, for he had the ambition
To produce a real self-running Ford.

Ridiculed for his vision of a real horseless carriage,
With the power to turn its own wheels—
The more those that derided him tried to disparage
His design, and to spurn his appeals
For financial assistance to put into action
His unique dream—the more he implored
The Great Helper to give him the great satisfaction
Of producing a self-running Ford.

Henry Ford laughed to scorn every senseless suggestion
That he quit and give up in dismay,
And became, in the United States, beyond question,
The great motorcar chief of his day—
Wheresoever the Stars and the Stripes of the Nation
Are unfurled, the fact can't be ignored,
That there's no auto maker in all God's creation
That has helped transportation like Ford.

Henry Ford, in his marvelous, up-climbing stages
Of prosperity, justly has shared
His success with his men by increasing their wages,
For he has for their happiness cared.
Disagreements between employees and employers,
The fomenter of strikes, he's deplored,
Because such inharmonious acts prove destroyers
Of that justice inherent in Ford.

Sacred honor, in Ford's master organization,
Has stood uppermost, up thru the years,
The supreme polar star in the Ford constellation,
The one star by which wisely he steers
His great enterprise, wherein he is the chief actor—
Wheresoever Ford motors have roared—
Recognized, everywhere, as a great benefactor
To humanity, is Henry Ford.

Tho great statesmen have blest our great civilization,
None of them have, perhaps, yet surpassed
Henry Ford, the past master in land transportation,
Whose great name will endure to the last.
Henry Ford's benefactions, on history's pages,
By posterity will be encored—
He succeeded by raising his co-workers' wages—
Yea, and God raised the wages of Ford.

—*Horace C. Carlisle.*

Branding Price-Fixing for What It Is

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

LETTER FROM ERNEST H. HAHNE, PROFESSOR OF ECONOMICS, NORTHWESTERN UNIVERSITY

Mr. CASE of South Dakota. Mr. Speaker, under permission granted by the House, I place in the RECORD a very interesting and thoughtful letter from Ernest H. Hahne, professor of economics at Northwestern University, which is most pertinent to a subject now before the Congress, Price-Fixing. I hope every Member will read it. The letter follows:

NORTHWESTERN UNIVERSITY,
COLLEGE OF LIBERAL ARTS,
Evanston, Ill., July 28, 1941.

Hon. FRANCIS H. CASE,
New House Office Building,
Washington, D. C.

DEAR MR. CASE: The current discussion of price control for the purpose of preventing inflationary tendencies prompts the following letter, which I hope may assist you in formulating a sound judgment with respect to this extremely important issue.

I am assuming that it is necessary to maintain capitalistic democracy with both sound military and economic measures, and that military measures alone are inadequate.

THE EUROPEAN PATTERN

The experience in European countries where price controls have been used most extensively now shows a vaguely defined pattern or stages of historical development. Those stages have been set forth by eminent German economists as follows:

1. Spot control: Originally intended as temporary price controls for particular prices, but subsequently proving to have been the beginning of a permanent program.

2. Key-price controls: Maximum prices for selected commodities or industries, usually those which have been well cartellized during peacetimes.

3. Antiprofiteering laws: Primarily excess-profits taxes followed shortly by penalty taxes and/or administrative "price-discouragement methods" aimed to discourage evasions and violations of maximum price decrees.

4. Wage and price freezing decrees (Italy, 1927; Germany, 1936; Japan, 1939): Intended to apply generally to the whole economic order, somewhat along the lines of the Baruch plan as outlined by C. O. Hardy in his War-Time Control of Prices.

5. Rationing: Beginning with priorities and supplemented with noneconomic sanctions.

6. Centralization and the use of equalization funds: Centralized control for both wholesale and retail prices through buying and selling agencies supplemented with offices which supervise interdependent prices.

Such price control developments could be followed here in the United States, provided there is an agreement to modify the economic order, and to abandon sound economic principles, and to adopt the policy of conscious control by a few power-using agencies.

It is very desirable that the proposals now being made which look toward the abandonment of sound economic principles be branded and recognized for what they are worth. It is unwise for regulatory agencies, as well as legislative groups to adopt price control systems that are founded upon fallacies that can be proved to be unsound in advance of opportunistic experimentation.

FALLACY NO. 1

One commonly accepted fallacy is that output can be restricted as a part of the program for preventing inflation.

Take, for example, the proposal to restrict the production of automobiles. Suppose that for purposes of price controls the administration has been able to fix absolutely the total quantity of purchasing power, which, to say the least is a questionable assumption, and that at any given time there is a totality of $200,000,000 that may be spent as purchasing power. All other things remaining the same, a reduction in cars will raise prices; thus if 1,000,000 cars are made then they will sell for $200 each, if 500,000 cars are produced they will sell for $400 each, while 100,000 cars would sell for $2,000 each.

Of course, this is absurdly simple, but not clearly understood, because it is reported in the press that O. P. A. C. S. desires to avoid price increases, and the dangers of inflation, while at the same time they recommend curtailment in the output of cars. The purpose and policy are contradictory.

Unless restriction of output is simultaneously accompanied by similar, or greater, restriction of total purchasing power, price rises will take place. The abnormal war demands automatically disturb industry and inevitably lead to curtailment of output of normal consumer goods. The conscious effort of the past decade to raise prices is now being supplemented by the normal workings of the economic system, and this disturbs those who feel that the situation is getting out of hand because it is no longer subject to their theories of conscious control.

The efforts to raise prices during the thirties were approved by the people at the polls, therefore, a repudiation of that policy today is politically dangerous, at the same time that it is economically unsound.

FALLACY NO. 2

A second common fallacy is that prices can be regulated without regulating incomes.

Initial proposals for price controls always assure that there will be no regulation of wages, except in countries where there is a definite attempt to redistribute incomes and wealth. This fallacy is founded upon a failure to recognize the close relationships between incomes, costs, and prices. To wage earners higher wages are desirable because they are incomes; to management higher wages are undesirable because they constitute higher costs; in short, costs are incomes.

Prices are related not to past but to prospective costs, and if prices are controlled by administrative fiat, there must be regard for costs, one of the most important of which is wages.

Whenever Congress grants price-control powers to the administration it impliedly grants powers to control wages, plus interest, plus rents.

Congress cannot separate incomes and costs, neither can any administrator.

But from a tactical viewpoint it is always emphasized that prices are controlled for the sake of the wage earners, while in the long run wages must be fixed if prices are fixed.

Will Congress, after these years of cooperating with the trade unions of America in securing the rights and recognition of collective bargaining, want to deprive those same trade-unions of their very purpose of existence by taking from them their powers of collective bargaining with respect to wages, hours, and conditions of labor? I doubt if trade-unions want to freeze wages, and especially if that power is lodged in the hands of an administrator that might find it difficult to separate incomes and costs.

A congressional vote to grant price control is a vote to hand wage control over to the administration, perhaps not at once, but insidiously and invidiously.

FALLACY NO. 3

A third common fallacy is that it is possible to check the threat of inflation by controlling particular prices, and that this automatically involves control over the price level.

Unless control over particular prices is accompanied by control over the general level of prices conflicting economic forces will be set in motion that would lead to the defeat of price controls. That there is a general level of prices different in 1932 than in 1940 cannot be denied, nor can it be denied that the value of money is different than the value of goods.

To regulate the value of money, the general price level, it is necessary to manipulate the rediscount rate, the reserve ratios, the open market operations, the flow of specie, the extension of bank credit, and these controls must move in harmony with those over particular prices.

This calls for a centralization of powers that is now diffused in the hands of the Federal Reserve Board, the Treasury, the Departments of Agriculture and Commerce, and placing these powers in the hands of that central agency which establishes control over particular prices.

To assume perfect harmony, say between the Department of Agriculture with respect to the fair price of farm products and the price administrator who fixes the prices of

the things the farmer buys, requires considerable faith in human nature. Harmony can be best established when the centralized powers of the price administrator include that of fixing all prices.

Moreover, if those now exercising powers over the extension of bank credit should make a move that would upset the apple cart of the interdependent prices fixed by the price administrator, it would be eventually necessary to divest the Federal Reserve Board and Treasury of their controls over credit and lodge such powers in the hands of the price administrator.

Do you think that under the American economic system there is anyone, or any group of men, sufficiently omniscient to exercise such control over the economic order?

FALLACY NO. 4

A fourth fallacy now current is that the proposed taxes under the revenue revision of 1941 will prove a sufficiently powerful check upon spending as to prevent inflation.

From 1933 to 1939 taxes and loans were used to finance spending and raise prices; now, with substantially the same taxes, the theory has changed and taxes will lower prices. Since the taxes are the same, the taxpayers the same, the tax incidence the same, it necessarily follows that the effects will be the same. The only variable factor in the situation is the willingness of the people to spend. Thus taxes were used during the great depression to pry people loose from their money, get it into circulation, and assure spending, whereas today it is assumed people are willing to spend and should be prevented from spending.

The funds collected by the 1941 taxes and Treasury loans will be used to buy war needs; then the laborers, managers, and industries supplying these needs get the funds; they will spend the money raised by these taxes. Hence the only difference is found in the time when the spending takes place.

To prevent inflation it is necessary that the taxes be accompanied by some method of absorbing the funds after they accomplish war purchases. Should this be left to the price administrator? My suggestion is that it could be much better accomplished through a deferred income plan.

FALLACY NO. 5

In the fifth place, a common current fallacy is that all inflationary measures are undesirable.

The fact is that the problem of price control involves a judgment as to the merits of relative values. Thus on July 24 the House was told that appropriations and contract authorizations for defense purposes would reach $52,000,000,000. We now know that the State and local debts reach about $19,000,000,000, that the Federal direct and guaranteed debt is about $56,000,000,000, or a total governmental load of $121,000,000,000.

Assuming that the present tax load of $3,500,000,000 proposed in the pending revenue legislation is continued simply to pay the principal of this existing governmental debt, it would take 35 years to pay the principal, let alone the added interest loads that must be borne.

The relative question, then, is this, Is it better to allow some inflation and the normal economic method of defraying acute indebtedness, or is it better to fix price controls that interfere with the normal workings of the price system?

Some reputable economists now regard inflation as a kind of tax, a creditors' tax, a tax on fixed-income receivers. If this view is sound, the issue then centers on the question as to the most desirable form of taxation. Before conceding control over prices to any single agency, which by virtue of the great burden must assign details to less and less competent assistants, it is desirable to weigh these relative values.

TWO SUGGESTIONS

May I offer two suggestions?

First. Congress should give further consideration to the deferred-income plan.

Thus by mopping up the tax and loan funds after they have been used to buy war materials, through the sale of bonds the limit placed on purchasing power becomes direct and effective. Such bonds should not be used as collateral for bank loans, nor should they carry conversion privileges, nor should they be cashed before the end of the military emergency, and then they should be used to buy the peacetime goods which will have experienced a curtailment in demand because of the war program.

England steered away from the deferred-income plan until it became apparent that price controls were breaking down, when the plan was finally adopted. Many sound and reputable economists favor this plan for America.

Second. Congress should at once set up a special committee to investigate and report a program designed to integrate fiscal and monetary policy.

Perhaps this could be done through some of the proposed committees already proposed by several Congressmen. Any intelligent citizen familiar with the overwhelming load imposed upon a diligent Congressman knows that he has neither the time, human endurance, nor inclination to master the complexities surrounding the predicament now caused by depression financing, defense financing, and prospective war financing.

Just as Great Britain called for the Colwyn Debt Committee to help solve the national-debt problem and the Macmillan committee to help solve the monetary problem, so, too, Congress might call for assistance from the reserves of the legal, statistical, accounting, and economic professions. This store of information is equal to that to be found in the different departments and agencies in the administrative branch, and would doubtless be welcomed by many in the different bureaus.

The responsibility belongs to Congress alone; aid can be secured from many untapped sources. Time is of the very essence of the price-control problem and such a committee should be established by Congress immediately.

Very truly yours,

ERNEST H. HAHNE,
Professor of Economics.

Observations Concerning the Grants of Aid to the Axis Powers

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

LETTER FROM C. A. BROOKE-CUNNINGHAM

Mr. COFFEE of Washington. Mr. Speaker, by unanimous consent I herewith read into the CONGRESSIONAL RECORD, a very intriguing, highly intelligent, emphatically scholarly, and argumentatively persuasive, letter from a distinguished citizen of Massachusetts. In this epistle the author, Mr. C. A. Brooke-Cunningham, expresses his reaction to a recent radio speech delivered by me and entitled "Is America Arming the Axis?" Mr. Brooke-Cunningham pays his respects to the influence of corporate greed in international relations. I believe it to be a splendid, dispassionate statement, reflecting the views of millions of Americans in their reaction to the shoddy business of putting profit before patriotism.

The letter follows:

GREAT BARRINGTON, MASS., *July 17, 1941.*

The Honorable JOHN M. COFFEE,
1608 House Office Building,
Washington, D. C.

DEAR MR. COFFEE: I am tardy in thanking you for your gracious letter of July 3, and for that I crave indulgence, but my very tardiness seems somehow to have increased the earnest of my appreciation, not alone of your kind letter but of the forthright, even scholarly, presentation of the momentous facts answering the question, Is America arming the Axis?

Certainly America is arming the Axis, has been for years, and, but for such intelligent efforts as yours, would continue to do so indefinitely. And to that conscienceless betrayal of the nations now struggling to preserve freedom and decency the giant corporations you mention have added, with characteristic effrontery, the exaction of tribute from the whole American people. And tribute it is, demanded not as by valiant conquerors but as by crafty victims of that personality disorder commonly known as greed, but nonetheless as rulers, rulers requiring acknowledgment of submission and conformity by the entire Nation.

Even the title of your address reveals the extent to which those corporations have commanded submission and achieved control. Your instinctive response to the factual evidence you had assembled was that America is arming the Axis. In the body of your article you fined your material down to the real transgressors. Still it was America that was arming the Axis.

And that is as it should be. America permitting treachery is America traitorous, if only on the classical basis, qui facit per alium est perinde ac si facit per se ipsum. If America permits perfidious conduct on the part of her nationals, she must endure the smudge on her honor and the damage to her prestige. This is a factor and a function of the national motto—perhaps unanticipated by the writers of it.

Generally speaking, I do not hold with the principle of government ownership, but I should like to see the Government take over the oil and coal properties of this country. They are essential to too many people to be managed and manipulated by small, uncontrolled groups. The oil companies, in particular, constitute a kind of class domination in which the people have no voice whatever. Strong and agile as he may be, if Mr. Ickes fondly imagines that he is going to run the Standard Oil Cos., he will soon find himself "run ragged." These companies have a positively serpentine power of finding the interstices in the most closely set bars of control. Mr. Ickes would as easily control a snake by putting it in a cornfield—as Congress has discovered for itself during 40 years of trial and error.

The situation is wholly anomalous. America has ample oil, but the American people cannot justly enjoy it, not because England and America need it for purposes of defense, but because 50,000,000 gallons of high octane gasoline were shipped to Russia to enable her to slaughter the Finns and a million barrels of refined oil were shipped to Japan for reshipment to Germany. There is no just reason why Americans should suffer for want of heating oil, or pay exorbitant prices for what little they can obtain. We are not so prodigal with our helium, and helium is not important to more people than adequate heating in winter. We expect and desire to pay for national defense. We have no ambition to

recompense the Standard Oil companies for destroying it. Nor yet do we wish to abet hyena habits of nocturnal marauding.

That sounds somewhat emotional, but that is only because the facts are so intense and glaring that, when the light is turned on their cold glint lends them a dramatic quality. And I am sure that you will be quick to perceive that the conditions I mention are, in every respect, correlative to the aid and comfort to the enemy to which you so courageously call attention. I can only hope that your endeavors may prove as effective as they are right and conscious.

I employ that word "conscious" as Sir Oliver Lodge once used it to me in describing a man who was about to act with me in the conduct of some research work. Sir Oliver said, "He is an intelligent, thoughtful, and conscious man. You will like him."

Thank you for being a conscious man.

Yours sincerely,

C. A. BROOKE-CUNNINGHAM.

P. S.—My nearest neighbors to the north are Mr. and Mrs. A. A. Berle, and to the north of them, on the other side of the political fence, is Mr. ALLEN T. TREADWAY.—C. A. B.-C.

Agriculture in New Jersey

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

Mr. CANFIELD. Mr. Speaker, I am happy to report to the House our colleague, Representative J. PARNELL THOMAS, hospitalized recently because of a sudden illness, is now at his home in Allendale, N. J., and convalescing satisfactorily. I called on him last Sunday morning and was delighted to find him gaining in strength and much improved since a like visit the week before. His doctors have prescribed an extended rest.

Congressman THOMAS's front porch was a little "Library of Congress." He has been spending the hours reading the CONGRESSIONAL RECORD and delving into Government reports. He was particularly pleased this last Sunday with a report he had on New Jersey farm income, this being from Mr. Fred W. Jackson, director of information, New Jersey Department of Agriculture, at Trenton. It points out that New Jersey holds third rank in average cash income per farm in the country and at my colleague's request I present it for the RECORD:

New Jersey holds third rank in average cash income per farm, second only to California and Nevada. The average size of the farms in California is 202 acres and in Nevada 979 acres, while in New Jersey it is 65 acres. This means that New Jersey is holding third rank with a very small acreage per farm.

When this acreage factor is considered in calculating the average income per acre, New Jersey ranks first in the Nation with an average income per acre of $52; Massachusetts second with $34, Iowa seventh with $19, California eighth with $18, New York eleventh with $17. Wisconsin is seventeenth with $12, while the average income per acre for the entire country is only $8.08 compared to $52 in New Jersey.

New Jersey farmers have attained this high rank through their own efforts in farm management and marketing, rather than being dependent upon Government payments. Out of each dollar of cash income New Jersey farmers received only about 1.4 cents in the form of Federal Government payments. In contrast to this, one might cite Alabama, where, out of each farm dollar, 24 cents is received in the form of Federal subsidies; North Dakota, 22 cents; Mississippi, 21 cents; Texas, 20 cents; and South Dakota, 18 cents.

New Jersey's total farm income represented approximately $121,000,000 in 1940. For comparison it may be of interest to note that the entire income of the whole radio industry of the United States for time, talent, and services amounted to about $123,000,000 in 1939.

Mr. Jackson's statement also points out that New Jersey ranks fourth in rural electrification, with 84 percent of its farms electrified. "In the last few years," he continues, "dairying has become an extremely important source of income, yielding $31,000,000 annually. Poultry products and potatoes follow."

The Wheat Program in Major Exporting Countries

REMARKS

OF

HON. STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

Mr. PACE. Mr. Speaker, there have been some criticisms received by Members of Congress in the last few weeks with regard to the wheat program. I am placing in the RECORD today some information which I believe will be helpful to every Member of the House. It gives a comparative statement of the program in the United States; in Argentina, in Australia, and in Canada, showing how the wheat program is managed in the four great wheat-exporting areas. It shows, for instance, that today the Canadian wheat producer is permitted to sell only a percentage of his crop and receives 52 cents per bushel; while in Australia they receive a maximum of 51 cents per bushel and in Argentina from 42 to 45 cents per bushel. I believe this information will be helpful to Members in answering complaints which they receive.

Mr. Speaker, I ask unanimous consent to extend my remarks and include this statement.

The SPEAKER. Is there objection?

There was no objection.

WHEAT PROGRAMS IN MAJOR WHEAT-EXPORTING COUNTRIES JULY 1941

The world's four major wheat-exporting countries are the United States, Canada, Argentina, and Australia. In the days when the world market took all the wheat it could get, these countries developed wheat-producing capacity far in excess of home needs. Now the world growth of nationalism, controlled commerce, and artificial trade barriers has hit them all. War blockade has hit them all. With most of their world markets gone, all face growing surpluses, and they have found that uncontrolled surpluses mean low prices and bankrupt producers.

Each of the countries has had to adopt wheat programs to meet the surplus and income problems. These programs have had two common objectives: (1) Finding foreign outlets for production grown in excess of domestic requirements, and (2) maintaining domestic returns to growers in spite of depressed world market conditions. Each has had to adopt some sort of marketing control and some form of price guaranty. Several have tried price fixing, pooling operations, and currency depreciation. In every case these programs to help the farmers have meant changes in the usual production and marketing processes, but the United States farmers' gains have been considerably greater than in the other countries.

A comparison of 1941 programs in the four countries follows:

In the United States: Cooperator's return, approximately parity ($1.15); noncooperator's return, market price protected by 98-cent loan for entire production of acreage allotment plus loan averaging about 59 cents a bushel for excess wheat, or market price for all wheat grown, less 49 cents penalty on the excess. Voluntary acreage adjustment of about 20 percent; payments for compliance of 18 cents a bushel on normal yield of allotted acreage; marketing quotas applied with approval of 81 percent of growers voting in referendum; all farmers may sell entire production from acreage allotments on market supported by 85-percent-of-parity loan; program cooperator may put entire production under nonrecourse Government loan averaging 98 cents a bushel; noncooperators subject to penalty of 49 cents a bushel on normal or actual production, whichever is smaller, of acres in excess of allotment unless this excess wheat is kept off market by storage under bond or by delivery to Government for relief use; stored excess eligible for 2-year Government loan at rates averaging 59 cents a bushel; Government pays storage on collateral delivered in settlement of loans, 7 cents a bushel to farmer who stores collateral on farm until April 30, 1942, and 12 cents for storing excess wheat to postpone penalty until April 30, 1943; crop insurance guarantees 50 or 75 percent of normal yield.

In Canada: Growers' return, guaranteed price averaging about 52 cents a bushel on the farm, Canadian money (equivalent to about 47 cents United States money) plus maximum of $4 per acre on land diverted from wheat; Government asked voluntary acreage cut of 35 percent under 1940; bonus to farmers who shift land from wheat; wheat board offers fixed price averaging 52 cents a bushel on farm for not more than 230,000,000 bushels; deliveries to be made on per-acre basis as storage room becomes available; stocks now fill 460,000,000 out of 575,000,000 bushels of available storage space, farm storage allowance to be paid on undelivered portion of 230,000,000 bushels only; fine and imprisonment for delivering or selling wheat in excess of quotas.

In Australia: Growers' return, averaging about 51 cents on the farm (United States money) if they comply with acreage control program and also market their wheat through Government channels; all farms growing wheat must be registered and growers licensed under new control program; control calls for stabilization of wheat growing at annual production of about 140,000,000 bushels, or about an average harvest allowing for seed and feed on the farm.

In Argentina: Growers' return, averaging about 42–45 cents a bushel on the farm (United States money); government purchases crop; grain board authorized to secure a promise from growers that 1941 acreage will not be increased and, if requested, to make as much as 10-percent reduction; no request for such a reduction appears to have been made this year.

The following makes a comparison of the situation in Canada and in the United States, and also compares the programs now in operation to solve the problems.

THE 1941–42 SITUATION

Canada	*United States*
Acreage: 22,000,000 acres sown for 1941 harvest as compared with 29,000,000 acres in 1940 and 26,000,000 acres the previous 10-year average (1930–39). The 1941 reduction amounted to about 25 percent.	Acreage: 64,000,000 acres sown for harvest in 1941 as compared with 62,000,000 acres in 1940 and 70,000,000 acres the previous 10-year average (1930–39).
Production: Early unofficial estimate is about 300,000,000 bushels, compared with 551,000,000 bushels in 1940, the second largest Canadian crop on record. The 10-year average production is 330,000,000 bushels.	Production: July estimate is 924,000,000 bushels compared with 817,000,000 bushels in 1940 and 748,000,000 bushels the 10-year average.
Carry-over: 480,000,000 bushels on August 1, the largest quantity ever carried over by a single nation. The 1940 carry-over was 301,000,000 bushels and the 10-year average 133,000,000 bushels.	Carry-over: 395,000,000 bushels on July 1, the largest on record in United States. The 1940 carry-over was 282,000,000 bushels and the 10-year average 241,000,000 bushels.
Supplies: Estimated at 780,000,000 bushels as compared with 852,000,000 bushels for 1940–41 and 464,000,000 bushels the 10-year average.	Supplies: 1,319,000,000 bushels on basis of July estimates, as compared with 1,099,000,000 bushels for 1940–41 and a 10-year average of 997,000,000 bushels.
Domestic consumption: Estimate for 1941–42 is 132,000,000 and for 1940–41, 125,000,000 bushels. The 10-year average is 110,000,000 bushels.	Domestic consumption: Estimate for 1941–42 is 650,000,000 bushels and for 1940–41, 671,000,000 bushels. The 10-year average is 695,000,000 bushels.
Exports: Prospects uncertain, but the estimated probability is about 200,000,000 bushels. Exports in 1940–41 were 225,000,000 bushels. The average for the 1930's was 201,000,000 bushels and in the 1920's 272,000,000 bushels.	Exports: Prospects uncertain, but exports to foreign countries and shipments to United States possessions may not be far from the 30,000,000 bushel total exported in 1940–41. Exports averaged 60,000,000 bushels in the 1930's and 170,000,000 bushels in the 1920's.
Surplus: From estimated 1941–42 supply of 780,000,000 bushels deduct estimated 132,000,000 bushels for domestic consumption. This leaves 648,000,000 bushels available for export and carry-over at end of the marketing year.	Surplus: From the estimated 1941–42 supply of 1,319,000,000 bushels deduct estimated 650,000,000 bushels for domestic consumption. This leaves 669,000,000 bushels for export and carry-over at end of the marketing year.

1941 WHEAT PROGRAMS

Canada	*United States*
Acreage adjustment: Each wheat producer is urged to seed not more than 65 percent of 1940 seedings. Compliance is voluntary.	Acreage allotment: Each wheat producer gets share of national allotment that is based on Nation's wheat needs, export outlets, and reserves. The 1941 allotment of 62,000,000 acres is roughly a 20-percent reduction below average seeded and diverted acreage. Compliance is voluntary.
Compliance bonus: Wheat acreage left to summer fallow draws a bonus of $4 per acre. If it is seeded to feed grains or rye, $2; if seeded to grass or clover, $2; and an additional $2 if still seeded to same crop July 1, 1942.	Compliance payments: For compliance with wheat-acreage allotment, farmer may earn 18 cents in conservation and parity payments on normal yield of acreage allotment.
Delivery quota: (1) Established by Canadian Wheat Board on the basis of normal production on 65 percent of 1940 wheat acreage on individual farm.	Marketing quota: (1) Proclaimed by Secretary of Agriculture and approved by 81 percent of farmers voting in a referendum held May 31, 1941.
(2) Wheat Board will take delivery of not more than 230,000,000 bushels (about 11 bushels per acre on basis of reported seedings). Delivery made under a system of quotas with amounts accepted dependent upon available storage at that time.	(2) All wheat produced on acreage allotment may be sold on open market free of penalty if producer seeds within acreage allotment or if he pays penalty on excess or stores it under bond.
(3) Excess wheat must be held on farm by producer, and it is a punishable offense to sell it without permission of the Wheat Board.	(3) Excess wheat (smaller of normal or actual yield on acreage seeded in excess of allotment) subject to penalty of 49 cents a bushel (50 percent of basic loan rate), unless stored under bond or delivered to Government for relief use. Excess if stored is eligible for loan at 60 percent of regular rate.
Storage: No loans, but farmers are given storage allowance at rates to be announced, but only on undelivered portion of 230,000,000 bushels (1940 rate was two-thirds of a cent a month for 9 months).	Storage: Cooperators in the farm program may store wheat under Government loan averaging 98 cents a bushel until April 30, 1942. On farm-stored collateral, Government pays borrowers 1 cent a month or 7 cents storage allowance for the full loan period if wheat is delivered to Government. Noncooperators may store excess wheat under loan at 60 percent of regular rate until April 30, 1943.
Price: Government, through Wheat Board, offers to buy wheat from the producers at fixed price of 70 cents a bushel on the basis of No. 1 northern spring, f. o. b. Fort William. This price level last year averaged 52 cents a bushel (Canadian money) to producers.	Price: Prices supported by an 85-percent of parity loan. For the country the loan averages 98 cents a bushel.
Crop insurance: None.	Crop insurance: By paying premiums based on loss experience of locality and individual farm farmer may guarantee himself 50 or 75 percent of normal yield, depending on type

Canada

Surplus removal: Wheat Board may sell its wheat at home or abroad by marking up the difference between selling prices and fixed price to farmers, plus freight, handling, and storage charges.

Financing: Partly through Dominion Government appropriation, but in addition a processing tax of 15 cents a bushel on all wheat converted into products used for human consumption domestically, realizing approximately $7,500,000 annually.

COMPARISON OF 1941 PROGRAMS IN ACTION

For this illustration of how the Canadian and the United States wheat programs operate, the same size farm with the same yield is used. It is assumed the operator of each farm has been seeding an average of 300 acres of wheat in the past. The average yield is assumed at 15 bushels per acre.

FOR THE GROWER WHO REDUCES HIS ACREAGE

Seeding: He would reduce his acreage by 35 percent to 195 acres.

Production: On the basis of an average yield of 15 bushels per acre, he would produce 2,925 bushels. Assume he keeps 585 bushels for feed and seed, leaving 2,340 bushels available for market.

Marketing: He is permitted to market a per-acre quota (not yet announced). Assume the Government takes normal deliveries of about 12 bushels to the acre. For this farmer this would be 2,340 bushels. At the average wheat board price of 52 cents (Canadian money) his return will be $1,216.80.

Loan: Except for loans which he may be able to get from private lending agencies, he has no other way of financing himself except by selling his wheat as he can. And it is a punishable offense for him to deliver more than his quota. Several provinces have various forms of debt moratoria to aid the grower until he can sell his crop.

Storage allowance: Delivery quotas and storage rates have not been announced. In 1940 he got two-thirds cent a bushel a month for 9 months.

Government payments: Assume he diverts wheat acreage to summer fallow to get the maximum rate of $4 per acre on 105 acres. This amounts to $420.

Income

	In Canadian money	*In United States money*
Sale to Wheat Board	$1,216.80	$1,095.12
Government payments	420.00	378.00
Total income	1,636.80	1,473.12
Average return per bushel, not including feed and seed	.70	.63

FOR THE FARMER WHO DOES NOT REDUCE ACREAGE

Seeding: He would seed his entire 300 acres.

Production: With a yield of 15 bushels per acre he would get 4,500 bushels. Assume he keeps 585 bushels for feed and seed, leaving 3,915 bushels available for market.

Marketing: Government has promised to take delivery of about 12 bushels on 65 percent of last year's acreage. This means he

United States

of policy. Farmer who has excess wheat, in effect, has additional insurance if he stores this excess because he can draw upon the excess without penalty by the amount by which his next year's yield falls below the normal yield on his allotted acreage.

Surplus removal: Some exports are being assisted by the Government and the machinery is available for keeping a fair share of world market for the United States. Increase in domestic consumption is encouraged by distribution of surplus products to needy, as through stamp plan.

Financing: Appropriation from Federal Treasury.

COMPARISON OF 1941 PROGRAMS IN ACTION

For this illustration of how the Canadian and the United States wheat programs operate, the same size farm with the same yield is used. It is assumed the operator of each farm has been seeding an average of 300 acres of wheat in the past. The average yield is assumed at 15 bushels per acre.

FOR THE GROWER WHO REDUCES HIS ACREAGE

Seeding: He would seed within his A. A. A. acreage allotment. This would be, roughly, 20 percent less than his average acreage, or about 240 acres.

Production: On the basis of an average yield of 15 bushels per acre, he would produce 3,600 bushels. Assume he keeps 585 bushels for feed and seed, leaving 3,015 bushels available for market.

Marketing: Since he seeded within his allotment he may market entire crop or he may store it under loan. Average United States farm price in June was about 83 cents. If he sells his 3,015 bushels at this price he gets $2,502.45.

Loan: If he prefers to store his wheat under loan rather than to sell it at harvest time, he can put it under Government loan which for the Nation averages about 98 cents. On 3,015 bushels this would bring the farmer a total of $2,954.70.

Storage allowance: By storing the loan collateral on his farm, the borrower will get storage allowance of 7 cents if he delivers his wheat to the Government at the end of the loan period. This amounts to $211.05. If he redeems his loan he does not receive a storage allowance.

Government payments: For seeding within his acreage allotment the farmer receives a conservation payment of 8 cents and a parity payment of 10 cents a bushel of the normal yield on his allotment (3,600 bushels). Altogether his payment would be $648.

Income

Government loan	$2,954.70
Government payments	648.00
Total income	3,602.70
Average return per bushel, not including feed and seed	1.19

FOR THE FARMER WHO DOES NOT REDUCE ACREAGE

Seeding: He would seed his entire 300 acres.

Production: With a yield of 15 bushels per acre he would get 4,500 bushels. Assume he keeps 585 bushels for feed and seed, leaving 3,915 bushels available for market.

Marketing: Under quotas, he is asked to make an adjustment in marketings similar to the adjustment the program cooperator

Canada

can deliver 2,340 bushels at 52 cents, or $1,216.80.

Handling excess: He will have 1,575 bushels which he will have to keep on his farm until quota wheat has found a market.

Storage allowance: He has to store his excess as best he can.

Income

	In Canadian money	*In United States money*
Sale to Wheat Board	$1,216.80	$1,095.12
Excess—no sale now [1]	---	---
Total income [1]	1,216.80	1,095.12
Average return per bushel, not including feed and seed [1]	.31	.28

[1] He may be able to sell his 1,575 bushels later, which would bring up his income and average return.

United States

made in seeding. In this case he will have 900 bushels of excess wheat (normal production of acreage above his allotment). In other words, like cooperator he has 3,015 bushels of free wheat to sell. At 83 cents (June farm price) his return will be $2,502.45.

Handling excess: He has three choices for handling his 900 bushels of excess: (1) He may store it under bond and get a loan on it at 60 percent of the regular rate or 59 cents. This amounts to $531. (2) He can market it and pay the 49-cent penalty. Deducting 49 cents from 83 cents, this means he sells 900 bushels for 34 cents a bushel or $306. (3) He may deliver it to the Government for relief use.

Storage allowance: By storing his excess under loan on his farm, he may get a 12-cent storage allowance if he delivers his wheat in settlement of the loan at the end of the 2-year period ending April 30, 1943. On 900 bushels this amounts to $279. Delivery of excess wheat in satisfaction of a loan, however, does not satisfy the marketing penalty. In the meanwhile, he can free his excess from penalty by seeding below his 1942 allotment by a corresponding amount.

Income

When storing excess: [1]	
Selling free wheat	$2,502.45
Loan on excess	531.00
Total income	3,033.45
Average return per bushel, not including feed and seed	.77
When paying penalty: [1]	
Selling free wheat	2,502.45
Selling excess and paying penalty	306.00
Total income	2,808.45
Average return per bushel, not including feed and seed	.72

[1] This assumes he will reduce his acreage in 1942 below his allotment or that his production falls below the normal yield on his allotment. If he redeems his excess in 1942, he may pay up his loan and sell his excess wheat at market price, which at present market level would increase his income.

Stimson's Wild Attack

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

EDITORIAL FROM THE SIOUX FALLS (S. DAK.) DAILY ARGUS-LEADER

Mr. MUNDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sioux Falls (S. Dak.) Daily Argus-Leader:

[From the Sioux Falls (S. Dak.) Daily Argus-Leader]

STIMSON'S WILD ATTACK

It is tragic, indeed, when a man so highly placed as Secretary Stimson of the Department of War descends to the low level of abuse and inflamed anger that he did in his attack upon Senator WHEELER.

The Montana Senator had mailed out about 1,000,000 postcards to a general list of American citizens. The cards quoted excerpts from some speeches against our participation in the war and urged the recipients to protest official acts that might lead the United States into the conflict. A few of these cards were received by men now in the military service. This is not surprising in view of the fact that many men have been called from private life to the uniform in recent months. It should be emphasized, however, that the mailing was not generally intended for military men.

Attacking WHEELER, Secretary Stimson went to the inexcusable extreme of stating that the

mailing of the cards "comes very near the line of subversive activities against the United States, if not treason."

This is a pathetic lapse on the part of the Secretary of War. It is an unfortunate reflection of his attitude. Any Cabinet member who stoops to such methods and who makes such an attack without a complete investigation deserves a sharp reprimand. In fact, it appears that the removal of Stimson from the important post which he now holds is in order.

He has departed from the rules of common sense, understanding, and tolerance. He is losing the respect of the American people, as Secretary Ickes has done.

Unfortunate, too, is the realization that this is a part of a general smear campaign in which perhaps several leaders of the American administration are participating. Somewhat similar tactics have been employed in an effort to discredit Charles A. Lindbergh with the slightly veiled hint that he is a pro-Nazi.

The Argus-Leader suggests to the administration leaders in Washington that their ends would be better served if they utilized more logic and less smear in their efforts.

Personal attacks don't refute arguments. If the administration does not have sensible explanations to offer for its position, it had better remain silent.

The Nation-wide reaction to the scurrilous attack upon WHEELER is already being felt. Even those who believe with the administration that we should prepare to play a large part in the international situation are dismayed by the tactics employed by Stimson and Ickes.

It was hinted recently that Charles Michelson, the smearing press agent who conducted the campaign against Herbert Hoover in 1932, is active again. His methods were effective 9 years ago because the people were in a mood for a change. But they are likely to be a boomerang in a situation such as that which exists today.

Mandatory Joint Tax Returns

EXTENSION OF REMARKS

OF

HON. JOHN M. COSTELLO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

STATEMENT BY ROSCOE POUND, DEAN EMERITUS OF HARVARD LAW SCHOOL, AND CHAIRMAN OF THE COMMITTEE OF AMERICANS

Mr. COSTELLO. Mr. Speaker, I wish to call to the attention of the Members of the House the statement of Roscoe Pound, dean emeritus of Harvard Law School and the chairman of the Committee of Americans. This statement very concisely sets forth the objection to the proposal to require the filing of mandatory joint returns by husband and wife for income-tax purposes.

Because of my opposition to this attack upon both family and home under the guise of taxation, I wish to make available to my colleagues this brief criticism of this proposal, which has been so well expressed by this most distinguished educator. The text of the statement follows:

The freedom of wives and the institution of marriage are being attacked for the sake of a few paltry tax dollars.

In many cases a wife may be living apart from her husband. As said in a recent decision: "There are those who have religious scruples against divorce and others who look upon it as a disgrace. While the law recognized the right to divorce for a statutory cause, it neither criticizes nor penalizes those who do not see fit to avail themselves of that remedy" (*Rademacher* v. *Rademacher*, 61 Idaho, 261,209 (1940)). If a wife because of a husband's misconduct is living apart from him and has separate property and income, the effect of requiring a joint return is to compel her to act with him and contribute her share to a joint assessment of tax. In effect, she is coerced to a joint relation which in justice and law she is excused from. For example, he might be living in California and she in Massachusetts, and then be compelled to in some way join with him in computing their aggregate income. On the other hand if the proposed statute were to be altered so as to provide for a joint return where husband and wife are living together, but separate returns where husband and wife are living apart, the effect would be to put pressure on them to live apart in order to avoid excessive taxes. This obviously runs counter to the settled policy of maintaining the institution of marriage and to the ordinary dictates of morals.

President Quezon Expresses Filipino Loyalty to the United States

REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

Mr. CRAWFORD. Mr. Speaker, I wish to direct the attention of Congress to the speech delivered on Loyalty Day on June 19 last by Hon. Manuel L. Quezon, President of the Philippines. Among other things he said: "Should the United States enter the war, the Philippines should follow her and fight by her side, placing at her disposal all our manpower and material resources to help her in achieving victory, for the cause for which America would fight is our own cause." As a Member of Congress I wish to express my profound appreciation and admiration of President Quezon's stirring expressions of solidarity with the United States in these times of emergency.

The speech, for which I am indebted to Mr. Vicente Villamin, who himself as a private Filipino citizen has expressed the loyalty of the thousands of Filipinos in America, follows:

My fellow citizens and friends, we have set aside this loyalty day to express the wholehearted and unswerving loyalty of all the elements of our population to the United States of America and to the Philippines, as well as to the great principles of liberty and democracy which are cherished by Americans and Filipinos alike. This enthusiastic demonstration is doubly significant because it is held upon the initiative of our laboring masses and their leaders who, in this manner, have sought to prove that their loyalty to our country is above their loyalty to any class, and their condemnation of communism and other political philosophies which are subversive of the present order under our Constitution. No more fitting day could have been chosen for this purpose than the anniversary of the birthday of Rizal, for the ideals and way of life for which he strove and died are the same as those for the defense of which we are ready to sacrifice our lives and our all.

LIBERTY THREATENED

I wish to speak to you today about the grave national emergency that we are facing. Events that are fast happening beyond our borders are rapidly and deeply affecting our lives and our fate. Nearly two-thirds of the peoples of the world are at war in three continents and the remaining one-third, including ourselves, is in some way already involved in the conflict. No greater ordeal has afflicted the human race since the dawn of civilization than that which it is going through now. Most of the democracies of Europe are already under the iron heels of military conquerors. And the onward march of military conquest is proceeding relentlessly and with unabated speed. Britain remains alone fighting gallantly against tremendous odds to stave this march and to maintain the flame of liberty in those lands where western civilization was born and where it attained its highest development. Liberty itself and all the principles which we ourselves cherish and which are the foundations of our culture and political ideology are in the throes of agony threatened with extinction from the face of the earth.

The United States, faithful to her traditional policy of noninterference in the affairs of other continents, followed a course of strict neutrality at the beginning of the war. She not only adopted a policy of nonintervention but, through the Neutrality Act passed by Congress, took the necessary precautions to avoid incidents that might drag her into the conflict. Gradually, however, the people of America have sensed from the trend of world events a grave threat upon the security and future welfare of the Western Hemisphere. They have seen that the course of conquest undertaken by the totalitarian powers is designed to effect the domination of the whole world, to uproot democracy wherever it may be found, and to destroy the free way of life of the common man. This program was at first considered too astounding to merit serious concern, but not now, for later events have proven that the dictators are capable of achieving what many believed impossible, and even today are pursuing a course which clearly points to that goal.

WHAT IS OUR DUTY?

President Roosevelt, that great and inspired leader with an unquenchable love for peace and liberty, fully comprehending the dangers which the totalitarian march of conquest has brought upon the Western Hemi-

sphere and all the Territories under the American flag, and to democracy everywhere, has aroused the American people to a keen consciousness of these dangers. With the approval of Congress, he has proclaimed the United States the arsenal of democracies fighting to maintain their liberties. In a recent address he informed the peoples of America and of the whole world of the policies which the United States will follow in the present emergency and the reasons for such policies. This address will go down in history as one of the most fateful documents of all times, and the decisions enunciated therein will, I believe, affect the destiny of mankind. No one who has read or heard that address can doubt the motives of America. No one can question her unselfish devotion to peace and democracy.

Now, my countrymen, what of the Philippines? What is our duty at present? What line of policy should we follow? What direction should the national efforts take? What is our stake in the present war?

We owe loyalty to America, and we are bound to her by bonds of everlasting gratitude. Should the United States enter the war, the Philippines should follow her and fight by her side, placing at her disposal all our manpower and material resources to help her in achieving victory, for the cause for which America would fight is our own cause.

OUR WAR, TOO

The United States seeks to defend the principles which we cherish and without which we could not live as a free Nation. She is striving to preserve liberty and democracy and individual freedom, and these are things for which we, too, would fight and die.

The United States is struggling to prevent the domination of the world by dictators and we, too, would fight and die against such masters. The United States wants to uphold the rule of right and justice in international relations and to safeguard the independence of small nations, to free them from the fear of aggression and subjugation by military powers, and we, too, would fight and die to save our country from such threats and perils. And so, if the United States decides to enter this war, it will be our war as much as the war of the United States, and her decision will be our decision. In such event, she will find all the people of this country to the last man on her side, fighting under her banner and praying to Almighty God for the victory of her arms.

Our stake in this war is more than the continued existence of democracy and individual freedom in the world. It is more than the maintenance of a free economy and free commercial intercourse among nations, and an unregimented social life. Our stake in this war is our own future independence and the assurance that that independence may endure.

I have endeavored to the full measure of our resources to hasten the execution of our national-defense program. The United States, I am happy to inform you, is also doing everything to strengthen the military defenses of our country. I trust that very soon it will be possible for the Government of the United States to send us more planes and more guns and ammunition to increase our power of resistance against invasion. We only need more equipment and more supplies, for we have abundant manpower. We have strong, intelligent young men who are eager to join the ranks for our defense and to uphold the principles which President Roosevelt has proclaimed to the world.

"THIS WE CAN DO"

For the safety of our civilian population I have, jointly with the High Commissioner of the United States in the Philippines, established the civilian emergency administration and called upon the men of the Philippines to enlist as volunteers to protect our homes, to track down spies and saboteurs, and to help minimize the damage and destruction which the enemy might inflict upon us. I urge upon our women the duty of cooperating in this civilian effort and to train themselves properly to give first aid to the wounded and those that may receive injury of any sort by enemy action.

These are times of stress and great danger. Every Filipino should awaken to the realities of the situation confronting us. Our first concern should be to insure an adequate food supply. The government is trying to build up stocks of food that may be used to relieve shortages of such commodities. But these will not be sufficient, if our lines of communication with the United States are disrupted. We can only insure an adequate food supply at all times and in any emergency, by producing in our country all our requirements. This we can do. This we should do. I call upon all the people to bend their every effort to increase their production of food articles, particularly rice and corn, to avoid hunger and suffering among our population. Housewives should also look forward to the danger of shortage and, even now, should build up individual stocks in their homes to meet their needs in an emergency, and begin to avoid waste and economize on these supplies.

Labor and capital should likewise comprehend their duties and responsibilities in the present crisis. They should avoid conflicts that will stop production. Strikes are wasteful, and I hope they will not be resorted to except in extreme cases and only after giving the agencies of the government an opportunity to settle the controversy.

GOVERNMENT IS ACTING

In order to finance our defense preparations, I have requested the President of the United States to make available to our government the funds derived from the excise tax on Philippine sugar, as well as the funds accruing to our government from the devaluation of the American dollar. I have assurances that this request is receiving sympathetic consideration by the American Government, and I trust that favorable action will be taken thereon in the near future. Your Government has also been taking steps to obtain equipment and war materials from the United States under the Lend Lease Act. It is my expectation that supplies will be given us through this method in increasing quantities.

The Commonwealth Government has been working in intimate collaboration with the United States High Commissioner and American military and naval authorities in the Philippines in relation to our national-defense program, and I wish to make public my appreciation of the splendid spirit of cooperation which has been patent in all our dealings. Above all, I wish to express our gratitude for the interest which President Roosevelt and the American Government as a whole have shown in the defense of the Philippines.

QUOTES ROOSEVELT'S CALL

I wish to close this address with the words of President Roosevelt in his proclamation declaring an unlimited national emergency, for these words convey the same call to duty which I should like to urge upon my fellow countrymen:

"I call upon all loyal citizens * * * to give precedence to the needs of the Nation to the end that a system of government that makes private enterprise possible may survive. I call upon all loyal workmen, as well as employers, to merge their lesser differences in the larger effort to insure the survival of the only kind of government which recognizes the rights of labor or capital.

"I call upon loyal leaders and officials to cooperate with the civilian defense agencies to insure our internal security against foreign-directed subversion, and to put every community in order for the maximum productive effort with a minimum waste and unnecessary friction.

"I call upon all loyal citizens to place the Nation's needs first in mind and in action to the end that we may mobilize and have ready for instant defensive use all of the physical powers, all of the moral strength and all the materials and resources of this Nation."

Agricultural Relief

EXTENSION OF REMARKS

OF

HON. ROSS A. COLLINS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1941

Mr. COLLINS. Mr. Speaker, it is a notorious fact that because of the low prices they have received for their farm products, the farmers of the United States have suffered more than has any other class of our people. Clearly this should not be the case.

The Agricultural Appropriations Subcommittee of which I am a member has made an effort to remedy this condition and we have succeeded in giving our farmers some measure of relief. I believe that that subcommittee has done more for the American farmer than has any other committee in the House of Representatives, for it holds the purse strings and produces the bills appropriating the funds which make possible our agricultural activities. Parity payments originated in that subcommittee. I was one of the principal sponsors of the soil-conservation program. I supported appropriations to remove surplus crops from the market so that farmers would be able to secure a reasonable price for them, and I helped obtain funds to maintain the food-stamp program.

This year Congress enacted a law making the Federal loan value of 5 basic crops, including cotton, 85 percent of parity. That was a fine bill and it had my enthusiastic support. To some degree it will do much this year to remedy the immediate plight of our cotton farmers, but it does not provide a permanent long-range program to restore prosperity to the agricultural sections of our country, such as Mississippi. Our thoughts and plans must anticipate and deal with the problems of tomorrow as well as the necessities of today. It appears to me that the making of loans on cotton year after year, as surplus after surplus piles up unsold in Government warehouses, contributes little toward the solution of our fundamental problem, and, as a permanent policy, will fail to provide our agricultural sections with that degree of

prosperity so necessary to the economic well-being of our country as a whole.

We cannot export in this year over a million bales of cotton. We cannot consume over nine or ten million bales of cotton. Taking into consideration our anticipated crop and existing surplus, that will leave us with a surplus of this year's crop of about 4,000,000 bales. With this war going on—and even if it ends—our exports and consumption will not greatly increase, and our surplus will continue to pile up year after year, until eventually, I fear, it will reach the breaking point.

What is my solution of this problem? I say, get back our foreign markets, of which high tariffs have deprived us

Extend and enlarge the reciprocal tariff program of our great President and Secretary of State, and repeal or revise downward prohibitive tariffs which keep out of the United States the products of countries wishing to buy our cotton, but unable to obtain the dollars with which to do so because they are not allowed to sell their goods here.

Prior to 1860 Mississippi was regarded as one of the half dozen richest States in the Union. That was because it raised cotton which was sold all over the world. Today it is one of the poorest States in the Union, and that is because high tariffs on the industrial products of other nations have killed our foreign markets. We raise the best cotton in the world, and the whole world wants to buy it. Other nations cannot trade with us and secure the dollars with which to buy our cotton, however, unless we in turn trade with them and buy what they produce. Prohibitive tariffs which have the effect of subsidizing the industrial regions of the United States by protecting them from competition with industries abroad not only compel our agricultural sections to pay more for the tools and machines and other products which they use, not only destroy our agricultural export trade, but also drive our foreign customers to the necessity of themselves growing the agricultural products which they otherwise would buy from us. Today cotton is grown, and on a larger and larger scale each year, in India, in Egypt, in South America, and even in Russia. This should not be the case, and it would not be if the nations which want our cotton could sell their products here so as to enable them to buy it.

I shall sponsor and support legislation creating research laboratories to find new uses for cotton and the other products of our farms and forests, and thereby increase their consumption both here and abroad. Who knows, for example, what effect it would have had upon the consumption of cotton if the du Pont people had had a reasonable basis to experiment with cotton instead of coal tar in producing Nylon, the new synthetic silk?

For many years I have believed the farmers of the country should have equal opportunity with people residing in cities and towns to have the use of electric current, and I have thought that it was the duty of the Federal Government to appropriate and lend to cooperatives, formed and operated under Federal supervision, sufficient funds to enable them to build electric power lines into rural districts. Accordingly I have cooperated with the Rural Electrification Administration program, leading the fight in the Agriculture Appropriations Subcommittee to obtain funds for that agency, and each year I have succeeded in having them increased. For the fiscal year 1942, upon my motion, the Agriculture Appropriations Subcommittee increased the amount for expansion of rural electrification from $40,000,000 to $100,000,000. Mr. Harry E. Slattery, the head of the Rural Electrification Administration, in response to an inquiry about my record on rural electrification, said this of me in a letter dated July 17, 1941:

I can say from my own knowledge that Congressman COLLINS' attitude toward the rural electrification program has been very friendly and very favorable.

I have always been, and I am now, in favor of every proposal which would enable the citizens of our cities, towns, and rural communities to obtain electric power for the smallest possible cost. And in that connection I have voted for every bill and every appropriation enlarging the field of operations of the Tennessee Valley Authority. In a letter dated July 12, 1940, Mr. David Lilienthal, Chairman of the Tennessee Valley Authority, made this very generous statement to me:

You have been a supporter of the T. V. A. project for many years; in fact, long before I had anything to do with this project; and since the creation of T. V. A. in 1930 you have been most helpful in the halls of Congress and in your counsel to us in its enlargement and development. * * * I will tell you frankly, Congressman COLLINS, that I have never come in contact with one who more eloquently espoused a desire for securing electricity for T. V. A.

It is with great pride, Mr. Speaker, that I add to my remarks a very fine letter that I received on June 14 from Hon. CLARENCE CANNON, chairman of the Subcommittee on Agriculture Appropriations.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., June 14, 1941.

Hon. ROSS A. COLLINS,
Member, Agriculture Department Appropriations Subcommittee,
House of Representatives,
Washington, D. C.

DEAR ROSS: I have already thanked you personally for the great help you, as a member of the Agriculture Appropriations Subcommittee, have given to the farmers of the country. I feel, however, I should write you and express my further appreciation and the appreciation of the farmers everywhere for your untiring efforts to give them a price for their crops that approximates parity.

The passage today of the loan bill, which you and I have advocated as a temporary measure for many years and which we helped to pass, may be of some benefit. However, I believe that the great drive we are making for the defense of the country will give to farmers a much larger price for their cotton and other products than they would receive through Government loans. I do know that the funds that you and I and the other Democratic members of the agricultural appropriations subcommittee have with difficulty through the years provided have given and will continue to give farmers much more for their crops than they would have received otherwise.

In brief, here is what we have done:

1. Our subcommittee provided $212,000,000 for parity payments.

2. For agricultural conservation payments we provided this year approximately $500,000,000, about $40,000,000 more than we appropriated last year.

3. For the removal of surplus farm products we appropriated approximately $225,000,000. Of course, $150,000,000 will be used in the food-stamp program, an increase of about $20,000,000 over the amount that we appropriated last year. This increase will enable many more counties in your State to get the benefits of food stamps.

4. Upon your motion in the subcommittee, rural electrification appropriations were increased from $40,000,000 recommended by the Budget Bureau to $100,000,000. Your persistent efforts to electrify farms of the country with cheap electricity are well known to every Member of Congress.

5. For regional laboratories we appropriated $3,500,000. With that amount we hope that new uses for cotton and other agricultural products will be discovered.

All in all I know that you have been a tireless advocate for agricultural people. You have had the vision to see correctly the need for increasing the earning power of the American farmer and your efforts have met with a measure of success. I feel that it is my duty to tell you my feeling of appreciation because like yours my district is largely made up of splendid agricultural people.

With warm personal regards, I am,

Very sincerely,

CLARENCE CANNON,
Chairman, Agricultural Appropriations Subcommittee.

Unjust 49-Cent Wheat Penalty

REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

Mr. MICHENER. Mr. Speaker, I rise to register the protest of thousands of farmers residing in the Second Congressional District of Michigan against the imposition of the 49-cent penalty on excess-quota wheat under the Agricultural Adjustment Act.

Those opposing this penalty may be classified in two groups:

First. Farmers who have not complied with the A. A. A. program and are willing to forego benefits and subsidies for the privilege of operating their own farms in their own way.

Second. Those who have complied with the A. A. A. program, are receiving benefits and subsidies, but protest against the method pursued in the placing of this penalty.

The Agricultural Adjustment Act of 1938 laid down a formula by which a compulsory quota on the marketing of wheat might be invoked. The penalty for noncompliance, however, was limited to 15 cents a bushel on the excess wheat. Under that law there was exempt to each farmer 200 bushels. This compulsory quota and penalty were never invoked, however.

The act of May 26, 1941, supplemented by regulations made by the Department of Agriculture, changed the exemption

from bushels to acres, making the exemption 15 acres rather than 200 bushels. It also changed the formula, increasing the possible penalty from 15 cents to 49 cents for the year 1941.

When the 1941 winter-wheat crop was planted in the fall of 1940, there was no indication that a marketing quota and penalty would be put into effect; that is, the farmers who had not subscribed to the A. A. A. program had a right to believe that for the 1941 crop they could grow, harvest, sell, and use their wheat as had always been the custom, and they acted accordingly.

The farmer who complied with the program was in exactly the same position. Consequently the act of May 26, 1941, and the Department regulations were, in fact, retroactive; that is, the wheat had been planted and the gathering time was at hand, when the farmer was startled by the news that if he had planted more than 15 acres of wheat, he could not sell any of his wheat without getting a permit from the local A. A. A. agent. That is not all. He could not feed, use, give away, or otherwise dispose of any of his surplus wheat without getting a permit and paying 49 cents a bushel on every bushel theoretically produced above the 15-acre limit or else impounding the surplus under A. A. A. direction. Therefore, the effect of changing the exemption from 200 bushels to 15 acres is if, in the fall of 1940 the farmer planted 17 acres of wheat, he is bound to pay the penalty on the average acreage yield of the 2 excess acres, even though he did not harvest those acres.

Let me call your attention to the case of our colleague the gentleman from New York [Mr. WADSWORTH], a noncomplier, who planted more than 15 acres in the fall of 1940. Shortly before the harvest time, a hailstorm destroyed much of his crop, and the excess acreage was not even cut. Yet, before he could sell, feed, or otherwise dispose of any of his wheat, grown on his own farm, the law required him to pay 49 cents a bushel for the acreage on which the wheat was not even harvested.

Is this fair procedure?

There is difference of opinion among the farmers as to the desirability, workability, and soundness of the A. A. A. program. Soil conservation is approved by all good farmers, but there is a question as to whether the Federal Government should subsidize compliers for properly farming and conserving their soil. The farmers are not agreed as to production control.

However, the A. A. A. is the law of the land. The policy has been determined upon and there is no possibility of repealing the law at this time.

The most relief that can be hoped for is elimination of the 49-cent penalty on the 1941 crop and the restoration to the farmer of the right to use wheat grown on his own farm for seed and to feed his own stock and poultry. Such amendments to the law are in the process of consideration in the Congress, and I am encouraged to believe that this limited relief will be given, despite the opposition of the Secretary of Agriculture.

Regardless of their attitude toward the A. A. A. program, all thinking farmers must agree that it was unfair, undemocratic, and un-American to change the law between planting time and harvesting time. Common decency and fairness rebel against changing the rules in the middle of the game.

I have no sympathy with the argument that these wheat farmers voted this penalty and marketing quota on themselves. Yes, the law provides for an election, but that means a fair election, with the electors fully advised concerning the matter upon which they are to vote. Was that done in the present case? Well, let us see. The law providing the 49-cent penalty became effective on May 26, 1941. Five days later, on May 31, 1941, the election was held in every wheat-producing county in the United States. Is there anyone so naive as to believe that all these farmers were fully advised during this 5-day period? As a practical matter, it just does not make sense.

Then again, were all of the wheat-producing farmers of the country permitted to vote in this election, the purpose of which was to place a 49-cent penalty on surplus wheat? The answer is that they were not. Even the qualifications of voters were changed in the 1941 law and accompanying departmental regulations.

If there is anything in the world that the average farmer abhors, it is subterfuge, deceit, and half truths. He is willing to meet any issue head-on. He is honest himself and he does not relish being taken for a ride by shrewd propagandists, whether they are found in the A. A. A. or elsewhere. He is often called a kicker and one hard to satisfy. Well, who would not kick under such treatment? When the independence is legislated and administered out of the farmer the independence of the Republic is indeed imperiled.

The general feeling of the farmers of Michigan with reference to this 49-cent penalty perhaps finds best expression in my home county of Lenawee.

This is one of the finest agricultural counties in the United States, made up of family-sized farms with diversified crops, for soil conservation in crop rotation was participated in long before soil conservation in Washington was ever dreamed of. These farmers are not radical, and, generally speaking, there is little distinction between farm tenants and farm owners. All of these farmers represent our highest type of citizen. I make these observations to show the background of the people of this particular county.

So incensed are these farmers over the imposition of this 49-cent penalty and inability to feed or use wheat grown on their own farms that a large mass meeting was recently held on the fair grounds at the county seat. More than 2,500 farmers were present. Resolutions were unanimously adopted by the meeting as follows:

To the Congress of the United States of America:

Whereas the American wheat farmers are suffering an invasion of their constitutional rights and privileges at the hands of the Agricultural Adjustment Administration; and

Whereas the wheat-marketing-quota referendum was conducted in a manner that prevented the farmer from freely exercising his elective franchise and denied to him the right to express his wishes in relation thereto, with the result that the wheat-growing farmer is now being most unjustly penalized for doing that which he had a right to do, and is being deprived of his property without due process of law and in direct violation of his constitutional rights and privileges; and

Whereas an appeal to the courts would not give an effective remedy, due to delays incident to court procedure: Therefore

The undersigned respectfully petition the Congress of the United States to take immediate action to remove the marketing penalties on the products of American agriculture and to restore to the American farmer a free market.

In addition, I am in receipt of a petition embodying these resolutions, signed by more than 1,000 representative dirt farmers of Lenawee County. I am filing these petitions with the Congress and having them referred to the Committee on Agriculture for consideration.

An Associated Press dispatch dated at Detroit, July 22, is as follows:

DETROIT, July 22.—A regional director of the Agricultural Adjustment Administration said here last night that protests over wheat quotas and regulations arose from misunderstandings or came from areas heavily populated by farmers of German ancestry.

In a talk broadcast from Detroit, Harry N. Schooler, director of the A. A. A.'s north central region, asserted:

"It is significant to note that whenever there is a concentration of farmers of German ancestry one finds this agitation to overthrow the work of the Department of Agriculture.

"Farmers who are influenced by their own economic welfare, who are free of political prejudice and foreign entanglement, are in complete accord with the wheat-control program."

This regional director, Harry N. Schooler, is clearly unfit for the position which he occupies. Imagine a man of this type, in these days of stress, making so unnecessary, unreasonable, and absolutely false an assertion in a radio broadcast, which the people have a right to assume was made by authority of the Department of Agriculture, whose representative he is. Possibly there are some farmers of German ancestry who are not in agreement with this particular law, yet for an official of the Government to charge that these protests "came from areas heavily populated by farmers of German ancestry" and that "it is significant to note that whenever there is a concentration of farmers of German ancestry one finds this agitation to overthrow the work of the Department of Agriculture," shows clearly that the official is attempting by innuendo to charge these farmers with being unpatriotic.

It is ridiculous to charge that "farmers who are influenced by their own economic welfare, are free of political prejudice and foreign entanglement, are in complete accord with the wheat-control program." This Mr. Schooler is an insult to the farmers of the Nation and especially to those of German descent. He plainly indicates that one who disagrees

with any law or regulation which the Department of Agriculture sponsors is un-American, and is influenced by "foreign entanglement" and is opposed to A. A. A. regimentation because of his German ancestry.

I cannot find language too strong to condemn such an unjustified course on the part of any official or representative of our Government. If the time has come when the farmers of the Nation cannot meet in public assembly and express their views concerning the operation of a law passed by their representatives, affecting their own farms and their manner of life, then indeed the days of the Republic are numbered, then the constitutional right of petition is a mockery. I call upon the Department of Agriculture to take proper action in the Schooler case.

In conclusion, I can assure the wheat farmers of the Nation that their Representatives in Congress are conscientiously trying to solve their problem, and I want to assure my own constituents that I am doing, and will do, everything I can to eliminate the injustice of this unfair 49-cent wheat penalty which the Department is now invoking on the 1941 crop.

Accomplishments of Farm Security Administration in the Fifth Congressional District of Washington

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

Mr. LEAVY. Mr. Speaker, my congressional district consists of eight counties located in the northeastern section of the State of Washington. These counties are Spokane, Pend Oreille, Stevens, Ferry, Lincoln, Douglas, Okanogan, and Chelan.

By far the greater proportion of the people living in these counties, all except Spokane, are engaged in agriculture, and in one county, Chelan, the principal crop produced is apples. This county is perhaps the greatest apple-producing county in America, and the congressional district as a whole produces more commercial apples than any other congressional district in the entire Nation.

AGRICULTURE HAS SUFFERED TREMENDOUS LOSSES SINCE THE LAST WORLD WAR

In common with all agricultural sections in America, the farmers in my district have seen conditions go from bad to worse. They have fought on despite adverse conditions, always in the hope that the next season would be better. Nature has been kind enough to them, and production has been abundant, but the farm economy has been most unfair and resulted in disaster to the farm owners. As a result of all this, actually thousands of farms that were operated by owners 20 years ago are today operated by tenants. Land holdings in the hands of a few individuals and corporations have increased at an alarming rate.

HELP FROM THE FARM SECURITY ADMINISTRATION

In recent years there have been numerous attempts made by the Federal Government to solve the farmers' problems, reduce farm tenancy, and increase farm ownership. Much effective work has been done and much good has been accomplished. There is one agency that has made a record of accomplishment that is worthy of special note, and that is the Farm Security Administration. By this I do not intend to in any way minimize the exceptionally splendid work that has been done and is being done by other Government agencies in the Department of Agriculture, because just at this time several other branches of the Government are doing a magnificent job. I particularly refer to some of the agencies under the Farm Credit Administration.

SOME OF THE FACTS

Mr. Speaker, broadly speaking, the gains of the Farm Security Administration in terms of money, living standards, and capacity for self-support made during 1940 by handicapped and low-income farm people present a most interesting and promising picture.

In my district in 1940 there were 969 active standard rehabilitation borrowers at the end of that year. The average borrower earned a net income of $895 during the year as compared with $666 in the year before he became a borrower from Farm Security. In other words, he increased his annual net income by 34 percent. This percentage as applied to the whole number of borrowers means a total annual income increase of $221,387 for the 969 families. This increase naturally reflects itself in the prosperity of the merchants, business, and professional people living in the district, as well as raising the standard of living of the farmers.

UNUSUAL RECORD OF REPAYMENTS MADE

So, frequently persons who criticize the Farm Security Administration either do not know the basis upon which it functions or are not particularly interested in the welfare of the farmer. All Farm Security assistance is in the nature of loans, made upon a basis that insures their ultimate repayment. It is not charity, subsidy, nor Government donations, and the borrowers in my district are rapidly repaying these loans. The total loans made in my district at the end of 1940 amounted in all to the sum of $2,496,600, and although much of this money does not fall due for 4 or 5 years, there has already been repaid to the Government the enormous sum of $1,518,835. I do not know what better evidence one could ask as definite proof that here is a program that is really working and really helping the farmer who needs help. The funds that are loaned to the farmers do not come as direct appropriations out of the Federal Treasury, but they are funds advanced by the Reconstruction Finance Corporation. The repayment record, accompanied by the marvelous results obtained in giving new hope to hopeless farmers, and in raising their standard of living from an extremely low standard, in many instances, to more nearly an average American standard, justify the conclusion that the program should be substantially expanded.

FARMERS ENTITLED TO ADEQUATE CREDIT

Mr. Speaker, we all know, of course, that the major cause of the farmers' troubles through the years, and even now, is the inadequate and unfair price for his product, when the price he receives for his crops is compared to the prices he must pay for the things he must, of necessity, buy. When you add to this disparity a high rate of interest on his indebtedness, and then, with many of the poor farmers, a total denial of credit, it is easy to see why we have met with so much ruin and the accompanying misery.

When the repayment record which I have just cited in my district is considered, it is a tribute to the honesty and industry of those needy farmers who were helped through the Farm Security Administration program, and it is proof that they are getting back on their feet and becoming permanently self-supporting. The success of this program is not based alone upon the financial credit extended, but also upon the advice and technical assistance and guidance given in sound farm and home management, which are such very important factors.

AN EXAMPLE OF IMPROVED CONDITIONS ON THE FARM

During 1940 the average farm-security family in my district produced $192 worth of goods for home consumption, as compared with $138 before they came into the F. S. A. program. This produce for farm use included 276 gallons of milk per family; 305 pounds of meat; and 316 quarts of vegetables and fruit canned for the winter. Now this increased production of food did not in any way add to the commercial markets, since none of it was offered for sale. It simply meant a better diet, better health and a rising standard of living for these families.

FARM-DEBT ADJUSTMENT

In many instances in my district where farm security has come into the picture and helped work out the problems of the farmer who was deserving and yet needed help, it was found in the first instance that he was carrying a debt burden which created an impossible situation for him. In cases such as these, the farmer and his creditors were brought together and the entire situation was frankly and fully discussed, and with rare exceptions the creditors usually agreed to arrange a scale-down of the obligations, and in some instances I know where the amount ran as high as 60 percent of the total debt. With refinancing from F. S. A. on a low interest rate, immediately a new promise of hope and actual accomplishment came into the life of the particular farmer involved and his family. The adjustment was on a basis that he could work out. The farmer was saved from foreclosure and the creditors received cash payments for what otherwise might have been a worthless debt.

In connection with debt adjustment it is interesting to note that the total debt adjustments in my district negotiated for the farmers up to and including the year 1940 amounted to the sum of $1,623,588. This represents a scaledown of 40.3 percent. In other words, creditors, who in

many instances would have gotten little or nothing, realized approximately 60 cents on each dollar that was due them. At the same time the debtors, who through F. S. A. discharged their obligations on this basis, took on new obligations bearing a lower rate of interest with fixed periods of payments. They were encouraged and directed by representatives of F. S. A., and took new courage and a new lease on life. From what I have stated, remarkable progress is shown to have been made. As another result of these debt adjustments $5,576 in back taxes has been paid to local governmental agencies.

THE FARM SECURITY PROGRAM SHOULD BE EXTENDED

Mr. Speaker, in addition to the 969 active rehabilitation loans in my district, there are today 1,880 farm families in my congressional district who are eligible and in general need of rehabilitation loans, but they are unable to get credit because of the limited funds that Congress has appropriated for this service.

Where a practical, sensible, and worthwhile program has gone forward as has the farm-security program in my district, it would seem shortsightedness not to allow it to expand to the maximum to meet the existing needs. This is particularly true when we realize that in the end there will be practically no financial loss to the Federal Government, and the rehabilitation of these hundreds of families, or hundreds of thousands throughout the Nation, will go a long way toward establishing a genuine and fundamental "first line of defense." The program causes us to realize fully and completely that after all, our democracy exists for the service it can render its citizenship, rather than the citizen existing for the use and benefit of the Government. In other words, it is a very beautiful and practical illustration of the contrast between our philosophy of government and the Hitler "new order."

American Blood Demanded for Aggressive War in Europe, Africa, and Asia

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

ARTICLE FROM NEW YORK TIMES

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following despatch from the New York Times of yesterday:

DE GAULLE SEES UNITED STATES ENTRY—BACKS BRITISH EAST ARMY CHIEFS' VIEW ON NEED OF OUR TROOPS

BEIRUT, LEBANON, July 28.—General Charles de Gaulle, leader of the Free French, before leaving here today for Damascus, endorsed the opinion previously expressed by Gen. Sir Archibald Wavell, former British commander in the Middle East, and by his successor, Gen. C. J. E. Auchinleck, to the effect that, to accomplish the complete and final defeat of Germany, American troops must be dispatched to this hemisphere.

Asked in a hurried interview if he agreed with the view the two British generals voiced to the press, General de Gaulle said categorically that he did.

Addressing a French gathering here, General de Gaulle remarked that, contrary to Adolf Hitler's expectations, America was taking an increasing part in the European war and was now "marching straight toward intervention."

Jewish War Veterans Present American Leadership Award to Hon. Wendell L. Willkie

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

ADDRESSES OF HON. WENDELL L. WILLKIE AND FRED S. HARRIS, NATIONAL COMMANDER, JEWISH WAR VETERANS

Mr. SHANLEY. Mr. Speaker, the Jewish War Veterans of the United States, through its national commander, Attorney Fred S. Harris, of Meriden, Conn., in my own district, presented the American leadership award of the organization to Wendell Willkie on Saturday, June 28. I am taking advantage of my unanimous consent to insert the speech of presentation of Commander Harris and the speech of acceptance by the recipient, the Honorable Wendell L. Willkie.

ACCEPTANCE SPEECH—OUR FREEDOM AT STAKE, SAYS HON. WENDELL L. WILLKIE

I am very proud to receive this award. I am very proud of all the veterans of the last war. In view of the disillusionment that came to us in the years of depression and false political leadership following the last war, it might well have been that it would have been the soldiers of that war that today would be leading America to isolation and defeatism. I am very proud that it is the leaders of the organizations of the soldiers of the last war that are leading us to the other path, to the path that will preserve liberty.

I am greatly concerned about the preservation of liberty. As a matter of fact, I know that in bestowing this award upon me that you have not done it as a personal tribute. You have done it as a recognition of your belief in the things that I have advocated.

Liberty is a passion with me. It is the obsession of my life. As a boy I fought for the right of men to organize in the labor unions. In the early twenties I gave myself to the struggle against those who were seeking to impose upon our minority groups a restriction in their liberties; and in the thirties I fought with all the force of my being against what I thought were unfair and discriminatory and punitive impositions upon the free enterprises of men. And now I am happy, in the forties, to be joined with you men in fighting for the liberty of freemen everywhere.

But we shall not preserve this liberty through wishful thinking. We shall not preserve this liberty through boasting about the strength of the United States. We will preserve this liberty if we are willing to make the sacrifices necessary to preserve it and we exercise the mental equipment of this country to see that those sacrifices are made effective.

I read in the paper yesterday where the President said that the United States was far short in its production of explosives as compared with the production of those instruments such as rifles which use those explosives. I hope his statement did not mean all that it implied or it then would mean that our defense organization has been a failure. But it means much more than that. It also means that not tomorrow, or the next day, but at once, that the President should appoint one man responsible to him with full authority, in charge of our defense program. All of this to the end that our production may be coordinated, planes and tanks and guns and ammunition may be simultaneously produced. It does no good to produce an airplane if at the same time you have not completed the building of the guns that go with that airplane, and it does no good to produce the planes and the guns unless you simultaneously produce the powder and the shells, and all of those together are no good unless you train a pilot at the same time.

My fellow veterans, our very freedom is at stake. We have been extremely fortunate that our delays have not already brought us to grief. Everyone who understands the problem at all knows that our race with Hitler is a race of production. I hope that by constant reiteration I can convince my fellow countrymen that we cannot have peace nor can we have liberty as long as Hitler survives. Nor can we defeat the forces of nazi-ism except by out-producing the Nazis.

The time for speeches and politics and for economic and social theories on the part of those handling our defense is overpassed. The time for work and organization is overdue. We want production and we want production coordinated. And we can only do that by putting into effect the fundamental principles of organization with one responsible head.

For more than a year I have been saying to my fellow countrymen only the productive can be strong, only the strong can be free. I hope to say that so many times, plus the fact that we may organize our defense system along these fundamental lines, that they will become accomplishments, because only thus, my fellow comrades of the last war, can America come through in this present struggle for the preservation of liberty.

PRESENTATION ADDRESS BY NATIONAL COMMANDER FRED S. HARRIS

We are gathered here to do honor to a great American citizen, a man whose name has become a synonym to all the world for courage, determination, and a deep and abiding faith in the ways of democracy. Actually, of course, Wendell Willkie has honored us—every one of us in this place and every person in the United States.

He has honored us first of all by sticking to his principles. He believes in being honest—honest with himself and honest with his country. A lesser man would have done things differently. A lesser man would have made political capital out of differences of opinion concerning American defense policies during a campaign for the Presidency. A lesser man would have sought personal gain and personal glory. A lesser man would have appealed to prejudice and intolerance. But Wendell Willkie could not do those things and remain an honest man in the sense in which he understands the words.

And in acting and speaking and working as he did, Wendell Willkie became a shining symbol of democracy at its best. In a world

grown cynical and weary, in a world where hatred and bitterness and doubt were eating like evil acids into the souls of men—in that world his example came like a welcome inspiration for us all. I do not think I exaggerate when I say that his story, written in the history books of tomorrow, will have a profound and important influence on the youth of America and the world.

During the election campaign Mr. Willkie spoke out strongly against those false Americans who were seeking to stir up religious prejudice, racial intolerance, and group misunderstanding. He repudiated the support of the elements which were trying to divide us into isolated groups, each suspicious of the other and each eternally quarreling with the other, and with all the force at his command he warned us again and again of this peril to our unity and our independence.

In a time of crisis he called on us for the best that was in us. Nor did he stop there. After the election was over he called on his supporters—on the millions of American men and women of every faith, color, and viewpoint who had voted for him—to stand together behind the President in a united front to resist all hostile influences. He spoke up for democracy in ringing unforgettable terms. He showed great physical courage when he ventured abroad into war-torn England to learn the truth at first hand. He came back doubly strengthened in his conviction that only by a complete and unyielding unity of all the American people could we preserve our democratic system.

In recent months Mr. Willkie has helped to make things clear to us. But his greatest contribution has been to demonstrate to all the world that democracy has an inner strength of its own, a strength that flowers in time of crisis. We are convinced now that, as free men standing shoulder to shoulder and working in the cause of liberty, we can face anything the dictators can produce. We know that the spirit of the free soul cannot be resisted, and that the human will of free men is 10, nay, a hundred times, as potent as that of slaves. We know that the weakness of nazi-ism, fascism, and communism lies in that fact, and that one day those systems will disappear from the face of the earth, even as slavery disappeared from the American scene.

But meanwhile we have a job to do. We must bolster our democracy militarily and economically. We must preserve and intensify our national morale. We must pour our energies, our intelligence, every ounce of our determination into the task at hand. For, like it or not, we are concerned in this war—and its outcome will decide the way of life of generations to come. We are concerned in this war, and we have chosen sides. We are on the side of democracy.

That is the order of the day. If we do it well, free men in a nation dedicated to the cause of freedom, the dictators cannot last long. If we allow un-American ideas of race supremacy and the division of humans into slave and master categories to enter into our lives, the dictators will be that much harder to get rid of. If we take our time, and argue, and get into quarrels among ourselves, the years to freedom without fear will be long indeed.

These, it seems to us, are the ideas Mr. Willkie has been seeking to get across to us Americans for the past 2 years. Together with other patriotic and far-seeing Americans, he has called us to action. The Jewish war veterans are proud to answer that call, proud to stand, as we did in the World War, at his side and on the side of American democracy. We fought for our Nation in time of war, and we are ready to do our part, as former soldiers and active citizens, at a time when war threatens us from every side.

In this respect, all veterans and all good citizens—Protestant, Catholic, and Jewish—stand alike. All of us together are today dedicated to the cause of democracy. We know no other way. We will support no other view.

Mr. Willkie, it is my great honor and pleasure to present to you at this time the annual American leadership award of the Jewish War Veterans of the United States.

"The Jewish War Veterans of the United States presents this award for American leadership to Wendell L. Willkie because he has demonstrated that for him love of country transcends party allegiance and personal ambition.

"His loyalty to the code by which freemen live has established a course of conduct that will become a beacon in the history of our country for men yet unborn.

"By his intellectual honesty and his physical courage; by his tolerance and his selflessness he has given strength, dignity, and increased stature to the cause of national unity and the divine privilege of American citizenship.

"Given on the one hundred and thirty-second anniversary of the birth of Abraham Lincoln and in the one hundred and sixty-fifth year of the Republic."

Taxes on Advertising

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

TELEGRAMS FROM MICHIGAN CITIZENS

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegrams:

IRONWOOD, MICH., *July 29, 1941.*

Hon. FRANK E. HOOK,
House of Representatives,
Washington, D. C.:

In behalf our two radio stations, WATW, Ashland, Wis., and WJMS, Ironwood, Mich., we protest as unfair, confiscatory, and discriminatory, the proposed taxing of radio and outdoor advertising revenue in occupational tax provision of general tax bill. Urgently request you consider carefully all points brought to your attention by National Association of Broadcasters and proceed to drastic modification or elimination of advertising taxation feature of the bill. Certainly due consideration should be given to great demands made by Government Department and defense program for free radio and billboard publicity. We have always complied with each request and propose to continue to do so, but such discriminating taxes, omitting newspapers, magazines, direct mail, etc., will make our costs much higher. Though applying to large stations now, the step will affect small stations as well.

UPPER MICHIGAN-WISCONSIN
BROADCASTING CO., INC.,
N. C. RUDDELL,
Vice President and General Manager.

ISHPEMING, MICH., *July 29, 1941.*

Representative FRANK E. HOOK,
Office Building of the House of
Representatives and Senate,
Washington, D. C.:

Urgently protest occupational tax on individuals rendering outdoor advertising service to others, because it is both confiscatory and discriminatory in character. This tax would absorb entire profits of my business, which provides me with a living. Have donated much space free displaying national defense and other posters of national interest whenever requested by the Government. A tax on any form of advertising is uneconomical and will serve to slow up business and in turn decrease national income. Outdoor advertising is an efficient and economical method for the Government and industry to advise the Nation and its citizens of subjects important to its welfare. I earnestly solicit your aid to defeat this proposed tax bill.

MRS. ED. J. BUTLER,
Butler Poster Service.

GLADSTONE, MICH., *July 29, 1941.*

Hon. FRANK HOOK,
House of Representatives:

TAX bill on outdoor advertising confiscatory and discriminatory. Would appreciate your vigorously opposing same. If to pass would work severe hardship on us.

HALE OUTDOOR ADVERTISING CO.

Air Service Between New Orleans and Certain Latin American Countries

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

Mr. HÉBERT. Mr. Speaker, in a time and era when we are attempting to develop friendship with our Latin American neighbors to the south of us, the membership of this House should be interested to have brought to its attention a remarkable and extraordinary opinion recently expressed by a Mr. Joseph M. Paul, Jr., counsel of the Civil Aeronautics Board, in connection with an application for air service between New Orleans, the gateway to the Mississippi Valley, and certain Latin American countries.

In a most astonishing opinion, Mr. Paul has asserted that there is no need for such a line because there is "the least degree of community interest" between the terminals of the proposed line.

I do not know what Mr. Paul means by "the least degree of community interest," but I do know that it is a thin thread on which to hang such a far-reaching and weighty opinion.

Not only New Orleans, but the whole Mississippi Valley has for years been interested in the development of the Latin Americas. This is not a recent interest. This is not an interest inspired by recent actions of the Federal Government following the outbreak of the war in Europe. It has been a natural interest of long standing, but now Mr. Paul tells us there in this section we find "the least degree of community interest."

I wonder what the real reason for Mr. Paul's remarkable decision is. I wonder what the real motives behind such an opinion are. I would not like to believe that Mr. Paul has rendered such a decision because of conditions not revealed at the recent hearings, but on the face of the hearings and the strong case made

before an examiner of the Civil Aeronautics Board, I cannot see how Mr. Paul could so express himself.

And I am not alone in this opinion of Mr. Paul's opinion.

With the permission and unanimous consent of this House I have herewith included editorials from New Orleans' great newspapers, the New Orleans States, the Times-Picayune, and the Item—and all are in agreement that Mr. Paul's opinion is slightly askew to say the least.

The New Orleans States calls it "A ridiculous finding."

The New Orleans Item says it is "Sheer nonsense."

The Times-Picayune more generously terms it "One man's opinion."

Governor Sam Jones of Louisiana, in a letter which I am also attaching to this statement, tells the Civil Aeronautics Board that he is "astounded" to read of the opinion.

Certainly everybody cannot be out of step except Mr. Paul.

As I keep Mr. Paul's opinion before me I am compelled to keep my tongue in my cheek in view of the rather difficult manner in which the proposed airline was finally brought before the Civil Aeronautics Board.

At least one application had been pending for more than a year before the hearings finally got under way. First there was one delay and then another. First there was one excuse and then another. First there was one petition and then another. It has been all too confusing to an ordinary mind like mine and now I find myself more confused than ever.

I never was much of a mathematician but I do still remember my elemental geometric problem that a straight line is the shortest distance between two points. Mr. Paul must have been a worse mathematician than myself because he apparently does not agree to the long accepted geometric fact as he concludes that an air detour to Latin America is all that is needed.

Mr. Speaker, Louisiana is not going to take this one man's opinion lying down. We are determined to fight for what we think belongs to us.

Louisiana has been too generous in the national-defense program to be shunted aside in an instance like this.

Louisiana has too long attempted to develop friendly relations with our Latin American neighbors to be told that we must be stalled in our efforts at this time.

This is not the last you will hear of this effort to black-out New Orleans and Louisiana from the Latin American air lanes—it is just the beginning.

And now read what Louisiana's Governor has to say about it and what the people of New Orleans think about this illogical and most astonishing opinion of one man, whose legal training should make him better able to arrive at a logical and sensible conclusion.

And always keep in mind that at least two responsible and reliable operators of air service desire and want to immediately establish this air service. Bear in mind that the citizens of New Orleans, of Louisiana, and of the Mississippi Valley have urged the establishment of this line which Mr. Paul says is of "least community interests."

The letter and editorials follow:

EXECUTIVE DEPARTMENT,
Baton Rouge, July 28, 1941.

CIVIL AERONAUTICS BOARD,
Washington, D. C.

GENTLEMEN: I was astounded to read in the papers that the counsel for the examiner in the matter of the proposed air line from New Orleans to Latin America is quoted as saying we do not need this service.

New Orleans has maintained close commercial relations with Latin America, and particularly Central America and Cuba, for better than a century; the entire Mississippi Valley, as to Central America, and the Valley, plus the Pacific coast, as to Cuba, can be more expeditiously served by lines from New Orleans.

The port of New Orleans has been made a port of embarkation for the Army and a supply base for the Gulf and Carribean defenses. Yet the counsel says we don't need the service.

May I suggest that an examiner come down here and let us show him a few reasons why we need the service?

Sincerely yours,

SAM JONES, *Governor.*

[From the New Orleans Item]

NO AIR SERVICE SOUTH?

We are surprised, disappointed, and unconvinced by the report of counsel to an examiner for the Civil Aeronautics Board who has been conducting the hearing of two applications to operate air service between New Orleans and Latin America. Counsel expresses the opinion that neither the route requested by Pan American Airways nor the one asked by American Export Lines, is required by public necessity or convenience. This is an indirect way of saying that no Latin American air-line operation at all, through New Orleans, would serve public necessity or convenience. That, we believe, is sheer nonsense.

"The existing air facilities being operated by Pan American out of Miami, Brownsville, and Los Angeles," says counsel, "appear to supply the present needs of travelers between the United States and Central America."

To our mind, any such conclusion is entirely outlawed by geography, distribution of population, and flying time. The grounds for this feeling, as set forth by spokesmen from New Orleans, and by the two lines competing for a New Orleans franchise, strike us as beyond contradiction. The award of air service to two points so far west as Brownsville and Los Angeles, while New Orleans, at the foot of the great Mississippi Valley, and in the very middle of it, was ignored, was an abuse of direction in the first place.

That New Orleans and the whole mid-continent should be forced to find its southward air service through points on the Atlantic seaboard, and other points on and near the Pacific coast, is an affront to geography and economics. By no means should such an arrangement be longer accepted.

"The benefits to be derived from the new routes are not great," adds counsel, "and they are realized only to points with which the United States has the least degree of community interest."

Yet American Airways and American Export Airlines are asking permission to operate between here and the Panama Canal Zone, Mexico, Guatemala City, San Salvador, San Jose, and Habana. American Exports, moreover, has linked itself with the great Taca system that girds Central America with air services, and makes connections with other lines into South America. And Pan American Airlines would of course tie in down below with the extensive connections that already serve it after it penetrates Mexico and Central America through its present far-western and far-eastern entry points in this country.

This means all the territory that present routes reach, this side of the Canal, and the other side, too. How all this area could be described as "only points with which the United States has the least degree of community interest" is beyond our comprehension. Have we "the least degree of community interest" with the Panama Canal Zone?

We have not seen counsel's whole brief. But if it explains this mystery and justifies the assertion we quote, counsel is a man of commanding talent.

We don't believe he can justify it because we don't believe anybody can. We believe that the two competing air lines know more about the prospects for profitable traffic than anybody else does. They would certainly not be competing fiercely for a franchise through New Orleans unless they anticipated traffic to justify their investment in it.

If the traffic would jutify the investment, that merely means that a southward route through New Orleans would be easier and cheaper for a great many Americans and their Latin neighbors than the route through Atlantic and Pacific cities.

If the Army, or Navy, or both, have had anything to do with shaping Counsel's opinion, because they want no more planes put into commercial service at this time, that should be fairly stated, in order that the matter can be debated in its true relations. We don't mean to say that this is the case. But we can't understand how counsel could have reached his conclusion on the facts and factors that appear on the surface of this business.

We have been urging our people, on an average of once a week for the past year to unite in one combined push with all their energy to bring one of these airlines through New Orleans before unforeseen circumstances could arise to prevent it. Now is their last chance to exert themselves with all their force to avoid being deprived indefinitely of vitally needed air connections with the southern countries that are obviously and properly tributary to our city.

Counsel's opinion is not necessarily binding on the examiner for the Aeronautics Board, but it is a bad start on the last phase of this important matter. Neither are the examiner's findings necessarily binding on the Board. So we have two chances to get a correct judgment in the premises. Will we lose them by default? The answer lies with our commercial organizations, our city administration, our delegation in Washington, and all their allies through the Valley having a common interest at stake.

[From the New Orleans Times-Picayune]

ONE MAN'S OPINION

Denial of long-pending applications for direct air service between New Orleans and Latin American centers was recommended to the civil aeronautics board yesterday by its counsel, Joseph M. Paul, Jr. He contends that present facilities "operated out of Miami, Brownsville, and Los Angeles" are adequate to present needs; that benefits derivable from the proposed direct lines serving the mid-Gulf area would not be great and would be "realized only to points with which the United States had the least degree of community interest," whatever that may mean. So he urges "outright denial" of the strongly backed and powerfully documented case for the proposed new air line to serve travel and trade between the Americas.

If this facility is denied New Orleans, the Central South and the neighbors across the Gulf, it must be denied in our judgment for other reasons than those advanced above.

The benefits derivable from the service are obvious, incontestable — certainly great enough to justify its moderate cost. As is pointed out in the brief of one of the applicant air lines, "all 20 Latin American countries have recognized the outstanding importance of New Orleans by designating that port as consular headquarters." As a gateway for Latin American trade and travel its advantages are so obvious that aviation experts in commercial and military fields alike long have marked it as strategic base for the air service which the board counsel would deny.

In our own belief the practical, tangible benefits to flow from this service abundantly justify its establishment. In addition it would prove a very present and potent aid to pan-American friendship and the solidarity our Government wisely seeks to promote. Quite apart from its provable benefit to trade and travel between this Republic and the others, it serves one of our objectives, the good-neighbor policy.

So this newspaper cannot conceive of the outright denial of this pan-American facility on the ground of inadequate "benefits." Military need of available equipment for its operation might be a valid ground for postponement, though not for rejection. As matters stand, however, the needed equipment happens to be immediately available. We trust the Civil Aeronautics Board, in passing on the application for this vital service, will weigh the supporting facts and arguments presented for its consideration as carefully and impartially at the least as the opinion of its counsel.

[From the New Orleans States]

A RIDICULOUS FINDING

Joseph M. Paul, Jr., attorney for the Civil Aeronautics Board, advises against both of the proposed air routes from New Orleans to the Tropics for reasons which are either confusing or absurd.

He says that the services which the Pan-American and the Export Air Lines propose to establish between New Orleans and Central America are unnecessary because they are supplied by lines now operating from Miami, Brownsville, and Los Angeles. This is simply spectacular reasoning. Miami and Brownsville are both a good distance away from the great Mississippi Valley, which has more contact with Central America than any other region in the Nation, and Los Angeles is clear across the continent. Valley air travelers, therefore, are expected first to journey to Brownsville, or Miami, or Los Angeles, to take flying boats.

Mr. Paul could as well say that an air route from New Orleans to Chicago would be unnecessary because travelers and the mails could go to Chicago via New York or San Francisco. Well, there is an old theory that the longest way around is the shortest way home, and it seems that the learned counsel of the C. A. B. still subscribes to it.

Mr. Paul gives another reason which we will have to submit to the well-known Philadelphia lawyer for clarification. He says: "The benefits to be derived from the new routes are not great and they are realized only to points with which the United States had the least degree of community interest." If the gentlemen of the C. A. B. understand what that means, they are wonders.

For a guess, we'd say that this C. A. B. attorney meant to declare that the United States has only a very slight interest in the points which the two air lines proposed to link with New Orleans; that is to say, Habana, Guatemala City, San Salvador, Tegucigalpa, Managua, San Jose, and the Canal Zone, in fact the whole of Central America in addition to Cuba.

This is about as dumb a declaration as ever emanated from a Washington bureau. Every one of the Central American countries and Cuba maintain a consular official at New Orleans. Most of their contacts with the United States are through New Orleans. A great part of the commerce moves through this city. All of the large American cities, like New York, Cincinnati, Chicago, Atlanta, Kansas City, Memphis, would be much closer to the Central American capitals by an airline through New Orleans than via Brownsville, and all but New York much closer than via the line through Miami, while the Los Angeles gateway would be out of the question for all of them. The mileage saving for all of these inland cities through New Orleans would run from 255 to 703 miles.

Mr. Paul's adverse decision is merely a recommendation to the C. A. B. He cannot have given the real reasons for declaring both applications out. New Orleans is bound to resent such a ridiculous finding. The fight is not yet over and the business interests of this city should demand a valid reason from the C. A. B., and if none is forthcoming, start some action in Congress.

Tax on Outdoor Advertising

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

Mr. JARMAN. Mr. Speaker, I am confronted today with rather a difficult decision even though the cause of the difficulty is an infinitesimal amount when compared with the total tax to be derived from this bill.

I naturally realize, as all the people of America do, the necessity of a tremendous tax bill, and I am therefore not surprised that our excellent Ways and Means Committee has brought in the largest one in history. In fact, I made the statement during the debate on the lease-lend bill that that bill would cost much money, as much as possible of which should be raised by taxation rather than by borrowing so that as little as possible would be passed on for payment by our children and our children's children. Therefore, it is my purpose to vote for this bill regardless of the fact that it contains several items with which I find myself in complete disagreement.

While it is apparently customary to bring tax bills on the floor with such rules, and I am fully aware that considerable time is thereby saved, it is difficult for me to agree with the propriety of bringing such an all-important and tremendous bill here with a rule such as this, which I think might be correctly referred to as strictly a gag rule, so that no amendments may be considered except those introduced by the committee. I am a strong believer in committee integrity and responsibility. I realize, of course, that legislation is in the main created, written, and to all intents and purposes passed in committee. I appreciate fully the responsibility of this great committee in this important matter and wish to heartily congratulate its members on their excellent work. Feeling as I do toward committee responsibility, believing in party organization, and fully realizing the superior knowledge of committee members who have spent months attending hearings and studying the matter while I was otherwise engaged, I invariably vote with the committee in charge of legislation in case of doubt. I generally do so in the absence of doubt unless my constituents are adversely affected or a matter of principle is involved. This attitude will cause me to finally vote for the bill regardless. I am not sure, however, that it will influence me to vote for this rule because of my serious doubt whether legislation of such magnitude should be passed without even the possibility of amendment by those opposed to certain of its provisions.

Even if permitted to do so, I would not vote for many amendments. In fact, the main objection I wish to advance to the bill pertains to a matter of only either $2,000,000 or $7,000,000, $2,000,000 according to those affected, and $7,000,000 as per the estimate of the committee. I refer to the tax on outdoor advertising. Those affected by it who, as I understand it, were not heard by the committee, claim that it is confiscatory in that it amount to from over 50 percent to more than 100 percent of the profits realized annually by those concerned after fair compensation for personal services is deducted. Those engaged in this business would but for this provision doubtless pay considerable income tax on the profits. This provision will not only lose that tax to the Government but will, if confiscatory as they claim, naturally put many of these people out of business and decrease the national income as I shall outline. Consequently, it will absolutely defeat its intended purpose, and "kill the goose that lays the golden egg" as effectively as I have ever observed.

A tax on any form of advertising is similar to one on the tools of a workman or the services of a salesman and should be levied only in dire emergency. Even if this were not true, however, this tax would not be equitable because it not only discriminates between advertising and other selling effort, but between different forms of advertising. While the bill also contains a radio-time tax, no tax is levied on other major advertising media, such as newspapers, magazines, direct mail, window displays, and so forth. Though grossly discriminatory, this is fortunate because it is quite detrimental to the success of the national defense and maintenance of the national morale for any, and would be proportionately more so for all, of the fundamental means of disseminating information to the public to be crippled or made ineffective by the process of taxation.

Outdoor advertising particularly contributes to the success of our national endeavors. Witness the billboards contributed to the Government during World War No. 1 and the recent contribution in behalf of the Army and the United Service Organizations.

During the first World War a similar tax on outdoor advertising, expressly excluding newspaper advertising, was pro-

posed. The Ways and Means Committee, however, realizing it as entirely unfair and very discriminatory, deleted it. Furthermore it was found that the possible returns were so small in proportion to the levy contemplated, and the disastrous effects on business generally, and especially that served by outdoor advertising, would be so great that it would be entirely uneconomical. Such is still the case, and possibly to an even greater degree. The cost of collecting this $2,000,000, or even the seven million, as estimated by the committee, would be so tremendous that I am strongly of the opinion that at the end of the year the Government would find itself on the red side of the ledger in the matter.

Since there can, insofar as I can see, be no possible reason for the imposition of such a tax except the need for revenue, this business should not be harassed and in a large measure bankrupted because of any such doubtful hope of profit to the Treasury. In fact, a tax on any form of advertising is uneconomical since it would serve to retard business activity, thereby decreasing the national income and proportionately decreasing income-tax collections. We have been told that when or if the national income becomes large enough, it will automatically pay off the national debt. I am rather skeptical about this ever occurring, and am very confident that it certainly will not if such steps as this continue to be taken to retard its growth.

Because of these facts I am seriously considering voting against this rule, in which event I believe it will be only the second rule against which I have voted since entering this body.

Conference Report on S. 1524

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

LETTER FROM WILLIAM GREEN

Mr. MARTIN J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Mr. William Green, president of the American Federation of Labor:

AMERICAN FEDERATION OF LABOR,
Washington, D. C., July 28, 1941.

HON. MARTIN J. KENNEDY,
House Office Building,
Washington, D. C.

DEAR SIR: Permit me to express the opposition of the American Federation of Labor to the acceptance and adoption of the report of the conference committee upon S. 1524 by the Congress of the United States.

Under section 9 of the Selective Service and Training Act, the President is empowered to seize and operate plants manufacturing arms and ammunition for necessary supplies and equipment for the Army and Navy upon failure of said plant to cooperate in the defense effort. The report of the conference committee seeks to amend and enlarge this power of the President by authorizing him to seize and operate not only plants manufacturing arms and ammunition for necessary Army and Navy supplies but, in addition, plants manufacturing articles "which may be required for the national defense, or which may be useful in connection therewith."

This means, if the conference report is adopted by the Congress of the United States, that the President may seize and operate almost every manufacturing or producing establishment, regardless of what article said plant produces, because every article manufactured or produced in this country could conceivably and reasonably be construed to be useful or required by the national-defense program or to be useful in the defense effort.

It seems inconceivable that Congress would or could invest the Chief Executive of the Nation with such broad and comprehensive power, except when the Nation is actually in a state of war.

The opposition of the American Federation of Labor to the report of the conference committee may be summed up as follows:

First, the conference committee's report strikes at the very vital and fundamental American principle of private ownership. The right to own and manage property is a fundamental American right. Said right should not be interfered with or impaired, except in case of war when the very life of the Nation may be hanging in the balance.

Secondly, the conference committee's report if adopted would impose a condition of involuntary servitude upon labor. Such legislation would be in direct contradiction to article 13 of the Constitution of the United States, which provides that "Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction. Congress shall have power to enforce this article by appropriate legislation."

Unscrupulous employers would be encouraged under the provisions of the conference committee's report, if adopted by Congress, to exploit labor to the limit. They would take advantage of the threat of Congress to seize industry, to compel labor to work under oppressive conditions, and to impose arbitrary conditions of employment. We vigorously protest against the creation of such a situation.

I assert with all the power at my command that labor is giving to the Nation the highest type of service, and in doing so, is inspired by a spirit of loyalty and devotion to our Government and to its announced policies.

Defense production in practically every line of activity is ahead of schedule. The fine degree of cooperation which is in evidence on every hand ought to be encouraged rather than discouraged through the enactment of repressive legislation, such as is embodied in the conference committee's report.

Voluntary service, which is inspired by a spirit of understanding and cooperation, will produce better results than compulsory legislation, or the application of forceful methods.

An appeal to the heart and conscience of labor and the management of industry for genuine cooperation and the highest type of service, will produce results. All will give willingly and in full measure, but those who would give service of this kind will resent compulsion and force.

I earnestly request the Members of Congress to reject the conference committee's report on S-1524 which amends the Selective Service Act.

Sincerely yours,

WM. GREEN,
President, American Federation of Labor.

World War Veterans of the United States Merchant Marine

EXTENSION OF REMARKS

OF

HON. THOMAS A. FLAHERTY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

ADDRESS BY HARRY J. PEARSON

Mr. FLAHERTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given by Harry J. Pearson, director of Sailor's Haven, Charlestown, Mass., in the interest of the World War veterans of the United States merchant marine, Sunday, June 29, 1941, National Maritime Day, in port of Boston:

"Service in the merchant marine is absolutely vital to the success of winning the war." So spoke Secretary of War Newton D. Baker in 1918, and the assertion is equally true today.

The service rendered by the merchant marine of the first World War was of tremendous value in the proper carrying out of America's part in the World War, for it was this service that was the main connecting link between our source of supply in the United States and our troops on foreign soil.

Had the merchant marine failed in its duties it would have been impossible for this country to have accomplished final victory.

Sailing in poorly armed, slow, clumsy vessels through the submarine zones, these men were more exposed to danger than those on war vessels. They wrote a glorious page in history, and the record, listing 156 merchant vessels sunk by the enemy in contrast to only 19 naval vessels, shows graphically the hazards they faced unflinchingly.

Today, while another generation is carrying on the same glorious traditions of the merchant marine, facing the same perils on the high seas, we pause to pay tribute to those merchant seamen of the last World War.

At noon today on the harbor end of Commonwealth Pier, South Boston, memorial services dedicated to all Americans who lost their lives at sea will be conducted by the World War veterans of the United States merchant marine, survivors of those men who enlisted in the service of the United States Shipping Board back in the dark days of 1917, and of sailors who manned United States merchant vessels as well as those in the United States Transport Service.

Annually the survivors of those gallant groups gather to pay tribute to those comrades who gave their lives building democracy's bridge of ships to the expeditionary force overseas.

Probably no more impressive ceremony was ever conducted along the Boston water front than will take place at noon today when 12 veterans' organizations join with the World War veterans of the United States Merchant Marine in a tribute to their lost shipmates.

The memorial services will mark the official opening of the Boston Maritime Day celebration and will get under way with a land parade forming on Northern Avenue and proceeding to the end of Commonwealth Pier.

More than 1,000 including, in addition to the delegates from the veterans' organizations, Girls Scout Mariners, Sea Scouts, and enrollees from the United States Maritime Service training station on Gallops Island

will be in the line of march led by the Girl Scout Drum and Bugle Corps and the Boston Police Department Band.

Guest speaker will be Clement A. Norton, Boston school committeeman and superintendent of Commonwealth Pier.

Climaxing ceremony will be the casting of a wreath on Boston Harbor waters by Mrs. Margaret Mahoney, Dorchester Gold Star Mother, from a Coast Guard boat moored off the end of the pier while Girl Scout Mariners sprinkle flowers from the caplog and the voices of a children's chorus from the Julia Ward Howe School, Roxbury, led by James Talbot, boy soprano, are raised in the singing of Nearer My God to Thee.

Echo taps will be played by Girl Scout buglers. Miss Daisy Lewis, Red Cross nurse, member of the Edith Cavell Post, who sustained shrapnel wounds recently overseas and was decorated for meritorious service by the King of England, will serve as aid for the Gold Star Mother.

Organizations participating in the tribute include the Spanish War Veterans, American Legion, Veterans of Foreign Wars, Jewish War Veterans, Regular War Veterans' Association, British Naval and War Veterans, Sons of Veterans, Kearsarge Veterans, United American Veterans, Newfoundland War Veterans Association, Sons of Veterans, State Guard Veterans, and their various auxiliaries.

Samuel Goldmeer, of the World War Veterans, United States merchant marine, will serve as chief marshall.

Henry Howard, of Newport, R. I., wartime head of the United States Shipping Board's recruiting service, with Mrs. Howard, will be a special guest of the occasion.

Men of the World War veterans, United States merchant marine, are charged with the duty of supporting the Government of the United States in any patriotic work necessary to the welfare of our country, assist in the promotion and support of the American merchant marine, carry on educational and humanitarian work among members and others when the occasion requires and are endeavoring to secure recognition from the United States Government for services rendered during the World War, particularly hospital and medical care and the privilege of using the colors to drape the caskets of their dead.

To all eligible for membership within this area, a welcome hand is extended by Carl A. Meyer, commander of Boston Post, No. 3.

The impressive services to be conducted on the Boston water front today mark but a prelude to one of the most unique and colorful harbor celebrations ever held at any port in the world.

It is an annual port holiday sponsored by public-spirited citizens interested in developing the port of Boston and reawakening interest on the part of New Englanders in the sea and foreign trade.

Selected as the opening feature of the annual conference of Governors it has attracted chief executives from 27 States through the country who will be guests of Governor Saltonstall aboard the Boston pilot boat, *Northern Light*.

In special recognization of their participation the port of Boston, National Maritime Day Committee, sponsoring organization, through its president, Frank S. Davis, will confer the honor of "Port of Boston Commodore" on each of the visiting Governors who will be presented with a yachting cap decorated with gold, and a commission.

Aboard the *Northern Light*, the visiting Governors will lead the colorful floating parade featuring 300 Government, merchant, and pleasure craft, all of them colorfully decorated, up the Boston main ship channel immediately following the memorial services.

Other high lights of the all-day program include lifeboat races over a mile course in Boston Inner Harbor with crews of merchant ships, Army, Navy, Coast Guard, Naval Air Corps, Sea Scouts, and enrollees from the United States Maritime Service training station on Gallops Island participating, a special fisherman's dory race, an aquacade with 150 section and national swimming stars competing, a canoe-tilting contest, concerts, water displays by Boston fireboats, speeches, and other interesting events.

For school children, a special celebration will be held on Castle Island with Edward Rowe Snow, Winthrop historian and authority on Boston Harbor lecturing on the harbor islands. Yacht races for Radio Snipe, Winabout, and Hustler class boats will also take place off Castle Island.

On behalf of the committee, I extend a cordial invitation for all of the listening audience to come to the Boston water front and witness this colorful marine pageant.

And now to turn for a moment to that work which is an integral part of the American merchant marine. Sailors' Haven in Charlestown, as with all seamen's welfare agencies throughout the country, was organized for the purpose of providing seamen arriving in the port of Boston with a home hotel ashore. Many years ago there was no more exploited group of men than those who followed the sea. They were the victims of crimps, boarding-house keepers and shanghaling. The need was imperative; namely, to provide them with protective influences from these evil things. Such days have passed but seamen still need a home hotel ashore.

Mr. Stanton H. King, who sailed before the mast for many years, served as superintendent for 47 years and his salty personality was incorporated into the building and program of the haven.

Days of sail, of iron men and wooden ships are no more, but the men who man our ships are still, for the most part, away from home when they put into the various ports of this or any other country.

Sailors' Haven, with its antiquated structure, poorly situated, and with inadequate equipment, strives to serve as headquarters ashore for men of the sea. However, we are passing through a period of transition, and presently these men will look for and demand much more superior quarters than those at present provided.

There must be established, in this as in all other ports, a home hotel for seamen ashore that shall equal in comfort and attractiveness the constantly improving quarters which are theirs aboard ship. It should be a modern building of hotel-like appearance, but within which there will be a home-like atmosphere, and located in a neighborhood which is as respectable as that where one finds modern commercial hotels. Men will be received therein as guests, self-respecting and self-supporting. Recreational facilities of all kinds will be provided and seamen's material needs will be met. Baggage room, mailing address, lodgings, and all other facilities associated with a seaman's needs ashore will of necessity be provided for. It will be his club, home, headquarters, and hotel ashore.

When material help is required it will be rendered on the basis of a good-credit standing. Landsmen establish credit standing with men's furnishings companies, banks, and other businesses. There is nothing degrading about this. So it is with seamen. When they require lodgings and food for a short time while awaiting ship they, too, can receive credit at their home hotel ashore. It is not dispensing charity nor relief as such, but meeting a situation in an honorable, self-respecting, businesslike way. It is by such means as this that we shall create in the minds of the public an entirely new picture of the men who man our American merchant ships.

My Trip Back Home

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

RADIO ADDRESS BY HON. FRED BRADLEY OF MICHIGAN

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over Station WSOO, Sault Ste. Marie, Mich., July 30, 1941:

During the past 2 weeks I have had a most pleasant and unusual experience of playing hookey from Washington to take a trip throughout our district back home. Legislation has been rather quiet in the Capitol during these last 2 weeks and the Congress has been sort of enjoying the calm before the storm. The storm, of course, broke this week when we started on the all-important tax bill, about which you have read so much in the papers during the past several months while the Ways and Means Committee of the House and the Finance Committee in the Senate wrestled with the all-important problem of who is going to pay the bill for all this very, very costly war program and this equally costly—yes, extravagant—idealistic program which we like to call our program for social gains. After all, this tax bill is one of the few problems really left for the Congress to do—that is one of its constitutional duties that the President has not asked it to give up—that is one function that he loves to leave in hands other than his own. That is one of the tough, disagreeable jobs, one job with which it is most easy to find fault, and one job that is most unpopular. It is always easy to give away somebody else's money, and Santa Claus is always not only that most popular man on earth but also can be the most powerful. But the bill collector, just as the tax collector, will ever be the most unpopular and the most disagreeable fellow we know, the one we least like to see come around our home. Yes; it is always the easiest thing to do to vote for appropriations when we are raiding the Nation's Treasury, but the hardest thing, politically, is to vote for a tax bill. In fact, I heard of one former Member of the House who stayed down here 12 years on only one campaign slogan—namely, that he had voted for every single appropriation but had never voted for a tax bill. Yes, sir; that is the way to be popular, but it is kind of tough on the National Treasury. So, this week the Congress is going to have that disagreeable task of telling you who is going to pay—or rather start paying—this huge bill, when you are going to pay it, how and on what things you are going to pay it. The only thing you will have left to worry about is, "Where are you going to get the money?"

Well, my trip back home was most interesting and enlightening to me. You know if we did not get out of this heat, actual and political, here in Washington once in a while, I think we would all go completely goofy. But on the other hand, we do find it most necessary to get back home ever so often to find out what you folks are thinking and talking about, otherwise we would not be able to learn wherein we might better serve you down here. You did a swell job for me

on both counts. Our biggest trouble here in Washington during July and August is getting cool nights to sleep, and I feel most refreshed after 2 weeks of our cool nights, which make sleeping a real pleasure. And, secondly, I feel most pleasantly refreshed because of what I learned you are thinking and talking about among yourselves. It makes me take on an added enthusiasm for the tremendously important job ahead of all of us down here in these very critical days in our Nation's history. True, most of the time we find that the President has already acted before the Congress is advised of it, and hence all there is left for us to do is talk about it. But so far, thank Heaven, we are still able to talk about it.

As an illustration of what I mean, let us just consider Iceland. It is well known that the overwhelming majority of the American people insisted that our Navy should not be permitted to convoy war materials to England or elsewhere. Numerous bills were introduced—including one by myself—to specifically prohibit the use of our Navy for this purpose, even though there was no authority in law for the President to order the Navy to convoy war supplies for some other nation. So what happens, when our Navy was serving as the all-important "eyes" for the British Navy and the British convoy system and that proved it was not going far enough to satisfy the British? The President simply put a contingent of American troops—sailors and marines—on Iceland, at the very edge, if not over the edge, of the Western Hemisphere, and over 2,000 miles away from our shores and but 700 from England. And having done so, of course, it becomes necessary for us to maintain a line of supplies to this "outpost of our own defenses" and hence we take over the complete convoy of war supplies.

Of course, if some ships laden with supplies for Britain happen to join up with our own ships, so much the merrier for them. We certainly will not hesitate—in fact, we are ordered—to protect ourselves and all with us against attack by German, Italian, or Japanese warships or raiders. Also we were told, after we had taken over, that we did so to prevent Hitler from seizing it as a possible springboard from which to launch an aerial attack on our own shores. We are told the same thing is possible about the Azores, the Canary Islands, the Cape Verde Islands, etc., and all of which we shall doubtless soon learn we have occupied ourselves to prevent Hitler using them as a springboard for an attack on America. Well, if I am not mistaken, a springboard is a thing which can be turned about and we might later be found using them ourselves as our own springboards from which to launch our own aerial attacks on Germany and Italy. After all, it occurs to me that a springboard is far more effective 700 or a thousand miles away from its objective than it is 2,000 miles away as it would be if Hitler had it. So maybe we may have some ideas in the back of our head as to the possibility of our using a few springboards eventually ourselves—provided either of two things happen. Provided, first, that by our continuing to stick our neck out we can eventually bring about that essential attack on our own troops—and you recall the President's campaign promise of last fall when he told you, "I will not send your boys to fight in foreign lands, except in case of attack"; or provided, secondly, the warmongers finally are able to convince you folks back home that this is our war and that we should get into it with both feet and start shooting, whether we can find anything to shoot with or not. One thing is very certain to me; you and I, the people and the Congress will not learn about the actual start of the shooting until long after it has started. The President knows that not 25 percent of the Congress would vote for a declaration of war at this time and I personally think we are much closer to an actual shooting war than is any affirmative vote by the Congress; hence, again, the President will act first and tell us about it afterwards.

I was glad indeed to learn that you do appreciate the gravity and seriousness of our present position. You realize only too well that we are literally sitting on a keg of dynamite and there are too many sparks flying around not to make our position very, very critical indeed. I was glad to learn that most of you are resigned to the fact that in all probability your boys are not going to be able to come home after their year of "training" is over. You are resigned to the fact that your boys are not in "training" in a manner such as that employed 25 years ago, but that on the other hand they have been inducted into, and have become an integral part of, our greatly enlarged, tremendously expanded, and now widely located Regular Army, stationed all over the entire Nation in many camps and on so-called "outpost duty" in over three-quarters of the entire world. These boys, undoubtedly, are "in for the duration"; I join with you in your prayer, "May God protect him wherever he may be."

But I learned also on my trip that you know almost as much about the causes of this war, about the sources and methods of propaganda used, and almost as much about the whole general situation as we Members of Congress are permitted to know—until afterward. I learned, for instance, that many of you were aware of the fact that possibly some of our present most prominent warmongers were undoubtedly among the same people who joined with similar groups in England and France and collaborated in the actual financing, yes, the actual manufacture, of the rearmament of Hitler's Germany in order to make him the threat to "world security" that he is today, in order that they themselves could continue to reap their filthy "blood profits," which Mr. Roosevelt himself called "fool's gold" back in 1936, when he was a candidate for a second term and, therefore, was sponsoring a "Neutrality Act" which was to forever throw that "fool's gold" out the window and forever keep us out of somebody else's war. Yes; I found that a great many of you were aware of the truth of these facts. I did find others who were skeptical, some indeed who denied there was anything to it. Well, to these "doubting Thomases" may I say simply this? What these folks and myself know is not only an unanswered challenge made on the floor of the House but a statement which I personally heard verified by the No. 1 British statesman in this country, who in fact stated that we ourselves had contributed over twice as much toward the rearmament of Germany as had Great Britain and, therefore, stood to lose twice as much in this war. Yes; it does appear that these international warmongers will keep on forever their nefarious trade in "blood profits" in their feverish search for Mr. Roosevelt's "fool's gold."

Yes; and along that same line I found that many of you were also fully aware of the unanswered challenge of the Honorable DAN REED of New York made during the debate on the lease-lend bill. Congressman REED stated at that time that he had been in conference with a leading British statesmen in London just before the outbreak of this war. He charged that this gentleman had told him that there had been a conference held in London between leading English, French, and German statesmen, bankers and industrialists at which time it was decided that they would stage a "phoney war" in which Germany would be permitted to gobble up a number of the smaller countries of Europe. She would be permitted to do this for two principal reasons: First, in order to provide her with more area in order to become more self-sufficient from an economic viewpoint. In other words, she would then be able to produce practically everything she needed without importing things from other nations. Secondly, they recognized that Europe as then constituted with so many small nations each maintaining its own government, its own embassy staffs all over the world, its own armies at full strength, and so forth, was too inefficient in competition for world trade and hence they agreed that Germany should take over these countries to become more on a parity with England and France and then at the end of this "phoney war" those three—England, France, and Germany—would "divide up" the trade of the world—and that would cut us out too.

Of course, England and France had made a defensive alliance with Poland, aimed at Russia. But when Germany jumped on Poland they had to make good on their alliance to "save their face." It was only when Hitler jumped on the Low Countries and Norway that they finally realized they had been duped by a man whose word could not be trusted and they then realized—too late—that they had been guilty of participating in rearming and plotting with an international liar and had neglected taking the precaution to rearm themselves at the same time. Yes, Congressman REED not only challenged any Member of the House to prove him false or misinformed, but also challenged anyone to prove that that conference was not recorded in the confidential files of our own State Department, and that challenge has not only gone unanswered, but I also personally heard its truth verified by the leading British statesman in our country today. The fact we must recognize is that it was only after they realized they had been double-crossed by Hitler that they frantically sought our help—and have been ever since.

Then I learned that some of you were also aware of the fact that, in addition to our difficulties with gasoline on the eastern seaboard, the lease-lend is proving embarrassing to us in other ways. For instance, tin is a commodity on which lease-lend has forced us to establish a priority rating. In other words, some of our industries have to give up tin in order to supply Britain's and our war needs. Yet we find that some of the tin we have been giving England under lease-lend is being sold by her in South America in direct competition with our same American tin and at a lower price. In other words, lease-lend is helping her protect her foreign South American trade against our own American competition in our own famous "pan-American solidarity." Yes; I found many of you were aware of the fact that Uncle Sam is again being played up in his favorite role of "Uncle Sap." Even in the case of Japan, I notice in the press reports that even though we may be freezing Jap assets in this country, the same press reports say that we may not interfere with further shipments of oil and gasoline to Japan, while we on the eastern seaboard are going to be rationed and have gasless Sundays, according to our friend Harold Ickes. It is a strange world, isn't it?

And to get still further back to home, to what we are doing ourselves to make a sucker out of "Uncle Sap," I learned that some of you whose business life is threatened with extinction by reason of priorities, Leon Henderson's price fixing, and so forth, had found out that you could still continue in "business as usual" provided you were willing to "pay the price"—and, undoubtedly, you would pay the price to someone who was now bellowing most loudly for our immediate entrance into this war. If you need steel, for instance, on which the price is fixed and a rigid priority established, you can always buy it from certain "brokers" who seem to be able to get a "priority rating" if you will pay twice and three times its established legal price. Thus you can continue to do business as usual if you will pay the "bootlegger" who seems to have an "in" in Washington. Thus are we to again get our war millionaire after this war?

Yes, my friends, I found out that you do know what is going on, possibly even more so than we do who have been keeping our own nose too close to the grindstone. And I found that you know, too, what is wrong with our defense program and why it has bogged down so pitifully, principally because Washington has not quit playing politics with defense. In other words, you know that if we are in as precarious a position as we are told we are, then it is time right now to stop looking forward to the 1942 and 1944 elections and get down to work to save our country before we save our party. And, finally, I learned that you do have a pretty fair idea of just who and what put our country in jeopardy—if it is—and just who is leading you very, very close to a shooting war, and you will not forget it. Yes, indeed, it does do you good to get back home occasionally. I thank you for the privilege.

Labor For Defense—Unions Tell Their Story

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

ARTICLE BY S. EUGENE ALLEN, EDITOR OF THE OREGON LABOR PRESS

Mr. ANGELL. Mr. Speaker, there has been much discussion of the part being played by labor in our national defense program. I am certain that if we will examine the facts, we will find that labor has been as loyal and patriotic in this great emergency facing us as any other group of American citizens. I know that is true in my own district in Oregon. Mr. S. Eugene Allen, editor of the Oregon Labor Press, published in Portland, Oreg., in my district, recently wrote a most informative article on this subject, which appeared in the Sunday Oregonian under date of June 20, 1941.

Under leave to extend my remarks I include this article and trust that my colleagues will read and examine the facts set forth therein. As disclosed by the table of initiation fees, dues, and benefits of A. F. of L. unions appearing as a part of the article, it will be noted that while in some instances initiation fees are substantial, nevertheless the benefits accorded to members are of equal value to the payment required.

The following is Mr. Allen's article to which I refer:

[From the Sunday Oregonian, Portland, Oreg., of June 20, 1941]

LABOR FOR DEFENSE: UNIONS TELL THEIR STORY—"WE'RE NOT LOOKING FOR HALOS," SAYS A. F. OF L. EDITOR, "WE'RE SIMPLY TRYING TO DO THE BEST JOB POSSIBLE"

(By S. Eugene Allen, editor of the Oregon Labor Press)

To Mr. Public labor unions may mean pacing pickets, industrial strife, and a vague, if heated, controversy about initiation fees and union dues, but to the members and officers of the labor unions housed in the Portland Labor Temple the union is an institution to serve the needs of the workers, and is operated just as is any business.

In this period of national emergency, with the Nation increasingly dependent upon the efficient cooperation of all groups in hastening the completion of the defense program, national well-being demands that facts replace prejudice and that enthusiastic argument give way to logic and information.

Characteristic of much current comment is the editorial expression of the Hood River News of June 20, 1941: "It would be well to wait a while before painting in the halo and setting the A. F. of L. into any niche of national honor in this time of emergency. There are little matters of racketeering in initiation fees on a huge scale, with the victim workers engaging in defense industries, and there is also the prospect that some rather messy graft in connection with the building of Army cantonments is in line for a congressional investigation in the near future."

UNIONISTS DENY THAT THEY'RE LOOKING FOR HALOS

Local officials of the unions affiliated with the American Federation of Labor are not seeking halos, they say. They are simply trying to do the best job they can in speeding the defense effort of the country to a successful conclusion. They say that they are engaged in a business—a business that depends upon the ability to offer value and service to American workmen and a business whose books and records are kept in the same manner that those of any efficiently operated modern business are.

Mr. Average Union Man pays an initiation fee of $31.03 to join his unions and he pays $2.50 per month dues to support its functions. That is what it costs him to engage in the collective-bargaining process with his employer and to provide the other benefits that members of Portland unions enjoy. Some of these are sick, unemployment, and death benefits—an average of $454.41—and which would cost a considerable percentage of the monthly union dues if bought from an insurance company.

Such is the business relationship between the union and its members expressed in general terms. Reduced to specific facts and figures, the situation presents a range of charges from a very nominal initiation fee of $1 in some of the lumber and sawmill workers' unions to a charge of $200 by the motion picture machine operators' union. The lowest dues of any union is that of the musicians' union, 85 cents per month.

Among the highest is the typographical union, which charges a minimum of $1.80, plus 3 percent of the monthly earnings of its members. This totals, on the average, a dues payment of about $7.50 per month in this union. It should be noted, however, that the printers' union maintains a very high scale of wages and that it pays a death benefit to survivors of its members of $1,000, a monthly retirement to its older members of $34.60, and maintains a home for them at Colorado Springs.

PRINTERS WELL PROTECTED THROUGH UNION

Thus, aside from collective bargaining protection, the member of the typographical union receives a high order of security for himself and his family in return for an initiation fee of from $12.50 to $25 (depending on the age of the applicant) and his monthly dues.

Of 59 unions listed in the city of Portland, 41 charge an initiation fee of $25 or less. Only 18 charge more than $25. Initiation fees and dues are based upon two factors—wage scale and benefits paid to members, and, more important, the cost of carrying on the business of the union and insuring an adequate reserve for periods of depression and other contingencies.

Upon the boilermakers' union falls the major responsibility for the speedy and efficient production of the "bridge of ships" to the democracies. These men are aware of that responsibility, and it is around this organization that much of the fervent popular controversy has settled.

Tommy Ray, secretary of the union (not to be confused with the Tom Ray who has recently been identified with alleged subversive groups), has been a boilermaker all his life except for the period during the World War, when he served in the United States Navy. He understands the problems of the industry and of the workers in it. Born in Chicago and brought up in the Windy City, Ray talks the language of the boilermakers—simple and direct. But he knows what shipbuilding is all about and has a keen appreciation of the responsibility resting on his shoulders as leader of this vital group of defense workers.

Until recently the worker taking on a job in Portland's shipbuilding industry was given a probationary period with the union and with his employer. Having proved his qualification on the job and being accepted as a full-fledged member of the union, he was charged an initiation fee of $18.25 if he was an apprentice or a helper, or a fee of $28.25 if he was an experienced journeyman.

During the probationary period he was given a permit to work, which cost him $1 per day. This permit was for a period not exceeding 60 days (Ray emphasizes that the union never charged any "$90" permit fees), but in practically all instances the worker was accepted or rejected in a short while and the permit fee was no longer charged. Few ever worked the full 60 days.

This permit fee was solely a device to enable the union and the employer to learn the qualifications of the new workmen. The reason for its adoption was simple: Both the union and the shipyards were confronted with waves of clamorous job seekers from all walks of life, the unskilled with the skilled, the substantial, loyal American with the subversive agent and agitator. By using the permit system and allowing the worker to take the job immediately—but withholding actual union membership until his competency and loyalty were demonstrated—the union performed, Ray thinks, a real service to the Nation.

Shipyards, like all other defense industries, are concentration points for subversive penetration and influence. And until the union takes into actual membership a worker, it has no direct responsibility or obligation to him, but once a worker is taken into the union he has all the rights and privileges of any other member—something the union does not desire to accord "fifth columnists." Moreover, once the member is in the union, a complicated system of charges and trials is required to dislodge him. It was thought it would be much simpler to use the probationary "permit system" to establish clearly his record and qualifications before accepting him as a member.

However, the plan was so widely misunderstood and misinterpreted that it has now been abandoned. The boilermakers have no permit fee any more. The prospective member is taken directly into the union and pays the initiation fee. If he has not previously been affiliated with any labor union he is charged an additional $15.

The monthly dues are $3 for helpers and $3.50 for journeymen. In return for this dues investment the shipyard worker receives, first of all, the benefits of collective bargaining and stabilization in an industry that is highly complicated and much at the mercy of changing conditions. Moreover, each month $1.25 of the membership dues is immediately allocated to cover the costs of the $1,000 insurance the union pays all its members upon death. (The amount is doubled in cases of death due to accidental means—and shipyard work is highly hazardous.)

WORKERS HAVE MULTIPLIED IN SHIP PLANTS

The importance of this union service to the shipyard workers and to the industry as well as to the national welfare becomes obvious when we realize that in Portland, during the past two decades, not more than 600 workers have been employed in industry

related to shipbuilding—repair work, building barges and tugs, etc. Yet, today, the boilermakers' union has more than 1,000 men working in the shipyards, and the figure is rapidly mounting. It is estimated that at the peak of operations there will be in the neighborhood of 10,000 in the yards building the ships which Uncle Sam so desperately needs.

In the metal-trades industries the average initiation fee charged is $36.88 in the Portland area. The dues average $2.65 per month. These amounts are for workers whose earnings are consistently higher than the average earnings of all workers. The metal-trades council of Portland, headed by Earl Ingram, who is also president of the boilermakers' union, is made up of the unions having jurisdiction over work in those industries. Among them are the auto mechanics, blacksmiths, boilermakers, building laborers, bricklayers, electrical workers, glass workers, general laborers, hoisting and portable engineers, technical engineers, machinists, office employees, painters, pile drivers, plasterers, sheet-metal workers, shipwrights, steam fitters, stationary engineers, and warehousemen.

The building trades council coordinates the activities of the building-trades groups in a manner similar to that of the metal-trades council. This group of unions is also playing a very important part in the defense program. Its members build the Army cantonments and ammunition dumps such as are located at Pendleton and Hermiston and such as are proposed for Medford and Eugene. They have built the ways for the shipyards and will soon be replaced in the yards by the shipbuilders themselves.

Fred Manash, barrel-chested secretary of the building trades council, points to the record of cooperation that has been made in the work that this group of unions does and to the moderate initiation and dues payments as evidence to controvert charges such as made by the Hood River News.

The Oregon Joint Council of Teamsters, which includes all of the unions in the teaming crafts in the State and which has for its president amiable Phil Brady, State representative, is also an important link in the chain of national defense. Brady and the teamsters are proud of their record of low initiation and dues charges. No union of this group in the State charges more than $25 and some units charge less. The highest dues charged is $2.50 per month. The record does not sustain the charges that have been made against the teamsters on this score.

Every union maintains a complete set of books which are audited at regularly stated periods. The books are open to the inspection of members of the union. Typical of the accounts kept by unions are the records of receipts and disbursements of the Portland Office Employees' Union, whose secretary is J. Howard Hicks. The statement is for the month of March 1941:

RECEIPTS

Initiation fees	$70.00
Dues	385.00
Assessments ($1 per month for a period of 6 months to prosecute the strike against Montgomery Ward)	247.00
Sale of union-label stamp to member	.50
Work permits (for temporary employment such as inventory)	29.00
Organizational receipt from American Federation of Labor	33.63
Deposit of withdrawal card by member	1.00
Total for month	766.13

DISBURSEMENTS

Organizational expense (includes contribution of $250 to Central Labor Council fund to care for the Montgomery Ward strikers still unemployed and also a number of payments of rent, lights, gas, medical, and dental bills of strikers belonging to office employees' union)	$420.41
General (flowers for funeral of member's relative)	$5.00
Payment of dues of officers of the union	21.00
Salary of secretary	158.40
Per capita taxes (36 cents per member to A. F. of L., 5 cents per member to Central Labor Council, 7 cents per member to State Federation of Labor, and other amounts to other department councils)	123.33
Office supplies and stationery	18.60
Rent and telephone	41.75
Local defense fund (reserve to meet unforeseen contingencies and financed by 5 cents per member reserve each month)	$12.35
Total expenditures for month	809.00

Unions are made up of human beings. The officials of the unions admit also that they are possessed of the frailties and faults with which the human race is endowed and to repeat what has already been said they are not seeking halos. But they think that this view of the picture has not been seen by many of their critics.

Initiation fees, dues, benefits of A. F. of L. unions

Local union	Initiation	Dues	Benefits
Auto Mechanics, No. 1005	$25.00	$2.00	$300 death benefit.
Bakery Drivers, No. 499	25.00	2.50	$200 death benefit.
Bakery Workers, No. 114	25.00	2.75	$350 death benefit; $75 death of member's wife; $10 week sick benefit (16 weeks).
Barbers, No. 75	20.00	2.00	$500 death benefit; $10 week sick benefit (10 weeks).
Bartenders, No. 496	25.00	2.00	$200 death benefit; $7 week sick benefit (8 weeks).
Boilermakers, No. 72	28.25	3.50	$1,000 death benefit; $2,000 accidental death benefit.
Building Laborers, No. 296	25.00	1.50	$200 death benefit.
Carpenters, No. 226	40.00	2.00	$300 death benefit.
Grocery Clerks, No. 1092	20.00	2.00	$200 death benefit.
Retail Clerks, No. 1257	5.00	1.50	Do.
Cooks and Assistants, No. 207	16.00	2.65	$200 death benefit; $7 sick benefit for 10 weeks, free doctor.
Dairy Drivers, No. 305	25.00	2.50	$300 death benefit; $10 sick benefit for 12 weeks.
Technical Engineers, No. 79	25.00	2.00	None.
Truck Drivers, No. 162	25.00	2.50	$300 death benefit.
Warehousemen, No. 206	25.00	2.50	$100 death benefit.
Garbage Drivers, No. 220	10.00	2.00	None.
Grocery, Meat Drivers, No. 223	21.00	2.50	$200 death benefit.
Garage and Service Station, No. 255	10.00	2.50	$250 death benefit.
Taxicab Drivers, No. 281	25.00	2.00	$200 death benefit.
Laundry Drivers, No. 358	25.00	2.50	None.
Electrical Workers, No. 48	52.00	5.50	$1,500 death benefit; $42 monthly old-age assistance after 25 years.
Electrical Workers, No. 125	27.50	(1)	$1,000 death benefit; $40 monthly old-age assistance after 25 years.
Stationary Engineers, No. 87	51.00	2.75	$750 death benefit; $65 per year sick benefit.
Hoisting Engineers, No. 701	60.00	3.00	$250 death benefit.
Flour and Cereal Workers, No. 20160	10.00	1.50	None.
Garment Workers, No. 228	7.50	1.30	$300 death benefit.
General Construction, No. 320	15.00	1.50	$200 death benefit.
Beauty Operators, No. 75-A	15.00	2.00	$500 death benefit; $6 week sick benefit for 10 weeks.
Ironworkers, No. 29	5.00	5.00	$400 death benefit; $25 old-age benefit after 65 or in case of disability after 15 years.
Laundry and Dry Cleaners, No. 107	10.00	[2] 1.25 [3] 2.25	$200 death benefit; $5 week sick benefit for 7 weeks.
Lumber and Sawmill	5.00	1.50	None.
Machinists, No. 63	25.00	2.00	$300 death benefit.
Meat Cutters, No. 143	61.00	3.00	$300 death benefit; $10 week sick benefit for 6 weeks.
Millmen, No. 1120	20.00	2.00	$300 death benefit; $75 death of member's wife; $400 permanent disability payment.
Motion Picture Operators, No. 159	200.00	3.00	$300 death benefit.
Musicians, No. 99	25.00	.85	$250 death benefit.
Office Employees, No. 16821	5.00	1.50	$300 death benefit.
Painters, No. 10	50.00	2.10	$750 death benefit; also dire need fund.
Pile Drivers, No. 2416	40.00	2.25	$300 death benefit; $400 permanent disability pay.
Plasterers, No. 82	75.00	1.50	$750 death benefit.
Plumbers, No. 51	100.00	2.00	$500 death benefit.
Sheet Metal Workers, No. 16	25.00	(4)	Do.
Shipwrights, No. 1020	40.00	2.00	$300 death benefit.
Sign Writers, No. 428	50.00	4.00	$400 death benefit.
Steamfitters, No. 235	50.00	2.00	$700 death benefit.
Streetcarmen, No. 757	10.00	2.00	$800 death benefit.
Stagehands, No. 28	100.00	1.75	None.
Typographical, No. 58	(5)	[7] 1.80	$1,000 death benefit; $34.60 old-age pension per month; old-age home in Colorado Springs.
Waitresses, No. 305	8.50	1.60	$200 death benefit; $50 per year sick benefit.
Building Service, No. 49	25.00	1.50	None.
Glaziers, No. 740	25.00	3.00	$400 death benefit.
Linoleum Layers, No. 1236	50.00	4.00	$400 death benefit.
Furniture Workers, No. 1482	10.00	1.00	None.
Plywood and Veneer, No. 2531	20.00	1.50	$500 death benefit.
Waiters Union, No. 189	10.00	1.85	$200 death benefit; $1 per day sick benefit for 28 days.
Motor Coach, No. 1055	10.00	2.50	$800 death benefit.
Mailers, No. 13	25.00	(6)	$700 death benefit; $34.60 month pension.
Photo Engravers, No. 31	30.60	4.00	$1,000 death benefit.
Printing Pressmen, No. 43	20.00	2.35	$600 death benefit; pensions; 12 weeks' sick benefit.
Average	31.03	2.50	$454.41.

[1] $3 to $4.
[2] Laundry.
[3] Cleaners.
[4] Average.
[5] $2.50 to $4.
[6] $12 to $35.

[8] 3 percent of earnings.
[9] 2 percent of earnings.

The Good-Neighbor Policy

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

LETTER TO THE DIRECTOR OF THE CIVIL AERONAUTICS BOARD

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks, I am including herewith a copy of a letter which I have just addressed to Mr. Harllee Branch, Director of the Civil Aeronautics Board.

It is amazing to me that, in view of all the efforts being made by practically every branch of the Government to foster the good-neighbor policy that an attorney for the Civil Aeronautics Board should demonstrate a complete lack of understanding of the value of this policy.

One of the most essential factors in developing cordial relationships between this country and countries to the south of us is rapid and efficient transportation. Yet the attorney has recommended that there be no further extension of air service to these countries.

JULY 30, 1941.

MR. HARLLEE BRANCH,
Civil Aeronautics Board,
Washington, D. C.

DEAR MR. BRANCH: I have hesitated writing you with reference to the applications of the Pan American Airways and the American Export Airlines for the inauguration of service to Cuba and Central America until I have had an opportunity to study the brief submitted by the counsel for the Board.

I have read this brief carefully and, to say the least, it is unimpressive.

The authors utterly fail to comprehend the close ties in business and culture which have existed between New Orleans and Cuba and Central America for many years. In addition to this, your attorneys have failed to realize the tremendous interest in these applications throughout the entire Mississippi Valley. The many cities of that Valley have a direct interest in this application and yet the potential traffic originating from these sources is ignored in the counsel's brief.

Those of us who are concerned about the future of our Nation have given wholehearted support to the good-neighbor policy. It is my feeling and the feeling of many of my colleagues that rapid and efficient transportation to points to the south of us play a vital role in the development of the good-neighbor policy. Yet, throughout the brief I can find no mention of the value of developing this policy.

I sincerely trust that the examiner for the Board will give every consideration to these commanding issues.

Sincerely yours,

HALE BOGGS.

Sugar From Latin America

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

EDITORIAL FROM THE MILWAUKEE JOURNAL

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of June 22, 1941:

[From the Milwaukee Journal of June 22, 1941]

SUGAR FROM LATIN AMERICA

Our chief problem in developing sounder economic relations with Latin America is the problem of finding what we can buy that our Latin neighbors have to sell.

This has been emphasized again and again in the Journal editorial columns, also by economists, and by our able Secretary of State, Cordell Hull. The keystone of the good-neighbor policy with Latin America must be our willingness to purchase more of what the southern nations produce.

Yet the Senate of the United States recently passed bill S. 937 (the Adams bill), which is directly contrary to this policy.

In brief, the bill calls for more and more subsidies to expand the uneconomical beet-sugar industry in this country—an artificial industry that has to be subsidized to exist at all. The excuse for this bill is that the Philippines are unable at present, due to shipping difficulties, to ship their quota of raw sugar. The quotas for all sugar, including beet, were set by the Sugar Act of 1937.

The natural and wise place to turn for more inexpensive sugar at this moment is to other Latin American nations of this hemisphere, not to American beet fields. We are trying to woo these nations politically and economically. They have thousands of tons of cane sugar ready to be shipped to the United States, without subsidy.

The House of Representatives should defeat the Adams bill. The beet-sugar industry, artificial and pretty much confined to six States, should not be encouraged to expand beyond present size.

It has been estimated that the Adams bill would result in additional subsidies for beet-sugar growers of up to $50,000,000 a year. And this for a nondefense industry, when we are straining to economize in such fields, so that we may speed up our arming.

The Adams bill should be defeated: (1) To allow us to buy economically a needed product which Latin American nations can sell to us, (2) to save the increased subsidy that would have to be paid to a domestic industry that has to be sustained by the hard-pressed taxpayer on a nursing bottle.

Great Lakes-St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

ARTICLE FROM THE MONTREAL DAILY STAR

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very timely and instructive article which appeared in the Montreal Daily Star of July 22, 1941, which quotes Hon. Pierre F. Casgrain, Secretary of State, Canada, which sets forth the attitude of that great country in regard to the Great Lakes-St. Lawrence seaway.

The article follows:

[From the Montreal Daily Star of July 22, 1941]

CASGRAIN SAYS WATERWAYS PLAN ASSURED—UNITED STATES CONGRESSIONAL PARTY AND LOCAL M. P.'S ATTEND DINNER

The St. Lawrence waterway development is "a thing bound to come," Hon. Pierre F. Casgrain, secretary of state, told members of the Rivers and Harbors Committee of the United States House of Representatives and members of Parliament at the Royal St. Lawrence Yacht Club last night. The United States legislators are in Canada to study the waterways scheme.

"Even in war we must prepare for the future," Mr. Casgrain said. "That is why Canada is going ahead with the St. Lawrence waterways."

The congressional party crossed into Canada from Massena, N. Y., at Cornwall, Ontario, inspected waterways development at Barnard's Island, looked over the area where the waterways scheme would be developed, then came via Beauharnois to Montreal. They reached the Royal St. Lawrence Yacht Club at Dorval before dark. They were accompanied by J. P. Moffat, United States Minister to Canada.

With the Americans were George Fulford, Member of Parliament for Leeds; Lionel Chevrier, Stormont, and Dr. W. D. MacDiarmid, Glengarry. Joining them here were E. Marier, Member of Parliament for Jacques Cartier; Joseph Jean, Mercier; Vincent Dupuis, Chambly-Rouville; Eugene Durocher, St. James; Brooke Claxton, St. Lawrence-St. George; Douglas Abbott, Westmount-St. Antoine; Peter Bercovitch, Cartier; Thomas Vien, Outremont; Ernest Bertrand, Laurier; and Senators A. K. Hugessen, J. H. Rainville, and L. M. Gouin; and Hon. T. D. Bouchard, Quebec Minister of Highways and Public Works.

ASKED TO VISIT AGAIN

Mr. Casgrain welcomed the visitors in French and English and urged them to visit Canada again. He recalled that three signers of the Declaration of Independence, one of

whom was Benjamin Franklin, visited Canada in 1776.

"Perhaps," he said, "there are no two peoples who feel so much at home when visiting each other, and there are perhaps no two countries who exchange so many visits during the year.

"It is a great privilege to welcome the distinguished representatives of the great American Nation. We are proud to say that she is our neighbor, our friend, and also our economic and moral ally. You have come to Canada on an economic and pacific mission, but this same mission will indirectly tend to increase our war effort."

Mr. Casgrain declared that the mission "proclaims the moral and financial alliance that binds our two countries in their common wish, to bring victory for the free and democratic nations."

Continuing, he said: "The agreement which brings us together today will not fail, notwithstanding certain unjustified fears, to bring to the Province of Quebec real benefits, such as the stabilization of the water level of the St. Lawrence at Montreal, the increase in commerce and trade, and the establishment of new industries, due to the electrical power which will accrue from the development of the St. Lawrence waterways."

MUST LOOK AHEAD

"Criticism born of ignorance and fear, will, I have no doubt, prove unfounded and unjustified. I believe we must look beyond the present moment and the present day."

Dealing with the Dominion's war effort, he was cheered when he said that "Today Canada fights on land, on sea, and in the air, and her forces are growing all the time, and will grow according to the needs of Britain.

"Canada," he added, "today is spending more than 45 percent of her income for war and victory, and we are not sparing our men either. We have stood for peace in the past. It is because the Province of Quebec wants to remain French, with her British institutions, that she fights so nobly with her sons at the side of Britain; and it is because she wants to remain free that she works hand in hand with her neighbor, the great American Nation.

"Canada, however, does not forget that war is an accident, and she must, even in war, prepare for the future. That is why she is going ahead with the St. Lawrence waterways development. In the working out of this far-seeing and far-reaching project, she feels doubly confident, since she has the immense advantage of American cooperation.

"So Canada is glad this evening to welcome the distinguished delegates of the United States Congress, as she knows that their presence is one step further toward the realization of the magnificent seaway from the Atlantic to the heart of the North American Continent."

Wednesday, July 30, 1941

EDITORIAL FROM THE BOSTON POST

Mr. STEARNS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of July 28, 1941:

[From the Boston Post of July 28, 1941]

THE LEGION GROWS

The new all-time high membership record just reached by the American Legion demonstrates clearly the public appreciation of the need for the prepare-for-defense program being carried on in this country.

The Legion, in its twenty-third year and with the number of its eligibles diminishing steadily as death claims the veterans now past middle life, would do well to maintain a membership decreasing only 5 percent each year. But instead of the decrease, the Legion already is some 2,000 members ahead of the previous all-time high, established last year. Its officials predict many more will join before the year closes. One Massachusetts post has doubled last year's membership, and others have nearly done so. It is truly a remarkable achievement.

The men who served in the combat forces in 1917 are joining, legion officials say, because they want to serve again. They realize that for the most part younger men will wear the uniform this time and that they must do their part in some civilian capacity. But whatever it is they are called to do, the men of the Legion are ready and willing. They proved themselves in 1917, and today they are proving the Legion's right to be called America's No. 1 patriotic group.

The Great Game of Politics as Applied to the St. Lawrence Project

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

ARTICLE BY FRANK R. KENT

Mr. VAN ZANDT. Mr. Speaker, as the time draws near for consideration of the St. Lawrence seaway and power project, almost daily we are hearing from the lips of many Members of Congress that it is increasingly difficult to justify the construction of this so-called international ditch.

One of the finest expositions of the fact that the St. Lawrence seaway does not appear justified is contained in the following article from the pen of Mr. Frank R. Kent, which appeared in the Wall Street Journal July 19, 1941. The article follows:

[From the Wall Street Journal, of July 19, 1941]

THE GREAT GAME OF POLITICS—GETTING HARDER TO JUSTIFY

(By Frank R. Kent)

WASHINGTON.—As the time approaches for floor consideration of the St. Lawrence seaways project, several things become clear besides the fact that, unless the President weakens, the vote on this exceedingly dubious proposal will be close. Two of these things are not subject to contradiction. One is that, left to its own judgment, Congress would not even debate this measure, much less pass it. The other is that its chance of success is wholly due to the fact that the President is making its passage a personal matter.

Evidence of this is found not only in the trouble he has taken to push forward conspicuous members of his Administration, such as Secretaries Stimson, Knox, and Jones, and O. P. M. members Knudsen and Hillman, some of whom have little interest in, and less knowledge of the project, but also in the way the administration publicity forces have been lined up in its behalf. All up and down the line the Government press agents and journalistic reflectors are unitedly pressing favorable arguments and obscuring those against. Even the publicity director of the Democratic National Committee has been prodded into doing his bit. The method adopted by most of these literary aides is to misrepresent and abuse those on the other side rather than argue the merits of their case.

The fact is, the full weight of the White House machine is being used to push this project through a reluctant Congress. Ordinarily, that would be enough. Perhaps it will be this time. Certainly the President can get from Congress anything he asks in the way of legislation or money which he can justify as for national defense. The proponents of the St. Lawrence plan have the greatest difficulty in justifying it on that ground. On the contrary, the statement that at the most optimistic estimate (the President's) the seaway could not be completed within 4 years and that it would divert a large number of men and an immense amount of machinery and other material, vitally needed for defense work at a most critical period, has not been contradicted and would seem to outweigh every argument of the canal advocates, not one of which is undisputed.

Actually, the engineering, financial, military, and industrial facts that are marshaled against this undertaking appear so conclusive as to make it impossible to regard a proposal which has been kicking around for 40 years as an emergency proposition in 1941. Engineers, who contend that 7 instead of 4 years would be required to do the job, estimate that a force of 43,000 men would be steadily engaged, but that at the peak 60,000 would be needed. To complete the job in 4 years double this army would be required. Where are these men to come from? In addition, help must be had from Canada, which, even less than we, can afford to divert labor now employed in producing munitions and other products of which the British are in desperate need.

The reluctance of Canada to participate in this project at this time is attested by the conditions under which the Canadian Prime Minister joined Mr. Roosevelt. In his agreement, Mr. Mackenzie King provided a clear escape clause by which his country may indefinitely postpone any participation or expenditure whatever. In his last letter on the subject—March 5—the Canadian Prime Minister declared that "the growing intensity of the war preparations and the apprehensions that still more serious perils will have to be faced in the near future, necessitate the most careful examination of any proposed expenditure from the point of view of public need and in the light of war requirements." So far from heartily approving the plan, this would seem to indicate great doubt of its present wisdom upon the part of Mr. Mackenzie King—even a desire to reconsider the whole business and lay it on the table.

In addition, the trenchant point is now being made that the proposed depth of the canal—27 feet—will be inadequate to accommodate more than a small percentage of the war and cargo vessels for whose use it is supposed to be. For example, it is said that of 384 ships now being built under the Maritime Commission's emergency program, only about 30 could keep their keels off the seaway

bottom. In itself, this would appear a reason calculated to stall the project, but it seems not to weigh much with its sponsors.

Stress has been laid by the President on the electric-power argument, though it has been authoritatively stated time and time again that we can build highly efficient steam plants more cheaply and more rapidly at strategic points than we can develop St. Lawrence water power. In reply to the allegation that this is a pet project of Mr. Roosevelt's, it is asserted that Mr. Harding, Mr. Coolidge, and Mr. Hoover favored it while in the White House. They did not, however, favor it during an unlimited national emergency, when its construction would sidetrack an army of men and vast quantities of material vitally needed to preserve our ally from destruction and our own security. When they favored it, the utmost speed was not being demanded in our own immediate defense program. Nor were we lagging both on our domestic armament, and in the aid we are giving the British. Nor, in their day, was there any uncertainty as to where the men, the money, and the materials to do the job were to be found.

Adequate Water Transportation

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

RESOLUTION OF THE ST. LOUIS REGIONAL CONFERENCE OF THE UNITED STATES CONFERENCE OF MAYORS

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the resolution adopted on February 21, 1941, at the St. Louis Regional Conference of the United States Conference of Mayors, having to do with transportation, and which is apropos to the Great Lakes-St. Lawrence seaway which is at this time under consideration by the Rivers and Harbors Committee, and which urges Congress to plan and work for greater national and adequate systems of waterways and connected roads to supplement our rail transportation.

The resolution follows:

TRANSPORTATION

The United States Conference of Mayors calls the attention of this country to the fact that the nations that have been most successful in modern times, both industrially and in the development and rapid mobility of their military machines, have been those which systematically and intensively developed their transportation systems, most particularly their natural and artificial waterways and highways for purposes of carrying the slow-moving raw materials and cargo; and

Whereas such a development would make it far more practical to construct ships and to locate many war-essential industries in the great valley between the Rockies and the Alleghenies; and

Whereas the past experience has demonstrated that there is a possibility of overtaxing of our railroad transportation system that should be avoided in time of real crisis; and

Whereas the planning if not the building of adequate transportation means is an essential part of any real defense program and is moreover a much needed part of the reconstruction plan to help solve the difficulties of internationally intensified competition: Therefore

We petition the President and Congress of the United States and all those concerned that they commence at once not only to plan but to promote a great national and adequate system of waterways and connected roads to supplement our rail transportation sufficient to meet reasonable military and civil demands.

Gen. Douglas MacArthur, "Boy Wonder" of 1918, In Thick of Things

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

ARTICLE FROM THE PHILADELPHIA INQUIRER

Mr. VAN ZANDT. Mr. Speaker, one of the greatest contributions that has been made to the strengthening of our national defense is the appointment of Gen. Douglas MacArthur as Commandant of the new Far Eastern Department of the United States Army, with headquarters at Manila, P. I.

In my maiden speech in Congress on the subject of national defense, delivered in the well of the House on January 25, 1939, I pleaded for the recall of General MacArthur to the United States so that the Nation would have the benefit of one of the finest military minds in the world today.

The American people may well feel proud that such a fearless military genius is directing affairs in the Far East as war clouds begin to gather.

On Sunday, July 20, 1941, the Philadelphia Inquirer paid tribute to Gen. Douglas MacArthur in the following article:

[From the Philadelphia Inquirer of July 20, 1941]

BOY WONDER OF 1918 IN THICK OF THINGS

One of America's great soldiers, Gen. Douglas MacArthur, may once again become the man of the hour as a result of yesterday's merger of United States and native armed forces in the Philippines.

General MacArthur, the boy wonder of the World War, bowed out of the national spotlight in 1935 when he ended his duties as Chief of Staff of the United States Army and found relative obscurity as military adviser to the new Commonwealth government of the islands.

General MacArthur was the son of Lt. Gen. Arthur MacArthur, who helped clear the Spaniards out of Manila in 1898, then led the rout of the Aguinaldo rebels in 1899, and served as Military Governor of the Philippines for the 2 years.

Graduated from West Point in 1903 at the top of his class of 93 cadets, the younger MacArthur served as a second lieutenant of engineers in the Philippines. Later he returned to the islands as Manila's district commander from 1922 to 1925 and then as department commander from 1928 to 1930.

MacArthur became a national hero as commander of the Forty-second (Rainbow) Division in the World War. No swivel-chair leader, he accompanied his men into nearly every important battle and was gassed, wounded, and rather thoroughly decorated.

MacArthur became the Army's youngest Chief of Staff in 1930. He personally commanded Federal troops who dispersed the "bonus army" in the national capital in 1932.

MacArthur is known in Philadelphia not only as a great soldier but also as a social figure.

His first wife was Mrs. Louise Cromwell Brooks, a daughter of Mrs. E. T. Stotesbury and the late Oliver Cromwell. They were divorced in 1929 and she later married Lionel Atwill, the actor. MacArthur was married again in 1937 to Miss Jean Marie Faircloth, 38, of Murfreesboro, Tenn.

As field marshal of the Philippine Commonwealth Army, he has said that a successful invasion of the Philippines would take "a half million men, $10,000,000,000, tremendous casualties, and 3 years' time."

The New York Times Article on the Nation's Power Shortage

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

Mr. ELLIS. Mr. Speaker, one of the most complete and comprehensive statements I have seen on the American power situation was contained in an editorial appearing in the New York Times on July 23. I quote it here in full:

OUR VAST POWER PROGRAM

By the time we are spending $36,000,000,000 a year for defense we shall need fully a hundred billion kilowatt-hours a year simply to fill Army and Navy orders. This means a considerable addition to the amount of power normally required. To find that power we must enlarge our existing power plants and build new ones. What the ultimate cost will be cannot be even roughly estimated. The annual expenditure of $470,000,000 for 5 years, now planned by the Federal Power Commission, does not cover the cost of generating machinery, transmission lines, and other accessories. Steam stations, we are told, will be built largely by private systems. All told, a sum that may be double the proposed 5-year expenditure of $2,350,000,000 must be spent by Government and industry.

We have only to consider the gigantic industrial expansion of Germany to realize what stands before us. Before she embarked on her wars of conquest Germany could dispose of about 100 billion kilowatt-hours of electricity a year. The conquest of Norway, Austria, Czechoslovakia, Poland, Rumania, and Yugoslavia added another 100 billion. Staggering demands are made on her aluminum industry alone. The Office of Production Management estimates that she is producing a billion pounds of the metal a year. Our revised program calls not only for that much but for 600,000,000 pounds more. Sixteen billion kilowatt-hours a year are needed for this

purpose alone. An unknown amount of magnesium must also be produced, for which another allowance of eight or nine kilowatt-hours a pound must be made.

Add the requirements of the mills that are turning out tanks, guns, planes, trucks, uniforms, ships, and it becomes plain why the strictly defense program alone calls for at least as many kilowatts as Germany needed before she began to overrun continental Europe. In the whole history of engineering there has been no such power effort as ours. It is a challenge to our ingenuity, resourcefulness, and our willingness to work.

Defense of America and Americanism

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, July 31 (legislative day of Monday, July 28), 1941

ADDRESS OF HON. CLAUDE PEPPER, OF FLORIDA, AT HELENA, MONT., JUNE 4, 1941

Mr. PEPPER. Mr. President, I ask unanimous consent to incorporate in the Appendix of the RECORD an address I made at Helena, Mont., on June 4, on the subject Defense of America and Americanism, which was broadcast over a Nation-wide hook-up of the National Broadcasting Co.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to come to Montana because I know and the Nation knows that one can talk about Americanism and patriotism in Montana without pulling his punches. In all of America, Americanism is nowhere more securely rooted than here among these great mountains, upon these broad valleys of the West.

The voice of the West is still the true voice of America.

As a citizen of America I appreciate the opportunity of being here to talk to other Americans about the terrible present, about the menace which hangs over the head of our land.

In order that the discussion might not be one-sided I took the liberty of informing your distinguished senior Senator, Senator WHEELER, that I was going to have the privilege of being here tonight and offered to share with him the platform so that he might say why he did not feel that the President was right in the course he is following to defend America. You have, of course, seen in the papers that Senator WHEELER advised me in a lengthy telegram that his duties in the Senate concerning the radio monopoly had kept him from coming, and offering to debate the rightness of the President's course with me in the Senate. Since the distinguished Senator was the one who chose to carry this question to the American platform, to the American public outside the Senate, I am sorry that he felt his duties would not allow him now to be here in Montana before this great audience tonight.

This mighty issue is too big to be settled on personalities. The stake is nothing less than the future of America, and that momentous question can be settled only upon the high plane of patriotism and principle.

I shudder to think that there is any man in all of America who so hates Roosevelt that he would not follow Roosevelt to save America. Dare any man to think of political profit, of what it may mean to him in the future to be able to say, "I told you so" above the clarion call of his country in her time of greatest peril.

We have seen too sadly that those people in many lands who could not rise above selfishness and ambition, who could not surmount the little things to meet the big things, have now lost all. Party lines do not count now, personalities are not now important; who you are matters not. The question that counts, the only question that counts is, do you love America? Do you want to serve America? Do you want to strike down, to hurl back any foe who is crouching to leap at America?

We see things today we never thought we would see in our time. We can hardly believe our eyes, we can hardly trust our ears, we hardly know how to treat the fear which grips our hearts. But we do know that everything we see, everything we hear, everything we feel, tells us America stands today in danger.

We have seen a man start out as a political agitator in the chaos of post-war Germany. We have seen him gather around himself a group of determined and ruthless men, put upon their lips strange doctrines, and finally fight his ruthless way to the mastery of a great nation. We have seen him drive a whole race from its borders, strip them of their property, break up their families, condemn them to a living death.

We have seen him take the preachers out of the pulpit and thrust them into the concentration camp. We have seen him break up fraternal orders, civic clubs, churches, which men thought no one would dare to touch.

We have seen him take the child from the father and the mother and make him not the child of the home but the child of the state. And into the mind of that child, instead of the sentiments of peace and kindliness and justice, we have seen him plant the corroding seeds of war, cruelty, and injustice.

We have seen him take the fair daughters of a civilized land and tell them it was their duty out of wedlock to breed for nazi-ism.

We have seen him abolish the written law and the impartial court and make crime whatever harmed the state, in the opinion of puppet judges. We have seen him set up a secret police to rove the land, to drag any man out of his home into the darkness never to be heard of again.

We have seen him prohibit the trade-union, the right of the worker to organize, and bind him to the machine as a serf of the new Nazi feudalism. We have seen him confiscate the factory of the industrialists, even those who financed him in the days of his struggle, and drive them like hunted beasts across the face of the world.

We have seen him grasp absolute power, burn down the place where the representatives of the people met, abolish elections, destroy the legislature, and rule a nation of eighty millions with no check except his own cruel will.

All these things we have seen him do to his own people.

Then we have seen him tell every lie, practice every deception, resort to every trick his devilish genius could conceive to divide, to frighten, to break down the resistance of the nations around about him, and finally when he had weakened them from within strike them with the most terrible assault ever hurled by man upon man. One, two, three, four, five, six, seven, eight, nine, ten, eleven, twelve, thirteen, fourteen—fourteen soverign nations, fourteen free people, not including Italy—now lie prostrate beneath his cruel, iron heel.

Now his coast line stretches from the Arctic Circle to the Mediterranean and his bear-like arms are now closing around the whole Mediterranean. His pincers are closing in upon Suez; he is now severing the jugular vein of the British Empire. His sinister hand is already reaching out to grasp the oil lands of Iraq and the Near East, the fertile valley of the Nile, the metals, the minerals, the vast areas of Africa. He is set to grab the islands off Europe and Africa, the islands which command the Atlantic—the Azores, the Madiera Islands, the Canary Islands, the Cape Verde Islands. Now, even now, he is sending his disguised troops into Dakar, which lies just 1,600 miles across the narrow neck of the South Atlantic from Brazil. If he shall possess the coast of Africa his coast line will run from the Arctic at the northern tip of Norway to the Cape of Good Hope, down under in the South Seas; across the Himalayas will lie the fertile plains of India; a little farther lies China.

Did Napoleon, did Julius Caesar, did Alexander the Great ever dream of so vast a conquest?

When this unearthly man began he was just a political agitator in a war-weary land. Now he gives orders not only to the small powers of Europe but to Italy, Russia, Japan, and now France. No great power in all the world stands against him but Britain and America.

For the first time in history the English-speaking peoples stand with their backs to the wall facing the powers of a hostile world.

The strategy of encirclement which Hitler has used to crush every foe is now reaching like a giant boa constrictor around us. Tighter and tighter draw his coils. Russian fortifications lie within sight of the coast of Alaska. Japan glares at us from across the Pacific hungry for more loot and conquest, watching like a hungry beast for a time to strike its prey—lurking with an assassin's knife in hand to pull another Mussolini on us and strike us in the back in some hard-pressed moment.

Hitler bombers, submarines, and surface raiders, some of them new giants, excelling anything on water, rove the seas, almost closing the sea lanes, nearly cutting off every land which does not join their evil Axis, from contact with the principal markets of the world. Like the Barbary pirates of long ago they levy tribute upon all who would use the highways of the world.

In South America he has sent his agents to prepare the way for his coming. For 6 months before they leave Nazi land they are expressly trained to spread propaganda, get control of the means of influencing public opinion, organize all their own people there to carry on a concerted campaign to undermine the independence of those nations, and particularly to destroy good will and trade with the United States. They put money into the hands of local traitors who will stir up sentiment against the local government under some plausible excuse of helping the people.

They buy every possible newspaper, radio facility, almost give away their own cleverly fashioned but propaganda-saturated news services. How near they have come already to setting up their own governments—mere Hitler puppets—in some countries is not generally understood. In some cases only the timely arrival of American naval vessels on a friendly visit gave the local authorities the encouragement and the assurance necessary to throttle such sinister schemes.

Hitler has long had a network of air lines in South America and between South America and Germany. He has offered these large

producers of raw materials ready markets in Germany in terms of bartered manufactured goods. Now with the keys to all Europe in his hands he will offer them again prosperity if they will just join his new order and collaborate with him in remaking the world. If they should determine like the Vichy government in France that collaboration with Hitler is their only choice for a place of power or prosperity then he should without firing a shot have over half of our own hemisphere unless we chose to fight—to send an army to fight—4,000 miles away upon the Orinoco, the Amazon, across the Andes.

Hitler has always boasted that he should not have to batter down our gates from without; that he would open them from within; that in our land of many peoples and many faiths he would raise race against race, religion against religion, section against section, class against class.

How well he knows how to do it. What experience, what success he has had so far in other lands all over the world.

Are there not ominous signs in America today when the name of our President is booed at huge public meetings, when some men hate Roosevelt so much they would rather lose America than to help Roosevelt save it, when prominent men dare to say that Roosevelt is as bad as Hitler or Mussolini or Stalin?

When a man who has been an officer in the American Army and a national hero tells the people we need a new leader in Washington without any apparent reference to the next regular constitutional election which is 3 years off?

When an American Senator says, "Yes, the President has the power to convoy if the Navy obeys him."

When the Senate, recently even refused to consider a resolution saying the President was right in his recent stirring address and deserved the confidence of Congress and the country.

Is it a sign of national health that many manufacturers have thought more about profit than production; have slowed up production because they did not want to run out of orders, and that some labor and labor leaders have struck over petty disputes when the destiny of the world trembles in the balance?

What is this strong power Hitler has to lull his victims into complacency while he, before their very eyes, sharpens his knife to cut them apart?

Like the serpent which whispered into the ear of Eve he says there is no harm while he lures a people to their downfall.

While some cry out that Hitler cannot come here, he is already here with his spies, his "fifth column," his Trojan horses, and those misguided souls who help him without intending it.

He is here through some big businessmen who, like some big businessmen in England before the war, preferred Hitlerism which would crush the labor unions and give them control of the state, to real economic and political democracy.

He is here through some who are waiting to be the man on horseback when things get bad in America in the face of another world depression and post-war turmoil.

His hand has in the last 15 months taken $40,000,000,000—as much as the whole National debt was a year ago—out of the pockets of the taxpayers of our land. And we know that is just the beginning of what we shall have to spend to stop Hitler. In fact, if we were spending at the rate of Britain and Germany we should have spent $100,000,000,000.

Suppose he crushes Britain and we stand alone against him, his navies, his army, his air force vastly outnumbering ours, with all the factories and men and women of Europe to work for him, with all Russia, Africa, the Near East, India, Asia to furnish him raw materials—how much shall we have to spend?

If Hitler controls the markets of Europe where shall we sell the surplus of our farms, our factories, our mines, our forests? What will happen to the price of cattle, wheat, corn, tobacco, lumber—what we make in our factories?

Will he not have the power to impoverish every American workman, every American farmer? How could our businessmen, as private enterprise, compete with the Hitler empire in the world for trade?

Can we stand against the world? Can we stand against a totalitarian world and remain a democracy? Under so great a strain, such stress, can we preserve the freedom which makes America what it is? Could we keep open our schools, our hospitals, keep up the American standard of living?

Yet who among you would not demand that our Government double, triple, quadruple our defense spending if Britain fell today and none stood between Hitler's blitzkrieg and us?

There is no alternative. Hitler must be destroyed or he will destroy us. My fellow Americans, do not let these fake prophets, these modern Pied Pipers of Hamlin, lead you to your destruction.

They cry "peace." How can there be peace with the devil?

What has destroyed the moral sense of Charles Lindbergh, who sees no difference to us whoever wins the war—who sees Roosevelt as much a conqueror as Hitler?

How can they hold back in their hearts a flood of indignation against what Hitler has done to the world? How can they talk about taking his bloody hand in friendship when his bombs have killed 4,022 children in Britain since August last and mangled 3,000 others? When he has thrown the earth back into a sea of blood which may drown civilization?

The old world, the era we knew, and with all of its faults, loved, is dead and Hitler has not only killed it—he has desecrated its body.

Now that is the Hitler they help when they hit Roosevelt.

The time is fast coming when public men, private men, big men, little men cannot be disloyal to the President without being disloyal to America.

Roosevelt has had a twofold purpose. To save us from Hitler and to save us from war. He hates both.

What has the vociferous opposition in the Congress and the country, the America First Committee, done to help him?

In 1938 the President said the peace-loving world must rise up to quarantine those who were spreading the germs of war.

The opposition cried out that the President was a warmonger, stirring up hysteria; that there would be no war if Roosevelt didn't cause it.

We passed a law prohibiting the sale of war material to any belligerent. When the President found the effect of this statute was to help Hitler he asked for its repeal. The opposition leaped to the floor of the Senate, rushed to the platform and to the radio, to the columns of the anti-Roosevelt press, and denounced not Hitler but Roosevelt and started then to broadcast the cruel falsehood that Roosevelt was trying to get us into war.

That opposition for 9 months prevented the repeal of the embargo against arms to the hard-pressed democracies. What might those 9 months have meant to the world? What could we be doing today if those 9 months were behind us in turning out planes, tanks, guns, and not in front of us?

The false prophets were writing their sad story.

Then the Preident called upon the mothers and fathers of America to send their sons to the training camps upon the democratic basis of selective service. Again the opposition dashed to the floor of Congress, to the platform, the radio, the anti-Roosevelt press, and again denounced the dictatorship, not of Hitler but of Roosevelt. Weeks they delayed this vital step in the national defense.

Came then the time when Britain had spent or contracted to spend for war materials the dollars she had available and every dollar's worth of property of every kind and character held in the United States by any British subject. She had up to that time bought at a good profit and paid for in American dollars every article of war equipment we had furnished her.

The President, determined to keep the war in Europe and away from America, proposed to Congress the lease-lend bill. Back came the same opposition to the Senate floor, to the platform, the radio, the anti-Roosevelt press, and denounced, not Hitler, but Roosevelt as a warmonger and a dictator.

More precious months they tore out of the calendar of the progress of national defense.

Now, whatever it is—the pending bill to draft needed defense facilities, the way we have drafted men, and the President's daring appeal to the people to back him up in increasing our production and in getting the goods to the hard-pressed defenders of freedom, or in helping Hitler from getting possession of those strategic islands in the Atlantic from which he can strangle England and strike at us and the same cry rises again from the Senate floor, the platform, the radio, and the still too numerous anti-Roosevelt press denouncing Roosevelt, deceiving the people as to what the issue is, lulling us into a false security, telling us all we need do is just do like France and every other ravaged victim of Hitler—just wait behind some "Maginot line" and Hitler cannot hurt us.

The past few days have shown many national magazines, many newspapers, putting aside partisanship and proclaiming national unity and patriotism.

A nation is grateful.

They see now that the real warmongers are those who would pull down the barriers the President has built up to keep Hitler in Europe. They see that those who really trifle with the blood of American boys are those who have done all they could to keep President Roosevelt from helping to stop Hitler with American materials—so there could be no chance that American men would have to do it anywhere.

I have not spoken of America's duty, but only of her danger. Has America lost a sense of indignation against hellish wrong? Have we sunk so low that nothing but self-interest which touches our soil or our pocketbook can move us?

Where is that America which bruised the head of another tyrant a generation ago; which tore the yoke of oppression from little Cuba; which gave its blood and treasure to free the lowly slave; which won back the freedom of the seas; which tore our freedom from a foreign king?

Where is the spirit of America which swells up from her churches, her firesides, from the hearts of good men and women, wholesome boys and girls? Where is the America which has always been willing to sacrifice for a better world, which through all the years has dared to keep its faith in the high destiny of man.

When a fiend threatens to turn back the clock of time, to dethrone God and destroy the dignity of man—that is America's cause.

If America has lost her soul, what else matters?

In the White House sits a man, often lonely, who has prayed like Lincoln and the Man of Galilee, that this cup might pass from him. But with his conscience bare and his hand in the hand of God, I know he has resolved to do the right as he sees the right.

He needs your confidence and your help. He needs a united Nation behind him in his desperate struggle with the giants of the world.

America needs to be stirred by an old-fashioned revival of old-fashioned patriotism. Good America! Great America! Brave America! You are the real America and against you even "the gates of" (a Hitler) "hell shall not prevail."

Cooperation of States Held Necessary to World Peace

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, July 31 (legislative day of Monday, July 28), 1941

ARTICLE IN REPLY TO AN ESSAY PRINTED IN THE CONGRESSIONAL RECORD

Mr. THOMAS of Utah. Mr. President, day before yesterday I asked unanimous consent for the insertion in the RECORD of an article. I obtained the consent, but now I am informed that the article is one-quarter of a page too long and that its printing will cost $101.25. I, therefore, again ask unanimous consent that there may be inserted in the RECORD this article, in spite of the fact that it is a quarter of a page too long. Ordinarily I would cut the article down so as to bring it within the rule of the Joint Committee on Printing, but since the article is an answer to another article which has already been inserted in the RECORD, I think that I am justified in making the request.

The PRESIDENT pro tempore. Without objection, the article will be printed in the RECORD.

The article is as follows:

[From the New York Times]

COOPERATION OF STATES HELD NECESSARY TO WORLD PEACE—RECENT ESSAY BY HISTORIAN RECOMMENDING POLICY OF ISOLATION FOR THIS COUNTRY DECRIED AS BEING OUT OF ACCORD WITH THE FACTS OF OUR TIMES

To the EDITOR OF THE NEW YORK TIMES:

An essay by Charles A. Beard under the title of "Giddy Minds and Foreign Quarrels," recently published by the Macmillan Co., invites an answer if for no other reason than the fact that its author is one of the most distinguished of American scholars in the fields of history and political science. In spite of the reputation of the author as a student of American political life, it is probable that few of his colleagues will accept without reservation the assumptions upon which he bases his argument for American isolation. Accordingly we trust that the veteran of many forensic contests will not be offended if we examine his assumptions with the same vigor that has characterized his own polemical achievements.

Assumption No. 1 concerns Mr. Beard's implication that a considerable number of teachers, newspapermen, and professional politicians in the United States have recently made it their major concern to champion "wholesale interference with foreign quarrels and disturbances." He cites no names of persons who propose such "wholesale interference." Certainly the indictment does not apply to Prof. James T. Shotwell, Judge Manley O. Hudson, Clarence Streit, or Senator Elbert D. Thomas, and a host of others who happen to believe in international cooperation rather than in Mr. Beard's thesis of nationalistic isolation. None of these gentlemen, so far as the record shows, has even proposed that the United States interfere on a wholesale scale in all the quarrels and disturbances, external or internal, in every country in the world, or, in fact, interfere at all, if that word is to be taken in its ordinary meaning and is not used to cover every kind of international action.

NOT SO ALOOF

Assumption No. 2 is that until the end of the nineteenth century "the United States kept aloof from the aggressions, wars, and quarrels of Europe," and "proposed no world conferences for correcting the wicked, settling conflicts, and curing unrest in the four corners of the world."

This assumption is not entirely consonant with the facts. For instance, as early as 1786 Thomas Jefferson, then our representative in Paris, proposed to the ministers of the great powers that these countries join with the United States in a joint naval demonstration in the Mediterranean in order to restore the international peace which had been broken by the Barbary States.

From the earliest days of our Republic the dignity of mankind has been one of the tenets of American democracy. Accordingly, we have recoiled from the oppression of racial minorities and have frequently translated our indignation into diplomatic protests. In 1840 the United States joined other powers in protesting against the persecution of Hebrews in Mohammedan countries. Later interventions on behalf of Jewish minorities were our protests to Russia in 1860, 1882, and 1891, and to Rumania in 1872, 1879, and 1880.

OTHER EXPRESSIONS

Our history is replete with many other episodes in which the American people have expressed their ideologies in concrete terms of foreign influence. For example, throughout the nineteenth century our intense championship of democracy led us to accord hasty recognition to new governments created by the overthrow of former monarchies, even when such revolutions were accompanied by brutal excesses.

Comity of nations has always called for a decent interval which, although short in time, may give proof of the deliberate decision of the people to change their form of government. But the United States, in its eagerness to promote the growth of self-government everywhere, has on occasion acted so promptly as virtually to intervene. For example, on the third day of the revolution of 1848 in Paris, our Minister, Richard Rush, hurried to the Hôtel de Ville, where before a large crowd he delivered an address of congratulation to the president of the provisional government. Momentous events for Europe grew out of this change of regime—a change which led to the advent of Louis Napoleon Bonaparte.

American devotion to ideologies moved our people throughout the nineteenth century to engage in all sorts of activities that had repercussions in Europe. For example, in 1851, Louis Kossuth, after a vain attempt to overthrow by force of arms the oppressive Hungarian autocracy, was accorded a magnificent reception in the United States. He was ceremoniously received by the Senate and House of Representatives and banqueted by Congress. Our citizens opened their purses to promote the cause of freedom in Hungary.

WE DID INTERVENE

It is true that American-European relations throughout the nineteenth century witnessed on our part more of nonintervention than of intervention. But there were a sufficient number of political interventions, to say nothing of the actions of private citizens, to contradict the myth of our complete isolation which numerous propagandists have ardently nourished.

There is one phase of Mr. Beard's second assumption that requires particular refutation. His reference to the "four corners of the earth" may lead unwary readers to assume that the alleged nonintervention policy of the United States extends to the Pacific and even to Latin America. This, of course, is incorrect. Even if there has been a pretense of nonintervention in European affairs, this has not applied to the Far East nor to Latin America.

From the first days of the young Republic, American interest in the China trade led to a vigorous foreign policy, which was later supported by the religious ideologies behind our missionary movement in the South Seas. As early as 1813 our Navy began to claim islands in the Pacific as American possessions. Soon missionaries were paving the way for the annexation of Samoa and Hawaii. In 1851 the United States alone persuaded Japan to abandon its hermit habits, but we soon joined in cooperative endeavors to maintain peace and order. In 1861 Anson Burlingame inaugurated the open-door policy in China, which became in time the cornerstone of joint American-European intervention in the Far East. In 1864 the United States participated in a collective manifestation with England, Holland, and France to aid the Shogun of Japan in restraining the daimyo of Satsuma from attacks on foreign shipping in the Straits of Shimonoseki.

Even more eventful has been the American policy of intervention in Latin America. And although some of these démarches are not to the credit of the Washington Government, they must be included in the enumeration of external acts of this Government which may be cited as proof that the concept of American isolation is a myth and has little foundation on fact.

PROPAGANDA IN EDUCATION

Assumption No. 3 is that a large part of the instruction in the field of international relations in the universities of the United States has been "stripped of all scientific pretension and has been little more than propaganda for the League of Nations, collective security, collaboration with Great Britain and France, or some other kind of regularized intervention by the United States Government in foreign controversies everywhere except perhaps at Amritsar or in Syria."

This is a serious accusation, imputing both insincerity and incompetence. Dwelling upon the financial resources of various foundations, Mr. Beard insinuates that numerous members of the faculties of universities and colleges are bribed to teach international cooperation and to condemn the isolation that he so ardently champions. Thus lured with "millions of dollars," they indulge in propaganda under the guise of modern scholarship.

Mr. Beard brings charges of lack of scholarship and of insincerity against a wide field of scholars in universities and research institutions. What proof of their ignorance or insincerity does he offer? None at all, except the implication that they seem to be almost unanimous in their conclusions that the blight of war can perhaps be solved by an American collaboration in some plan of universal collective security.

Mr. Beard offers no evidence of "unscientific method" on the part of these scholars. He ignores the possibility that scientific investigation of the subject of war and peace may lead the majority of scholars in the field of international relations to the conclusion that American consultation in international affairs is probably the most immediate road to peace and justice.

It is indeed true that hundreds of teachers of international relations in Harvard, Princeton, Columbia, Chicago, Illinois, Wisconsin, Northwestern, California, and many other universities and colleges, after long study of the question, have concluded that world peace can probably be secured only by active participation of the United States with the other foreign powers. It ought to be significant that such is their conclusion.

It is also true that the investigations of the great research institutions like the Carnegie Endowment for International Peace, the Brookings Institution, the Council on Foreign Relations, and the Twentieth Century Fund have tended to the same conclusion. None of them, of course, has a monopoly on the truth. But if the extensive application of scholarship represented in these centers of learning leads to the hypothesis that war can be avoided only by collective action, this conclusion ought to carry some weight with persons who are seeking a remedy for war by thinking rather than by appeals to emotion.

EVIDENCE UNCONVINCING

Assumption No. 4 is related to Mr. Beard's charge that President Roosevelt has embarked on a "vast and risky program of world pacification," that he has resolved "to act as a kind of arbiter in world affairs," and that he and Secretary Hull contemplate "running the foreign affairs of the United States on the basis of constant participation in the quarrels of Europe and Asia, with war as their ultima ratio." The evidence offered in proof of these indictments does not appear very convincing, and attention is herewith called to this part of the essay simply because of Mr. Beard's implication that the teachers in our colleges and universities desire the President to pursue such a policy.

The use of this assumption suggests a doubt as to whether or not Mr. Beard has lost touch with the realities of American education or whether he understands the proposals of the scholars whom he attacks. Certainly, their writings do not show that they believe the United States must "accept the obligation of directing world destiny." Most of them believe that the best interests of the United States require not that we should direct but that we should cooperate with other democratic states, or indeed with any kind of states, whether dictatorships or democracies, that desire to preserve peace and render justice. Some believe that this cooperation should be limited to consultation with a view to implementing the Kellogg-Briand Pact. Others would go so far as to join in economic and financial boycotts. Others would even have us participate in reviving the League of Nations or some other form of international organization.

None of our colleagues has proposed that the United States should dictate or that it has the power to dictate, the destiny of the family of nations. To do so would be the very negation of the first principle of a widely accepted conclusion—namely, international cooperation. It is hoped that under such a cooperative system the United States would throw its influence on the side of the peacemakers and thus tend to turn the scales in favor of law. It is hoped also that the United States would be wise enough always to throw its weight on the side of those nations which desire to accomplish justice by peaceful change and thus secure those economic readjustments that promote peace rather than war. It is something of a shock to find a vigorous fighter for law, justice, and good faith, as Mr. Beard has been, so cynically sneering at the attempts of our Government to uphold somehow the sanctity of international law and of treaties, such as the Nine Power Treaty and the Kellog Pact, and so coldly indifferent to brutal international aggressions and outlawry.

CHALLENGE TO BRAINS

Of course, it is possible that there will never be a bloc of states which, even with the support of the United States, will be sufficiently strong to keep the peace without resort to war. If so, our civilization is probably doomed. We know that since the birth of our Republic in 1776 there have been three World Wars—the French Revolutionary Wars, the Napoleonic Wars, and the War of 1914–18. We know that unwillingly this Nation has been dragged into every one of these catastrophes. It would therefore seem sensible to discover, if we can, some method by which war can be avoided for ourselves as well as for others. Surely, it is not unpatriotic or un-American to suggest international collaboration for the avoidance of war. The failure to achieve that end should be a challenge to our scientific wits (Mr. Beard's very clever wits included) and not ground for unscholarly sneers.

So far as President Roosevelt is concerned, there is no evidence, even if we include the "quarantine" speech of October 5, 1937, that justifies Mr. Beard's insinuation that the President is using foreign quarrels to divert the "giddy minds" of the American people from domestic problems. The only proof that Mr. Beard offers to support his charge that the internationalists expect the President of the United States to direct the destiny of the world is a sentence from Walter Lippmann, bad enough as it was printed, but which Mr. Beard tears from its original context and twists and distorts into still more ugly meaning. This commentator once wrote that "America has preponderant power and decisive influence in the affairs of the world." Obviously he meant that the United States is such a potent combination of men and technology that when we throw our weight into the scales of international competition we give ascendancy to the states on our side of the balance.

DISTORTION CLAIMED

Pouncing upon the unfortunate word "preponderant," Mr. Beard, by the aid of an undeniably authoritative dictionary of the English language, causes the columnist to say what he did not mean to say, namely, that the United States outweighs the rest of the world. This kind of labored distortion is not like the Charles Beard we have known and admired; and even if there were no distortion at all of Walter Lippmann's argument, it would hardly prove that either the President or teachers in our universities are misleading giddy American minds with quixotic schemes for guiding the course of the entire world from the White House in Washington.

Assumption No. 5 is the implication that the United States has little to gain from foreign trade. Nowhere in this essay does Mr. Beard attempt to weigh the pros and cons of foreign trade as a factor in national prosperity. But in several places he injects the implication that the country has little to gain from international commerce and much to lose through its possible entanglements. He belittles the China trade with ridicule, the weakest of arguments among thoughtful people, and actually says: "Despite tons of diplomatic notes, despite gunboats, marines, soldiers, Open Doors, and all the rest, the trade of the United States with China has been and remains relatively insignificant."

CHINA TRADE VALUABLE

Mr. Beard is, of course, entitled to his definition of "significant." But the New England prosperity resting on the proceeds of the China trade at the beginning of the nineteenth century would seem to have some significance. Even more than this, 20 years ago China was our second best customer for tobacco, being exceeded only by Great Bratain, and surpassing Germany, France, and Italy. In those years we exported over 40 percent of the tobacco grown in the United States. As late as 1931, China stood in the fourth place as an importer of American raw cotton. In buying over a million bales of our cotton a year, she was surpassed only by Germany, Great Britain, and Japan. Finally, before the World War, China ranked only second to the Philippines in the importation of American piece goods. These are, we think, significant facts.

Mr. Beard's contempt for foreign trade is not shared by the economists of the United States. Most of the studies in our universities as well as in such research centers as the Brookings Institution show that national prosperity is powerfully promoted by external commerce. The calamitous situation of the world today only too eloquently proclaims the fact that the desertion of foreign trade in the quest for self-sufficiency invites war and imperialism.

Obviously, the spread of capital goods into countries which formerly imported chiefly consumers' goods will develop regional economic systems and tend to lessen foreign trade. Likewise, the opening of new fields of raw products—such as cotton in Egypt, India, and China—will also curtail foreign commerce with countries which, like the United States, formerly supplied the world with these raw materials. But even so, new industrial enterprises which expand the purchasing power of many countries and increase the amount and variety of economic wants have ever tended to counterbalance any decline in foreign trade due to realinement of industrial areas. Thus it is reasonable to expect in the future a continuing and perhaps increasing volume of international trade in which it should be the ambition of all countries to share.

Finally, we enter protest against resort to the sophistry of employing Washington's Farewell Address as proof of the present necessity to pursue a policy of isolation. The Farewell Address is a matter of historical record, and it is true that in 1796 Washington actually admonished this Nation in the following words: "The great rule of conduct for us in regard to foreign nations is in extending our commercial relations to have with them as little political connection as possible."

ARGUMENT NOT VALID

Mr. Beard rings the changes on the tenacious heritage bequeathed us by the Father of his Country. This appeal to authority however, is specious. Washington's proposal for an isolation policy almost 150 years ago is not necessarily a valid argument for isolation today. George Washington saw fit to cultivate his large Virginia plantation with slaves; this fact would certainly not be accepted as an adequate defense of slavery at the present time. Again, the Father of his Country viewed with alarm many democratic tendencies; he actually participated in the drafting of a Constitution which was consciously designed to prevent the growth of political parties; surely Mr. Beard would not accept this circumstance as a proper mandate for the abolition of all political parties in the America of the twentieth century.

More than this, any historian who uses the Farewell Address as an argument for isolation in the nineteenth century is simply trying to pull the wool over his readers' eyes. In this historic document Washington took pains to say: "With me a predominant motive has been to gain time to our country to settle and mature its yet recent institutions, and to progress without interruption to that degree of strength and consistency which is necessary to give it, humanly speaking, the

command of its own resources." It is obvious that Washington placed a time limitation upon his counsels. To cite one part of the Farewell Address without the other is little less than misrepresentation, assuming, of course, that the person who thus misquotes Washington has been careful enough to read the entire address.

The Farewell Address was superb counsel for its time and place. The time was 150 years ago. The place was a poor, little struggling Republic, in a world where republics were new and monarchies were, as Rousseau described them, ravaging wolves. In the period when we were weak and when our form of government was experimental, isolation may have been an admirable policy. But today we are the most powerful articulation of people and resources in the history of the world. Today our form of government is no longer an experiment in federalism and republicanism. Consequently it does not follow that the foreign policy recommended by Washington for the gangling young Republic should guide the continental empire of 1939.

LESS BARBAROUS WORLD

Washington himself must have had this future of his country in mind when, on another occasion, he said: "I consider how mankind may be connected, like one great family, in fraternal ties. I indulge a fond, perhaps an enthusiastic, idea that as the world is much less barbarous than it has been, its melioration must still be progressive * * * that the period is not very remote when the benefits of a liberal and free commerce will pretty generally succeed to the devastation of war. And I most sincerely and devoutly wish that the exertions of those having this view may effect what human nature cries aloud for—general peace."

In these sentiments George Washington was indeed far ahead of his time and seemed to be arguing for international cooperation and international organization—indeed, for something like a league of nations rather than for isolation. At any rate, if we are in these days to be guided by Washington's advice, it should be clear that the isolationists, including Mr. Beard, have no monopoly on that advice.

FACTS IMPORTANT

The author tells us: "Those Americans who refuse to plunge blindly into the maelstrom of European and Asiatic politics are not defeatists nor neurotics. They are giving evidence of sanity, not cowardice; of adult thinking as distinguished from infantilism."

It is obvious that refusal to plunge blindly is evidence of sanity. There is no need of writing an essay to prove that. Most of the teachers and scholars whom Mr. Beard excoriates simply propose that the American people be not blind to some of the facts of these troubled days. They call attention to the inventions and social developments that are making this globe a smaller world, with the result that no nation can live unto itself. They point to the trends of history, indicating that the domestic policy and institutions of every nation are profoundly affected by the external policies of other nations, and vice versa. They challenge the claim of the isolationists that nations can be immunized from the ravages of war, and propose to seek a solution based on the reasonable cooperation of all nations, including America.

The Part of the Farmer in National Defense

EXTENSION OF REMARKS
OF
HON. HAROLD H. BURTON
OF OHIO
IN THE SENATE OF THE UNITED STATES

Thursday, July 31 (legislative day of Monday, July 28), 1941

RADIO ADDRESS BY L. J. TABER

Mr. BURTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address by Hon. L. J. Taber, master of the National Grange, delivered on the Grange hour, on July 19, 1941, on the subject The Part of the Farmer in National Defense.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The preservation of the four freedoms here in the United States is the supreme challenge of this generation. It can only be done by adequate national defense and an abundance of food. George Washington and his ragged, rugged, rural Continentals left their blood-stained foot tracks in the snows of Valley Forge; but to bring the victory of Yorktown, food was as essential as were munitions and leadership.

A starving army cannot long survive. The farmer today, in producing the first essentials for victory, has a real struggle. As an illustration, I have a letter from a Wisconsin farmer in which he says:

"I have had three hired men in the last 6 months. The first was taken by the draft, the second left in 60 days for an airplane factory, and the third found a job where with overtime he could quadruple his farm wages. Farm work and 20 cows compelled my wife and daughter to ride the tractor and help with the milking. We are keeping ahead of the requested 8-percent milk increase for cheese and powdered-milk factories. This leaves little time for Grange or community work."

A woman from New York writes: "Drought and high costs are terribly discouraging. All our children have now left the farm, as the youngest boy was taken by the draft. Father and I are past 60. It is pretty hard to answer the patriotic urge of helping America and Britain with more eggs, more milk, and more pork. We are doing our best but isn't there some way we can get some help?"

From Texas comes a similar note. Instead of drought, however, it is too much rain. A young farmer writes: "I have one tractor and some fair farm equipment, I cannot afford to buy more. I cannot get help. My wife and my 14-year-old boy keep the tractor going in daylight. I run it at night."

These three widely scattered glimpses tell the story of the farmer's part in national defense. In 1917 and 1918, agriculture lost more than a million young men in the industrial and military draft; nevertheless, our farmers cultivated 25,000,000 acres more land to produce the food to feed America and the Allies and to bring victory. The farmer will make history repeat.

THE FARMER AND THE NATION

Agriculture will support the Government's program for national defense and for making this Nation strong. America must be made impregnable. It must be done with all possible speed. We have a 50-50 chance to keep out of the war in Europe by doing a heroic, self-sacrificing, efficient production task at home. Just as machines will win the war, so food will help preserve morale in England and at home. The farmer fights for freedom; he fights for justice; he fights for national defense. He asks only that he receive equivalent compensation, consideration, and reward with industry, capital, and labor. The farmer will oppose any freezing of prices or any price-fixing program unless and until he is assured that manufactured articles, labor, profits, and salaries will receive the same treatment from the hands of governmental authority.

The farmer cannot gear his production to changes as quickly as can transportation and business. This is well brought out in the wheat crisis. Many farmers feel the injustice of placing a quota on a crop that was planted in good faith last fall. The Canadian farmer has a 7-cent less penalty than the American and the Canadian dollar is now depreciated, so that the farmer north of the boundary could pay the 42-cent tariff, take back American money, exchange it for his own currency and have from 10 to 20 cents more per bushel than our farmers growing wheat beyond their quota.

The Grange suggests that any farmer who has overproduced, who will agree to cut future acreage, be allowed to feed this year's wheat to poultry, dairy cows, or hogs, the three items on which increased production is requested for defense purposes. Instead of making this penalty wheat and taxing it, put it to a defense and patriotic use. This is sound common sense, good for America, good for the farmer and good for national defense. The wheat situation only emphasizes continued need of being on guard to enable the farmer to take his full and rightful place in the defense program. Scarcity leads to weakness. Controlled abundance leads to strength and power. We must adjust farm prices upward to enable agriculture to employ labor, to secure new equipment and take care of the growing needs of the consuming public.

It must not be forgotten that the farmer has been at a price disadvantage since 1920 when compared with prices of manufactured goods or labor prices. There was too much skyrocketing of all prices during the last war. In 1920 and 1921 farm prices dropped to unheard-of levels, but manufactured prices and labor dropped less than half as fast as did farm commodities. There was a rise in prices again in the 1926–29 period, but in the great collapse of 1930–33 farm prices again fell more rapidly than wages or the price of manufactured goods. In other words, the farmer has been laboring under a price disadvantage for full 20 years. He should have an increase of approximately 20 percent in prices before he reaches equality with other groups.

EQUITABLE FARM PRICES

Justice requires that the farmer receive price parity in this emergency. The 85-percent-loan program is of value. However, the Grange demands other constructive steps. About one-fourth of our agricultural wealth is represented by the five staples of wheat, cotton, corn, tobacco, and rice. The other three-fourths of the Nation's food producers must also have equitable prices and fair returns. Marketing orders, Surplus Commodity Corporation purchases, the food-stamp plan, purchases for the Allies, Government purchases for Army camps, and the lease-lend program can help lift prices. Collective bargaining and cooperative marketing must be used to the limit to help agriculture. Our best organized rural groups have suffered the least from price inequality. Every farmer, large or small, East or West, North

or South, organized or unorganized, whether landowner, sharecropper, or tenant, must have price justice. In this battle for the farmer, the Grange insists that by legislation, administration, and self-help methods we must enable rural people to secure sufficient income to make our calling of greater service to the Republic.

Just as a hungry army cannot long win victories, so an impoverished agriculture cannot promote national defense. In addition to increased prices, and larger volume of present farm products, we must develop new uses, new plants, and new crops that can be grown somewhere in the continental United States. Our million Grange members have contributed pots and pans to the aluminum drive. From the soil, however, can come farm products of equal value. Soybeans, oat hulls, cotton linters, and other farm commodities can be made into plastics of a thousand different forms. The chemist, the manufacturer, the scientist, and the chemurgic worker can aid the farmer in finding defense substitutes for metals and materials of which there may be a shortage. As a result of increased prices and increased demand, we can use these steps to protect agriculture during this crisis. More important, we can feed and clothe not only the United States and Britain, but we can provide now and in the future a limitless amount of raw materials for our factories, both in civilian and defense needs.

DANGER SIGNALS

The storm across the sea brings danger signals nearer to all. One of the byproducts of war is the curse of inflation that has brought misery and suffering after every great conflict in history. All patriotic Americans must guard against the dangers of inflation and the destructive spiral that begins to operate when prices, costs, and wages chase themselves up the ladder, bringing no advantages to any group, and followed by the disastrous and sickening thud of deflation that inevitably must ensue.

There is danger of overexpansion in prices in a period of great defense and deficit spending. This can be counteracted in two ways; first, by a just and equitable tax structure that compels every American citizen to make an equitable contribution to the defense of the Republic. And second, by intelligent organization and cooperation of all groups that will check unreasonable inflation. Only when both steps fail should the Government step in. In addition, there must be wise planning for the post-war period, that is inevitable. Hitler will be crushed. All of us devoutly pray for an early collapse of the dictator states. But whether soon or late, the period of peace and readjustment will come. We must prepare for the greatest dislocations that agriculture and the world has ever seen. The Grange is keenly conscious of its responsibility and is working now toward the necessary steps and program to enable agriculture to play its part in world readjustment and to prevent the crucifixion of agriculture that we had after the last war.

NATIONAL UNITY IMPERATIVE

This leads directly to the challenge of national unity. There is nothing more important in America than to promote understanding, teamwork, and progress, and this can only be made possible when business, agriculture, and labor are willing to sit down without bitterness or publicity and frankly face the great problems that threaten the Nation. We must think of victory before we think of ourselves. We must think of this Republic before we think of our own calling. We must remember the consumer at all times and, above all, must try to develop a spirit of tolerance. We have too much bitterness, too much unwillingness, to believe that the other man differing from us may well be a patriotic, God-fearing American, ready when the need comes to give his blood and his all that the American way of life may survive. We can only preserve freedom and liberty by preserving the democratic processes, remembering at the same time that true liberty means restraint, tolerance, discipline; yet no sympathizer of Hitler or the dictator states has a right to the protection of the Stars and Stripes.

THE FARMER FIGHTS AGAIN

Since 1776 and long before that historic birthday of freedom the farmer has been in the forefront of every battle for human liberty. Today the machine age and mass production and distribution have created the need for a Government much stronger than Jefferson or Jackson or Lincoln ever considered necessary to preserve our institutions. Big government, big business, and big labor are projected into the field of national life. Every eleventh American is on some Government pay roll, not including the Work Projects Administration, the Civilian Conservation Corps, and similar activities. Labor claims 10,000,000 strong. Big business is almost 100 percent organized. The greatest battle for freedom and defense that agriculture has ever fought will not be on the bloodstained field of carnage but in the field of organization. Only by building agriculture, only by making it strong enough to be the great balance wheel between labor, government, and industry can our children still climb the rugged heights to freedom and equality of opportunity.

This year the National Grange celebrates its diamond jubilee. We call on every tiller of the soil to join with us in protecting rural life. From ocean to ocean our members celebrate this occasion by emphasizing patriotic service, increased membership, building a better community life and laying the foundation for a great Grange headquarters in Washington, honoring our founders and helping to make the Grange perpetual. Without a stronger Grange and better organized rural life, we cannot preserve the institutions of our fathers. A great forward Grange movement is essential for the benefit of the open country and the Nation as well. With the clarion call of patriotism, comes a new demand and new need for a Grange continually increasing in membership, service and power.

Without sacrifice there can be no glorious achievement. In thinking of America and victory, we must think soberly of the future of our Republic in this grave hour. All must be willing to rededicate themselves to the priceless privilege of helping to make America the world's greatest bulwark of defense against the enemies of human freedom. We can help defend this land of ours from the dangers of confusion from within, and ruthless dictators from without. We can build an economic defense program preventing collapse when world turmoil ends. To organized agriculture comes the opportunity of being a cardinal part in building an America that will be the hope of the Western Hemisphere and the guiding star of liberty and freedom for all mankind.

Starvation in Small Democracies

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, July 31 (legislative day of Monday, July 28), 1941

ADDRESS BY MRS. EVE GARRETTE

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered on July 19, 1941, as a part of the National Grange Hour by Mrs. Eve Garrette of New York City on the subject Shall the Small Democracies Starve?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SHALL THE SMALL DEMOCRACIES STARVE?

Good morning. For this is a good morning in these United States of America, this typical Saturday morning which all of us take for granted. This morning of filling iceboxes and pantry shelves to overflowing with food for Sunday; this morning of cake baking and pie making and roasting meats—of kitchens fragrant with fine mouth-watering aromas of good food cooking—and rosy, well-fed children running in to say, "Mother, I'm hungry," or "Mother, when do we eat?" Yes; this is indeed a good morning in these United States of America. One for which we should give solemn thanks.

For, as I speak to you, and as millions of you listen, across the sea as many millions just like you and me—our kind of people—are facing starvation. People who are not enemies, but friends. Decent, self-respecting, freedom-loving people who once fought gallantly for freedom by Britain's side for the cause we champion too. They are the people of Poland and Belgium and Norway and Holland—nations that have been our lifelong national friends. They are the sturdy, civilized stocks that have helped to build America's greatness—they are the blood relatives of 20,000,000 American citizens.

Lest it be forgotten in these grim days of swift change, may I remind you that these people already know the terror of war from the skies; they have already seen their homes destroyed; their families scattered and lost; their personal world come to an end. They know all about the humiliation of surrender; the ignominy of subjugation to Hitler's armies. These peaceful, kindly Christian peoples of the little democracies of Europe have nothing more to learn of the horror of war itself. Yet, as I speak, they know war's most dreadful aftermath. Hunger, pestilence, decay, and degradation. On this good Saturday morning, those are the specters that sit at every table in Poland and Belgium and Norway and Holland.

On this Saturday morning, over there, millions of women have been standing since dawn in long weary lines hoping to buy their weekly ration of meat—1 ounce; millions of mothers are receiving their daily ration of milk for the babies in their arms—1 pint; and millions of housewives are stirring up a bit of flour and sawdust and hot-water in a pot, calling it dinner for their families, while listless, pale children stand drearily by—too tired to play, too tired to cry of hunger even. Milk? Eggs? Butter? The life-giving, life-nourishing foods? They are only words over there. Just as America, the land of plenty and abundance, of granaries bursting with surpluses is the land of their only hope.

AMERICA IS THEIR ONLY HOPE

For the people of the little conquered democracies look to us to save them before it is too late. They know that America is the only country in the world today possessed of the power to save them from the most dreadful fate known to suffering humanity—the fate of famine, the fate of transformation from normal, decent human beings into a derelict, disintegrated, and demoralized humanity. They appeal to America, because they know that the force of American public opinion is the most powerful force in the world today. You and I make up that opinion. The responsibility is yours and mine. Therefore, when these innocent starving people appeal to America, they appeal to you and to me, and upon you and me rests their

fate. So let us consider carefully the merits of their case, of good and civilized and Christian people whose only crime is that they were defeated in a war they never made.

These little democracies do not come to us as beggars. They do not ask for charity, unless compassion itself is the highest form of charity. They have the funds in this country with which to buy the food they so desperately need. They are frantic to buy from us; they ask, and they ask pitifully, that we sell to them out of our own abundant stores in order that they may be kept alive and self-respecting human beings until this dreadful war is over. They ask that we raise our voice to bring them aid, before it is too late. The case of the hungry little democracies is as simple as that.

OUR PROUDEST TRADITION CHALLENGED

It is also a challenge to our proudest national tradition. For America is the great humanitarian Nation of the world; it is the only Nation in the world that has ever undertaken great humane works in behalf of people outside its own boundaries. Therefore, a strong, authoritative voice has been raised in America to succor the helpless democracies, through the medium of a Nation-wide committee, already known to many of you as the National Committee on Food for the Small Democracies. Herbert Hoover, the world's foremost expert on mass relief administration, the man who once fed half of the world when half the world was starving and who is still revered in many foreign lands, is honorary chairman of the committee. Its roster is comprised of 900 of our most distinguished and responsible citizens, from every State in the Union. Back of the national committee are 4,000 local committees, representing many millions of Americans, all dedicated to the proposition that a way be found to save millions of innocent lives, all dedicated to the proposition of being true to our finest instincts as Americans.

For in these days of a world completely dislocated, you and I specially cherish our heritage of decency; we cling to the honest things we have been taught—the honest and decent things that give us pride in our own souls. And we have been taught that when others are hungry and cold and in human despair, we should be ashamed of ourselves, we are unworthy of ourselves, unless we do something to help them. We all know that to show compassion toward those less fortunate than we is the foundation stone of our religious faith—it is being true to ourselves and our deepest spiritual convictions.

A WAY MUST BE FOUND

Because of our deep spiritual conviction we have an overwhelming desire to help our hungry friends across the sea. We cannot justify our living in plenty—sitting down to three good meals a day—without wanting to save from starvation millions of innocent people. Therefore, the great body of American public opinion and American spiritual leadership is vocal in demanding that a way be found to save these people. Furthermore, public opinion does not consider the difficulties insurmountable. It is well remembered that once before when starvation's blight fell upon the world in the midst of a great World War, millions were rescued from hunger and disease and degeneration without affecting in any way whatever the military outcome. American brains, American ingenuity and American devotion to the cause of humanity found a way. Millions of American citizens firmly believe that what was done once, can be done again. They go further. They say, it must be done again, for the sake of the realities as well as the moralities of this crisis.

And it is here that I should like to address myself particularly to my women listeners. For it is the women who are swift to recognize the vital need of feeding the starving peoples of Europe's best racial strains, because there is stark danger in disregarding their desperate plight. Like the farmer, every mother is imbued with the instinct of looking forward to the harvest at planting time. She recognizes the imperative necessity of proper feeding if there is to be a harvest. She knows that no child can grow up well and strong without proper feeding. She also knows that her own children will have to live in the same world with other women's children, and, if she is to safeguard the future of her own children in that world, she must be deeply concerned about the kind of men and women other women's children grow up to be. Does any mother want the child she so carefully nourishes—she so carefully protects from harm and danger—the child she loves so dearly, to have to live in a world that may be made by children of starvation? Wolfish, animal, mindless children of starvation bred on hate? What sort of a world will they make? Is that not the very danger facing every mother in this land today? With the very prospect that the millions and millions of children in hungry Europe—the millions who are already suffering from the diseases that sign their death warrant where normal adulthood is concerned—the millions who are already dead, but do not die because it is the tragedy of famine that so many of its victims cannot die, are not these other women's children already a very present menace to America's children, unless something is done, and quickly, to rehabilitate them.

AS THOUGHTFUL WOMEN SEE IT

Thoughtful American women are alive to the danger of the present crisis. They recognize clearly that the argument, "Wait until the war is over, then we will feed our hungry friends in Europe" is not good enough, for "wait until after the war is over" sounds much too far away. And as women their every natural instinct is revolted at the thought that, living in this well-fed land of plenty and superabundance of calories and vitamins, anyone can callously condemn millions of innocents to starvation. They do not wish to so condemn them. They recall that there was One who said, "Suffer the little children to come unto Me." They ask, "Dare we forget that? Dare we say 'Suffer the little children to suffer'"? As a matter of fact, it is doubtful whether any American worthy of the name is not desirous of helping the hungry. Only the popular fear that by helping the hungry, Hitler shall also be helped has been the restraining influence.

The question as to whether these peoples can be fed without helping Hitler is an academic one. The pros and cons are argued and argued and argued, still no one knows whether or not it can be done, because the test has not actually been made. And until the test is made, the question continues academic. And now gallant England, fighting for her life, finds herself in the position of requiring food from us. We are asked to conserve food for England and we wish to conserve food for England. We are glad to do so. But what of the claims of our friends in Belgium, Poland, Norway, Holland, upon us? Can we in good conscience deny their need? If we propose food for England, must we not also propose food for the little democracies—England's friends and allies, and ours? Must we at least not make the attempt to aid them? So widespread has become the crystallization of American public opinion on this very point that a formula be found for feeding the little democracies, and at once, that it has become a matter of congressional interest. There is pending both in the Senate and the House of Representatives a resolution asking that our Government, cooperating with the British Government, work out as quickly as possible the setting up of systematic and definite relief for all of the stricken and hungry countries, beginning with Belgium, where the need is now most acute.

If you feel that this resolution deserves your support, a letter or telegram to your Senator or Congressman here in Washington will aid in speeding the day when the trial be made of feeding the hungry. For until the test be made, can there be rest for us in our comfortable homes at night? Can we eat with appetite the food that is set before us every day—the good juicy meat, the potatoes, the bread and butter and pie and cake? Can we watch our children grow stronger and healthier every day, well-nourished on good food—knowing that our helpless friends' children are hungry? Fellow Americans, I ask you this direct question. Not even to try to help our helpless friends, is it not unthinkable?

Advice by an Ex-Service Man to a Draftee

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, July 31 (legislative day of Monday, July 28), 1941

LETTER FROM THE ATLANTIC CITY (N. J.) PRESS

Mr. SMATHERS. Mr. President, one of my friends and constituents, a leading member of the bar in Atlantic City, N. J., Mr. Harry Gottlieb, has requested me to have inserted in the Appendix of the RECORD a reader's editorial taken from the Atlantic City Press, Atlantic City, N. J., embodying a letter written by an ex-service man to a draftee, giving advice and inspiration to the draftee, in the nature of a big-brother communication.

I ask unanimous consent to have it inserted in the Appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[From the Atlantic City (N. J.) Press]

A READER'S EDITORIAL

A reader sends copy of letter mailed by an Atlantic City resident to a boy in the military service. We think it provides today's best editorial:

DEAR ———: I have your letter of the 7th. I really don't know how you find time to write all the letters you have written since you entered the service. Your letters home show that you are happy and satisfied with this turn in your life.

I was hoping that you would take it that way. I think you and I have a few traits in common, and I had the feeling that you would feel about the service as I did back in the first World War. It never occurred to me when I went into the service that I was performing a duty to my country, but rather I felt that it was a privilege to serve a country which I loved so much. Some people are a little backward in showing their enthusiasm and love for their country. They think it is a sign of weakness, but I never concealed the fact that I get a sincere thrill in the passing of an American flag or the playing of the national anthem, and always get goose pimples on each of such events. As far as time in the service is concerned, I never considered that it was wasted, or that I could have accomplished more with my life if I hadn't given almost 2 years of service to my country. In fact, I am convinced more

than ever that a man's life is not complete unless he has given some time for military duty for his country. As the years go by, I feel that my life has been fuller and more satisfactory by reason of that military life, and if my health is good today, with these many years of worry and work, I attribute a great deal of that good health to the life I lived in the American Army.

I hope you don't think that this is idle flag waving, because I never meant anything more sincerely in all my life. I know that you have the same attitude, but I believe these few words will crystallize these thoughts in your mind. You, too, now have an opportunity to serve, and serve a country well worth-while. Serve it to the utmost and to the best of your capacity. But I know even before these words are written that you could do no less. Keep in mind that you are serving your country in a just and unselfish cause, and that each man's service to that cause is vitally important to the preservation of the liberty and happiness which its people have enjoyed since its creation.

As ever,

YOUR BIG BROTHER.

Is the Present Administration's Foreign Policy Leading the United States to War?

REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

Mr. WOODRUFF of Michigan. Mr. Speaker, the American people within the last week have had revealed to them the extent to which the administration apparently is going toward involving this Nation in a shooting war, with our Army still unprepared and unequipped and without any approval, advice, or consent of the Congress or of the people themselves.

It has been noted in these comments for the past 2 years that most of the accurate information about the administration's foreign policy does not come from Washington, but from London. In these comments for the past 2 years events have been foretold and movements and policies of the administration have been foreseen accurately by statements coming out of London. At the very time when the administration was denying it intended to do certain of these things officials of the British Government were saying the United States did intend to do these things. In practically every case the administration did do exactly what London officials said it would despite New Deal denials to the contrary.

Again we have such a situation confronting the American people. The country is against war. The people of the Nation are overwhelmingly opposed to the country being taken into a world-wide war. The people do not like and do not want any close hook-up between the bloody dictatorship of Joe Stalin in Russia and the free constitutional republic of the United States of America. But within the matter of a few days, Harry Hopkins, superboss of the $7,000,000,000 lend-lease-give program, arrived in London secretly; made a speech in which he bluntly told the British something the American people have not been told—that American warships are convoying materials to Britain alongside British warships; Prime Minister Churchill tells the House of Commons and the British Nation that the United States "is giving us aid on a gigantic scale, and is advancing in rising wrath and conviction to the very verge of war" with Germany; immediately thereafter we hear that Mr. Hopkins is in Moscow clasping the bloody hand of the Russian dictator, Joe Stalin.

It is exceedingly disquieting that the record of the past 2 years or more so completely bears out the fact that whenever some high British official in London announces that the United States is going to do something, or that the administration is going to follow a given policy, it always turns out to be true. It will be a direful thing for the American people, especially the sons of millions of American fathers and mothers, if Churchill's positive, emphatic, and unqualified statement that the United States is "advancing in rising wrath and conviction to the very verge of war" proves to be as accurate as other British official announcements have proved to be.

It has not been very many days since the Secretary of the Navy, Frank Knox, gave a congressional committee the most solemn and emphatic assurance that American naval craft were not being used in convoy service along with the British Navy in getting aid to Britain. Yet it is inconceivable that Harry Hopkins, bosom friend and adviser of the President of the United States, would broadcast to Britain and Germany, and all other countries who listened in on his world-wide broadcast, that the United States naval craft are patrolling "alongside" and "parallel with" British naval craft, unless that were the fact. The American people are entitled to some immediate explanation of this absolute contradiction between Secretary of the Navy Knox's statements to congressional committees and Super-Lend-Lease-Administrator Harry Hopkins' statements to the British people and the whole wide world.

It is disheartening when we stop to realize that the American people have stood aghast at the bloody despotism of Joe Stalin and his cohorts, who have killed off the intelligent and leading citizens, priests, and teachers of Russia. It has been but a matter of a few months since Mr. Roosevelt himself and all of his responsible spokesmen, along with the American people, were condemning out of hand the unjustified and cowardly attacks by Joe Stalin's military hordes against the brave people of little Finland. No more do we hear from the White House or from administration spokesmen any kind words for brave little Finland, which was the only nation in the world who, despite all hardships and sacrifices, honorably met her payments on the interest and principal of her debt to the United States. Instead of that, we now find that Mr. Roosevelt's bosom companion, friend, and adviser, Harry Hopkins, is in Moscow, dining and preparing to give the products of American workers and American taxpayers' dollars into the hands of this bloody Russian despotism.

What strange events indeed have come out of this war for the United States of America.

The American people are entitled to more explanation and information than they are being given; and if they are betrayed into a shooting war by the administration, the wrath of the American people will be terrible to behold.

And yet these events—Hopkins' speech about American naval vessels convoying British-aid ships, Churchill's declaration that the United States is advancing to the verge of war with Germany, and Hopkins' presence in Moscow—all are warnings to the American people that they had better begin to demand in no uncertain terms that their Representatives in Congress fulfill their constitutional function of representing the people by demanding information and enlightenment—and seeing that it is given—on the operations of a little clique of willful men and women who want to plunge this Nation in bloody warfare up to its neck.

Price Fixing

REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

Mr. FULMER. Mr. Speaker, we have heard much lately about price fixing.

I notice that bills will be introduced in both Houses today dealing with a price-fixing program.

I have requested this time for the purpose of outlining what I believe to be a sound, common sense, fair, constructive formula to be used if we are to have a price-fixing program.

I am one of those who believe that we should have a price-fixing program provided we deal fairly with all groups. Otherwise, we are bound to enter into an inflationary period such as we have never seen in the history of this country.

The sad thing about inflation is that it not only plays havoc with consumers when prices are continually advancing, but when deflation sets in it plays havoc with producers and millions of innocent people who are turned out of employment.

Well-organized groups are in a better position to handle their business affairs when deflation sets in than these millions of unorganized people.

Industry, for instance, can slow down and, if need be, close down, turning out their employees; in the meantime maintaining a fixed price, gradually liquidating their high-priced goods.

I realize that price fixing is a very complicated proposition. However, if we are to have price fixing, we should consider every angle and every item entering into the picture. All groups should be considered and dealt with on a fair and equitable basis.

PRICE-FIXING FORMULA

First. We should ascertain a fair value for farm products, raw materials; call it parity, if you please. Suppose we find that cotton should sell for 20 cents per pound; cottonseed, $50 per ton; wheat for $1.50 per bushel; and so on down the line.

Second. Then we should determine a fair selling price for the manufacturer, taking into consideration the cost of the raw material, wages, and every other item entering into the cost to the manufacturer, adding thereon a fair profit; thereby setting up a fair and proper differential between the farmer's price, or the price of the raw material, and the manufacturer's price.

Third. On the same basis, a proper differential should be set up between the manufacturer's price and the selling price of the jobber and wholesaler to the retailer.

Fourth. The retailer's price should be fixed including a fair profit.

Fifth. This price-fixing program should be continued on a fair-price basis on agricultural products and raw materials after the war until the real emergency is over. Otherwise you will find, as was the case following the last World War, farm prices will decline far below the cost of production, which will not only bankrupt the agricultural interests of this country, but will tend to destroy wage earners and business.

Any other price-fixing scheme dealing only with the manufacturer, or leaving out a proper program, after the war, as stated, in maintaining a fair price on farm products or raw materials, will certainly not do the job.

Suppose you put a price ceiling on cotton goods, leaving the farmer's price and the consumer's price wide open. Then you will find that the manufacturer, cotton and wheat buyers, those operating between the manufacturer and the cotton and wheat farmers, will be in a position to push the farmer's price down the hill.

The same thing is true on the consumer's end; that is, those operating between the manufacturer and the consumer will be in a position to push the consumer's price skyward.

There are just lots of people who are operating between farmers and consumers, many of whom are nothing more nor less than real parasites. As a matter of fact, this is the major problem of farmers and consumers today.

My program of price fixing deals fairly with all groups, including labor. In the meantime, it will tend to hold down and weed out useless parasites and speculators, both of whom never produced a living thing, but who, from day to day, are sapping the very lifeblood out of farmers and consumers.

Open Letter to Wendell Willkie From America First Committee of Southern California

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, July 31 (legislative day of Monday, July 28), 1941

LETTER WRITTEN BY JOHN L. WHEELER

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an open letter which was addressed to Mr. Willkie, when he spoke in the city of Los Angeles, by the America First Committee, and which was written by my son as acting chairman of that committee. My son quotes Mr. Willkie when he spoke at Rushville, Ind., when he said:

I shall never lead this country into any European war, and when I say that I mean it.

I ask unanimous consent that that open letter be inserted in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO MR. WILLKIE

DEAR MR. WILLKIE: It is the earnest hope of thoughtful citizens in every walk of life that our Nation shall be united in this time of world chaos. We believe, however, that national unity is more than an oratorical flourish and can only be achieved by strict adherence to the fundamental concept that national policy must be based on "the consent of the governed." To proceed on any other basis is to adopt the totalitarian pattern of the Nazi and Communist dictatorships which challenges our democratic way of life.

Our Nation was united by the pledges of all candidates in the last Presidential campaign—that we would never participate in any foreign wars. Poland, Norway, Holland, Denmark, Belgium, and France had already been overwhelmed by the Nazis, and Britain was reeling from the shock of devastating air bombardment. Yet at Rushville, Ind., you promised:

"I shall never lead this country into any European war, and when I say that I mean it."

And at Boston, President Roosevelt pledged:

"And while I am talking to you, fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again and again and again. Your boys are not going to be sent to any foreign wars.

"They are going into training to form a force so strong that by its very existence it will keep the threat of war away from our shores. Yes, the purpose of our defense is defense."

Today an overwhelming majority of our people—some 80 percent, representing a far greater vote than any candidate received—are still united in their determination that we shall not enter any war to aid Britain or Russia, defeat Hitler or Finland. There is a national unity in this purpose which is greater than it has been on many issues affecting our national existence. It would be complete were it not for a well-financed minority group which seeks to force the adoption of contrary and undefined policies through coercion and the possession of the instruments through which this overwhelming majority may make its will effective.

You should know, for instance, that the chairman of your "unity meeting," Dr. Millikan, is the principal leader in this area of the movement for "Union now with Britain." You should know that an officer of the Committee to Defend America by Aiding the Allies (Britain and Russia) appealed to the American Peace Mobilization Group, a Communist-front organization, for participation by its members in your meeting.

We say you should know these things because no one should serve as a front for these movements other than through choice. A plea for national unity under the auspices of such groups will further confuse the American people. It will tend to confirm the belief of many that their passion for national unity will bear the bitter fruit of union with Britain and Russia—another sacred symbol becom just campaign oratory.

You had confidence in the American people You knew what they wanted. For in Cleveland, Ohio, you said:

"In the present situation my confidence is in the American people. I have confidence in what they want. And I have confidence in their ability to get it.

"What the American people want above everything else is a defense system so strong that none of these nations will dare to strike at us from whatever motives. Until the people have that defense system they don't want any more international incidents. They don't want any more swashbuckling words. Before talking any more, they want to get down to business. They want to build an Army and Navy, and above all an air force. They want to make themselves strong."

We are still united behind that program. We cannot be tricked or coerced or blindly led into any other course of action. We do not need more speeches or committees; we need greater confidence in pledges given. Faithfully keep your promise to us. Help our elected representatives to do likewise, and we shall not only be completely united, but we shall not stumble on into chaos.

Sincerely yours,

AMERICA FIRST COMMITTEE
OF SOUTHERN CALIFORNIA,
JOHN L. WHEELER,
Acting Chairman, Los Angeles, Calif.

Price Fixing

REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

Mr. LELAND M. FORD. Mr. Speaker, I ask unanimous consent to address the House on the President's message covering price fixing.

This appears to me to be one more step in the direction of socialism or communism, the destination toward which this Government seems to be moving. It must give racketeering, highjacking, socialistic, communistic C. I. O. leadership, and others of the same ilk, great satisfaction to see this country moving so rapidly along the line toward their goal. It is simply too bad that the great bulk of our

people do not realize what is going on, and what is happening to their Government, which involves the loss of their individual liberty and freedom, while certain leaders camouflage and cover up the real situation by shouting for the four freedoms, at the same time destroying every one of them and moving in the direction of socialism or communism.

It is quite clear to me, and to many others, that a movement is on foot by certain groups to destroy business and industry in this country, as well as the financial structure of the country, in order to accomplish their communistic and socialistic purposes. I submit as a fact, that you have never heard Mr. Henderson, Madam Perkins, or Hillman ever say one single word to the subversive leadership in the C. I. O. about curbing their demands for their pound of flesh in their form of profiteering and racketeering, but in every single instance they have always attacked business and industry, threatening to take over business and industry and operate it by Government. Let us meet this fact face to face. If this is not socialism or a form of communism, what is it? On the other hand, this communistic, socialistic, C. I. O. domination, which has been helped along by Perkins, Hillman, and certain C. I. O. leaders, has always granted to the C. I. O. leadership every demand that they have ever made, all down the line, through the Mediation Board, Department of Labor, Hillman's department, the N. L. R. B., and the Wagner law. This same group have used this vehicle for the suppressing of individual liberty of the great bulk of 130,000,000 people, and, in my opinion, have used it in a wholly socialistic, communistic manner. I submit again to you, if the actions of these people in the past are any criterion for the future, if they set up a three-judge court of review as suggested, it will be nothing less than a vehicle for the subversive C. I. O. communistic element to move in and take control of this Government.

Now they scream for price fixing and talk about inflation. Did they ever think about price fixing or inflation when they were granting to this subversive, communistic group of C. I. O. leaders, who never cared anything for the real workman, but always feathered their own nests, all these increases in labor's unreasonable demand for everything they could think up? The record will show that they did not. Then contrast these actions and the treatment of this group with the treatment of the men in the Army who have been drafted, the amount of money they have been getting, and the sacrifices they are making along with it. It is high time that some of us thought of equalizing such situations as this.

If the threat of inflation or the necessity of price fixing is here, then I charge the administration, through its officials, namely, Perkins, Hillman, and Henderson so far as he is concerned, with being responsible for it. Perhaps Henderson is less responsible than the rest.

How can these people reasonably expect the prices of commodities not to go up when they have stepped in and made these unreasonable grants, and then told industry and business that it was mandatory that they pay them? They have gone so far as to make business pay men salaries and wages who have only applied for jobs but never worked for the group. This has been one of the most damnable attacks by these Socialists or Communists that has ever been perpetrated on a free form of government such as we have. Do they think they can consistently raise these prices and indirectly buy the votes of this subversive group for future elections, and continue to have prices remain stable? Any 12-year-old child having normal mentality would know better than that, so they, therefore, cannot hide behind the skirts of ignorance or the skirts of bad administration, because any normal 12-year-old child should be able to figure out that this is a direct attack or approach of socialism or communism. How do they expect to keep the prices of airplanes stable in view of the fact that they stepped into a plant like the North American at Inglewood, in my district, and forced that company, whether they wanted to or not, to accept an all-out, C. I. O., Freytag-led agreement? This agreement, I am told, will raise the price of airplanes $800,000,000. Unfortunately, our people do not know it, but they are going to know it before we are through.

The Government did a good job of police power when it stepped in and opened up this plant, but when it carried out every demand of the Communist subversive leaders there it practically undid all the good that was previously done.

Price fixing has never worked that I know of, and it will never work under a purely political administration. The best example of this was the N. R. A. and the "blue buzzard" that were issued to helpless people. This was one of the first psychological steps that were taken to break down the barriers that existed between socialism and individual liberty and the form of government as we have known it. It is high time that the real, red-blooded Americans, whether they be Democrats or Republicans, get together and take these Socialists and Communists apart, for if they do not, this country is gone.

Further than that, if the real citizenship of this country does not wake up pretty quickly, it might be too late to save some of the things that they hold dear.

I believe that there is a well-directed, well-thought-out move to destroy the defense program of this country. I further believe that this move originated and is directed from foreign countries. In the accomplishment of their purpose they do not care whether they do it through strikes, whether they do it through price fixing, whether they do it through inflation, whether they do it through the destruction of the credit of this Government, or through revolution. Their one objective is to destroy, first, the defense program of this country, then the form of the government itself, so that they then may move in.

Charm—Competency

EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

Mr. DITTER. Mr. Speaker, the emergency defense program was launched in the early summer of 1940 and has now been under way for more than a year. Opinion is practically unanimous that the progress of the first year is highly unsatisfactory. The Members of the Congress who serve on committees which deal directly with defense problems, and to whom confidential information must be made available, realize that we are woefully unprepared for war today and shall be for some time to come. The objectives set for the first year have not been achieved. Clamor has not produced competency.

One of the major causes for this deplorable condition is the failure of the administration to develop an efficient governmental organization to administer the program. A most incongruous, ill-assorted, unintegrated, overlapping series of agencies has been set up for this urgent and specialized administrative work, each vieing with the other for its proper place in the sun. Confusions and conflicts rather than orderly operations are painfully apparent. Oviously costs are multiplied as agencies are added. And, by the same token, efficiency is decreased as possible conflicts of authority are increased.

The lag in the defense effort cannot be laid at the door of the Congress. Despite the President's pronouncement in the spring of 1940 that the Congress had no more work to do and that it should adjourn, the legislative branch of the Government set itself to the serious task of transporming an "on order" weakness to an "on hand" strength. Congress promptly provided the funds which were requested by those responsible for the maintenance and operation of our armed forces. The further retardation of the program which would have resulted had the President's advice been followed can well be imagined. Thousands of hours of manpower were saved by the rejection of the suggestion to adjourn.

In the defense undertaking, the administration has had the benefit of the entire experience of the Government in industrial mobilization during the first World War. All competent students agree our experience at that time demonstrated the need for a unified, centralized, coordinated program. That experience establishes the fact that the mobilization of the industrial life of the Nation cannot be stimulated by a regard for the number of agencies which can be created or by a concern for the number of favorites that may be pleased. What was necessary then is essential now.

The real bottleneck of the defense program can easily be discovered. It is in the conglomerate mass of conflicting interests, which, by reason of the selfish motives of the component parts, cannot find a definite objective or a singleness of purpose.

The failure to establish an efficient administrative mechanism lodges the responsibility for our unpreparedness today in one place. A crisis demands competency rather than charm.

The Defense of America

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

ADDRESS OF HON. JENNINGS RANDOLPH, OF WEST VIRGINIA

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered at the banquet of the United National Association of Post Office Clerks of Pennsylvania on Sunday evening, July 6, in Pittsburgh, during the annual convention of that organization:

We have heard so many, many times that America is a great melting pot for the nationalities of the world. To be sure it is; and America is the better for what has taken place.

My forbears came from Scotland and England. Yours came from these and many other countries in the Old World. They traveled to this Nation and they gave it life and they breathed into it vitality as they swept ever westward across the great expanse of the country. Those were the men and women of sterling pioneer stock who actually contributed to the Republic of which we are a part. Yet there came to the United States of America more recently, and I shall not name the number of years, too many individuals, far too many, who accepted its privileges, partook of its profits and its protection, but who gave nothing of citizenship in return.

NATURALIZED CITIZENS ARE LOYAL

Naturalized citizens are just as important and loyal as native-born citizens. The time has come when both must join hands in a great fight to rid this country of the unloyal—I use the word advisedly—the unloyal, who are not worthy of citizenship in this good land of yours and mine.

We had better square our shoulders and speak plainly, face the truth and know that there are hundreds of thousands of men and women in this country who are sowing from within the seeds of distrust and unrest. If our country is attacked by any foe or group of foes from without, we have already fostered those within who would join in tearing apart the solidarity of the Nation. It is time for the American people to keep America safe for Americans.

I introduced a bill in Congress—perhaps it will never pass—if you are in favor of it you might let your Representative in Washington know that you support the plan and would like to have it come out of the committee. I do not think it is drastic. I think it is just and necessary. In simple language this is what it will do. It provides that 6 months after the passage of this measure each and every alien in the United States who has not declared his or her intention of becoming a citizen of this land of yours and mine, shall be taken in custody and deported. It is estimated that only about 22 percent of the aliens living here have declared their desire to become citizens. Thousands of these have lived here an average of 15 years.

On June 13, 1940, the House of Representatives, by a vote of 330 to 42, passed a bill to deport Harry Bridges. Since that action more than a year has passed. Not long ago in Detroit, Harry Bridges denounced the Federal Bureau of Investigation in vehement language—the same Bureau which has recently corralled 32 spies, eight of whom have already pleaded guilty of espionage against this country. This is the same Harry Bridges who postponed action on a motion made before the Longshoremen's Union, the group he badly leads, which would have made a contribution of $500 to the United Service Organization because this noncitizen wanted to look into the validity of the drive.

Far too many such persons have wormed themselves into places of leadership. With false tongue they preach not doctrine which builds a better American, but one which causes discord, unrest, and un-Americanism. Hasten the day when the action of the House over a year ago is concurred in and this man and others of his stripe are banished from our shores.

SERIOUS TIMES FACE AMERICA

We know that these are very serious times in the life of our Republic and the eyes and ears of our people are focused on national defense. We know that the youth of the country have placed themselves in the position of giving their services over a period of time—millions of them—to the cause that we believe to be right, and that is the preparation for any possible attack which might ever come to the United States of America.

Industry in general is meeting the challenge of a real production program. I shall not give detailed figures, but I believe you will be interested in knowing that we have stepped up our preparedness output greatly during the last year. In the past 12 months, there has been an increase of 350 percent in military plane production; powder, 1,200 percent; small-arms ammunition, 3,000 percent; Garand rifles, 500 percent; machine guns, 300 percent; and light tanks, 650 percent.

The front line of our preparedness efforts is the production line. That battle will be won not with tack-hammer taps but with sledge-hammer blows. We are just beginning the manufacture of necessary defense items. I believe firmly that America needs 100,000 fighting planes and 20,000 tanks. We are just beginning to realize the implications of the war.

All has not been well, and I personally have not approved of high-ranking defense and Cabinet officials glossing over the paralysis which has sapped our defense production due to jurisdictional strikes and ill-advised walkouts. The American people have a right to know the facts and when so advised they eventually know how to cope with the situation.

Last November the first major strike occurred in a defense industry at Downey, Calif., at Vultee Aircraft. For 12 days that shut-down continued. Twenty-five training planes which were so badly needed for the Air Corps of our country were lost to this Nation during that period.

In Congress on November 20, 1940, I said, "We must take steps now to see that strikes do not occur." But month after month defense strikes occurred all over the land, not only in the key industry of aviation but in other allied fields. In January of this year there were approximately 102,000 man-days lost by strikes in factories essential to military preparation; in February 430,000; and so on through the months until in June, when the situation was said to be much improved, there were more than 550,000 man-days lost by strikes in defense industries. These strikes must stop now and not later.

PEACETIME STRIKES ARE PROPER

I believe the right of labor to strike in peacetime industry is a precious right and one which must be retained. For over 8 years in Congress I have advocated and supported the gains which labor has made and I want to see nothing done to tear down those gains. However, today we must meet our responsibility and both capital and labor must close ranks in this time of crisis. We must march forward in behalf of unity, cooperation, and harmony which will be recognized by all of the American people. No group can be allowed to cripple our preparedness program.

Irresponsible labor leadership on the one hand and selfish employer leadership on the other are not to be tolerated in this hour of our need. The citizens of our country are rightly aroused and demand action. The people of America will enthusiastically commend fearless effort in Congress, as I know they commended the President of the United States for the courageous leadership he displayed in the North American Aviation strike in California when one-fifth of the airplane production of this country was brought to a standstill. We must not allow any ill-advised segment of labor or any greedy segment of capital to destroy the defense effort in this period of crisis.

This is no time for hysteria; it is no time for flag waving; it is just a time for us, in a sane manner, knowing our obligations to the Republic, to stand foursquare together. We have a fight in the world between a system of Hitler, which would bring about the subjugation of man and the blasphemy of God, and our own system of recognizing the dignity of humanity and the freedom of democracy. In such a fight we are called upon to stand united for what we believe to be right. Let us see to it that the defense industries of America continue to turn their wheels and that any difficulties between worker and management are ironed out at the mediation table and not when men are off the job.

We must stand with closed ranks in this time of our country's need. I listened recently to speeches by four men who had been candidates for President of the United States—Cox, Davis, Smith, and Willkie. I liked the sentiment which they expressed. They were more than former Presidential candidates. They were more than men who had disagreed with the President on domestic issues. They were leaders who were big enough to put littleness aside and stand by our Chief Executive in our defense plans for protection of our people, our institutions, and our way of life.

STAND UNITED IN CRISIS

So in our hour of need we stand together. Let us demonstrate to the United States and the world that loyal citizens will not fail in the time of testing.

I trust that as you go from this convention there will be the thought in the heart and mind of each and every one of you that America is your country; that you must keep its institutions inviolate and that your thoughts and acts be directed toward the desired end of seeing to it that the Stars and Stripes of this country continue to wave over this free people, without a single star erased or a stripe obscured.

In this time of crisis, let us breathe new meaning into the words of George Washington, who said:

"Citizens by birth or choice of a common country, that country has a right to concentrate your affections. The name of America must always exalt the just pride of patriotism."

Exemption of Strategic Minerals From Excess-Profits Tax

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

LETTER FROM H. D. TUDOR

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. H. D. Tudor, 58 Sutter Street, San Francisco, Calif.:

SAN FRANCISCO, CALIF.

Hon. FRANK W. BOYKIN,
House of Representatives,
Washington, D. C.

DEAR FRANK: The strategic minerals exempted from the excess-profits tax under the Second Revenue Act of 1940 are minerals that ordinarily are not produced domestically in any great quantity.

The lack of production is due principally to the fact that there are few known domestic deposits capable of commercial production under ordinary conditions. There are, however, a great many marginal and submarginal deposits, and there is always the possibility that development and exploration may lead to the discovery of new sources of supply.

Under these conditions, the prospectors and capitalists are most likely to confine their activities to the search for and exploitation of those minerals which experience has proved do exist, more or less bountifully, in our mineral lands.

Only some extraordinary incentive or condition will bring about domestic production of the minerals exempted from the excess-profits tax. Undoubtedly it was the recognition of this fact that prompted the Congress to grant the exemption. It attempted to supply the extraordinary incentive for the investment of time and money in the attempt to increase domestic production. In effect, it said to the taxpayer: "You gamble your time and money in the effort to increase the production of these essential minerals, and if you are successful the Government will give you preferential treatment, not as to normal taxes but as to excess-profits taxes. The Government realizes that you are embarking on an extremely risky and hazardous business; if you are unsuccessful and lose your investment, there is nothing we can do about it; but we do extend to you the promise of preferential tax treatment if you are successful, and we hope you will be successful, because only through your success can we attain our objective, which is solely an increased production of these minerals."

The taxpayer accepted, in good faith, the offer of Congress. Large sums have been spent, much of it lost, in the attempt to find the badly needed minerals. Discoveries of the mineral deposits have been followed by the erection of plants, which, of course, entails substantial additional investments.

It is almost incredible in the face of this history that upon the attainment of the objective of the Congress, and before the taxpayer has had any benefit from the exemption, it is proposed to discontinue the exemption. The amount of revenue involved is insignificant; it might even be argued that by the action proposed that the revenue will actually be decreased. Certain it is, however, that the production of these minerals will be adversely affected by the elimination of the exemption, and many cases of hardship will arise.

That the foregoing statement is not an exaggeration is clearly illustrated by the following typical cases, which apply particularly to quicksilver:

In July 1940, just prior to the passage of the Second 1940 Revenue Act, a corporation was organized in Nevada to buy the quicksilver properties. They held up the development, or the spending of any money on this mine until exemption from excess-profits tax went into the law. The name of this company is the Coroma Quicksilver Mines, Inc., with a mine at Guerneville, Calif.

After the exemption was allowed, we went on with the development and got down to producing from 125 to 150 flasks of quicksilver per month, containing 76 pounds per flask. This development cost in the neighborhood of $75,000. Before going into it, we considered quicksilver was one of the most important metals entering in the defense program. They are now considering the development of two additional mines—one very large property in Idaho and one in northern California; but the development of these properties will depend on whether they get the exemption that they had last year on the excess-profits tax. If this exemption is to be eliminated, they will reconsider whether to go forward or not.

The situation on quicksilver is at the moment extremely tight. There is no way to obtain enough quicksilver to go around—to supply the quicksilver trade and also take care of the enlarged demands of the Army and Navy. At the present time it would take three or four thousand flasks of quicksilver, which is not available to supply the present demand. Quicksilver has a variety of uses. About half of the production of the United States goes into making medicines and dental work. The defense program has brought out an enormous demand for it—one of the largest being for the painting of ships with mecurial paints to prevent barnacles from forming. If they are not so painted, in a few months the ship must go into drydock and be scraped.

The shortage of quicksilver for present defense uses is well known to the Office of Production Management, and it is important for the defense program that every effort be made to increase the production, because it is impossible—even with the present tariff—to bring quicksilver from outside; as the principal sources of quicksilver are now in the hands of the German and Italian Governments. So short is the situation that Australia, Canada, and the Far East are begging for opportunities to acquire quicksilver wherever possible.

With the situation as stated above, the taxpayer made his investment in good faith. He has no reason to believe that exemption would not be continued. He has every reason to feel that he has been treated shabbily.

Sincerely yours,

H. D. TUDOR.

Amendment of Sugar Act of 1937

REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

Mr. OSMERS. Mr. Speaker, the Rules Committee is now considering H. R. 3582, an amendment to the Sugar Act of 1937, which was introduced by Congressman COFFEE of the beet-sugar State, Nebraska, and which was reported by the House Agriculture Committee on May 25. The bill would expand the production and marketing quotas for the subsidized beet-sugar industry by up to 25 percent and correspondingly reduce the importation of non-subsidized cane sugar, largely from Latin America.

New Jersey is absolutely opposed to the enactment of this bill. It is not only against the interests of our State, but it is against the interest of the entire Nation.

Since the Civil War, New Jersey has imported and refined cane sugar. Today the focal point of our sugar trade is the large cane-sugar refinery on the Hudson River, employing over 1,300 unionized men and women, and contributing about $22,000,000 a year in purchasing power. But the refinery is only one part of a much larger sugar business which employs thousands in the importing, shipping, unloading, storing, refining, and distribution of cane sugar.

Stripped of all complications, H. R. 3582 is simply a proposal to further expand the production of subsidized sugar in the United States at the expense of Latin America. If the beet-sugar industry is expanded, it automatically means that less raw cane sugar will be brought up from the sugar islands. Latin America has tremendous surplus stocks of raw sugar which have piled up as a result of the Hitler blockade. Latin America also has the existing capacity to greatly expand her production of raw sugar to meet any emergency that might arise in the United States.

At the Habana Conference of the American Republics, July 30, 1940, the United States solemnly agreed to assist the Latin-American countries to market their surpluses created by the war. Under this program the Import-Export Bank, in January 1941, loaned $11,300,000 to Cuba to help finance her surplus sugar crop. That surplus sugar is now lying unsold in the warehouses in Cuba. If we encourage sugar surpluses in Latin America, on the one hand, and artificially stimulate new production in the United States, on the other, we will be justly accused of bad faith and welching on our agreements.

A great deal of loose talk is taking place about the good-neighbor policy. If we want the nations of Latin America to be our good neighbors, we must buy products from them. The purchase of some of their surplus sugar would not harm any domestic grower. The domestic beet-sugar interests are highly subsidized and well protected. No one is proposing to take anything away from the beet-sugar industry and the defeat of H. R. 3582 could not conceivably harm any beet farmer. I see no reason why the United States should pass legislation to undermine our relations with Latin America in order to give more subsidies to a small group of American farmers who represent about one-half of 1 percent of our American agricultural life.

The beet-sugar lobby has argued that H. R. 3582 is in the interests of our national defense. The truth, of course, is

that this bill, if enacted, would be contrary to every phase of a sound defense program. In the first place, it would waste essential war materials and skilled labor. It is impossible to expand the beet-sugar industry without the construction of new beet factories, and beet factories are made with steel, aluminum, and hundreds of other commodities which are now on the priorities list. There is plenty of existing capacity to expand the production and refining of cane sugar. Secondly, this bill would raise the cost of living. American consumers pay out about $1,000,000,000 a year for their sugar. This bill, H. R. 3582, by further stimulating the production of high-cost beet sugar, and virtually embargoing the flow of low-cost cane sugar, would raise prices to consumers by millions of dollars a year. And in the third place, the bill provides that the Federal Treasury pay additional subsidies to the already highly subsidized beet-sugar industry. At best, the beet-sugar industry is a national luxury, and this type of luxury should be minimized rather than maximized in time of war.

No sound argument has been advanced in favor of this legislation. But of all the arguments, the weakest and the most frequently repeated is that the subsidized production of beet and other mainland sugar should be further expanded in order to "protect consumers" and to "avoid" a recurrence of the price rise in sugar which took place in the last World War.

The most recent revival of this claim is found in the CONGRESSIONAL RECORD of July 17, page 6143. Here we find Congressman BOGGS, of Louisiana, favoring a 25-percent increase in the cash subsidies paid to Louisiana planters, an increase which would be granted by the enactment of H. R. 3582. In support of this bill, now before the House Rules Committee, the Congressman said:

> In my opinion, the best safeguard we can establish against a repetition of similar experiences following the second World War is to give every encouragement and stimulation to the production of sugar within the mainland confines of the United States.

The published record shows that during the last World War mainland sugar producers were actually a drain upon consumers. Consumers were saved from further price rises only by the expanded production of nonsubsidized sugar which took place in the nearby islands of the West Indies.

What happened in the sugar industry in the last World War has been described in two official documents of the United States Government. The first is Government Control of the Sugar Industry in the United States, written by Dr. Joshua Bernhardt, who was the sugar expert in the United States Food Administration. This book is an official account of the work of the United States Food Administration and the United States Sugar Equalization Board, Inc.

The second official record of sugar in the last war is the report of the Federal Trade Commission on Sugar Supply and Prices, published November 15, 1920. Dr. Bernhardt's report covers primarily the years 1915 through 1918, and the Federal Trade Commission's comprehensive and heavily documented report covers the price rise following the declaration of peace. The Federal Trade Commission report on the sugar price rise of 1920 was made at the specific request of the House of Representatives Resolution No. 150, October 1, 1919.

THE BEET-SUGAR INDUSTRY FAILED TO EXPAND ITS OUTPUT

During the last World War the United States needed more sugar because we had to feed our Allies—Italy, France, and Great Britain. In 4 years we shipped some 2,000,000 tons of refined sugar abroad. The question immediately arose as to where we were going to get these additional supplies of sugar. The United States Food Administration decided that the only sensible place to get this sugar was from Cuba. It knew that—

> It was inevitable that should the war continue for several years there would be a continuous and progressive decline in domestic sugar production, following the increased absorption of men into the military machine and into war industries (Government Control of the Sugar Industry in the United States, p. 22).

But the Government's skepticism of the possibility of increasing domestic growing and production did not stop it from doing everything within its power to stimulate that production. A great drive took place for expansion, and Mr. Herbert Hoover, as National Food Administrator, wrote a letter to all beet-sugar producers, asking them to increase their crops:

> I, therefore, earnestly appeal to every farmer so situated to come to his country's aid in this hour of need. Without the cooperation of the American beet grower our task will be very difficult and our ability to respond to the calls to be made upon us for this very essential commodity will be curtailed. It is at least the duty of every beet grower to maintain in 1918 his normal acreage of sugar beets. It is his privilege to increase the acreage to the extent that a well-balanced production of crops will permit, and in this manner effectively demonstrate his patriotism.

But this appeal by Mr. Hoover to patriotism was a failure. In 1918 the plantings of sugar beets declined 117,000 acres, or 15 percent below 1917. The acres actually harvested decreased by 71,000, or 11 percent below 1917.

The reasons for the reluctance of the beet-sugar industry to increase acreage in 1918 are given as follows by Dr. Bernhardt:

> It developed, however, that the beet farmers in the West were refusing to sign the customary contracts for acreage with the beet-sugar companies because they felt themselves unjustly treated with regard to (company) prices. Moreover, their costs of production were mounting rapidly, competing crops were becoming more profitable, and there was a feeling that with a price restricted by agreement between the sugar factories and the Government, the raising of beets would become progressively less profitable in comparison with the production of other food commodities, the prices for which were not regulated by the Government. (Government Control of Sugar in the United States, Dr. Joshua Bernhardt, p. 26.)

To overcome this reluctance to plant, the Government, through the Food Administration, stepped in and handed down a decision for a fixed price of $10 a ton for sugar beets of the 1918 crop. This was 35 percent over the $7.39 price of 1917, and 63 percent over the $6.12 price which had prevailed in 1916. But this greatly increased price did not bring forth an expansion of beet-sugar planting, and it was only through exceptionally good weather conditions that a more serious decline in the total output of beet sugar was avoided in 1918.

A quick glance at the figures of beet-sugar output in the war period shows an uninterrupted decline in the 4 years after 1915:

Production of continental beet sugar in war years 1915–19

[Raw value]

Years:	*Tons*
1913	785,000
1914	773,000
1915	935,000
1916	878,000
1917	819,000
1918	814,000
1919	777,000

Source: Table 9, The World Sugar Situation, Department of Agriculture, May 1940.

The reasons why beet farmers did not care to expand their acreage in 1918 are just as applicable today as they were then. Farmers do not like to produce sugar beets if they can produce other crops which are less susceptible to weather variations and to damage by pests and disease. They naturally prefer crops which do not require so much arduous labor and such intensive irrigation, cultivation, and fertilization. Sugar beets are produced typically in the United States in rotation agriculture with alfalfa, beans, potatoes, corn, and other crops. As the price of these other crops advanced during the war, the farmers had an opportunity of making a good profit on them. And, again, the cost of producing beets increases rapidly in wartime because the production of this high-cost crop demands a relatively large amount of labor; and labor comes high in wartime. With men going into the military services and being called to essential war industries, there was a shortage of labor and a consequent rise in wages. As a result, rather than increase their beet-sugar production, the farmers increased the output of other crops which were relatively more productive and lucrative.

The same inability or indisposition to expand production was found in the cane-sugar industry in Louisiana. The production of sugar in Louisiana is carried on under great natural disadvantages, both in climate and soil. When we entered the war, Louisiana, although she had received generous tariff protection for years, only produced about 6 percent of our total sugar consumption. Any increase in Louisiana sugar therefore would have been insignificant in terms of our wartime requirements. Still, any increase would have been helpful. However, Louisiana was unsuccessful in increasing her production, and the crop years under Government supervision—1917, 1918, and 1919—averaged about 218,000 tons of sugar as contrasted with an average production between 1914 and 1916 of about 232,000 tons, raw value.

CUBA ALONE EXPANDED HER PRODUCTION OF RAW SUGAR

The Food Administration, seeing the failure of the high-cost domestic producers to expand their output, turned to Cuba, the most efficient raw-sugar producing island in the world. For 2 crop years, 1917–18, and 1918–19, the entire Cuban supply was purchased by the Food Administration at prices substantially below the prices which were fixed for domestic sugar. Domestic growers always asked for higher prices in order to meet their high cost of production.

Cuba, who had declared war on Germany in April 1917, began to expand her production of raw sugar in the cause of the Allies, and the results were phenomenal. She increased her production from less than 3,000,000 tons to well over 4,000,000 tons a year, and this increase made it possible for the United States, in turn, to furnish refined sugar to her Allies and, at the same time, to maintain in this country a high per capita consumption at a relatively low price.

Increase of sugar production in Cuba in war years 1915–19

[Raw value]

	Tons
1914	2,922,000
1915	3,398,000
1916	3,422,000
1917	3,890,000
1918	4,491,000
1919	4,184,000

Source as above.

CONTINENTAL CANE-SUGAR REFINERS GREATLY EXPANDED THEIR OUTPUT

The additional supplies of Cuban raw sugar were brought to the United States under the supervision of the Food Administration, and these supplies were refined by the sugar refineries in New Jersey, Pennsylvania, and other States. While the beet-sugar producers failed to increase their output, the home refining industry expanded its output by about 1,000,000 tons, approximately equivalent to the expansion in Cuban raw-sugar production. The table below shows the expansion in the output of the continental cane-sugar refining industry during that period:

Refined cane-sugar output in continental United States, 1914–20

[Short tons, refined]

1914	3,282,000
1915	3,346,000
1916	3,566,000
1917	3,500,000
1918	3,230,000
1919	4,085,000
1920	4,208,000

Source as above.

The experience of the first World War was that the cheapest, most expansible, and most reliable source of sugar was the combination of the home cane-sugar refiners and the Cuban raw-sugar producers, both cooperating voluntarily under contract with the United States Government.

DOMESTIC SUGAR GROWING INCREASED PRICES, RATHER THAN DECREASED PRICES, IN THE LAST WORLD WAR

In the last war American consumers would have been forced to pay higher prices if more beet sugar had been produced in this country. Although the Government paid sugar-beet prices of 63 percent above pre-war levels, nevertheless this increase was followed by an actual decline in production. If the Food Administration had tried to force an increase in beet production in order to obtain so-called continental self-sufficiency in sugar, it would have had to raise the price of sugar beets not by 63 percent but by 200 percent or 300 percent. The only possible way to expand the production of beet sugar is to plant new acres or to try to increase the yield per acre by more intensive cultivation. But to add new acres or to intensify cultivation means progressively higher costs. These higher costs would drive farmers into the production of other competing crops such as beans and potatoes, unless the prices of beets were raised drastically.

In tropical and fertile Cuba, where it is easy and natural to produce sugar, and where there are practically no alternative crops, a slight increase in sugar prices will bring a substantial increase in output. During the last World War, the United States Government—1918—purchased the entire Cuban sugar crop at a price only 18 percent higher than that received by Cuba in 1916. This modest increase of 18 percent brought out a 33 percent increase in sugar production, whereas a 63 percent boost in sugar beet prices brought about a 7 percent decrease in beet-sugar production—1918 compared to 1916. The Food Administration found that the only way to protect consumers was to turn to Cuba, rather than to subsidize high-cost beet-sugar growers, for an increase in output. In speaking of this policy, Dr. Bernhardt reports:

> A much higher (sugar) price than that which prevailed in 1918 and 1919 might have conceivably increased production in the United States beet industry * * * to the extent of a few hundred thousand tons, but the wiser policy was adopted of assuming a price level which would encourage production in the only source of supply where large increases could be immediately expected in response to relatively small price increases, that is in Cuba. (Government Control of sugar, p. 128.)

IN 1919–20 THE BEET-SUGAR INDUSTRY AGAIN FAILED CONSUMERS

The claim that the beet-sugar industry came to the rescue of American consumers in 1920 is heard every time the beet-sugar bloc argues for more subsidies from those consumers. The reasons for the rise in the price of sugar in 1920 are found in a 7-page letter of submittal of the Federal Trade Commission in its 205-page report to Congress on Sugar Supply and Prices. There is not one word in that report which would substantiate the claim that the beet-sugar industry saved the day. On the contrary, the Commission points out that—

> It seems that the chief difficulty in the sugar trade, with the Government no longer purchasing sugar and directing its distribution, lay in speculation and hoarding (p. 16).

And who were the hoarders? Was sugar hoarded by the foreign producers? No. The amount of sugar imported into the United States from foreign countries in 1920 was the highest on record. These imports hit 3,003,257 short tons in 1920 as contrasted with 2,379,764 in 1919. It was this tremendous expansion in the imports of sugar, made largely by the continental cane sugar refining industry, which finally broke the price. This fact is confirmed by the Federal Trade Commission on page 16 of its report. The Commission said:

> The price in the United States had advanced beyond what world supply and demand conditions appeared to warrant and sugars were received here from countries which do not usually supply this country, in the aggregate amounting to large quantities. A decline in price set in early in June 1920, which not only stopped speculative buying but threw the stocks of many speculators on the market, further precipitating prices (p. 16).

And what were the domestic sugar producers doing in 1920, at a time when there was "speculation and hoardings"? Did the beet-sugar industry in the Western States, and the Louisiana sugar planters, come to the rescue of American consumers? No. According to the Federal Trade Commission, they were engaged in what looked like "speculation and hoarding."

On March 1, 1920, when consumers were paying about 20 cents a pound for sugar at retail, there were 136,000 tons of undelivered beet sugar in the warehouses of the beet companies (Sugar Supply and Prices, pp. 8 and 23). The Commission indicates that some companies in the beet-sugar industry held back their marketings of sugar in order to take advantage of the high prices which were prevailing.

Regarding the withholding of beet sugar, the Federal Trade Commission reported that there was—

> Evidence that certain (beet sugar) companies for longer or shorter periods unduly delayed the marketing of the crops (p. 50).

And the Commission went on to say that—

> There is some evidence that the producers of new beet sugars, whose prices were not controlled by voluntary agreement, as were the prices of old-crop sugars, were holding back for higher prices, which they hoped would be allowed by liberal rulings of the Department of Justice (p. 46).

And on page 74, we find that the Commission had this to say regarding the hoarding of beet sugar:

> On the other hand, complaint has come from dealers that they were unable to get sugar from these (beet) companies even though they furnished the trucks to haul it away.

This evidence does not substantiate the claim made repeatedly by the spokesmen for the beet-sugar industry that it was their industry which came to the front with a supply of sugar in 1920 to break the high price. Their deliveries in 1920 decreased by 48 percent, while the continental cane-sugar refiners expanded their importations of raw sugar and deliveries of refined sugar by 13 percent over 1919. By October 1, 1920, when the new crop of beet sugar came to market, sugar prices had already dropped drastically from their peak and were rapidly decreasing under the influence of the

large contributions of sugar from foreign sources.

And this episode of 1920 seems to have been profitable to the beet-sugar factories. This matter is discussed by the Trade Commission on page 111 of its report. It says:

It follows that such prices as have been secured during April and May, ranging from $17.50 to $22.75, represent excessive profits.

The evidence which destroys for all time the fantastic claim of the subsidized beet-sugar industry that it was the true friend of American consumers in 1920 is found on page 13 of the Federal Trade Commission's report, Sugar Supply and Prices. The Commission reported that the entire 1919–20 crop in Cuba was offered to the United States Government at only $6.50 per 100 pounds. This offer was rejected by President Wilson who decided to terminate war-price fixation, and the only remaining price control over sugar was through the Department of Justice which was empowered to curb excessive profiteering.

This required that the Department determine maximum prices for the various producing areas. Public hearings were held. One of those hearings was held down in Louisiana, and the Louisiana planters came before the Department of Justice, and stated that they needed not $6.50 per 100 pounds, but $16.60 per 100 pounds, raw-sugar basis—page 114. The Louisiana planters testified that in order to get back their costs they needed a price four times as high as the 1915–16 price. And this unprecedented price was granted the high-cost Louisiana producers by the Department of Justice.

Of course, the higher price for Louisiana sugar was demanded and obtained, by the beet-sugar industry. For a while the continental refiners of the 1918–19 Cuban crop continued to sell their sugar at a much lower price—page 114, Sugar Supply and Prices. Shortly afterward, as all prices merged under a free market, the Cubans, who had offered to sell their sugar at 6½ cents a pound, received the higher domestic price. According to the Federal Trade Commission, the prices obtained both for Louisiana and the beet-sugar industry "represent excessive profits."

THE 1920 EPISODE COST AMERICAN CONSUMERS ABOUT $741,000,000

It is estimated that the increase in the price of sugar in 1920, which came about largely because of the demands for higher prices made by continental growers, cost the American public about $741,000,000. At an average retail price of 19.4 cents a pound in 1920, the Nation's sugar bill was $1,775,000,000. If the 1919 price of 11.3 cents a pound at retail had continued consumers would have paid about $1,033,950,000.

There is no reason why the price in 1920 should have been any higher than it was in 1919. And if the Government had maintained control over the sugar industry and had purchased the Cuban sugar crop at the offered figure, it is very doubtful whether prices would have been any higher. The difference between $1,775,000,000 and $1,033,950,000 is $741,000,000. The consumer was saved from further burdens only because the continental refiners were able to import and make available to them the supplies of raw sugar from the tropical producers.

H. R. 3582 WOULD BURDEN CONSUMERS AGAIN IN WORLD WAR NO. 2

In the present war the United States does not need more sugar to feed Europe. Our sugar problem this time is to get new supplies to meet a deficit caused by the fact that the Philippines are not going to be able to send all their crops here next year. Extremely fortunate for the United States there is now in the Western Hemisphere a surplus of sugar which has been created by the fact that the Latin-American countries have not been able to sell their normal quantities of sugar, due to the Hitler blockade in the Atlantic. I have received information from the United States Tariff Commission to the effect that these surplus stocks as of August 31, 1941, are as follows:

	Tons
Cuba	1,869,501
Dominican Republic	72,752
Peru	66,138
Haiti	5,512
Brazil	255,734

About 400,000 tons of this sugar is owned by the United States Government through the Import-Export Bank, which early this year loaned $11,300,000 to Cuba to help her finance her current surplus.

H. R. 3582, stripped of all its complications, would amend the Sugar Act of 1937 in such a way as to deprive American consumers of the right to use this Latin-American sugar. Congressman COFFEE, author of the bill, and the beet-sugar bloc generally, want American consumers to be forced to obtain about 1,000,000 tons of sugar from additional production of beet and other domestic sugars, to take the place of a possible Philippine deficit.

If this bill is passed it will boost the price of sugar, as occurred in the last World War. Beet sugar is high-cost sugar, and the beet-sugar industry cannot be expanded to fill the Philippine deficit without a substantial increase in sugar prices. New beet-sugar factories would have to be built, and no one would make this investment without assurances that prices would be high enough to give a generous profit. Farmers, as in the last World War, will not want to raise more acres of sugar beets unless prices are high enough to meet increased costs. Labor is the big cost item in growing beets, and already serious shortages of labor have occurred in the Middle West.

But even if the price of sugar beets were jacked up, as it was in the last World War, it is doubtful whether additional supplies would be forthcoming. In World War I increased prices and fervent pleas from the Food Administration were ignored by beet farmers. Beet-sugar output actually declined. If in this war we attempt to stimulate the inefficient and subsidized beet-sugar industry it will cost consumers millions of dollars a year.

The facts of the existing situation are briefly as follows:

First. We may have a deficit of 1,000,000 tons in the Philippine quota next year.

Second. There are well over 2,000,000 tons of unsold raw sugar in the warehouses of Latin America.

Third. In addition, there is existing sugar-growing capacity in Latin America and sugar-refining capacity in the United States to expand the production of sugar by two or three million tons a year.

Fourth. The production of beet sugar cannot be expanded without a substantial increase in prices to consumers, and more subsidies paid out of the Federal Treasury.

Fifth. If we use Latin-American sugar, prices will remain low and no new subsidies will have to be paid.

Under these circumstances, to artificially expand the production of beet sugar and to prohibit consumers from utilizing nonsubsidized Latin-American cane sugar would be the height of foolishness.

Letter of United States Selectee-Parents Legion

EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

LETTER TO THE PRESIDENT

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to the President of the United States:

UNITED STATES SELECTEE-PARENTS LEGION,
Cincinnati, Ohio, May 1, 1941.

Hon. FRANKLIN D. ROOSEVELT,
President of the United States,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: May we respectfully submit to you, sir, that ours is, we believe, a strong, national group representative of the sentiments and of the will of the home folks of these United States; definitely, the most important group of this Nation's people, i. e., the family groups of mothers and fathers and sons. These sons, our sons, all up and down and across the glorious land of ours, are leaving our firesides, giving up their way of life, their educational pursuits, their vocational efforts, and the inspiration and comfort of close association with their loved ones to engage upon a period of military training to defend and secure our country. They owe no allegiance to England, or to any other foreign power, be it of dictator or imperialist leadership. They should not be made party outside this hemisphere, against their will and against our will, to depredation, iniquity, cruelty, and murder. Neither the peerage of England, nor the "60 families" in America should prevail to send them into foreign slaughter, in unholy combat all to no purpose, as has been demonstrated over 1,000 years' experience.

Political ideologies and the spurious symbols they falsify, are mere blinds behind which power and pressure groups operate. Entrenched powerholders of these systems are finding it increasingly difficult to distort

facts and to disable intelligence with propaganda, in whatever inane form it is uttered. Those of us historically high-minded are not totally blind to traditional mendacities. We have been forced by the pressure of logical facts to become more intelligent. The continuous injustice, the tyranny, and the folly that citizens have to suffer by unwonted, enforced participation in these recurrent foreign wars, are the inherent, unmoral attributes of these political systems devised for the most part by plutocrats, call it "fascism," or pseudo-democracy. It is not the will of the people. However falsified or euphemized by the paid propagandists, or the hired "commentators," when, in 1918, the powerholders had departed in safety, 9,998,771 boys had been killed on the "fields of honor," "to make the world safe for democracy," in "the war to end war." Twenty million two hundred and ninety-five thousand five hundred and twelve had been wounded (some of whom had been better dead) and 5,983,600 were unaccounted for.

We most respectfully urge, Mr. President, this criminal carnage as it would again involve our youth in foreign battlefields must stop. We would be mad indeed to countenance further the destruction of the social and vocational achievements and the lives of our sons that these foreign engagements inflict upon us. Categorical imperatives of throne, bank and state, must yield their peremptory power over the minds and the lives of sons and the parents of sons under the gathering pressure of action that follows intelligent skepticism.

Together with the Congress, we depend upon you, Mr. President, to maintain our most emphatic expression of the point that we do not want, neither do we expect, our sons sent into any foreign wars. We are reminded of your own most gratifying assurance in this respect, as pronounced in Boston last October, when you said to us: "And while I am talking to you, fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again, and again, and again, your boys are not going to be sent into any foreign wars. They are going into training to form a force so strong that, by its very existence, it will keep the threat of war far away from our shores. Yes, the purpose of our defense is defense."

Mothers and fathers, Mr. President, who have always made and will continue to make this Nation the stronghold of democracy it has ever been and will so remain, are not defeatists. We are not fearful of the security of our own country so long as we are kept adequately prepared and so long as the people rule more and are ruled less. We have the manpower and the equipment sufficient to meet any combination of foreign powers. We have been beset before these times, on all sides, by superior forces with more and finer equipment than we had and against our lesser manpower. We have survived and we will survive, just as long as and as well as we have indeed a Government representative of the will of the people. We are not unmindful that you, Mr. President, have been sorely importuned, cajoled, and perhaps even threatened with political oblivion of both your most respectable self and of your admirable party, did you not say and do those things which must, if indulged far enough, bring us certainly into the very battlefields of those foreign lands upon which the unending quarrels of European relatives are never, over 1,000 years' striving, settled.

We are not unmindful that yours is a task demanding the highest order of deliberation upon and consideration of the public will, especially the will of the fathers and mothers of sons who are selected. As yours is the highest office within the gift of the people and carries with it all of the solemn responsibility imposed by a faithful citizenry, so it is to the mothers and fathers of sons to whom you may, if you will, sir, resort for the best counsel, with confidence that counsel from this source, if heeded, will avoid tragedy and best provide that security and unity so necessary to a truly great nation.

Anglophiles, Anglomaniacs, hired commentators, propagandists for pay, internationalists, racial chip carriers who discredit their own race, all of these warmongers are none of them in the same tent with we fathers and mothers of sons they would have you, Mr. President, send to be blown to bits in Europe. They never participate; they take most and give least.

Convoys, it is our conviction, Mr. President, are the first step into Europe, where our sons would be expected to take the brunt of the shooting and bombing between the imperialists and the dictators. This time, the plowing under would be even more deadly, probably two of every four boys instead of one in four. This time, mothers and fathers will react less favorably to those responsible, if we are pushed into Europe. Attempts to put us into Europe's brawls against our vast majority of sentiments and good advice in the matter we would fight more determinedly this time. More vigorously than even before would we fight to sustain those who would, while keeping us prepared with our own sons and our own equipment, seek to impress Europe and Asia with the desirability of a just peace among nations, rather than favor those who seek our own involvement in a war never of our own making. Convoys, may we repeat, sir, by any other name are in effect convoys.

We are not either ripened or conditioned for convoys, nor for that matter, anything that moves our boys into Europe's recurrent wars. We mean not to become ripened or conditioned for ill-advised action. We mean not to become "assimilated," as some of our world travelers like to phrase it among themselves—these puny, little, fat, internationalists who make so much noise as the false front behind which they hide their minority high pressure. They would, indeed, assimilate our sons in war as they try to do it in civil life; they would place our own boys around the checkerboard of hell in Europe, feeling at the same time no more compassion for our sons, no more sincere affection than if they were bits of filthy merchandise.

We think, Mr. President, those today who, in the face of the smear proclivities of those we have indicated, preach and practice peace and preparedness, just as did their own illustrious forebears, are the most courageous souls in America today. It is so easy to indulge in words and acts and incidents that cry for war—it is so difficult to assume the role of the peacemaker when tempted by the Scylla and Charybdis of opportunism and world power.

Mind we not our own affairs; take we seriously the promptings of the Tories among us, who advocate "Union Now," we may yet wake up some fine morning and learn that poor Britain has regained her colonies, lost at the time through the stupidity of another of her German kings.

We haven't recovered from the last European fiasco. Were we to bear the brunt of this scrap for the determination of the balance of power in Europe, as between the house of Rothschild and the imperialists on the one side and the dictators on the other, our sons lost forever and our meager earnings dissipated, our children's great-grandchildren's grandchildren won't live to see the end of it. Spiritual values will decline as never before, Christianity will be divided as some no doubt intend, and unity in America will be found only in the older dictionaries.

We know the Winchells, the Lippmanns, the Thompsons, and the Kaltenborns are among the principal war agitators; theirs is the internationalists' love of show, power, pomp, and money. What have they at stake? What sacrifices do they make? How much remuneration do they realize for their unholy work of propaganda and warmongering? They don't speak the sentiments of the home folks, the family group, in these United States. They are among the world travelers. They are not the fireside type; international trouble is their dish. Their war ideas represent political gambling of the most dangerous, destructive sort, rather than human needs translated in terms of our own country's welfare, peace, security, and unity.

It is indeed, Mr. President, vital that we preserve democracy in these United States, without attempting to impress democracy upon Europeans, or Asiatics, none of whom have any democracy and all of whom probably will continue to choose to decide their own ways of life. In assaying a world empire, we may destroy a nation.

Concluding this appeal to you, honorable sir, to keep our country out of war, so far as it is within your own power to act, let us reiterate, we have the utmost faith and confidence in yourself and the Congress to respect and abide by those guideposts which have never failed America, the Constitution, the Bill of Rights, our sacred traditions, and the advice of the founding fathers of our country and their notable successors; all of this, Mr. President, with your own disposition to deal frankly and openly with us, the fathers and mothers of sons, and to reflect, represent, and sustain our will in these serious matters, do we commend most respectfully to your earnest attention.

Very sincerely yours,

GEORGE ALBERT SHIVER,
President, U. S. Selectee-Parents Legion.

Michigan, the Pioneer State in Education

EXTENSION OF REMARKS
OF
HON. WILLIAM W. BLACKNEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

RADIO ADDRESSES OF HON. WILLIAM W. BLACKNEY, HON. GEORGE A. DONDERO, AND HON. BARTEL J. JONKMAN, OF MICHIGAN

Mr. BLACKNEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address of Hon. GEORGE A. DONDERO, Hon. BARTEL J. JONKMAN, and myself made over radio station WINX, Washington, D. C., July 29, 1941:

ADDRESS OF HON. WILLIAM W. BLACKNEY

Ladies and gentlemen, through the courtesy of station WINX, it is my privilege tonight to present for your consideration the importance of the State of Michigan as the pioneer State in the educational progress of America.

As president of the Michigan State Society, I greatly appreciate this courtesy. The Michigan State Society is the oldest State society in Washington, having been established in 1862 and consisting of approximately 2,000 fine Michigan citizens, or former Michigan citizens, who are boosters of our great State. I am particularly proud of the State of Michigan, admitted to the Union in 1837, the twenty-sixth State in the Union, with a population of five and one-quarter million. It has had remarkable progress in various lines of occupation and industry.

Michigan can well be called the tourist State of the Union because people from every

State in the Union visit our beautiful State, with its Great Lakes, with its more than 5,000 inland lakes, its picturesque scenery, and its beautiful forests. Michigan is one of the greatest agricultural States in the Union and its farms reflect the initiative and prosperity of our farmers.

Michigan towers above all of the States in the Union industrially, particularly in the manufacturing of automobiles. In my home city of Flint is located the home of the Buick and the home of the Chevrolet, and every time I see a Buick or a Chevrolet car on my way around and through Washington, I know those cars reflect the importance of our great State.

As a former teacher in my native State of Michigan, I have always been vitally interested in books and reading and in the cause of education, and I feel that I know the influence that the reading of good books has been to the youth of the land.

For many years it was my ambition to build up a library that would be well-balanced and would fit into one's scheme of life. After many years I have been successful in accumulating more than 6,000 volumes, and I can safely assert that the influence of those books has been of vital importance to me.

Palmer, in his great book on self-cultivation in English, aptly says:

"He is unwise, however busy, who does not have his loved authors, veritable friends in whom he may seek refuge in the intervals of work and by whose influence he enlivens, refines, enriches, and emboldens his own limited existence."

And Milton, in his splendid essay Liberty of Printing, in comparing men and books says:

"Many a man lives a burden to the earth, but a good book is the precious lifeblood of a master spirit, embalmed and treasured up on purpose to a life beyond life."

Because of my interest in this subject, I desire to call your attention to the fact that the evolution of the Congressional Library in this country has been very remarkable indeed.

In 1800 Congress appropriated $5,000 as the nucleus of a library. In 1814, as you know, at the time of the British invasion, the Library, which was located in the Capitol, was partly burned. Three thousand volumes of that small library were destroyed.

Shortly after that our Government bought from the Thomas Jefferson estate his very fine library of 6,000 volumes, the largest private library then in the United States. Again, in 1851, a fire swept the Library, which was still located in the Capitol. As a result of that fire only 20,000 volumes out of 55,000 remained.

Then a peculiar thing happened. It required 13 years on the floor of this Congress in debate, in discussion, and in study to convince the people of the United States and to convince Congress that a library was of great public necessity and, therefore, should be properly housed. Finally, after 13 years of debate, the great Congressional Library, as we now know it, was organized.

In 1897 the fine building that we see here, with 14 acres of floor space, with more cubic contents than this entire Capitol, was constructed. Now we in America can look the British Museum Library in the face, we can look the Bibliothèque Nationale in the face, and say that today America has the largest Library in the world.

I know of nothing that is of more vital importance to America than a fine library and a fine collection of books. At this time over 7,750,000 books, maps, and charts are in this great Congressional Library.

In 1934 the Congress again started a new addition, which gives 20 acres more of floor space, and an investment of over $15,000,000 in buildings and grounds alone, aside from the maintenance and cost of the books, all in the interest of this fine Library.

Originally it was built for the Members of Congress. Now, it is called the great university of the American people. Of all things in my Government, I am proud that the Congressional Library exists, not only for the 32,000,000 boys and girls of America but for our 130,000,000 people, because each year over a million people come here to visit the Library of this country and receive an inspiration for reading and study that will favorably affect their entire lives.

My own State of Michigan abounds in fine libraries, including the library at the capitol in Lansing, the splendid library at the Michigan University, and the equally splendid libraries at the various colleges and normal schools of my State.

Michigan has been greatly benefited by the exchange of books between the Congressional Library and our own libraries.

Michigan is highly conscious of the value of books and reading. In many of our factories splendid libraries have been established in order that the men who work by day may have the advantage of books and reading at night.

I am greatly interested in the educational system of my native State. Unquestionably, the honor of leadership in education belongs to Michigan. To illustrate, let me call your attention to the six important educational dates that mark the educational progress of Michigan.

In 1817, the Legislature of the Territory of Michigan sketched in detail on paper, a full program of education from the primary schools to the universities.

In 1827, the Legislature of the Territory of Michigan actually laid the foundation of our common schools.

In 1837, our State legislature, after the admission of Michigan to the Union, created our great university with its then four departments—literature, science and the arts, law, and medicine. This was pioneer work, in many respects, for all the world. Other States had established fragments of such a system, but none had constructed it on so profound a basis. Nothing remained for Michigan to do in education except to elaborate the details and enlarge the structure of our educational system.

Therefore, in 1848, the Legislature of the State of Michigan, realizing that handicapped children were not receiving proper education in our State, created an institution for the instruction of the deaf, dumb, and blind.

In 1855, the Legislature of the State of Michigan organized an agricultural and industrial college, one of the first pioneering agricultural colleges in the United States.

And then, to cap the climax, in 1870, the Legislature of the State of Michigan opened the doors of our university to women, thereby completing the educational system of Michigan and establishing the thorough democracy of the educational scheme.

I am particularly proud of the stand that Michigan has taken on education. In my own State, the superintendent of public instruction and the entire school personnel of the State, superintendents, principals, and all grades of teachers have demonstrated their love and zeal and efficiency for our public-school system.

It has been a pleasure for me to have this splendid opportunity of appearing on this Michigan program. Naturally, we of Michigan love our native State. We are proud of her educational institutions, we are proud of her industrial factories that are without a peer in this country, we are proud of her fertile farms and, above all, we are proud of our fine patriotic citizens.

I sincerely thank Station WINX for this opportunity of saluting our State of Michigan. This station is performing a wonderful educational function in making these programs possible.

ADDRESS OF HON. GEORGE A. DONDERO

I am greatly indebted to Station WINX here in the Capital city of Washington for the opportunity to present a salute to my native State of Michigan and it is appreciated.

Michigan can point to its colorful history, which began in 1669—240 years ago. Three flags have dominated its trackless forests and lake-bound shores. Its more than 1,600 miles of coast line is longer than any other State in the Union. Its two peninsulas are washed by the unsalted seas—the Great Lakes. One hundred and four years ago it was accepted into the sisterhood of States as No. 26. Its virgin forests built the homes of the Middle West. Its scenic lakes and natural beauty remain. It is still the "land of the sky-blue waters." Michigan had the first agricultural college in the Union. It also had the first State university in the Nation and it was the first university to admit women.

Today, with a population of more than 5,000,000 people, it stands in the forefront in national defense and in its contribution to the health, wealth, and prosperity of the Nation. The products of its farms and factories are unexcelled. They are the pride of a free people and the wonder of the world. Its gigantic industries constitute the very heart of our national defense.

Michigan produces a higher per capita value of goods for export than any other State in the Union. More than 600 of her industries are engaged in foreign commerce or export trade, and they import 300 commodities from 56 foreign countries used in the manufacture of their products. It now produces thousands of barrels of oil per day.

It is the automobile capital of the world. In 1937 the value of automobiles shipped for foreign points amounted to $350,000,000. Michigan ranks first in the Nation in the export of automobiles, automobile parts and accessories, canned, fresh, and frozen fruits, vegetables, machinery, tools, chemicals, hospital supplies, office equipment, electric refrigerators and ice-making apparatus, stoves and ranges, iron and steel products, hardware, and pressed-metal products. One dollar out of every seven expended for wages and retail trade in Michigan has its origin in foreign trade.

The State stands fourth by customs districts in the value of its exports. In 1939 it amounted to $245,000,000. Michigan is surpassed only by New York, Galveston, and New Orleans in this respect.

The State is situated in the heart of the Great Lakes. These unsalted seas represent one-third of the fresh water of the earth. They are located in the interior of the North American Continent. On the breast of these inland seas is carried nearly one-quarter of the water-borne commerce of the United States, which exceeds all the foreign commerce of our Nation. These mighty inland oceans have but one outlet to the sea—the St. Lawrence River. It is the key to a land-locked empire inhabited by 40,000,000 people who are now denied free access to the seven seas and the ports of the world. Michigan is in the center of this empire.

It is one of the 17 States of the Middle West which needs low-cost water transportation for its raw materials and manufactured products—the products of its farms and factories. This potential low-cost transportation by water has been provided by a generous Providence, namely, through the St. Lawrence River—the only outlet and water highway to the oceans from the Great Lakes—a distance of more than 2,000 miles. It is now completed with the exception of a small section of the International Rapids between Canada and the United States. The two nations have signed an agreement to remove the last barrier so Midwest commerce may move economically and unvexed to the seas. Incidental to its construction 2,200,000 horsepower of electric energy can be produced. It is there now going to waste. That power would be invaluable to our national defense if it were now available. It is the only project in this country comparable with the Panama Canal. No one in this day and generation even doubts the wisdom and foresight of this Government in uniting the Atlantic and

Pacific by the Panama Canal. The whole world benefited by its construction. The Great Lakes-St. Lawrence seaway stands alone—the greatest project on the North American Continent—the master project of our age. Its international character challenges the world. This waterway is there waiting the ingenuity of man to complete it and convert it to his use. Its cost to the United States, after exhaustive study by the Army engineers, is estimated at less than $200,000,000. This is less than the cost of three battleships. The power feature of the project will cost ninety-three million and will pay for itself. The entire work can be completed in 4 years.

When this seaway is completed, part of the future navies of the United States may be built in the Great Lakes, a thousand miles inland—a vital asset for national defense. If the 45 shipyards (30 on the American side and 15 on the Canadian side of the Great Lakes) were now available, they would prove a tremendous factor in our program of national defense. Only small ships drawing less than 14 feet of water can be constructed in them for ocean service. Because of the land-locked, restricted depth of the canals in the St. Lawrence River, larger ships cannot reach the sea.

Build this seaway and we will provide an inland waterway for large ocean-going vessels and accommodate more than 75 percent of the ships of the world. Its cost is moderate when compared with other Government spending. It will pay for itself many times in savings to the people. It will create a new frontier. It will serve to stabilize many important industries in their present midwestern locations, anchor them there for the benefit of the railroads as well as the utilities which will be supplied with greater power facilities, and for the benefit of all other public conveniences which thrive in prosperous communities.

"There are three things which make a nation great and powerful—a fertile soil, busy workshops, and easy conveyance for men and goods from place to place."

The busy workshops of Michigan are now producing the implements of national defense to preserve the Republic of the United States.

ADDRESS OF HON. BARTEL J. JONKMAN

Michigan, one of the outstanding States of the Union, is blessed with a greater combination of natural and man-made facilities for creating human happiness than any comparable area in the world. Some States may surpass her in industries, others in agriculture, etc., but in her combination of industrial, agricultural, educational, mining, recreational, and other facilities she is unsurpassed and stands in a class by herself.

Consisting of two peninsulas, with a shore line of 1,624 miles, more than any other State in the Union, Michigan could exist as an isolated empire while her people enjoyed all the reasonable comforts and luxuries of life.

Notwithstanding her latitude, the large fresh-water lakes lapping her 1,600 miles of shore line moderate the climate, giving Michigan longer growing seasons than any of the other North Central States.

As a result, Michigan stands out in the production of quality seeds of all kinds. Michigan seed potatoes are sent to Pennsylvania, Indiana, Illinois, Ohio, New York, and other States south because Michigan's climate and soil conditions produce potatoes of high-producing potentiality. Sections of Michigan produce flax, said to equal that grown in Ireland. Its celery is unexcelled, and Kalamazoo, as the Celery City, is famous throughout the world.

Michigan's other crops are hay, corn, wheat, oats, beans, sugar beets, rye, barley, buckwheat, seed cabbage, onions, cucumbers, and other vegetables. Its fruit, peaches, cherries, apples, grapes, plums, pears, and berries grow in superabundance.

Michigan is rich in natural resources. It ranks first in salt, second in iron and gypsum and gypsum products, third in copper, limestone, and cement, fifth in sand and gravel, eighth in petroleum, as well as general mineral products. I wish I could go into detail and tell you about the richest belt of rock-producing copper, the greatest deposit of surface iron ore, the largest limestone quarries, the thousands of oil and gas wells, but time forbids.

I would like to tell you about Michigan's industries, about Detroit, Lansing, Flint, and Pontiac, world-famed for the manufacture of automobiles. Grand Rapids, my home city, the furniture capital of the world, Midland with the world's largest chemical plant, Battle Creek, whose breakfast foods are known everywhere, Kalamazoo with the largest bookpaper factory. I could dwell on our industries manufacturing lumber, drugs, beet sugar, clothing, machinery, refrigerators, flour, leather goods, dairy products, furs, canned goods, fishing tackle, etc., but I must save a few moments for Michigan's scenic beauties and recreational facilities.

Michigan's sons and daughters have raised her to a state of eminence in these fields of enterprise, but they have been enabled to do so largely because Michigan offers recreational facilities which really recreate, the enjoyment of which has enabled her citizens to raise the trip hammer of work and increased the force of their blows for human progress.

Scenic beauties in Michigan are unsurpassed. Mackinac Island, Island Royal, and similar beauty spots; the Manistee, Michigan, Au Sable, St. Marys, and other rivers, together with over 5,000 inland lakes, and thousands of acres of forest and cut-over lands provide outstanding opportunity for reinvigorating tired minds and bodies with new energies. There are no inland fisheries to compare with those of Michigan. Small game is abundant, and a million deer together with bear roam the cut-over lands inviting an annual trek of 300,000 hunters whose 50,000 kill does not diminish the supply.

Not only Michiganders enjoy this playground but hundreds of thousands from other States take advantage of this health-restoring element in Michigan's make-up. The recreational industry is now ranked as the second largest in the State, being exceeded only by manufacturing. More than 60 State parks, half of them on lakes and streams, offer facilities to visitors and tourists. Michigan is doing all she can to promote and foster this recreating agency for all who may wish to come.

So when you plan your vacation come to Michigan; she welcomes you.

Eternal Vigilance

EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

Mr. DITTER. Mr. Speaker, censorship has always been a controversial subject. It has become more so as the international situation has become more complicated. Threats of a clamp down on news have been sensed for a long time by those identified with the press and the radio. Vigorous denials have been made in the past by Government officials of any intention to censor. Despite the denials, protests have been heard on all sides against moves which have seemed to indicate that some type of news supervision would be very acceptable to certain men close to the White House. Arbitrary rulings by administrative bodies and the rabid railing of some Cabinet members who resent criticism have contributed in no small degree to the controversy.

The battle flared up again when the first supplemental appropriation bill for the present fiscal year was reported to the House of Representatives. At that time it was discovered that the Navy Department had made a request for an appropriation of almost $800,000 for the establishment of offices in 18 different places for a national cable censorship. According to representatives of the Navy, the unlimited emergency declared by the President made the proposal necessary.

An examination of the hearings conducted by the Appropriations Committee disclosed that the project had been approved by the President, even though no authorization was at hand under existing law. When pressed for further information, the representative of the Navy who attempted to justify the appropriation admitted that an authorization was necessary before the appropriation could be made.

The irregularity of the procedure which was attempted—to ask for funds before a proposed activity was authorized—was, in itself, subject to severe criticism. The door would be opened wide to possible abuses of all kind were Federal funds made available without authorization. Too much has already been done in this direction by the issuance of blank checks and the delegation of extraordinary authority for their use. With the demands being made as they are for stupendous sums for the defense program, the bars should certainly not be lowered. To resort to a practice of this kind in such an important and highly controversial field as censorship was surely an ill-advised move to make. To say the least, it did nothing to allay the suspicions of those who have been apprehensive of arbitrary authority.

It is generally admitted that cable censorship is a necessity in time of war. Naval officials, who should know, have stated cables were censored during the last World War, but that the censorship did not start until after we had entered the war.

But the Congress has not declared war. And until it does some rights, long recognized as fundamental to free men, should be regarded as secure against the possible invasion of emergency powers. Among these rights, freedom of the press and freedom of speech are basic. Eternal vigilance always has been the price of liberty. It continues to be the price which must be paid today.

The Defense of America

EXTENSION OF REMARKS

OF

HON. CHARLES F. McLAUGHLIN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

RADIO ADDRESS OF HARRY B. FLEHARTY, SPECIAL ASSISTANT TO THE ATTORNEY GENERAL

Mr. McLAUGHLIN. Mr. Speaker, under leave to extend my remarks, I include the following address delivered by Mr. Harry B. Fleharty, Special Assistant to the Attorney General, over radio station WWDC under the auspices of the Veterans of Foreign Wars on July 27, 1941:

Members of the WWDC radio family, those whose duty it is to preside over the destinies of America today, are rightfully seriously and earnestly emphasizing the importance of national defense. Our President, our Congress, our military commanders did not create the emergency, making it necessary that preparation for warfare take precedence over our personal plans in business, professional life, educational attainment, and home life. They did not create the emergency, which makes it necessary that our dreams, ambitions, and longings be sacrificed, and our ability, time, and energy be devoted to the creation of a fighting machine, capable of overcoming the attack of the most efficient war machine the pages of history have recorded.

People who live in a city may have been negligent about preparing about safety from forest fires, but they do not set the fires which make absolutely imperative every possible preparation to suppress the deadly flames that menace every activity of life and even life itself. I wonder if we realize the completeness of the analogy. I know what it is to plow furrows in an attempt to save a homestead from the hungry flames of a raging prairie fire. I know what it is to watch the devouring flames of a forest fire eat their way relentlessly toward the heart of the city. I know how easy it is to summon every possible energy of every person, at whatever sacrifice, to check the progress of the fire and save the homes and lives of the community. The danger is so obvious and so appalling that opportunity is all that is required to command all the ability and energy of every individual in defense of the community from the devastating flames. In the quiet of my home I have asked myself, as I am now asking you, "Is our situation as a nation in any real sense analogous to the homestead or the city threatened by fire? Is our danger as great and as imminent?"

America has lived over a hundred and fifty years with the Axis Powers functioning as strong and active nations. Why are they any greater menace to America and the American way of life in 1941 than in 1925 or 1895? Of course, the answer is obvious. In 1941, the Axis Powers are at war to force all of Europe, Africa, and Asia to adopt their way of life. Success in Europe, Africa, and Asia would either accomplish or make necessary the conquest of the Americas.

Post mortems are often unpleasant, but they are sometimes profitable. It may pay to turn back to the close of the first World War and review the dreams of those who saw a possibility of a world brotherhood arising from the ruins, and who saw their visions blacked out by tidal waves of nationalism. I am sure it will profit us to turn the pages of history back still farther and trace the philosophies that have abandoned the leadership of scholars and enrolled under the leadership of military chieftains, and now are arrayed in battle line.

What are the irreconcilable differences between the philosophy of Hitler, which will rule Europe, Africa, and Asia if the Axis Powers conquer Great Britain and Russia, and the philosophy of America? Of course, we realize that when we adopted as the creed of America, "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness" that we wrote the obituary of the political concept known as the divine right of kings, but I think we little realize that modern despots have substituted for the divine right of kings the theory that the whole duty of man is obedience to a supreme racial state.

The doctrine that all men are created equal, not in mentality, not in physical powers, but equally endowed by their Creator with the inalienable right to life, liberty, and pursuit of happiness, is an eternal denial of racial superiority and an incentive to brotherhood; a challenge to national arrogance and an impulse toward world unity. The creed of America exalted individualism, by its recognition of each person as a child of a universal Father, who bequeathed to each child equality in inalienable rights. That creed established the supremacy of man over government by the declaration that government was instituted to secure those rights and that government derived its just power from the consent of the governed. The ship of state was created for the crew, not the crew for the ship.

This creed of America is the soul of America. The 48 States may comprise her physical body, but the soul of America is that self-evident truth expressed in the Declaration of Independence. This creed of America is, and of necessity must be eternally at war with the philosophy that the supreme good is force. This dogma of the Axis Powers is as ancient as the story of Eden with the tragedy which blasted the peace of the Garden when the eldest son of Adam, on the theory that might makes right, slew his younger brother and then sought to shake off responsibility by the old query "Am I my brother's keeper?"

The 12th day of February 1809 contributed more generously than other days to the development of the philosophies between which you and I are compelled to choose. On that day two boys were born. One in a log cabin in the clay hills of Kentucky. One in a home of palatial dignity in Shrewsbury, England. The parents of one boy named him Abraham Lincoln. The parents of the other body named his Charles Darwin. Separated in birth as they were by the wideness of the seas; separated in opportunity as they were by the absolute extremes which marked the floorless cabin, the poverty-stricken environment, the association with want and ignorance of Abraham Lincoln and the aristocratic home, the schools and colleges of Shrewsbury, Edenburgh, and Cambridge, the intimacy with wealth and culture afforded Charles Darwin, they were even more widely separated in their philosophies of life.

In 1859 Abraham Lincoln expressed his philosophy of life by assuming the leadership of an effort to prevent America from becoming false to her creed. In a speech that year Lincoln said: "The people of America, by their representatives in Old Independence Hall, said to the whole race of man, 'we hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these rights are life, liberty, and the pursuit of happiness.' This was their majestic interpretation of the economy of the universe. They grasped not only the whole rights of men then living, but they reached forward and seized upon the farthest posterity. They erected a beacon to guide their children and their children's children."

In 1859 Charles Darwin gave to the world his Origin of Species, upon which Spencer and the exponents of German kultur founded their version of the survival of the fittest and applied that which Darwin applied to physical form and characteristics, to life as a whole. Darwin did not suggest the substitution of a molecule for a Maker. He did not intimate that moral values were mythical and power alone worthy of consideration. He did not suggest dispensing with the moral universe. Darwin emphasized the theory of progressive development as a method, not as a cause. But the theory of the survival of the fittest was seized upon by Germanic kultur and made the vehicle for an attempted black-out of everything but materialistic force. The conclusion they reached was that the only right is might. That everything in life is, and by right should be, the property of that individual or nation who can take it and keep it. That mercy, sympathy, compassion, love, are weaknesses to be relentlessly stamped out. That the gentle, the sympathetic, the affectionate must be ruled by the strong, the brutal, the pitiless. That man must be subject to the law of the jungle—must be ruled by the law of the tooth, the claw, and the fang.

That is the philosophy of life the Axis Powers present to the world today. Talk of equality of rights—it is a weakling's dream. There is no right but might. If any nation has what an Axis Power wants, it must prepare to defend it or abandon it to the Axis Power.

The weakness of the German version of the survival of the fittest lies in its definition of "the fittest." Who are the fittest? In one of his poems, W. W. Story says:

"Speak history who are life's victors
Unfurl thy long annals and say,
Are they those whom the world called the victors
Who won the success of a day?

"The martyrs or Nero—the Spartans
Who fell at Thermopylae's tryst
Or the Persians and Xerxes, his judges or Socrates,
Pilate or Christ?"

Who are the fittest? The John L. Sullivans, the Corbetts, the Joe Louises, or the Florence Nightingales, the Abraham Lincolns, the Mahatma Ghandas. Who are the fittest? The businessmen or the bandits? The gardeners in their gardens or the gangsters in their hide-outs? Who are fittest? Artists or Amazons? Preachers or plunderers? Musicians or murderers?

What is the fittest? Egotism, vanity, cruelty, malignity, ruthlessness, hate, brute force—or modesty, unselfishness, pity, helpfulness, kindness, brotherhood, love?

I am willing to accept the doctrine of the survival of the fittest, but I cannot accept a definition of the fittest that will drive justice from the purposes of men, service from the lives of men, peace from the spirits of men, laughter from the lips of childhood, and love from the hearts of humankind.

The choice I am compelled to make tonight, is the choice Pilate gave his people. Who shall we loose upon America, upon the world, upon the future of the race of men—Jesus or Barrabas? brotherhood or barbarism?

So I am led to the conclusion, my friends, that all I have ever regarded as of real and lasting value is at stake in the conflict between the philosophy that force is the only thing divine, that we are products of force

and that we become like our Creator only as we become incarnate force. And the philosophy that we are creatures of love—that God is love and that each of us as a child of God can become like our Creator only as we become love incarnate.

I am beginning to understand that the creed of America must be my personal creed. That before America can be American, I must become American—you must become American. Neither Greek nor Jew, bond nor free, but of one brotherhood, one family. It is not easy. I am a bundle of prejudices, a creature of intolerance. But prejudice, intolerance, belong to the disciples of force, not to the apostles of love.

America has declared that every man is endowed by his Creator with the right to life, liberty, and the pursuit of happiness, which cannot be taken from him by force or without his consent. Rights which are inalienable. We have builded a citizenship of millions of Jews whom we have taught that doctrine. We have builded a citizenship of millions of Negroes and Chinese and Japanese and Indians to whom we have taught that doctrine. If we do not believe it we have builded a Frankenstein that will at least be a factor in our destruction. Either we must find room in our hearts for the Negro, the Jew, the Japanese, the Chinese, and every other race, or we deny the fundamental doctrine of America, and are but Hitlerites in masquerade. We reject the doctrine of equality, the creed of America, the brotherhood of the Galilean, the fatherhood of God.

Defense of America, therefore, must begin within me—within you. It must be an opening of the windows of the soul to the sunshine of universal brotherhood. It must include driving the bats of prejudice and intolerance from the temple of each individual life.

With an American people freed from prejudice and intolerance, an American people animated by unselfishness, motivated by love, we would have a force as irresistible as the flight of time. We would have a national life so potential for service to the race of mankind that it would be worthy of any and every sacrifice required to make it fully effective in the life of humanity.

I do not know the answers to the problems that we Americans confront tonight, but I do know how one great American sought the solution to problems equally grave.

Abraham Lincoln, charged with the preservation of the Union, bowed beneath the weight of years of bloody warfare, said: "Many times I am driven to my knees because I have no other place to go." After all, what a human experience that was. Margaret Montague told in Harpers of her little granddaughter who told many bedtime stories of the adventures of a bird, sheep, bear, or an elephant, and who always concluded the adventure with the phrase "an nen him went home to hims muvver." If someone else told the story and left the hero at large, the little one would inquire, "An nen didn't him go home to hims muvver?"

The prodigal in the New Testament who fell from happiness to homelessness, from abundance to hunger, said: "I will arise and go to my father." The Shepherd King, when his burdens seemed greater than he could bear, said, "I will lift mine eyes to the hills whence cometh my strength." All akin to the experience of Lincoln when he said, "I was driven to my knees because I had no other place to go."

I do not know the answers to our problems, but I do know that the path "home to muvver," "back to my father," "to the hills whence cometh my strength," is open to us in America tonight as it was to Abraham Lincoln, and I feel certain the surest approach to the safest national defense will be with Lincoln—on our knees.

Joint Income-Tax Returns

EXTENSION OF REMARKS

OF

HON. VANCE PLAUCHÉ

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

Mr. PLAUCHÉ. Mr. Speaker, coming from a State that has always recognized community rights and community estates, I am delighted that the House will be permitted, under the rule adopted yesterday, to consider an amendment striking from the revenue bill section 111, which makes mandatory joint income-tax returns by husband and wife.

More important, as far as I am personally concerned, than any other argument presented for the adoption of this amendment is the effect upon the marital state that that particular provision of the bill will have if it is enacted into law.

I cannot express my personal views on this subject better than to insert as a part of my remarks a letter received by me a few days ago from the Most Reverend Jules B. Jeanmard, bishop of Lafayette:

The Honorable VANCE PLAUCHÉ,
House of Representatives,
Washington, D. C.

MY DEAR MR. PLAUCHÉ: No doubt your attention has already been called to Arthur Krock's article, A New Penalty on the Marital State, which appeared in the New York Times of Friday, July 4, and which makes such a clear case against the proposed revision of the 1941 Revenue Act, making mandatory joint income-tax returns by husband and wife. Whilst I am heart and soul in favor of any legitimate measure that has for its purpose the levying of the necessary taxes for the strengthening of our defense, this particular measure should, in my humble opinion, be opposed on the ground that it would, in many cases, penalize marriage, place a premium on divorce and upon celibacy—practiced for selfish and unworthy motives—and promote immorality. Surely no measure should be adopted which would further tend to decrease the birth rate, already at an alarmingly low ebb in this country.

For these reasons, then, I would ask that you oppose this measure which, however well intended by its proponents, will, if enacted into law, be attended by such serious consequences.

With sentiments of esteem and with kindest personal regards, I am,

Sincerely yours,

JULES B. JEANMARD,
Bishop of Lafayette.

Mr. Speaker, if we are to maintain our Christian civilization, we must not penalize the marital state but must help and encourage family life.

The only argument presented in favor of this provision is that it will provide needed revenue.

In my opinion, it is far more important at this time that we will do nothing that will tend to penalize marriage, place a premium on divorce, which is now a national scandal, and promote immorality.

I urge every Member of the House to carefully consider the far-reaching effects of section 111, providing for joint returns, as outlined above, and support the amendment which will be presented striking section 111 from the bill.

The Duty of Congress in Time of Emergency

EXTENSION OF REMARKS

OF

HON. WILLIAM H. LARRABEE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

STATEMENT OF HON. WILLIAM H. LARRABEE, OF INDIANA

Mr. LARRABEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement that I have prepared to express my views in reply to numerous communications coming to me from my district and from all parts of the country, in which Members of Congress, who support the administration's national-defense program, are being accused of "breaking faith with the people, breaking pledges and promises to young men selected under the Selective Training and Service Act, and resorting to deceit and treachery and contributing to the efforts of the warmongers in leading our Nation into the European war."

Realizing that nearly all, if not all, other Members of this House receive many similar letters, it occurred to me that the nature of my reply to contributors of such emotional messages might be of general interest.

My statement, in which I have endeavored to set forth my views clearly and definitely, follows:

Throughout the history of mankind are to be found numerous recorded occasions when it has become necessary for the chosen leaders or officials to set aside all consideration of the welfare of the individual and their own immediate personal welfare—all thought of the possibility of reelection to office or elevation to leadership—and consider only the greater need, the welfare of all the people whose interests such leaders or officials have been charged with protecting and defending.

If it is true that the majority of the people of our State and Nation are opposed to the plans and program of our national administration for the defense of our Nation, our people and the rights and property of our people from threat of foreign encroachment, then the time is at hand when Members of Congress and other public officials must consider the greater need, that of the entire Nation and all of the people of the Nation, in preference to following the path of easy and pleasant action—that of attempting to satisfy the emotional demands of the individuals.

No one has a more deeply rooted hatred of war; no one objects more sincerely to militarism; no one shuns more conscientiously, than I, all things that tend toward development of armed conflict. Yet Members of Congress should be, must be, big enough to set aside personal feeling, overcome emotional sympathies, resist the pleadings of those who may be temporarily inconvenienced or displeased, and consider first and foremost the ultimate security of the ma-

jority—the very existence of our Nation in the future.

To those who have studied the development of international trends and events during the past few years with sincere and courageous vision there can come but one conviction. That is the conviction that if our leaders are to be true to the mandates of their oaths of office; if our leaders are to shun deceit and treachery and act for the common good and protection of all, they must act with bold determination in preparing for any eventuality.

To do otherwise would be to break the promises that they must have made in accepting their oath of office. To do otherwise would be to resort to the blackest treachery.

To fail to understand a danger which faces our Nation and our people may be forgiven if such failure is that of the individual in private life, but to fail to know of, understand, and prepare for such danger, on the part of a public official, sworn to protect, defend, and preserve our Nation and its people would be an act of highest treason.

Regardless of whether or not my decisions and my acts in the present grave emergency may be pleasing to the electorate, or to any specific individuals, my paramount duty is to my country and its people and I shall continue to act in every instance in consideration of my greater obligation and with regard for the dictates of my conscience. Should I fail in these highest considerations, and in so doing contribute to the downfall of my country and the enslavement of its people, I would have contributed to the destruction of the freedom of the democracy which we all cherish, and which all of us desire to perpetuate, although there are unfortunately widely divergent views concerning the action we should take to preserve our liberties.

For those who differ with my views concerning the paths of action we must follow to defend and preserve liberty and justice for all, I have only the kindliest of feelings, if their views have the substance of sincerity. For that minority who would wilfully sacrifice our national integrity and the security of our people merely for the sake of traveling the easier pathway of shunning the grave responsibility that is theirs, I hold only the deepest abhorrence.

If our Nation lives through the present crisis, and I am convinced that it will, for I am convinced that our Nation is in the right, it is of little importance whether or not my decisions and my actions so please the electorate that they may wish to return me to Congress. If I, and a majority of others in positions of grave responsibility fail in our duty now, and in so failing permit the last great citadel of democracy to be crushed upon us it will matter forever in the minds and hearts of those who may survive.

If each and every one of us is steadfast in our faith in our Nation—if each and every one of us will realize the danger that draws ever nearer and if we fortify that faith and that realization with the willingness and courage of individual sacrifice during the period of the emergency I have no doubt but that the future will bring to us more luscious fruits of peace, liberty, and prosperity than we have yet enjoyed. It is true that the path we must follow is not the easy road. But we have seen other nations endeavor to follow that avenue which is paved with appeasement, lined with concessions—the highway that attempted to circumvent all necessity for sacrifice, only to find that they were speeding to the abyss of national destruction and personal enslavement.

In the light of the greater good, the immediate welfare of the individual—my personal welfare and the personal welfare of every other individual—must be submerged. For the ultimate welfare of all individuals I dedicate myself to these precepts.

August in American History

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

COMPILATION OF HISTORICAL HIGHLIGHTS BY HON. SAMUEL A. WEISS, OF PENNSYLVANIA

Mr. WEISS. Mr. Speaker, on Monday, June 30, I presented to this Congress, in my extension of remarks, historical highlights that have occurred in our Nation's history during the month of July. I stated then that I intended to present historical highlights that have occurred during the various months of the year. I now present to this Congress for historical use August in American History:

August 1: Colorado admitted to the Union as the thirty-eighth State in 1876; Federal workmen's compensation insurance law becomes effective in 1908.

August 2: American Dental Association organized in 1855; first street letter boxes set up in America in Boston in 1858.

August 3: Christopher Columbus sails from Palos, Spain, in 1492, on journey that led to discovery of America.

August 4: John Peter Zenger, colonial editor, acquitted of libel in 1735, in famous case that established freedom of the press; United States Coast Guard established in 1790.

August 5: Admiral Farragut wins Battle of Mobile Bay in 1864; first talking motion picture presented in New York City in 1926.

August 6: Norwich College, Vermont, established as first college giving courses in civil engineering and military science, 1819.

August 7: United States War Department created by act of Congress in 1789.

August 8: New York Medical Repository, first medical and scientific periodical in America, published in 1797; Charles A. Dana, noted newspaper editor, born at Hinsdale, N. H., in 1819; mimeograph machine patented by Thomas A. Edison in 1876.

August 9: Dr. William Thomas Green Morton, discoverer of use of ether as an anesthetic, born in 1819.

August 10: Missouri admitted to Union as twenty-fourth State in 1821; Smithsonian Institution incorporated in 1846; United States Naval Academy opened at Annapolis in 1845; Herbert C. Hoover, President of the United States, born at West Branch, Iowa, in 1874; first electric streetcar operated at Baltimore in 1885.

August 11: Robert Fulton's steamboat, the *Clermont*, makes first successful run up the Hudson River from New York City in 1807.

August 12: Gold discovered in the Klondike region of Alaska in 1896.

August 13: Lucy Stone, pioneer of woman suffrage movement, born in 1818; first annual convention of letter carriers held at Boston in 1890.

August 14: First national appropriation for life-saving station is voted in 1848.

August 15: Panama Canal opened to commerce of the world in 1914.

August 16: Battle of Bennington during Revolutionary War, in 1777; first peace society, New York Peace Society, organized in 1815.

August 17: Birth of David Crockett, frontiersman and one of the heroes of Texas' fight for independence, in 1786.

August 18: Birth of Virginia Dare, first white child born in America, at Roanoke Island, Va., in 1587; Meriwether Lewis, explorer of the West with Capt. William Clark, born in 1774; first United States Government exploring expedition under Capt. John Wilkes sails on voyage in 1836 that resulted in discovery of the Anarctic Continent.

August 19: Orville Wright, one of the inventors of the airplane, born in 1871; battle between American frigate *Constitution* and British man-of-war *Guerriere* in 1812.

August 20: Birth of Francis Asbury, pioneer bishop of Methodist Church who established Methodism in America, in 1745; birth of Benjamin Harrison, President of the United States, in 1833, at North Bend, Ohio.

August 21: First adding machine patented in 1888; American Bar Association organized at Saratoga, N. Y., in 1878; Lincoln-Douglas debates began at Ottawa, Ill., in 1858.

August 22: First international yacht race won by American schooner *America* in 1851.

August 23: Birth of Commodore Oliver Hazard Perry, whose dispatch from the Battle of Lake Erie—"we have met the enemy and they are ours"—has become part of the American tradition, in 1785.

August 24: Center foundation of Capitol in Washington laid in 1818; Parcel Post Service authorized in 1912.

August 25: Bret Harte, novelist and poet of the West, born in 1836.

August 26: City of Los Angeles founded in 1781; University of Michigan established in 1817; woman suffrage amendment to Constitution becomes effective in 1920.

August 27: First flow of petroleum near Titusville, Pa., marks beginning of commercial development of petroleum industry in 1859.

August 28: Henry Hudson discovers the Delaware River in 1609; Coal first mined in the United States in 1806; Glenn H. Curtiss Wins Gordon Bennett Cup in first international air meet at Rheims, France, in 1909.

August 29: First Indian reservation in the United States established in Burlington County, N. J., in 1758; Oliver Wendell Holmes, famous author and father of Supreme Court Justice of same name, born in 1809.

August 30: Battle of Manassas or second Bull Run during War between the States in 1862.

August 31: Charleston, S. C., earthquake, most devastating east of Mississippi River, in 1886; patent for moving-picture camera granted to Thomas A. Edison in 1897.

Waterways Improved by Russia for Military Preparedness

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

Mr. MANSFIELD. Mr. Speaker, at my request the Chief of Engineers has furnished me with information on the waterway improvements by Russia for military preparedness.

A number of important waterway projects in Russia had been completed and others had been started before hostilities commenced in the Russo-German war. A recent German communique boasted that should her railroads be damaged by

aerial attack she had an adequate system of inland waterways to provide a transportation alternative. The Soviet Union may not be so fortunate but her improved waterways will to some extent provide such an alternative.

The Dnieper River flows from the vicinity of Smolensk through the Ukraine district of southwestern Russia and empties into the Black Sea. A large hydroelectric and navigation project located about 200 miles above the mouth of the river has facilitated navigation over the rapids in that vicinity. The Dnieper is navigable for about 500 miles above its mouth to the general region of the central German offensive toward Moscow. According to newspaper accounts, pitched battles have recently been fought in this region and the river was filled with the bodies of dead soldiers. Kiev, the goal of the German drive for the rich Ukraine territory, is located on the Dnieper some 250 miles above the hydroelectric development referred to. This dam, 200 feet high, was designed and built with American equipment, under the supervision of an eminent American hydroelectric engineer, the late Hugh L. Cooper, and will generate annually 2,500,000,000 kilowatt-hours of hydroelectric power as well as facilitate navigation through the Ukraine. Russia, like the rest of the world, having become conscious that the power of falling water is an inexhaustible natural resource that can be destroyed only by geological changes in the earth's surface, is proceeding to harness these resources for the use and benefit of all her people.

The rivers of southwestern European Russia more or less parallel her lines of defense and thereby provide natural obstacles to invading forces. They are not so advantageous for the supply of military operations as if they were perpendicular to the military lines. However, prior to becoming defense lines they are valuable for transportation.

The White Sea-Baltic Canal connects with the Moscow-Volga Canal and provides navigation between Moscow, Leningrad, Archangel, and other Arctic Ocean ports. It constitutes an inside route from Leningrad to Archangel less than one-fourth the hazardous journey around Finland, Sweden, and Norway. Light naval units such as submarines and destroyers can be shifted from the Baltic Sea to the Arctic Ocean through these protected inland waterways, a military advantage of no little importance. The newspapers tell us from day to day that Leningrad is about to fall or that the Germans have been repulsed in that region, but it is significant that even if Leningrad should fall and the railroad between Leningrad and Moscow be cut, it would be necessary for the Germans to push more than 100 miles farther east before they could intercept the waterway connection between Moscow and the important resources of the Arctic coastal region.

Until the Baltic-White Sea Canal and its connection with the Moscow-Volga Canal were completed and navigation extended through these canals to the White Sea and Arctic Ocean and thence up the rivers flowing into the Arctic Ocean, the abundant timber and rich mineral resources of the Arctic region including the Kola Peninsula and numerous islands above the Arctic Circle were untouched. In the Kola Peninsula, between the White Sea and the Arctic Ocean, an ore has been found from which aluminum can be produced and two large plants have been placed in operation to supply this essential metal. The Arctic region of Russia has become productive due to water transportation made possible by man-made improvements. Former frozen waste now support communities and ports that have sprung into existence as a result of waterway transportation. Coal and oil abound in the Pechora District, along the eastern Arctic coast. The geological chart of the Arctic coasts of Russia, prepared by the Arctic Institute, shows coal at 73 points, peat in fair quantity, gold and graphite at 26 points on the Chutkotsk Peninsula, lead and zinc on Vaigach Island, copper on Novaya-Zemlya, and iron and sulphite at other localities.

Recent newspaper articles have quoted prominent Russian officials as saying that the Russians had large reserves of men, materials, and factories behind Moscow and even behind the Ural Mountains and that her armies could retire again and again, and still be supplied with war matériel. Information on the exact location of these matériel and manufacturing facilities is not available, but it appears that the abundant resources of the Arctic region have been made available by waterways, which have supplied and will continue to supply the raw materials for military operations.

The partially completed plan for connecting Moscow with five seas has resulted in a network of waterway transportation behind military defensive lines, suitable for military supply, something like the waterway system in Germany. Moscow is connected with the Baltic by the Volga Canal, with the Arctic Ocean by Volga and White Sea Canals, with the Caspian Sea by Volga Canal and River, and has been or is to be connected with the Black and Azov Seas by the Volga and Don Canals. Thus outlying regions of timber, minerals, and other resources are connected with the interior and central manufacturing centers of Russia.

It is comparatively easy to put a railroad out of operation. One bomb hit on one bridge stops operations. A natural waterway can hardly be damaged at all by military operations and even an improved waterway is difficult to put out of operation. One barge tow on a river carries the tonnage carried by 10 freight trains. And a canal or a river can accommodate a great deal more tonnage than a railroad. Naturally countries in Europe, where wars are continually being prepared for or being waged, give prime consideration to the improvements of their waterways, and Russia appears to have attended to and to be attending to the maintenance and improvement of her inland waterways.

Poll Taxes

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1941

EDITORIALS FROM VARIOUS NEWSPAPERS

Mr. GEYER of California. Mr. Speaker, the demand for the repeal of the poll tax as a prerequisite to voting is growing by leaps and bounds throughout the United States. All over the country people are realizing that it is more than just a local matter. They are beginning to realize that the votes of those from districts that need not concern themselves with the rights of certain groups are affecting the entire Nation.

It will be noted that the following editorials represent many sections of the country and that one or two of them show conclusively that the bill that I have introduced, providing for the repeal of this tax, is constitutional:

[From the Nashville Tennesseean of July 17, 1941]

MASSES HOKUM

Our esteemed contemporary, the Daily Herald, of Columbia, pleased that the Maury County court again has failed to remove the county poll tax, regrets that the court "skirted a proposal to force collection of the tax."

The Herald should and must know that all county courts faint at the very thought of enforcing collection of this tax, and whether that is because the courts know, better than the Herald, just how much this tax is despised by the people or because the courts, like the Herald, are quite content that the majority of the people should have no vote, the Herald, of course, also knows.

The Herald advocates collection of the tax, but will not, we believe, advocate this too strongly—since nothing would bring about the erasure of this despicable levy from our tax books (and probably the separation of the administration that ordered it from the public pay roll) more promptly and surely than real enforcement of its collection.

In Maury, as in the 94 other Tennessee counties, the great majority of those against whom the tax is assessed never pay it. In Maury, as throughout the State, the vast majority of the people never vote—though our Constitution rightly calls the suffrage a right, and there can be no democracy where at least a majority of the people are not free to exercise the right.

The Herald is confident that if the Maury magistrates could be prevailed upon to enforce payment "Maury County could prove to all the world that the poll tax is not only a fair tax, but can be collected." This, besides being a large if, and a confession of the actual futility of the tax, doesn't make sense—since when in the history of the world was the fairness of any tax demonstrated by the simple ability of the taxing agency to gather it in?

Says the Herald:

"Each year our constables (and those in other counties) take solemn oath that they have been on the property of each delinquent as to poll taxes and found there no property

on which to levy. *They know and all know this is not so.*"

The italics are ours. The perjurers obviously are all the constables in all the counties. And the cravens and scofflaws, it is equally obvious, are those of us who recognize this perjury and this utter and general disregard of a law, even so shameful and antidemocratic a law as that which imposes the poll tax as a prerequisite to the vote, and do nothing about it.

The Tennessean, we like to feel, is doing something. We are trying, and shall not desist, to procure the extermination of the poll-tax law and relief for the supposedly free-born people of Tennessee from the hideous situation of arrant tax-avoidance and official dishonesty so aptly described by our contemporary, and so certainly the effect of the kind of a tax the poll tax is.

The Herald calls this attitude "catering to the masses." We accept the soft impeachment. We refuse to draw a line between the masses and the people. We believe in the right of the people to vote as we believe in the principles upon which our Nation is founded, the principles which alone distinguish a government of, by, and for the people from all the forms of tyranny and authoritarianism that strut the globe.

The Herald calls this attitude "feeding the masses hokum." Let the definition rest with the common sense of all Tennesseans.

It definitely is not hay that there has not been in Tennessee a State or national election by popular majority in upward of 20 years.

Kill the poll tax.

[From the Newark (N. J.) Evening News of July 7, 1941]

FIGHT ON POLL TAX

Before another general election payment of a poll tax as a prerequisite to voting for candidates for Federal office will probably have been outlawed by the Congress in the eight Southern States where the imposition of such a tax still obtains. Hearings will shortly be held by a Senate judiciary subcommittee on a bill to prohibit such restriction. Once passed—and there is no question that it will pass—there will be an end to the means effectively employed for so long to keep the South solid.

Campaigns for State repeal of the tax have been made by such organizations as the Southern Conference for Human Welfare, the Southern Electoral Reform League, and southern branches of the Congress of Industrial Organizations. They have argued that the poll tax is contrary to the fundamental principles of democracy in that it disenfranchises large groups of citizens. In recent years these efforts have been successful in North Carolina, Louisiana, and Florida, where large increases in the numbers of voters immediately resulted.

Those States that have stood against repeal will doubtless put up a fight against Federal action. Already the shibboleth of invasion of States' rights has been raised. It indicates, however, that some southern Members of the Congress have not yet grasped the significance of a decision by the Supreme Court of the United States 6 weeks ago. That decision, reversing a doctine established 20 years earlier, asserted the congressional power to regulate primaries for the nomination of Federal office candidates. Its application to the States' rights issue is found in these words of the opinion by the new Chief Justice:

"While, in a loose sense, the right to vote for representatives in Congress is sometimes spoken of as a right derived from the States, this statement is true only in the sense that the States are authorized by the Constitution to legislate on the subject * * * to the extent that Congress has not restricted State action by the exercise of its powers to regulate elections * * * and its more general powers * * * 'to make all laws which shall be necessary and proper for carrying into execution the foregoing powers.'"

The language admits of no doubt as to its intent and scope. Clearly, if the Congress decrees that voters for Federal candidates shall not be required to pay a poll tax, the States have no alternative.

[From the Portland (Oreg.) Oregonian of July 16, 1941]

POLL-TAX SCANDALS

Only an interest in the cause of clean politics elsewhere will be felt by Oregonians in the indicated renewal of pressure in Congress for enactment of the anti-poll-tax bill. It has no bearing on this State. The bill will not be directed at poll taxes per se, but to making poll-tax payment a prerequisite for voting in Federal elections.

Oregon abolished poll taxes by constitutional amendment adopted in 1910, and while possession of a poll-tax receipt was never a voting qualification, collection of the tax had had some scandalous aspects. The original purpose to use the head-tax principle for county road building was in early days rather generally observed. The tax could be worked out on the roads and in rural communities; that was the common procedure. Even that fell into disuse, and the unpopularity of the tax resulted in enforcement of collections directed at those deemed safe from the political standpoint to crack down on.

Chinese laborers became chief victims, and it was charged that deputy sheriffs who made poll-tax round-ups of Chinamen often pocketed the taxes they paid. Sheriffs were on a fee basis and they got their bit of poll taxes turned in. The Chinese learned to demand "chuck-chee," or receipt, which they could show to foreclose another collection from them in the same year, if they moved to jobs in other counties. Devices were employed to get the chuck-chees away from them in order to soak them again.

The poll tax was in such disrepute that when, in 1910, its constitutional prohibition was offered as bait for a measure granting county option in taxation, the measure was readily passed, to be amended in the next year so as to retain the poll tax inhibition but repeal county tax option.

Payment of poll tax as a voting prerequisite is in force in eight Southern States. It is employed in part to suppress Negro voting and in part as a political-machine device for controlling elections. In some States the tax is cumulative as a voting prerequisite. In Georgia it might cost a tax delinquent $47.47 to vote; in Alabama $36. A time limit for payment prior to election, which runs as high as 6 months, induces forgetfulness among white voters. The tax collector, by reminding those who are "right" with his political crowd, and by predating receipts, becomes a power in his factional machine. Though payment of poll tax in behalf of others is prohibited, it is frequently resorted to in block proportions.

The poll-tax States are not without their own electoral reform organizations, but congressional action is in general opposed by Southern political leaders.

[From the Buffalo (N. Y.) Courier-Express of July 13, 1941]

BAN ON POLL TAXES

Hearings are shortly to be opened by a Senate judiciary subcommittee, under the chairmanship of Senator NORRIS, on a new bill to prohibit collection of poll taxes as a prerequisite to voting in Federal elections. The bill was introduced by Senator PEPPER, often an administration spokesman, after a conference at the White House. It is expected to have administration support when pressed for enactment after a short midsummer recess of Congress.

Poll taxes were once collected by virtually all States of the American Union, but are now retained in only eight States of the South—Alabama, Arkansas, Georgia, Mississippi, South Carolina, Tennessee, Texas, and Virginia. Originally, the imposition of a poll tax was employed as a means of extending the franchise. During the early years of the Republic, when a poll tax was substituted for ownership of land as a qualification for voting, exercise of the ballot was extended to hundreds of thousands of citizens to whom it had previously been denied. Massachusetts held to its poll tax until 1892 and Pennsylvania until 1933, but in all of the Southern States, except Georgia, poll taxes had been repealed by the end of the Civil War.

It was not until after Reconstruction that poll taxes as a qualification for voting were reinstituted in the South, with the frankly stated purpose of disfranchising Negro voters. That they have worked effectively to this end is clearly shown by the testimony of all observers of southern elections and by the relatively small proportions of the adult population casting ballots in primaries and general elections in the poll-tax States. In North Carolina, Louisiana, and Florida, where poll taxes have been repealed during recent years, there have been large increases in the numbers of qualified voters.

[From the Louisville (Ky.) Courier-Journal of June 28, 1941]

HOW A ONE-PARTY SYSTEM OPERATES

It is mathematically possible for the 211,000 Texas Republicans who supported Willkie to elect a United States Senator today, though it is politically impossible, more the pity. A Republican victory would be a blessing in the form of a lesson to the whole one-party South, where the poll-tax qualification for suffrage, plus committee-controlled primaries, perpetuates minority rule.

There are, according to latest reports, 27 candidates in the Texas free-for-all special election to fill the vacancy caused by the death of the late Senator Morris Sheppard, 24 of them Democrats. That makes one candidate for every 30,000 of eligible Democratic voters. Even though no such division of the Democratic vote is in prospect, the possibility is a significant reflection on the effect of a vicious system in a State whose white voters alone exceed Kentucky's entire population, but which seldom casts as large a vote as Kentucky habitually casts.

Georgia, another poll-tax State, presented a striking illustration of minority rule at a special election on constitutional amendments, June 3. Only 60,000 Georgians, approximately, bothered to vote at all, and the election triumphed by a relatively small majority. Georgia's basic law, thus, was changed by fewer than 2 percent of its citizens.

We need not dwell upon the seriousness of subjecting our organic law to alteration at the will of so small a fraction of the electorate. We can only be thankful that the Bill of Rights is beyond the reach of a one-party system as it is maintained in most deep-south States, where the vote steadily declines while the population increases.

Although Georgia's population is 300,000 larger than Kentucky's its registered voters number only 540,401, of whom 280,000 participated in the last State election, as compared to 815,538 in Kentucky. And Georgia primary returns refute the explanation that, since the Democratic nomination is equivalent to the election, the voters are interested in the primary. They are not. Gov. Keen Johnson, who was nominated by a plurality of 33,000, received more votes in the 1939 primary than were cast for all the candidates in Georgia's last Democratic State primary.

The system in the poll-tax States discourages citizens from qualifying. Primaries are conducted by the party organization. Evidently, to an increasing number of citizens, a poll-tax receipt isn't worth the price for the privilege of casting a vote against an organization which counts the ballots.

We might add that the theoretically elite electorates of Commonwealths which exclude the masses from the polls haven't distinguished themselves by the superiority of their selections. We offer in evidence Governors "Pa" and "Ma" Ferguson, and the incumbent, "Pass-the-Biscuits" O'Daniel, of Texas, as well as Georgia's reelected chief executive, Gene (Suspenders) Talmadge, who seems to be about to purge Georgia's universities of "furrin' professors" to make places for home talent.

[From the Fresno (Calif.) Bee of July 11, 1941]

POLL TAX SURVIVES IN ONLY EIGHT UNITED STATES STATES

The poll tax once was almost universal in the American Union; it survives in only eight States, Alabama, Arkansas, Georgia, Mississippi, South Carolina, Tennessee, Texas, and Virginia.

And in these States it is retained not primarily as a revenue-raising device but rather for the purpose of disfranchising large numbers of voters, particularly the Negroes.

A swift glance at the actual number of votes cast in these States proves the poll-tax requirement has reduced drastically the actual balloting. Moreover, in North Carolina, Louisiana, and Florida the abolition of the poll tax was followed immediately by a large increase in the number of registered voters.

As to the practical evils inherent in the system, the Editorial Research Reports of Washington gives this illuminating sidelight:

"The political machine profits both from a small electorate which can be more readily watched and manipulated and from the direct advantage which the poll-tax system gives to those who are in control of the machinery of government. In the large cities it is customary for the machine to keep a number of poll taxes constantly paid up. If the persons in whose names the payments are made have died or moved away, others can be found to impersonate them at the polls.

"In the counties, if any officeholder is in danger of losing his post, the whole group can pool their resources to pay up enough taxes to insure him a majority of the electors. The tax collector becomes a key man in the system, for he can keep his faction informed of the tax status of his supporters and opponents, can assist his political friends to pay their taxes on time, or can antedate the tax receipts of those who may be dilatory.

"To the candidates he favors, the tax collector can offer advantageous terms of tax settlement, omitting penalties and interest for their followers, or even giving credit for taxes to a list of voters which the candidate hands in to his office. This manipulation in administration of the tax sometimes results in disfranchisement of substantial citizens as well as of Negroes and others in low-income groups."

The Southern Conference for Human Welfare, the Southern Electoral Reform League, and other progressive organizations in Dixie are working to erase all poll-tax laws from the statute books.

And the Federal Government also may take a hand in the fight.

The Senate Judiciary Committee is shortly to begin hearings on a bill by Senator PEPPER, of Florida, to prohibit the collection of poll taxes as a requisite for voting in Federal elections.

This at least would protect the voting rights of the citizens of poll-tax States in the selection of presidential electors and Congressmen.

Best of all, however, would be the awakening of public sentiment throughout the South to such an extent that the eight offending States finally would join the other 40 in making an end to the whole poll-tax system.

Any sort of property requirement for voting is thoroughly abhorrent to the best traditions of our American democracy.

Observations by Maj. Gen. William C. Rivers, United States Army, Retired

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

LETTER TO HON. JAMES E. VAN ZANDT, OF PENNSYLVANIA

Mr. VAN ZANDT. Mr. Speaker, the following letter received from Maj. Gen. William C. Rivers, United States Army, retired, gives his views on methods used in the promotion of Army officers.

The letter is as follows:

NEW YORK, N. Y., *July 28, 1941.*

To the Honorable JAMES E. VAN ZANDT,
The House of Congress, Washington, D. C.

DEAR SIR: The CONGRESSIONAL RECORD reports the passage by Congress of Senate Joint Resolution 88 to strengthen the common defense by suspending section 24b of the National Defense Act during the emergency and authorizing a more expeditious procedure to vitalize the active list of the officers of our Army.

It has long been a major tragedy—and a cause of much loss to the Nation—that we promote the average Army officers, the good officers and the lesser number of superior officers, by the routine method of seniority up to the grade of colonel. When we are at war we do promote all the Army officers by selection.

Promotion by seniority demands that in the confusion of preparing for battle we are compelled to experiment with our Army officers, particularly with the general officers, in the effort to place the more competent officers in the more responsible positions. This experimentation and weeding out the incompetent officers should be done gradually and thoroughly in time of peace. The press has been announcing the names of many general officers who are to be relieved of commands they have had for months in order that these generals may be replaced by more competent and as a rule by younger general officers

This system of experimenting with our Army officers, while we are in emergency preparations for possible war, has in the past produced much confusion and some almost unbelievable results. It inevitably delays and mars the early training of a number of units of the new Army.

All the navies of the world have a selection system for promoting naval officers. All the armies of the world, save only our own Army, use the selection system in advancing army officers. Gen. George C. Marshall, the Army Chief of Staff, is reported by the press as having just stated to the Military Affairs Committee of the Senate that he would prefer a selection system for promoting our Army officers. Gen. Douglas MacArthur said, in one of his annual reports as Chief of Staff, "The main disadvantage of the seniority method is its tendency to discourage initiative and enterprise among young officers of ability." The Newton D. Baker Board on Army Aviation reported, "There should be adopted for the Army a system of selection similar to that now provided for the Navy and the Marine Corps."

The Army efforts in the past to eliminate the incompetent officers have failed. This is only natural; save during a great emergency, boards composed of members of the Army, or of members of any Government bureau, will lack the determination and the courage to eliminate a number of their own comrades each year. Procedure by elimination is a negative measure. Promotion by selection is a positive measure, and it has the powerful element of competition—an element of great value to the State and to the taxpayers.

Our plan of habitually assigning the higher Army officers on an experimental basis at the beginning of an emergency produces some extraordinary results. I recollect training a regiment that I fought in all our major battles in France in a great southern camp. The routine inspections of officers of the inspector general's department caused the removal of all four of the generals in that camp. Two were West Point graduates with long service in the Army. My small command was the only unit sent to France. I went into battle at Chateau-Thierry without a field officer. The War Department had sent me four lieutenant colonels and majors. I had never met any of them. But I had to send each one in turn away, after weeks of effort, failing to secure from them average energy, speed, and power—force of action. The major tragedy of the event was the disappointment of the 20,000 drafted men in the camp. The command was turned into a replacement unit—with no chance to go to France as a division. The fighting power of my men was such that I was made a brigadier general. On going some distance to my three regiments of my new command, I made at once thorough inspection as to their methods and fighting power. I had to send two of the three colonels to the rear. One of the two was a West Pointer with long service in the Regular Army.

We fought behind the lines of British and French troops at first. After the disaster of Bull Run, Mr. Lincoln had ample time to rebuild his new army. He had the greater resources and factories. He had most of the small number of officers of the old Regular Army—and he had 73 percent of the living West Point men who fought in both northern and southern armies. However, we shall now be compelled to maintain a larger military force in time of peace than heretofore.

It is mandatory for the safety of the United States that we have a better Army than we have had in peacetime. The most necessary thing for that is promotion for all officers by selection. Let the privates of the drafted men and all others have the freest chance for promotion for superior work in the training. The two routine objections to promotion by selection are both childish and also inaccurate. They are that the men we see doing well in peace may not do well in war. And that there is injustice in promotions by selection. Indeed there is great injustice in promotion by seniority—the injustice to the able officers with power, force, and initiative and the continuing injustice to the people of the United States. The officers we see doing well in peace are as a general rule the very men who excell in war—they are prepared for war.

A study of the battle of Crete shows that successful Army officers must in the future be men possessing greater and greater qualities of personal initiative and resourcefulness. The capture of Crete in a few days, under the circumstances, was an epoch-making event in warfare. It was the most marked event since the introduction of gunpowder. Britain controlled the sea. But the British were unable to prevent large German forces from being ferried by air across the sea and landing on the island of Crete. This notwithstanding the fact that Britain gallantly sacrificed in the fighting several powerful destroyers and cruisers. The British were in possession of Crete. They had an army there, with defended positions, artillery, tanks, and other heavy equipment. The Germans took Crete without artillery and tanks and other such special equipment. They ferried to Crete thousands of armed infantry soldiers in transport planes and in gliders. The German dive bombers acted in the place of artillery and tanks in the battle, to aid in defeating the British forces on Crete.

German air power in Crete demonstrated the fact that the air forces can now hold as well as seize positions; that air forces are not simply auxiliary to the older arms—as many have long asserted.

Yours faithfully,

WILLIAM C. RIVERS,
Major General, United States Army, Retired.

"I Think America Is Swell," Says Fred Gong, an Oregon Chinese Boy, and Ranks First in a Contest With 1,600,000 American Students

---

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

ARTICLE FROM THE SUNDAY OREGONIAN OF JULY 27, 1941

Mr. ANGELL. Mr. Speaker, the melting pot of America is still at work producing young Americans who will carry on and continue to hold aloft the standards we have erected here in this land of freedom in 150 years of progress. This is strikingly brought to our attention by the achievement of a young American of my district, Fred Gong, born of Chinese parentage and recently given the first award in the fourth annual American Magazine youth forum competition. The award was the unanimous decision of the judges who studied the 655,898 articles, paintings, and drawings submitted by America's high-school and preparatory-school students. This represented 1,600,000 students throughout the United States. The prize-winning picture, drawn by this young Oregonian student, is entitled "What My Community Contributes to the Nation," and depicts the scenes of the early Oregon pioneers crossing the plains in their covered wagons drawn by ox teams and the achievements they and their successors have wrought in the Oregon country in lumber, fishing, agriculture, manufacturing, and the harnessing of the great waterways, so as to release to the whole Northwest territory the never ending hydroelectric energy, turning the wheels of industry and lighting the homes of these thriving communities.

The accomplishments of this young man restores and renews our faith in democracy, and gives us renewed energy and vision to press forward in our endeavors to preserve our American way of life and to protect it from invasion by the ideologies of the Old World. We want to continue to preserve America as a haven for those of all faiths who love liberty and want to live under the protection of the Stars and Stripes. The brilliant achievement of this young man of Chinese blood will strengthen our desire to give increased help to the courageous Chinese people in their heroic fight to preserve their own country and beat off the Japanese invaders who seek to subject them to slavery or death.

Mr. Speaker, America will be safe in the hands of young Americans such as Fred Gong. As one of the judges of this contest said:

What impresses me most about the competition is the unanimous conviction among the younger generation that our way of life can and must be preserved. To me this is positive proof that there are no bottlenecks in the production line of the arsenal of young democracy.

Under leave heretofore granted, I include as part of my remarks an article written by this young American, describing his journey across the United States, which was made possible as a part of the award for his achievement. I also include a short biographical statement of this Chinese family and the boy who has performed this outstanding achievement. These articles appeared in the Sunday Oregonian under date of July 27, 1941, and are as follows:

[From the Sunday Oregonian, Portland, Oreg., July 27, 1941]

I THINK AMERICA IS SWELL—A CONFESSION OF FAITH FROM FREDDIE GONG (A VERY HAPPY YOUNG MAN OF PORTLAND, OREG.)

(By Fred Gong)

In two and a half wonderful weeks I traveled from Portland to the tip of Cape Cod, where America's artists have found a paradise among the fishermen of New England. I saw Chicago, Washington, New York, and Boston, and besides the cities I saw the mountains, and fields, and prairies that shape America.

Maybe it's because I am young that everything was thrilling. Sometimes I wonder whether, if I were older, it would have been possible to enjoy America as much, or whether such a feeling as mine must be explained as a byproduct of one's teens.

However you explain it, America to me was all a marvelous adventure, an experience you see and feel more easily than you tell. On the train I tried to put some of my feeling into drawings. My art teacher, Miss Ruth Halvorsen, of Lincoln High School, accompanied me on the trip, also as a guest of the American magazine, and we sketched with water colors whenever there was time throughout the trip.

Riding on the train, we sketched the powerful brown mountains of the Rocky range, and the prairies of Wyoming, where herds of white-faced cattle graze on the rolling landscape. We really saw cowboys, too. If I were a cowboy in Wyoming, I know how I'd feel—it's a place where you seem to rule the world. You feel you are very high up and the land is very far down.

In Chicago, we saw the Art Institute and all its masterpieces. The Institute and the National Museum in Washington, and the fine museums in New York City opened my eyes to the artistic wealth of America. I had always thought the great paintings were kept in Europe, but scores of them are here.

In Washington, we saw the Capitol, the Congressional Library, Washington's and Lincoln's Monuments, General Lee's Home at Arlington, and Mount Vernon, where George Washington lived and died. And from Washington we continued on to New York.

New York—with its skyscrapers and subways, its theaters and hotels, its stock exchange and the long green island called Central Park—holds the finest things man has made. But we saw the lower East River section, too, and it seemed to me New York has the most of the worst, as well as most of the best.

On our trip to Boston and Provincetown, Miss Halvorsen was the guide. I want to go back to Provincetown some day. The colors jumped up like nothing I had ever seen—the water was never so blue, the sand never had so many colors—yellow, ochre, orange, green, Prussian blue.

On the boat returning from Provincetown to Boston, someone heard I had won the American's $1,000 art prize, and I had to make a speech from the bandstand and autograph all copies of the magazine on the boat.

How this could have happened to me, I cannot explain. I only know I think America is swell—it's wonderful.

SO THE FAMILY STAYED IN OREGON—AND FREDDIE WENT TO NEW YORK

The American public likes to have its decisions vindicated now and then—and vindication never came more agreeably than in the case of the Portland Chinese-American family which thousands of citizens have come to know simply, almost affectionately, as "the Gongs."

The Gongs—Fred Gong and his wife, May; their Mexican-born son Henry, 20; and their four American-born children, Fred, 18; Betty, 16; Peter, 14; and Michael, 4—are living useful American lives today because the public came to their rescue 2½ years ago.

Chinese-born, Mr. and Mrs. Gong entered the United States from Mexico in 1922 with their first child, Henry, then 1 year old. They remained after forfeiting $3,000 bond, and 14 years later the father, mother, and son Henry were arrested in Portland on a charge of illegal entry into the United States. By that time there were three more children, American-born, and a baby was on the way.

After 2 years of delay, the case came to a head in 1938, and the crux of the public's concern was this: Should a family with four young American citizens in its ranks be split by a deportation action, or packed off in whole or in part to China, when that land was under Japanese invasion? The public's answer was "No."

So effectively did Portlanders protest that the deportation action was dropped, and the Gongs permitted to remain.

Since that time, son Henry has distinguished himself annually by winning scholarships at Albany College. Daughter Betty has been praised as a pianist.

Now, son Freddie has established himself as the best high-school artist in America. In June he was named winner of the American Magazine Youth Art Forum's $1,000 first award for his oil painting, reproduced above, showing the contributions of the Oregon country to the Nation. In addition to the

$1,000, he was taken to New York City as a guest of the magazine, and he tells about his trip in the story at the top of this page.

With his prize, Freddie Gong plans to pursue his art studies. Those who have watched his progress since the days when, as a 4-year-old, he returned home from the zoo and drew pictures of the animals on the sidewalk in front of his father's barber shop, believe that the young artist's career will be a great one.

And those who went to the rescue of the Gongs 9 years ago are prouder now than ever that, unknowingly, they contributed handsomely to the artistic wealth of young America by the kindly act of saving one family from disruption and perhaps disaster.

War in Heaven Again

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

ARTICLE FROM THE CHRISTIAN CENTURY

Mr. MUNDT. Mr. Speaker, under leave to extend my remarks, I take this opportunity of calling to the attention of the country and the Congress the following pointed parable from the Christian Century for July 23, 1941. Its author, Rev. John Haynes Holmes, is one of the distinguished clergymen of America, there being 45 lines devoted to his activities and accomplishments in the current volume of Who's Who in America.

[From the Christian Century of July 23, 1941]

WAR IN HEAVEN AGAIN—A PARABLE

(By John Haynes Holmes)

Now the war in heaven had ended with a victory for Michael and his angels; and Satan and all his hosts had been cast into hell.

But Satan was not content with hell and wanted to get back into heaven again. So he plotted and planned another war. Only he doubted Beelzebub, lest Beelzebub turn against him when he was engaged with Michael and his angels and gain the headship of hell. So he took Beelzebub into his confidence and talked with him about his purposes and besought his aid. And Beelzebub consented. And behold, Satan and Beelzebub signed a nonaggression pact. * * *

And the war came and raged a year and 9 months, and Satan won great victories over Michael. But Beelzebub helped not in the fight, but watched Satan and took advantage of him and profited greatly in his own interest. And Satan distrusted Beelzebub the more, and suspected that he had in Beelzebub a jealous rival, and therefore a foe who would rise against him when he was locked in final combat with Michael.

So Satan pondered the problem and took counsel with his infernal ministers and captains. And these ministers and captains also did distrust Beelzebub and advised attack upon him, that he be destroyed. Then would Satan be free to fight and destroy Michael and win again his place in heaven. And Satan agreed and turned all his minions against Beelzebub. And Beelzebub marshaled all his deadly hosts against Satan. And there was war in hell. * * *

Now, when Michael saw this he was glad. And he mounted the ramparts of heaven and lifted a shout. And he hailed Beelzebub as his brother in arms, and promised him aid and comfort in his battle against Satan. He said he took back nothing of all that he had said against Beelzebub; but, he added, "We have but one aim and one single irrevocable purpose. We have resolved to destroy Satan. * * * Any demon who fights Satan will have our aid. Any demon who fights with Satan is our foe." And he sent a celestial commission into hell to confer with Beelzebub and to join hand and heart with him.

And Michael went to God and told the Most High what he had done. And he said, "Behold, O God, Beelzebub is now our friend. We beg that he be received among us and be crowned with light and be given Thine own sword. For this is a holy war, and those are holy who fight against our foe."

And God laughed.

St. Lawrence Seaway Not a Defense Project

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

RADIO ADDRESS OF HON. WALTER C. PLOESER, OF MISSOURI

Mr. PLOESER. Mr. Speaker, it was my privilege to address the Nation on the subject of the St. Lawrence seaway project over the Columbia Broadcasting System on Saturday, July 26. The following are my remarks:

It has been my privilege on two prior occasions to speak to the American people on various phases of the Great Lakes-St. Lawrence seaway project—once, concerning the treaty history, and once, concerning the detrimental economic effect. Only very briefly have I mentioned anything in regard to the argument being advanced that this is a defense project.

There is an attempt to build in the public mind the false opinion that the St. Lawrence seaway was a defense measure.

Very few people have the privilege to come to Washington and listen to the committee hearings on legislation. The press, restricted by a need for brevity, is unable to get the entire story before the people.

Tonight my purpose is to convince you that the St. Lawrence seaway is not a defense measure. I shall comment briefly on some of the statements of the people advocating the project in the name of defense. By their own statements you and I will be able to judge the truth of this defense claim. You will agree with me that the term "defense" in connection with the St. Lawrence seaway project is but an excuse. It is a pity that at a time like this when the Nation is so heavily burdened with the costs of actual and true defense work that anyone should attempt to foist this additional burden upon the American taxpayer.

For the benefit of those who are not acquainted with the project, I explain. At the present time, the Rivers and Harbors Committee of the House of Representatives in the Congress of the United States is considering a bill which would approve and authorize an agreement between the Government of the United States and the Government of the Dominion of Canada. This agreement calls for the building of the St. Lawrence seaway and power project. According to our Constitution, the agreement is really a treaty and should have been submitted to the United States Senate for ratification. This constitutional method has failed once before during this administration. Feeling that it would not be possible to secure the constitutional two-thirds vote needed in the Senate, the devious method of presenting the treaty as an agreement is being used in the hope of obtaining congressional approval by a simple majority vote of both Houses.

The Great Lakes-St. Lawrence seaway and power project is a plan to open the Great Lakes to ocean traffic and international trade by creating a 27-foot channel through the Lakes and rivers from Lake Superior to the mouth of the St. Lawrence River in Canada. It includes the building of a power dam. The authority sought from Congress would authorize the President to transfer the power produced to the State of New York. The cost, which, of course, would be borne by the taxpayers of the Nation, is estimated by the proponents at approximately $266,000,000. To make the deepened channel usable, it will also be necessary for the Government to deepen many important harbors in the Great Lakes. No estimates are being advanced by the administration for this harbor work, but conservative technicians believe that such necessary work will run the total cost to an amount in excess of $1,000,000,000.

During the last few weeks the Rivers and Harbors Committee of the House of Representatives has been holding public hearings on this St. Lawrence subject. The purposes of the seaway are twofold; first, the development of ocean navigation into the Great Lakes; second, the development of a power dam for the production of electric power. I have strongly opposed the navigation part of the project because of its injury to the Nation from an economic standpoint. The two interests are so joined together at the present time so as to be almost inseparable. I am opposing the power project at this time because of the need of speed in the development of electric energy for defense.

The proponents say it is national defense. The facts, however, are a glaring contradiction to all of the arguments advanced in behalf of the project as a defense measure.

Only a novice would be foolhardy enough at this time to predict the ultimate disposal of the issues involved. They are so numerous and so vitally important that years may be consumed in their final determination. The project itself involves not only questions of international law and international rights, but it also involves questions of sovereignty and the rights of the Federal Government under the general welfare clause of the Federal Constitution. This issue is nonpartisan. The ratification of the agreement is being urged by the powerful forces of the administration, by the Governor of New York, and by a few friends of free trade and economic internationalism throughout the Nation. Oddly enough, among many others, it is being opposed by men in the shipping industry on the Great Lakes, who see in the building of a deep waterway to the ocean the end of American supremacy on the fresh-water seas of the continent.

Is this Great Lakes-St. Lawrence seaway a defense measure? I say it is not. If it is not, then we certainly cannot afford it at this time. If it is not, then we would be foolhardy to waste time on the project when time is so important. In spite of all of the promises of the administration to cut to the bone all nondefense spending, the administration is already authorized to spend, in the coming year, $88,000,000 more for nondefense expenditures than they spent last year. Whatever might be added by this proposal will be just that much more nondefense spending.

Now, if St. Lawrence is defense, then the two defense aids must be navigation and electric power. If the proponents are to convince us that the project is necessary to defense, two main questions must be answered. These questions are:

First. What defense aid can we obtain which will be immediately beneficial through improved facilities of navigation?

Second. What electric-power facilities can be developed which can be ready for use in defense industry?

The argument from the navigation standpoint has been that when we open the Great Lakes to ocean-going traffic, we can use the shipbuilding facilities of the Great Lakes. Secretary of the Navy Knox testified before the committee that the shipbuilding yards of the Great Lakes are already being used or about to be used to full capacity. Small Navy craft are being built on the Lakes. The deepening of the St. Lawrence channel, therefore, adds no shipbuilding facilities which are not now in good use. We do need more shipways to build ships. But even the inexperienced can readily see that it is much to our immediate advantage to build new shipways on the East or West coasts or the Gulf of Mexico, where they can be used now, without waiting 4 to 8 years before we would be able to get the boats, which are built, into the sea. When I think of building a shipway on the Lakes—then building the ship—then building the deep channel to get the ship out to the ocean where it is to be used, I am reminded of the fellow who built a cabin cruiser in the basement of his home and then had to take the house apart because it was much too big to get through the door.

The President in his message to the Congress on June 5 of this year made a strong plea for the seaway and power project. He used his high office to throw full weight to the statement that this was a necessary defense project. It is unfortunate that this attempt has been made, because it constitutes one more weak link in the chain of nondefense spending attempts. The Nation is continually being told that time is the great factor to be overcome. Time is the most important element and this is, of all times, no time to twist words or purposes. The President said in his message: "The seaway will help prevent transportation bottlenecks. It will increase our capacity to build ships." As a matter of fact, if additional shipbuilding facilities for larger ships are to be had on the Great Lakes they must be built. Therefore, no bottleneck is to be relieved that cannot more conveniently be remedied on the coast line or the Gulf. Obviously, any such facility built on the Lakes becomes bottlenecked by the lack of a deeper channel. The administration's most promising time for completion is 4 years. Any statement to the contrary is unfortunately misleading. Secretary Knox's testimony before the House committee substantiates my statement.

The President further said: "No comparable power, shipbuilding, and transportation facilities can be made available in the time required to construct this project." The President claims 4 years to build the project. Electric power developed by steam plants, which can be built in 18 months, is certainly comparable power for our defense and more consistent with the Nation's rush for time. Water-power development can go forward more leisurely and more beneficially after the war emergency.

Under the present plan, when the power dam is built, it is the intention of the administration to give it to the State of New York. Governor Lehman, of New York, testified that they believe (or he believes) that it belongs to New York. The taxpayers of the Nation pay for it but the State of New York gets it. This is without precedent. Any power so developed belongs to the people of the Nation and not to any one State. One astounding fact revealed in the hearings came out of the testimony of Lieutenant Governor Poletti, of New York. He testified that the State of New York had created, back in 1931, an agency known as the Power Authority of the State of New York. Since creation this agency has had nothing to do but attempt to sell to the Middle West and others the idea of building the St. Lawrence project. For this purpose the Legislature of New York gave the power authority $1,250,000. New York has money to spend to sell the rest of the Nation a bill of goods, but expects the taxpayers of the entire Nation to pay for the goods.

Now, as I have stated, this Great Lakes-St. Lawrence seaway and power project is to be an agreement between the United States and Canada. The question immediately comes to your mind and mine, Does Canada consider this a necessary defense project? Remember, Canada is at war. Also remember, that the United States is in the midst of a program of all-out aid to Britain and Canada. Canada has therefore a double stake—her own facilities and expenditures for defense or war and her interest in the American lend-lease all-out aid program, which is principally for her benefit as a part of the British Empire.

On March 5 of this year W. L. MacKenzie King, then Secretary of State for External Affairs of the Canadian Government, addressed an appeal to our Minister for a reconsideration of the proposed agreement in the light of the many, many defense needs of Canada and the United States. Couched in very careful diplomatic language, designed not to offend our President, the Canadian secretary sought an "out," because he definitely did not feel that the St. Lawrence project was necessary for defense. From his expressions one can plainly tell that he and his Government, for whom he was speaking, feel that a diversion of energy and money to such a project at this time would be a hindrance rather than a help. I will read very briefly from Mr. King's letter to our Minister on the subject of the St. Lawrence agreement.

Mr. King said: "The growing intensity of the war operations and the apprehension that still more serious perils will have to be faced in the very near future necessitate the most careful examination of any proposed expenditure from the point of view of public need and in the light of war requirements.

"In existing circumstances, the Canadian Government desires to know whether the Government of the United States is of the opinion, in view of the position in Canada, and, of course, the position in the United States as well, that the project as outlined in the State Department's proposals of 1936 and 1938 and under consideration since that time should now be proceeded with."

Remember that Canada realizes that she must not offend us because she is the recipient of our lend-lease program. To Mr. King's letter our Minister gave an insistent reply in the name of the President. The net result is that the whole proposal is before the Congress under the name of defense. It is plainly not a defense matter. It is the duty of the Members of the Congress and of the people who have to pay the bill to defeat this measure. I insist that we must devote our efforts and our resources to real helps for defense and we must not, in any fashion, use "defense" as an excuse to bring about the forced approval of any undertaking which is clearly not a defense project. The Nation now faces the most terrific tax burden in history. The Nation now is struggling under the most staggering and mounting debt in the history of any nation in the world. It is certainly no time to be playing at defense. It is time for us to really work at this job of defense. The administration's duty is to get the job done and not spend its time setting up imaginary bottlenecks or ghost-defense projects. I appeal to you in the interest of your own welfare to urge your Members of the Congress to oppose this waste of fleeting time, manpower, and money. For your interest—for your Nation's interest, oppose the Great Lakes-St. Lawrence seaway.

A Country Editor Speaks the Sentiments of His People

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

Mr. HOFFMAN. Mr. Speaker, from the South Haven (Mich.) Tribune of July 23, 1941, comes the following:

RUSH MATERIALS, BUT KEEP OUR MEN AT HOME

According to authorities, it is the belief of the President that this country can take many a belligerent step without formally becoming a participant in the war. Judging by recent German statements, that belief seems to be well grounded. Hitler's spokesmen denounce the United States and its foreign policy, but they still say that Germany will not be forced into declaring war on us by "overt acts." In short, Hitler's legions are busy now without taking on a new foe.

If Hitler had wished, he could obviously have construed the United States military occupation of Iceland as an act of war. Iceland is less than a thousand miles from Germany, and could be developed into a major air base for use against the Reich.

The reasons for occupying Iceland are clear enough. First, the American occupation has released numbers of Empire troops for service elsewhere—the bulk of them will probably be sent to Africa, where the British have just won a decisive victory over France, and where there are rumors of German action to pull Vichy's well-burnt chestnuts out of the fire.

Second. The American occupation of Iceland makes it possible for us to patrol and dominate the greater part of the Atlantic Ocean. Thus British men-of-war need only to protect the convoys from Iceland to English ports, which involves a distance of about 700 miles.

Third. The American occupation of Iceland has made it clear to the world that, as the President said, we will recognize no fixed geographical boundaries in carrying out our policy of protecting this hemisphere from aggressors. It is the Government's position that the airplane has made all previous ideas of hemispheric defense more or less obsolete, and that our military outposts may be far-flung indeed.

Fourth. The American occupation of Iceland may have been designed as a move to pave the way for future occupation of other foreign possessions, notably Dakar, in French Africa, and the strategic Cape Verde Islands.

Theoretically our Navy is not convoying British shipping. It is simply patrolling the Atlantic. In actuality, many authorities believe, there is little difference between a convoy and a patrol. It has been announced that an American destroyer dropped depth charges over a German submarine. And American fighting ships are at sea now, warning the British whenever they come on a Nazi raider. The American Navy, in other words, is pretty much in the war.

Furthermore, American aid, though many still feel that it is not great enough, is becoming a real factor in the conflict. Some of the great bombers which have been blasting away at German-occupied areas on the

continent, are of American make. British dreams of air equality and eventual air superiority have not yet been realized, but they are coming closer to actuality. And at this time, with a large part of the German strength mobilized on the eastern front, British power, relatively speaking, is undoubtedly greater by far than in the past.

The recent statement by a British general to the effect that American manpower will be eventually necessary to lick Hitler, caused much speculation in this country. The British position, as stated by Mr. Churchill, has always been that the Empire needed only materials of war, not men. Whether that position will be changed, remains to be seen. Right now, there would be small chance of Congress authorizing another A. E. F.

We are doing enough to furnish materials—let's keep our boys home for our own defense.

Mr. Speaker, the thought expressed in the last line of this editorial, "Let's keep our boys home for our own defense" is but common sense.

Even the most casual student, the most unobservant of international affairs knows that the sending of an American Expeditionary Force for the invasion of Germany and the maintenance of that force across the sea is an impossible task.

Roosevelt's plan of sending the marines, the armed forces, of the Navy or of the Army into foreign lands and then calling for this Government to send an expeditionary force to back them up, is but an underhanded, despicable way of evading the Constitution, usurping the right of Congress to declare war, of dragging America to the slaughter house of Europe.

Congress should have foresight and knowledge enough to know that if Hitler threatens us, our forces should not be dissipated, we should not get into positions which are impossible of defense; that we should prepare to defend ourselves on the battlefields and in the waters where a successful defense can be made.

American Cannon Fodder

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1941

Mr. HOFFMAN. Mr. Speaker, we have plenty of young men who are suitable and could be used for cannon fodder but why have them shot, bombed, murdered to settle a quarrel between European nations? Why not keep American cannon fodder for national defense?

Note the editorial which reads as follows:

Gen. Sir Claude Auchinleck, the new commander in chief of the British Army in the middle east, says that American manpower will be needed if the war is to be won properly.

"I've always thought the war must be won in Europe," he told correspondents in Cairo, "in Germany, on Germany's own soil. Therefore, I see as much need for American manpower in this war as in the last." Gen. Sir Archibald P. Wavell, whom General Sir Claude succeeded, was of the same opinion. Neither has fought on Germany's own soil. No British land force has been close to it and none has been on it as the war rounds out its second year. American manpower is to break into it and storm Berlin.

The British generals talk of American manpower and mean cannon fodder. Manpower is a gentler word. The British are waiting until the youth of this country, millions of young men, have been conscripted into military service, and trained or untrained, can be carried across seas to be thrown in masses against the German war machine to be blown to bits, to fight their way into Berlin and revenge the defeats in Norway, Flanders, Greece, Crete, and Libya.

The British people have been taught to expect this. The British generals demand it. They are presenting an overdue note signed by the cannon-fodder traffickers of this country. It is natural for British generals who have fought their wars with other people's soldiers to have these ideas and make such requisitions. It is not so natural that American society women who collect bundles for Britain should have the same feeling regarding the youth of their country. It is not so natural for war committees, the Aid the Allies, the Fight for Freedom, the Friends of China, and the Union Now, to echo the demands of the British generals.

But all these people are willing, even anxious, to immolate the young men of America on the battlefields of the whole world and to do it now.

Read two British calls for the sacrificing of a million or more American young men.

THE BRITISH CALL FOR OUR ARMY

The Honorable Mr. Wedgwood, M. P., in this country to sell the war and a sideline of crockery, has been a bit more outspoken than smoother British representatives have thought wise. Mr. Wedgwood remarks that we are in the war up to our necks and we'd better get a sensible Congress and get going. "The trouble with you Americans," he said, "is you are afraid to assume responsibility." It is our war, said Mr. Wedgwood.

Mr. Roosevelt has said there can be no peace with Hitler. Mr. Bullitt says this is our war and the people have chosen their course. Mr. McNutt says it has to be our war. Mr. Hull, and Mr. Knox, and Mr. Stimson, and Mr. Ickes say it is our war. The American people have said it is not. If the British Government officials are listening to Mr. Roosevelt and his proxy voices and listening only to them, they may have the idea that the United States is withholding payment on a long overdue promissory note. The American people didn't sign it.

The British generals say that to do the fighting properly and get the desired results Germany must be fought on German territory and annihilated there, which will require an American expeditionary force of millions. The British can keep an invader from getting to the island but they can't throw an expedition on the continent. Their generals and their spokesmen say that there is where the war must be carried, and for that purpose the Americans are needed.

Probably the British can't understand how a government such as Mr. Roosevelt's could exist when it misrepresents so large a majority of the people. They may think that such a government would have to resign. If a British Government tried to take the British people into a war they saw no reason for entering, a war they knew would be the most deadly in which they had ever engaged, that British Government would give way to one which was representative of the people.

The American people apparently must reconcile themselves to being deceived by their executive branch of Government. They look to Congress to represent them and to make good on the pledges Mr. Roosevelt has given the country. He does not intend to abide by his promises but Congress can hold him to them.

Of this much the American people may be certain: When General Wavell and General Auchinleck—incidentally from the occupied lands of India and Egypt—call for our Army, when their call is echoed by Parliamentarian Wedgwood, by the foreign office man Vansittart, and others, they are demanding what they have been promised. They reveal to the United States why Mr. Roosevelt asks authority to hold the men in service and to send them anywhere he wishes.

The British knew the American Army was being raised to fight its way to Berlin. They want it now for the western front while the Russians are still fighting on the eastern. Mr. Wedgwood voices the impatience.

Mr. Roosevelt creates an emergency without an authority of law. He does something to offend a foreign nation and then he calls upon Congress to back him up—then turns to the people and tries to make them believe that Congress is responsible for his wastefulness, for the national bankruptcy he created, for the unemployment he brought about, for the war which we are traveling across the seas to find.

If Congress is to deserve the respect of the people it should unmask the executive branch of the Government and show the people once for all whether this administration believes in constitutional government, in the preservation of the four freedoms here at home; or whether political ambition has obscured its judgment, destroyed its reason, and undermined its patriotism, and is driving us into this war.

America's Duty To Keep Faith With Americans

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

RADIO ADDRESS OF HON. WALTER C. PLOESER, OF MISSOURI

Mr. PLOESER. Mr. Speaker, it was my privilege to address the Missouri Conclave of the Order of DeMolay meeting at Washington University, St. Louis, Mo., July 26, 1941. The address was broadcast over station KSD, St. Louis.

The following are my remarks:

Dad Land, Brother George Doering, and De Molays, when George Doering asked me some weeks ago to attend this Missouri Conclave of the Order of De Molay, for the purpose of speaking to you, I felt that I had been signally honored. Some of you perhaps know that De Molay has been very kind to me throughout the past 19 years.

Honors have been mine in abundance. In the solitude of my most secret thoughts I have often wondered whether I fully deserve such commendation from my brothers or from an organization to which I personally owe so very, very much. Under no circumstance could I have refused George Doering and under no circumstance could I have refused De Molay or Dad Land. This is the first formal speech, not prepared exclusively, for radio, that I have made in Missouri since my induction into the Congress of the United States. I feel inspired by the complimentary invitation you have extended me. I am, indeed, happy to be here.

If I should dare to reminisce, I would say that appearing before a Missouri Conclave of De Molay is quite like a soldier returning to the battleground of the past. Fifteen years ago when I presided over the Missouri conclave, there existed a lot of well-intentioned, good-natured, healthy, and strenuous competition between chapters and ambitious individuals. Times have not changed—or have they? One regret is that I shall not be permitted to stay continuously with you for the 2 days of your sessions.

I take this opportunity to salute the honor and integrity; to salute the tireless effort and tremendous devotion to the service of the young manhood of America which has been demonstrated over all these years by Frank Land, the founder of the Order of De Molay; I salute the George Doerings, the Fred Reinhardts, and all the others who have for long years so conscientiously served their Nation in the work of De Molay. Reverently, I add my humble prayer to the memory of the devoted servants of American youth, who have gone on to the greater and more glorious field of De Molay service, the Wagners, the Marshalls, and the Dulaneys. Their memory is my shrine.

The youth of any nation is the lifeblood of that nation. So it is that every man who serves youth well serves his nation well. The mothers and fathers of the nation are the direct guardians of the nation's future. The principles and ideals which they inculcate into the lives of their children are the direct plans for the future of America. It is the home and the church and the school with which De Molay coordinates its service to youth.

American youth, your tomorrow is being made today. That which your seniors do today will determine what you must do or undo tomorrow. You men—and you are men—will in a few short years assume the full responsibility of citizenship. My constant hope is that we who are today charged with the responsibility and stewardship of that great privilege of American citizenship will not in any way forsake you. If we create new opportunities, you will enjoy them. If we create unusual burdens, you will have to carry them. If every man in business, if every man in the professions, if every man in public office, and if every father and mother of America would only realize that whatever they do today affects your destiny, this could and would always be a land of peace, tranquility, and opportunity.

Sometimes years and ambition cause men and women to forget the days of their youth. Sometimes men in high and low positions alike, in their selfish march for gain and power, are prone to forget that they, too, were once the youth of the land. When men forget their youth, then, too, is the youth of that day forgotten. When such men forget, we have pain and suffering. When such men forget, we have the misdeeds which injure the world. When such men forget their youth, we have war and famine and hunger and misery and death.

Old men do not fight wars. They only plan them. The youth of the Nation seldom ever plan a war. They only fight them.

As a Member of your Congress, I feel a special responsibility today. My incumbent duty seems to me to be to discuss with you the immediate problems of the Nation which affect you—the young men of the Nation.

The Nation today is in the midst of a false boom of prosperity, brought about through the prosecution of our enormous defense program. This boom of prosperity will fool many old heads and young heads alike. As it grows even larger and larger, many will allow themselves to be lulled into a sense of security, which really exists only temporarily. About the time the very youngest of you have reached majority a new crisis will face the American people, and you, the new citizens of the Nation, will be face to face with cold reality.

After the present emergency, regardless of which ultimate course the Nation may take, you in the first years of your independent responsibilities, will be faced with the period of reconstruction. To rebuild the prosperity and happiness of the American people, will be, in a great measure, your direct responsibility. It will be a trying period. May I caution you to remember that—that which is built now, may be built upon sand. That which you build then, must be built on more solid stuff.

You have a right, as American youth, to be dealt with frankly. To me it seems that America's most important duty is to keep faith with Americans. Keeping faith with Americans is fundamental. This means that every person charged with the affairs of this Nation must keep faith with American youth.

The momentous question before all of us today is: Will America go to war? Men in high public positions have promised that we will not. Men in high public positions have promised that American youth will not be sent to fight on foreign soil. This to me, as a Member of the Congress, is a solemn obligation which I have assumed to the youth of America. For my part, I intend to keep that obligation and to do everything in my power to induce other men to keep their similar obligations. I interpret these promises to mean that we will not send an expeditionary force to fight in any foreign war. I interpret other promises not made by me but by my predecessors in the Congress to mean that when the Government makes a contract with American youth, that contract must be kept.

National unity has but one foundation, faith. Faith is destroyed by broken promises. Faith in America grows greater and greater and greater by the demonstration of those in public places to keep their promises. Our faith made firm, our national unity shall be unquestioned, and our defensibility invincible.

You are the strength of America. You must be made stronger and that newer and greater strength must come from renewed faith and allegiance and loyalty.

Rapidly changing world events may, within hours, change the course of America. The essential performance of the Nation today is to build a strong and impregnable defense. Why should we build a strong defense? Is it because we are threatened with attack? No; I do not believe that we are threatened with attack from without. But we must prepare to defend ourselves from the strongest possible enemy, so that no one nation or group of nations will even flirt with the idea of molesting our peace.

If we are to grow strong defensively, the youth of the Nation, who are and always will be the defenders of any nation, must be trained and equipped. To such a program, the youth of America have willingly submitted.

Now, if we make ourselves strong and invincible in a military way, there is no justifiable reason why America should have to become involved in any other nation's shooting war. It may seem odd to some, but for my part I am peculiarly selfish of America for Americans. I am extremely selfish where American youth is concerned.

In our democratic way, as Americans, we cherish the right to disagree, to hold and fight for our own opinions. Certainly, I do not expect everyone to agree with my opinion as to what constitutes the proper course for America today. I do hold that we are not yet at war, and that if we are determined in our course for peace, there is not likely to be any justifiable reason to go to war. Our course, as I see it, is to complete, in every expeditious way we can, the defense of America and preserve right here all of the freedoms which we claim to be American. In this way only can this Nation be the beacon of freedom for the world.

At times I feel the course of man-made events here at home sweeping us on into the maelstrom of world chaos. If this dastardly curse, known as war, should be ours in the near future—and I promse you that I shall fight such a course to the last—with it will come a special challenge to youth. If over the brink, to war we should go, whether by blunder or stupidity, remember Americans, young and old, that this is our Nation. You and I may not agree with the direction, but at all costs, America must be preserved.

The challenge to youth will be to meet the test of the time. You will meet that challenge and conquer it, you always have—you always will. With your unconquered spirit, you will save America and rebuild it into the glory which is hers for the welfare of her people. You will not fail, because you—youth of America—have the indomitable spirit of the pioneer. Forward is your only goal. May that goal be peace and right for our beloved country, but peace or war, right or wrong, our country first and forever.

The Fundamentals of 1776

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

OPEN LETTER TO THE BOARD OF DIRECTORS OF THE AMERICAN COALITION

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the American Coalition:

AMERICAN COALITION,
Washington, D. C. August 1, 1941.

Open letter to the board of directors of the American Coalition:

THE FUNDAMENTALS OF 1776

MY DEAR COMPATRIOTS: Less than 4 weeks ago on the one hundred and sixty-fifth anniversary of our Declaration of Independence, the President said:

"In 1776 we waged war in behalf of the great principle that government should derive its just powers from the consent of the governed."

The question now foremost in the minds of all citizens of our beloved country is this:

Are we going to wage war now with the "consent of the governed" or in defiance of their will?

Upon the answer to that question may well depend the survival of our constitutional, republican form of government created by the men who fought and won the war referred to by the President.

Last Fourth of July the President also said:

"But now, in our generation—in the past few years—a new resistance, in the form of several new practices of tyranny, has been making such headway that the fundamentals of 1776 are being struck down abroad and definitely they are threatened here."

Let us look at these fundamentals of 1776 now threatened here. They are set forth in the Declaration of Independence. Here are a few excerpts and some comments upon their present-day application.

"The history of the present King of Great Britain," wrote Thomas Jefferson in the Declaration of our Independence, "is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute tyranny over these States."

Inasmuch as the Constitution of the United States confers upon the Congress and upon the Congress alone, the power to declare war, the greatest injury and usurpation of power the American people could suffer would be the injection of this Nation into war by any other means than that envisaged by the men of 1776 in writing our fundamental law.

Here are the closing statements in the record of the debate on the war power in the Constitutional Convention of 1789. (U. S. Formation of the Union, p. 562):

"Mr. Gerry never expected to hear in a republic a motion to empower the executive alone to declare war.

"Mr. ELSWORTH. There is a material difference between the cases of making war and making peace. It should be more easy to get out of war, than into it. * * * Mr. Mason was against giving the power of war to the Executive, because not safely to be trusted with it; or to the Senate, because not so constructed as to be entitled to it. He was for clogging rather than facilitating war; but for facilitating peace. He preferred 'declare' to 'make.'

"On motion to insert 'declare'—in place of 'make,' it was agreed to."

Could the intent of this fundamental power written by the men of 1776 into the Constitution of the Government which they created in 1789 be more clear? Hardly

Here is another excerpt from the Declaration of Independence worthy of your attention:

"He (the King of Great Britain) has obstructed the administration of justice by refusing his assent to laws for establishing judiciary powers."

In connection with this fundamental of 1776, be it noted that Mr. Roosevelt vetoed the Logan-Walter bill passed by Congress to grant citizens a review by the courts of acts infringing their constitutional rights committed by an arrogant bureaucracy now in power.

The President's veto of this bill is the more reprehensible because in his message to Congress on January 3, 1936, he said:

"They realize that in 34 months we have built up new instruments of public power. In the hands of a people's government this power is wholesome and proper. But in the hands of political puppets of an economic autocracy such power would provide shackles for the liberties of the people. Give them their way and they will take the course of every autocracy of the past—power for themselves, enslavement for the public."

Heretofore—with all respect to the President—there never has been an autocracy of any kind in control of our Nation. There is now, and what the President says of autocracy applies to it.

Congressman Cox, of Georgia, whose ability is as unimpeachable as his patriotism, makes the following pertinent comment on the existing situation:

"It is unionist collectivism that hampers, retards, and hinders production for defense today—that defiantly ignores the public interest, threatens the public welfare, and cripples industrial operations by striking at a time of national emergency * * *. The Federal Government has refused consistently to consider any proposal to curb either the powers or the activities of unionist leaders and agitators. Federal authorities, Federal bureaucrats, Federal courts shade all decisions in favor of unionist collectivism. * * * The whole scheme is to let conditions become so bad as to afford an excuse for the Government to take over industry—the very thing which the leftists are seeking and have been working to bring about. The collectivism of labor constitutes a greater danger to the Republic at this very hour than does Hitler and all his kind." (From speech of Representative Cox, p. A2843, Appendix of the CONGRESSIONAL RECORD.)

But let me quote again from the Declaration of Independence:

"He (The King) has made judges dependent on his will alone, for the tenure of their offices, and the amount and payment of their salaries."

This Nation will not soon forget the outburst of anger of an outraged citizenry when the President sought to drive through Congress legislation which would empower him to pack the Supreme Court with Justices presumably subservient to his will. To what extent the people's victory in that struggle has been nullified by resignations, death, and the prolongation of Mr. Roosevelt's power through his election for a third term, in defiance of all tradition, time alone can tell.

One more citation should suffice:

"He (the King of Great Britain) has erected a multitude of new offices, and sent hither swarms of officers to harass the people, and eat out their substance."

Well, my fellow citizens, the President has created scores of new executive agencies of government and increased the number of civil servants by 723,000. He has enlarged the national debt and obligations guaranteed as to principal and interest by the Federal Government to the stupendous total of $55,362,000,000. He has expended in all, down to June 30, 1941, over $73,000,000,000 of your money. He has called for additional appropriations, now granted, of over $33,000,000,000.

Not satisfied with power, granted by the enactment of H. R. 1776, to give away our ships and our armaments, to take any articles conceivably of use for defense purposes and to give them to Great Britain or to the Soviet Union, the President has now asked of Congress authority to take, in his discretion, virtually any and all property you possess for use in an emergency which he has in large measure created by the foreign policy he has pursued

That, my fellow citizens, caps the climax.

Is it astonishing that the name of the great author of the fundamentals of 1776 was hissed and booed at the last convention of the party which for generations claimed him as its prophet?

The truth is the New Deal needs war to shackle socialism on your backs. The New Deals needs war to blind you to the complete bankruptcy of its pretended restoration of prosperity. The New Deal needs war to make crushing taxation acceptable. The New Deal needs war to destroy the fundamentals of 1776 and establish a personal dictatorship on the ruins of the American Republic.

My fellow citizens, we are on the verge of war.

Again, I quote from the President's address:

"I tell the American people solemnly that the United States will never survive as a happy and fertile oasis of liberty surrounded by a cruel desert of dictatorship."

That gloomy forecast struck a strange note on the anniversary of our Declaration of Independence. The little bands of farmers at Lexington, Concord, and Bunker Hill were not so easily daunted as Mr. Roosevelt.

The men who proclaimed the fundamentals of 1776 to the world were not deterred by the garrisons of British Regulars and the Fleet of the Mistress of the Sea. Those men in a "desert of cruel dictatorship" hurled the armies of the hated tyrant from our shores not once but twice, and their descendants have maintained our independence for 165 years in the face of all the kings, emperors and dictators of Europe and Asia.

The lessons of history are imperishable.

The Republics of Greece and Rome fell. Why?

Because their people were debauched and their manpower dissipated in the foreign adventures of glamorous demagogues.

The handwriting is on the wall.

To those among you who have written to our office for advice as to what you should do in this crisis, I say to you:

The framework of the Constitution still stands. Its guaranties still hold.

Every man in the Congress is your agent and the agent of your State and your community. Each and every one of them and the executive officers of your Government have taken a solemn oath before God and man to defend the Constitution against all enemies, foreign and domestic. Call upon them now and continuously for an account of their stewardship, until they again beseech your ballots.

The fundamentals of 1776 are not the property or the creed of any individual or political party, they are the precious heritage of the American people. For their defense Democrats and Republicans have a common cause. None but the spokesmen for foreign nations and foreign isms can cavil at an appeal for union in support of it.

You cannot evade your responsibilities as one of the sovereign people of the United States without paying the penalty for so doing.

The Congress of the United States must not abdicate.

Be an American.

Call on your fellow Americans for an American union now to guarantee our American independence and to preserve our American Constitution—that great charter of our liberties—the embodiment of the fundamentals of 1776.

Yours for America now and forever,

JOHN B. TREVOR.

Antitrust Activities as Affecting Farmers

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Friday, August 1 (legislative day of Monday, July 28), 1941

ARTICLE FROM THE NATION'S AGRICULTURE

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the

Appendix of the RECORD an article appearing in the Nation's Agriculture, monthly, for July-August 1941, relative to the antitrust activities of the Department of Justice.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Nation's Agriculture of July-August 1941]

ANTITRUST AND THE FARMER

The establishment of a special section within the Antitrust Division of the Department of Justice whose sole function will be to aid farmers in their fight against organized buying and selling monopolies has been announced by Thurman Arnold, Assistant Attorney General in charge of antitrust.

Creation of the new section is a recognition of the predominant role farmers have played in the 50-year-old struggle to free American markets from artificial restraints. The antitrust law was passed in 1890 largely as a result of agitation on the part of farm groups.

The attempt during the last 3 years to provide sufficient funds to make antitrust enforcement a reality has had the consistent and wholehearted support of the American Farm Bureau Federation and other farm organizations. Indeed the testimony of Edward O'Neal before the House Appropriations Committee was decisive in obtaining a substantial addition to the appropriation for the Antitrust Division, and the establishment of the new section is at least partly in response to a suggestion made by the American Farm Bureau Federation.

The new section in the Antitrust Division will devote its full time to the task of eliminating every illegal restraint of trade which artificially raises prices the farmer has to pay for goods he buys or lowers prices the farmer receives for goods he sells or narrows the farmer's market by raising the spread between farm prices and retail prices for farm products.

EFFECTIVE AUDIENCE

According to Mr. Arnold, the new section will provide a sympathetic and effective audience for farmers' complaints against buying and selling monopolies and also a source to provide reliable information to the farmer, explaining to him his rights to protection under the antitrust laws and the programs undertaken by the Antitrust Division to see to it that those rights are not violated.

Meanwhile, the industry-wide food investigation initiated by the Antitrust Division last fall is already showing concrete results. As of June 20, 17 indictments had been returned against processors, distributors, and labor unions, cutting across the major elements in the Nation's food supply—meat, milk, fruits and vegetables, and bread. From the indictments already returned, the outlines of the types of restraints which lower farm income and restrict farm markets can be seen.

Three indictments charge conspiracy to lower prices paid to producers. The Canners League of California and the major fruit and vegetable canners have been charged with a conspiracy to fix prices paid to growers and also the minimum prices charged for canned products. This practice protects the canners' operating margin at the expense of producers and distributors and consumers.

It is charged that concerted efforts were made to cut off the credit of canners who refused to fall in with the conspiracy. Raising the price of canned fruit indirectly reduced the size of the farmers' market; by limiting the size of the pack it directly brought about a similar reduction; by destroying independents it reduced the number of potential purchasers; by dictating the terms of purchase and particularly the use of purchase contracts in which the price was left open it forced upon the grower marketing methods which protected the canner at the grower's expense.

The Dried Fruit Association of California and the major dried fruit packers have similarly been charged with an effort to fix both prices paid to growers and prices charged distributors and consumers. A grading and inspection system under which the Dried Fruit Association became the sole judge of quality was the principal device used. Small packers and nonmembers of the association were denied equal right to use the grading system and were thus prevented from effective competition. This reduced the number of purchasers of the growers' fruit.

The members of the association agreed to force upon the grower contracts in which the price of fruit was left undetermined; to refuse to guarantee a minimum price or a minimum return to the grower; to refuse to give the grower the benefit of any increase in price which might occur after the date of the contract; to refuse to grade fruit at the point where it is harvested; and to refuse to buy dried fruit except in accord with the grades arbitrarily established by the association. By such rules they decided in their own favor and against the grower every issue as to the way the growers' fruit should be marketed.

LAMB MARKETS

The major meat packers in Chicago have been charged with controlling the prices paid to producers for sheep and lambs. It is charged that, buyers representing the packers agreed not to compete with each other for any shipment of sheep or lambs until late in the day, after the price had been well established; that each alley was assigned to a particular buyer by the toss of a coin and thereby the farmer was deprived of the chance to get more than one bid, and that the firms and individuals indicted control 90 percent of the market for lambs in Chicago.

Another series of indictments charges wholesalers and retailers with a price-fixing conspiracy under the pretense of enforcing State unfair practices acts. In the case against the Washington Wholesale Tobacco & Candy Distributors, and others, the defendants are charged with fixing prices and enforcing their conspiracy under the pretense of complying with the Washington State Unfair Practices Act. They are also charged with boycotting national distributors who sell direct to retailers and allocating markets among themselves.

In Denver, Colo., the Food Distributors Association, the major chains, and others were indicted for price fixing while pretending to administer the Colorado Unfair Practices Act. This law permits the use of cost surveys in determining whether or not the act has been violated. Under the pretext of ascertaining costs, the defendants are reported to have got together and arbitrarily fixed percentage mark-ups which they would use in establishing minimum prices. In 2 years they doubled the percentage mark-up from 6 percent to 12 percent. In this case the defendants have already paid substantial fines rather than go to trial. In Connecticut, the Connecticut Food Council, major chains, and others have been indicted for similar conspiracies under the pretext of complying with the State law.

Another instance of price fixing on the part of wholesalers and retailers has been uncovered in the indictment brought against the Western Washington Wholesale Grocers Association, which charges that members of the association fixed prices and forced manufacturers not to sell to jobbers who were not members of the association.

Two indictments have been returned which involve the use of labor unions to police price-fixing agreements among food distributors. In Washington, D. C., several chains and two bakery drivers' unions have been charged with fixing bread prices and keeping larger loaves off the market. It is said that the union drivers report violations of the agreement and refuse to supply retailers who fail to conform.

In Dubuque, Iowa, the Beatrice Creamery, a local of the truck drivers' union, and several individuals were convicted on a price-fixing indictment. In this case an independent distributor sought to increase his market by establishing a price of 11 cents for the first quart of milk and 8 cents for each additional quart on the same delivery. The conspirators blacklisted this distributor and imposed a fine of $100 upon any driver who accepted for his customers a transfer of patronage from other dairies to the price-cutting distributor. The defendants have been convicted, sentenced to imprisonment, and given a suspension of their sentence on condition that they pay fines and costs

Three other indictments charge major dairy companies with simple price-fixing conspiracies. In New York City, Sheffield, Borden, and their subsidiaries were indicted for fixing prices and attempting to maintain an artificial 2-cent differential between the so-called grade A milk and grade B, which were in reality substantially identical in quality.

In San Francisco, the Evaporated Milk Association—Borden, Carnation, Pet, and others—were charged with collusively fixing wholesale and retail prices of evaporated milk, coercing jobbers and retailers to sell at the agreed prices, and maintaining arbitrary differentials between standard and secondary brands which are in reality substantially the same quality.

In Philadelphia the major baking companies have been charged with conspiring in parts of four States to limit the size and weight of the loaf of bread, to fix prices and discounts, to prevent the sale of day-old bread, and to limit the right to market bread. Supplementary to this indictment is another in Philadelphia which charges the Freihofer Baking Co. and William Freihofer Baking Co. with waging local price wars in order to destroy independents or to force them to adopt the price-fixing schemes of the conspirators.

In addition to those discussed above, indictments have been brought against the California rice industry, the Seattle Fish Exchange, the California sardine industry, and brewing associations in Washington, Oregon, California, and Idaho.

In spite of the progress made so far, the food investigation is still in its early stages. According to Department of Justice officials, a substantial number of additional milk and bread indictments are bound to come following further investigation. Further indictments are to be expected in poultry, eggs, cheese, meat, sugar, ice cream, and fresh fruits and vegetables. The terminal market rackets are slated to be a major aspect of the investigation. The setting up of a special section to deal exclusively with these and other problems faced by the farmer in his struggle against concentrated economic power should facilitate the carrying out of a comprehensive, thorough, and impartial job which is aimed to bring about a better diet for consumers and a better income for farmers.

Churchill's Unfortunate Remark

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, August 1 (legislative day of Monday, July 28), 1941

EDITORIAL FROM ST. LOUIS POST-DISPATCH

Mr. CLARK of Missouri. Mr. President, on July 30 there appeared in the St. Louis Post-Dispatch a very able editorial on the subject of the astonishing assumption by Prime Minister Churchill in declaring a foreign policy for the United States. The editorial is entitled "Churchill's Unfortunate Remark." I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch of July 30, 1941]

CHURCHILL'S UNFORTUNATE REMARK

Appearing before the House of Commons yesterday, Winston Churchill said:

"The United States, the greatest single power, is giving us aid on a gigantic scale and is advancing in rising wrath and conviction to the very verge of war."

It is both understandable and exceedingly regrettable that the British Prime Minister should have taken it upon himself to make this statement.

It is understandable because Mr. Churchill was opening the debate on British war production and thus spoke officially as the responsible head of the British Government to Parliament. In this capacity, he sought to make a full report to the Commons on the war situation and American relations to it.

But, however good Mr. Churchill's intentions may have been, it is exceedingly regrettable that these words came from his lips. The good and sufficient reason is the fact that the British Prime Minister is not the authority for statements like that on behalf of the American people.

We have our own responsible Government. We have our President and our Congress. If anyone is to say to the world that this country "is advancing in rising wrath and conviction to the very verge of war," it is the Chief Executive of the United States. It is the elected official who holds a commission from the American people. It is not the Prime Minister of Great Britain, who sits in Parliament as the member from Epping.

And if any assembly is to hear and judge a statement like that, it is not the members of the British Parliament but the Representatives and Senators whom the American people have sent to Congress. If a statement of that sort is to be issued, and that in itself is a grave question, the date line should be Washington, not London.

Mr. Churchill's assumption—for he has said something which President Roosevelt has not yet gone so far as to say—is doubly bad. It is bad for England because it inevitably will suggest to many Americans that the British are counting on an American expeditionary force in addition to the generous aid in the form of arms and supplies which is now being provided.

Gen. Sir Archibald P. Wavell, British commander in chief in the Middle East, told American correspondents in Cairo a month ago, that for victory Britain would finally require America's men. A few days later Lt. Gen. Sir Claude J. E. Auchinleck, also interviewed in Egypt, said that American manpower would be just as necessary as in the World War. Now the British Prime Minister says almost as much in other words. It is bad, in short, for the policy of aid to Britain, which Americans by and large endorse.

But it is even worse in its relation to unity in the United States. One of our chief problems is to conduct our foreign affairs in such a way as eventually to win the approval and support of those who now dissent. We live in a democracy, and in a democracy compliance is achieved by discussion and persuasion among its members. By no stretch of the imagination can that end be furthered by having the head of the British Government make policy-shaping declarations for the American people.

This should need to be pointed out only once. The British are such sticklers for form and the amenities that we may expect future pronouncements of this grave character to come direct from Washington, not by way of London.

Tom Girdler

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, August 1 (legislative day of Monday, July 28), 1941

ARTICLE FROM THE NATION

Mr. GUFFEY. Mr. President, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD a brief article from the Nation of July 26, 1941.

I am sure the Members of the Senate will be interested in reading this article in view of statements made to Senate committees by Tom Girdler, president of the Republic Steel Co., about 4 years ago.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Tom Girdler is still president of the Republic Steel Corporation, and it was Girdler who declared 4½ years ago that "he would go back to the farm and dig potatoes before he would sign with the C. I. O." But on July 15 Republic Steel, the National Labor Relations Board, and the Committee of Industrial Organizations signed a stipulation settling all charges of Wagner Act violations against the company. Moreover, if the N. L. R. B. certifies that the C. I. O. has a majority, the company will sign a contract with the union. Mr. Girdler explained his about face with the simple remark that Republic is operating at top speed, much of its output is defense work, and "we want to avoid any let-down in production from any cause." Profits and patriotism work wonders, especially profits. Girdler's surrender marks an important victory for collective bargaining, and Republic workers reinstated by the agreement will receive tens of thousands of dollars in back pay, but the price of the victory included the lives of 18 workers killed during the strike in Little Steel in 1937.

Foreign Affairs

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, August 1 (legislative day of Monday, July 28), 1941

ARTICLE BY VARDIS FISHER

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Vardis Fisher, published in the Idaho Sunday Statesman of July 27, 1941, entitled "Birdwells Call It Decency."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Idaho Sunday Statesman of July 27, 1941]

BIRDWELLS CALL IT DECENCY

(By Vardis Fisher)

Stricken, like so many interventionists, with a feverish lusting to see young men fight while he sits at home and applauds, one Russell Birdwell takes a full-page ad in the July 21 Time to ask the President and Congress to give us "marching orders." Maybe Birdwell is only a phoney front for a bunch of industrialists with foreign investments. Maybe he owns a block of International Telephone. Or perhaps he is a sincere and wealthy American who thinks it is our job periodically to save the British Empire. Whatever he is or is not, his hysterical nonsense calls for an answer—because this is not the first time he has jumped into four or five thousand dollars' worth of type.

In huge black words he heads his advertisement thus: "What the hell can we get out of this war?" Decency, he says. A decent world for our children, he says. A noble and sweet and Christian world in which Democracy will be saved and we'll all love one another and listen to the birdies sing. There's another answer, but, first, it is well to pass under review a baseless charge which he repeats.

INVASION-PROOF

A million times over the air and in the press it has been said that isolationists are appeasers. Some of them may be. I don't know. But anybody who calls all of us appeasers is either stupid or dishonest. As an isolationist, I merely echo the sentiment of millions when I say that I believe in arming this Nation to the teeth—and giving it an extra set of teeth. With a mighty navy and air force, talk of invasion becomes sheer lunacy. I'll let my sons go to their death any day to save this Nation, but not to save the 175,000-acre estate of the Duke of Hamilton.

If there's an appeaser in the world at the moment, it is England. Why is she not bombing the huge I. G. Farben powder plants just out of Mannheim? Because they're insured by Lloyd's of London. Why is she taking certain materials we are giving her and selling them to Latin American countries? To keep her economic foothold in our dooryard. Why isn't she doing a real job of bombing Germany now? Because she is interested not in winning the war but in saving the property of the Tories. To sacrifice other nations, including our own if she can, has been her policy; and during the last 15 years she double-crossed France at every turn. That's enough for me. Again and again she appeased Hitler by sacrificing her allies, and

she'll sell us down the river too if she ever gets a chance. The reason England loses all battles except the last battle lies in the fact that she first induces other nations to fight for her and fights for herself only when she must. At this moment, when Germany is engaged on the eastern front, England's bombing of Germany is, in my opinion, nine-tenths propaganda and bluff. She is hoping now that Russia will turn the tide; and if Russia doesn't, well, there's the United States getting ready to plunge in. It's a pity that Americans don't realize that of all nations in the world, none, including Japan, so envies and distrusts and despises us as England does.

REALISTS, NOT APPEASERS

Isolationists of my stripe are not appeasers. On the contrary, we are determined to be just as realistic and selfish as that greedy old Mother of Parliaments. We have only to be hard-boiled and get ready and no combination of powers can ever invade us or ever dare try. It is a deluded and sentimental patriotism that wants us to take up the fight for England where Russia leaves off. Neither in France nor Belgium nor Norway nor Greece did England do much more than to stand at the back of a small ally and cheer him on. Now she is cheering Russia and beseeching us to hurry and jump in. Only after she has exhausted all her allies will she gird her fat old belly and make a fight.

Mr. Birdwell thinks that all isolationists ought to be shut up. He says the world belongs to the "good people"—meaning, I suppose, that war-lusting minority in this Nation which thinks the majority ought to be suppressed. He says gangland must go. It would be well to start at home and wipe out a few Hagues and Kellys first. Above all else, he says that our all-out participation in this war will bring "decency" and "bequeath to our children a decent world."

In the last war, it will be remembered, our part was very small. We lost fewer than a hundred thousand men, and we were in only a few minor engagements. In a wet dismal day in August 1930 I stood on a hill north of Verdun. In no direction could I see farther than a mile, but within that small radius nearly half a million men had been slain. Persons were digging out their bones and piling them up, and when they got an assortment of bones that seemed to make a skeleton they called it a body and hauled it off for burial. On that small segment of the front more than five times as many men were killed as we lost in the war.

FATE OF FOUR

Rigby, Idaho, is a small town with a small high school. Among my classmates are four whom I remember well. One was killed in action. The other three I shall call John and Jim and George. John, after his return, became a dentist, but he had been shell-shocked and gassed, and he knew he could never see his forty-fifth birthday. I talked with him many times and found him disillusioned and sad and bitter. He died a couple of years ago. Jim had been a happy-go-lucky prankster, but after he returned from France he was another man. He was a drunkard, and he was mortally sick. The last heard of him he had been shipped off to a hospital, and he is probably dead now. George used to be in business in Boise. I saw him often, but he never wanted to talk with me. On him was the blight of a sick body and a sick soul. He is one of the living dead who helped to keep the estates for the Dukes of Hamilton. Our hospitals from coast to coast are full of these men who went out to save democracy and came back to be forgotten and slowly to die.

A gentleman up north named Don Moore has recently quoted the commander of the American Legion to prove that we fought in a noble cause last time. He might as well have quoted Charley McCarthy. The real American Legion is not these healthy and prosperous men, not smug men who never saw the front or saw it safely, not the propagandists of our present hour. The real Legion is the forgotten men slowly dying in hospitals.

These Birdwells, these fat old breast-thumping men like Knox, these scurrilous name callers like Ickes, say we shall get decency out of this war. They say if we save the British Empire with its exploiting heel on two-fifths of the earth, we shall give a decent world to our children. But I see something else. I see them a decade after the war has closed gathering up the bones of our men and trying to fit the bones into skeletons. That will be the easiest part of it to take. I see hundreds of thousands and perhaps millions to whom we shall bequeath a living death in our midst. For every man killed, 10 suffer a fate a thousand times more dreadful; and they come back to die among us or to be shoved into hospitals where we can wash our hands of them with a few taxes and forget them and pretend that it was all for the best.

Remember that last time we fought only a little skirmish at the tail end of a war. Remember that this time we shall, if we get in and if we must, fight to the last young man. But remember, too, that most of these young men will come back to us, horribly mutilated, blind, or emasculated, and sentenced to years of agony while we forget them. They will be full of physical and mental sickness that nobody can understand, I imagine, except those who suffer it. Remember, above all, that our hospitals were overcrowded last time, and that this time on the sites of all our fine cantonments and barracks and air fields we shall build hospitals to hold these young men to whom we are bequeathing a decent world. Tens of thousands, perhaps hundreds of thousands, of them will be confined to hospitals for the insane. The others, men bankrupted by murder, with bodies half dead and souls stricken, I saw all over France and Germany. This time we shall have the joy of seeing these corpses walking to the morgues.

"What the hell can we get out of this war?" That, Mr. Birdwell, plus economic chaos and a military dictatorship; but it will be on the conscience of you interventionists, and not on mine.

Analysis of Nondefense Appropriations

EXTENSION OF REMARKS

OF

HON. EDWARD T. TAYLOR

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

Mr. TAYLOR. Mr. Speaker, I notice the minority report on the revenue bill of 1941, under the heading, "The need for economy in nondefense spending," insists that there should be a drastic reduction in nondefense spending. Reference is again made to the statement of the Secretary of the Treasury sometime ago that in his opinion nondefense expenditures could be reduced a billion dollars, and in that report the statement is made that "various other responsible individuals and organizations estimate that a saving might be made of $2,000,000,000 or over" in nondefense expenditures.

In addition to those references there seems to have been created quite a widespread impression that Congress is being extravagant at this critical time in our history in the unnecessary expenditure of vast sums of money in nondefense appropriations. The public is being misled by inaccurate and unwarranted charges. It does seem to me that impression is so widely at variance with the facts that it must be based upon an utter lack of accurate information. I feel that it is unfair to Congress and especially to the Appropriations Committee of the House, to allow that impression to be continually broadcast over the country when it is wholly unwarranted by the facts. I have mentioned this matter twice before. In answer to a letter from the editor of the Rocky Mountain News in Denver, I made a comprehensive statement on this subject and it appears in the Appendix of the CONGRESSIONAL RECORD, commencing at page A2424. Again I placed in the CONGRESSIONAL RECORD of July 24 a comparison of nondefense appropriations for the fiscal years 1941 and 1942 as of July 19, 1941, in comparative columns. That statement shows that the total nondefense appropriations for the fiscal year 1942 are $7,145,000,000 in round figures. Of this amount the sum of $3,786,000,000 or 53 percent is due to fixed charges such as interest on the national debt, debt retirement, veterans' benefits, social security, and other grants and expenses, and so forth, and cuts cannot be applied to those definitely fixed charges.

Deducting this amount of $3,786,000,000 from the $7,145,000,000 leaves $3,359,000,000 of nondefense appropriations that are not fixed charges. If a billion dollars is to be cut from this $3,359,000,000 it is equivalent to a 30-percent reduction. I doubt if many Members would vote for that reduction. This percentage would have to be applied to aids to agriculture, aids to youth, general public works, such as roads, flood control, reclamation projects, and so forth, and also to the operating expenses of all ordinary agencies of the Government other than those engaged in national defense. That statement placed in the RECORD on July 24 shows that the nondefense appropriations for 1942 are $342,662,008, net, less than the nondefense appropriations for the fiscal year 1941. Included in the nondefense items for both fiscal years are fixed charges of the character I have enumerated. Those fixed charges against the Government have increased net $250,642,930 for 1942 over and above the same items for 1941. We have not only overcome all that increase, but, we have made a further reduction of $342,662,008. When the increases and decreases in these fixed charges are eliminated from consideration in each fiscal year the decrease in the nondefense appropriations—other than fixed charges—for the fiscal year 1942 under the nondefense appropriations for the fiscal year 1941 is $593,304,938.

Of course, it is very popular and sounds patriotic to shout "Cut down nondefense appropriations. Slice a billion or more dollars off them." I only recall a few who have loudly vociferated in regard to the

reduction of nondefense appropriations who ever definitely specified just what appropriations they would cut and how much on each one. In other words, all of this indiscriminate fusillade of talk about reduction of nondefense expenditures is made without much specification as to where, and how, and how much the reduction should be. Few of them point out the particular items in which they would want the cuts to be made. None of them indicated what reductions they would vote for. They remind me of a remark by that stalwart Republican of bygone days, former Speaker Uncle Joe Cannon. On a similar occasion he said:

> The boys are doing a lot of thundering in the index, but they won't perform much in the text.

The record of Congress in reducing nondefense appropriations is most commendable. Whenever and wherever the facts indicated that a decrease could rightfully bemade it has been made, as I think the decrease of $593,000,000 will testify. If anybody wants to make further reductions let him come forward and specify the place and the reasons and the amounts of each cut.

To the best of my recollection, none of the people who are shouting the loudest about a billion-dollar reduction ever asked for a hearing before the committee when we were considering appropriation bills in order to point out the places they thought those alleged cuts could be made. History is merely repeating itself in connection with appropriations. Everyone is in favor of cutting in the abstract but when it comes to pointing out the specific items and amounts that they suggest cutting, that is another question. People are enthusiastically in favor of cutting appropriations for anybody else, but when applied to them it is horrible.

As everyone knows, every State, every city in the United States, practically every county and nearly every town in this Republic are constantly and vehemently appealing to Congress for appropriations for projects of all conceivable kinds. They vigorously shout "cut down appropriations but for God's sake give us this project." That applies universally throughout this entire Republic. The Appropriations Committee says "No" a dozen times to where it says "Yes" once, and it should be borne in mind that the committee has this year and always cuts many millions of dollars under the Budget recommendations on nondefense appropriations. The House sometimes overrides the committee; and the Senate, which is a coordinating body, always exercises its rights of insisting on additions to our House appropriations; and in conference we are compelled to compromise on those additions.

The minority report referred to seems to criticize the President for not making recommendations for additional reductions. Whether or not that criticism is warranted, it must be borne in mind that Congress is the body that makes the appropriations, and that the Appropriations Committee of the House is, and has been especially for the past 20 years that I have been a Member of that committee, the main watchdog of the Federal Treasury, day in and day out. Regardless of where or what the first line of defense of our Government may be, it actually starts with the Appropriations Committee of this House.

Advocating cuts in the abstract is a politically safe and popular pastime. It sounds good to our constituents out home, but pointing out specifically the items and the definite amounts advocated to be cut is something in which the advocates of this horizontal general cut policy just will not indulge. I cannot believe that the American people will be much deceived by a general clamor for a wholesale reduction of nondefense expenses, when a large percentage of the population from every portion of the United States is frantically appealing to the Congressmen to secure additional projects and appropriations for their localities.

I feel that these gentlemen who make heroic demands for reductions should come before the committee or the House of Representatives and state for the record that they are in favor of reducing aids to agriculture, aids to youth, flood control, reclamation, and the general operating expenses of the Government by the 30-percent necessary to bring about a billion-dollar cut in nondefense appropriations. They will not do so, and the American people know, or ought to know, they will not do it.

Mr. Speaker, I include herein as part of my remarks my former statements above referred to:

Comparison of nondefense appropriations, fiscal years 1941 and 1942 (as of July 19, 1941)

	1941	1942	1942 compared with 1941
Legislative, judicial, and executive	$39, 883, 021	$41, 575, 724	+$1, 692, 703
Civil departments and agencies	1, 034, 113, 062	984, 604, 613	−49, 508, 449
General public-works program	525, 650, 590	531, 233, 060	+5, 582, 470
Veterans' pensions and benefits	578, 856, 984	575, 193, 162	−3, 663, 822
Aids to agriculture	1, 067, 416, 460	1, 100, 535, 785	+33, 119, 319
Aids to youth	437, 151, 020	338, 727, 000	−98, 424, 020
Social security	446, 986, 960	466, 929, 000	+19, 942, 040
Work relief	1, 371, 671, 961	885, 905, 000	−485, 766, 961
Refunds of receipts	83, 011, 000	82, 006, 350	−1, 005, 550
Interest on the public debt	1, 100, 000, 000	1, 275, 000, 000	+175, 000, 000
Transfers to trust accounts	215, 315, 000	273, 735, 262	+58, 420, 262
Statutory debt retirement	587, 915, 000	589, 865, 000	+1, 950, 000
Total, nondefense appropriations	7, 487, 971, 964	7, 145, 309, 956	−342, 662, 008

[From the Appendix of the CONGRESSIONAL RECORD of May 21, 1941, page A2424]

LETTER OF HON. EDWARD T. TAYLOR, OF COLORADO, TO THE EDITOR OF THE ROCKY MOUNTAIN NEWS

Mr. TAYLOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I have written to the editor of the Rocky Mountain News, Denver, Colo., in response to an inquiry from him as to my position toward the suggestion of the Secretary of the Treasury that a billion dollars should be cut from nondefense expenditures.

The letter follows:

MAY 20, 1941.

MR. JACK FOSTER,
Editor, Rocky Mountain News,
Denver, Colo.

DEAR MR. FOSTER: The receipt is acknowledged of your letter of May 14 propounding to me in substance the query: "Do you agree with Secretary Morgenthau who says that the Government's nondefense expenditures can and should be cut $1,000,000,000?"

If I understand the Secretary's position correctly he did not state specifically what items should be eliminated or how much certain specific services should be reduced. I am informed he did outline in a general way certain activities which he termed "nondefense" and to which he thought cuts might be applied such as the National Youth Administration, the Civilian Conservation Corps, Public Works (which would include Federal-aid roads, flood control, reclamation projects, etc.), agricultural assistance (which would include soil-conservation payments, parity payments, and sugar-crop payments to farmers), and others which he did not list.

Let me say at the outset that I favor making reductions wherever it is possible to cut expenditures intelligently on the basis of the known facts and circumstances surrounding each case and after considering the relationship of those expenditures to our entire governmental program. I would not commit myself in advance to any arbitrary cut of a billion dollars in expenditures without knowing what items are to be eliminated and reduced or without weighing the effect of those proposed eliminations and reductions.

When people casually refer to nondefense activities in Government, they are generally thinking of everything except the Army and Navy. A large part of the Government's civil expenditures are in some manner related to national defense. There is a defense angle to almost everything the Secretary specifically mentioned and in some a very substantial defense aspect.

Modern warfare is economic, industrial, agricultural, and financial as well as military. Getting a nation on a national-defense basis consists as much of gearing the entire population and the entire economic, industrial, agricultural, and financial fabric to that level as it does of training soldiers, building naval vessels, and procuring munitions. If agriculture is depressed, there is a weak spot in the national economic armor. If education is neglected and not sufficient trained workers are available for industry, there is a failure to produce the necessary implements of war and peace. If unemployment, no matter how small, is not relieved, some citizens go hungry. Every phase of any Government activity must be examined to determine the appropriate relationship to the national effort before one can definitely throw that activity aside and say "This is nondefense, it has no place in the picture now." I sometimes hear the question. "What is the use of building these huge dams on some of our rivers; they are not national defense?" Yet if it had not been for the dams at T. V. A., Bonneville, Grand Coulee, and others, there would have been at this moment a serious power shortage for the production of vital war materials. So it becomes necessary to examine each activity on the basis of its own merits and its relationship to the entire national effort.

I have been on the Committee on Appropriations for 20 years. I would not knowingly vote for an appropriation that I believed was not important for the development or welfare of our country. A great many people do not pay much attention to the details of the Federal Budget and think that it is susceptible of being cut arbitrarily any time without harm to our national life. Every item in that Budget is gone over carefully by the President and the Bureau of the Budget before it is recommended to Congress. The Committees on Appropriations of the Senate and House go through the Budget

item by item and eliminate and reduce many. So far this session the House Committee on Appropriations has taken approximately $70,000,000 from the Budget estimates and there are still five more bills to be considered and undoubtedly there will be further cuts.

In the next fiscal year our total for other than defense expenses will be about $7,000,000,000 and will probably constitute one-third of the total estimated expenditures of the year. Of this $7,000,000,000 about one-half is for so-called fixed charges such as interest on the public debt, grants to States (such as social security and vocational education), etc., and the other half, where the cut of a billion dollars would have to fall, comprises all the rest of the Government activities. To take a billion dollars out of this half would mean a drastic cut of about 50 percent on the whole one-half or a greater percentage on the general classes which have been suggested for a cut.

Many of the appropriations the Secretary mentioned are yet to come before Congress for action this session. Those for the N. Y. A., the C. C. C., and some others he mentioned generally have not been acted upon by the committee or the House. The agricultural appropriations are still in conference between the two Houses. When these come before the committee and the House I will vote upon them in the light of the information we then have and their relationship to the entire national welfare. If the facts show they can be cut, I will act accordingly.

It is a noteworthy fact that whenever cuts in expenditures are suggested, the proponents usually offer a general suggestion of an arbitrary amount, they do not go into detail. Perhaps an anecdote of history will be illustrative. One of my predecessors as chairman of the Committee on Appropriations, before the days of the Budget, took a copy of the old book of estimates under his arm. He was getting ready for the committee work of the session. He wanted to know where to make some cuts. He visited every member of the Cabinet in turn. He displayed to each the book of estimates and asked him privately where some reductions could be made. Each turned to pages in the book and specifically pointed out general items, which, in that Cabinet officer's opinion, were of dubious national value and should be cut. When the chairman got back to his office and summed these visits all up he found to his dismay that each Cabinet member had pointed out cuts in other departments, but not one of them had suggested a reduction in his own bailiwick.

Everyone is in favor of cutting generally; when we get down to specific cases it is a horse of another color. It is incumbent on those who want to make these arbitrary general reductions to point out in detail, item by item, where they are and what amounts should be eliminated and why they can be taken out. Then we will know what cuts can be made and why they should be made.

This is my fifth year as chairman of the Appropriations Committee. It has long been the practice of the chairman of the committee to insert in the CONGRESSIONAL RECORD at the end of each session a summary of the Government's finances. Because of the extent of our present expenditures and the great interest taken in the subject, I have been placing in the RECORD month by month at this session a summary of receipts and expenditures which the Treasury Department furnishes me. It is absolutely accurate and as complete as can possibly be made. Those who have been following this data have found it informative and useful in watching the course of our finances. It prevents an enormous amount of guesswork, speculation, and misunderstanding of all current appropriations.

I trust this information will be of interest to the people of Colorado.

Very cordially yours,

EDWARD T. TAYLOR.

Fixing Farm Prices

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, the cotton farmers of this country are very much disturbed over the proposal to fix farm prices. The very suggestion yesterday broke cotton prices $5 a bale. That will cost the American cotton farmers about $12,000,000 unless that price is recovered.

At the prices the farmers of the South are paying for the things they have to buy, cotton should be selling today at 25 cents a pound, at least, and wheat should be selling anywhere from $1.50 a bushel to $2 a bushel.

I want to serve notice now that I do not propose to support any proposition to permit any man or set of men to fix farm prices so as to discriminate against the people who till the soil, the ones who are suffering most as a result of the fixing of industrial wages of labor all out of line with agricultural wages and agricultural prices, which places unnecessary burdens upon the backs of the farmers, the people upon whom we all depend for our food and clothing.

Let farm prices continue to rise until they reach actual parity with industrial commodities and industrial wages. Then the farmer will begin to enjoy a full measure of that prosperity to which he is entitled. And that will result in prosperity for the whole Nation.

Twenty Reasons for Opposing Mandatory Joint Income-Tax Returns

EXTENSION OF REMARKS

OF

HON. JOHN M. COSTELLO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

STATEMENT BY MEMBERS OF THE HOUSE OF REPRESENTATIVES

Mr. COSTELLO. Mr. Speaker, under the permission granted me today to extend my remarks in the RECORD, I wish to insert a joint statement containing 20 reasons why the mandatory joint income-tax provision of the pending bill should be stricken from this legislation. The statement is presented with the approval of several Members of the House, whose names are appended thereto, in order that those Members who are in doubt regarding this matter may have presented to them some substantial reasons for opposing this provision of the tax bill. The statement appears below:

1. H. R. 5417 is one of the most important revenue measures ever to be considered by the Congress. Public attention, however, has been centered almost exclusively upon the social, moral, economic, women's rights, and constitutional aspects of the provisions respecting mandatory joint returns upon which there have been no public hearings.

Is it not sound policy to eliminate the joint returns provision, upon which public indignation rightfully is high, so that the full efforts of the Congress may be directed to the many intricate and technical questions of revenue legislation that must be considered?

2. All taxpayers are faced with drastic increases in their taxes amounting, in some cases, to 200 percent or more. These increases will have the same effect upon family budgets as heavy wage and salary cuts. In many instances they will more than absorb the family's annual savings.

Notwithstanding the above situation, an additional tax would be placed upon a selected group of married people—those who have separate incomes—by reason of mandatory joint returns. Such discrimination is unfair and unjust in the extreme. It may even lead to confiscation of income. By the addition for tax purposes of a small income belonging to the wife to a large one belonging to the husband, the resulting application of surtaxes may largely wipe out any benefits from the smaller income.

3. The impression is widespread that only about 175,000 families would be affected by the compulsory joint-returns provision. That this is an erroneous assumption is apparent from the report upon mandatory joint returns[1] prepared for the Committee on Ways and Means.

The statistics so far made public applied to the 1938 situation when personal exemptions were higher and the surtax rates not only were lower than those proposed in the bill, but affected only individuals in considerably higher income brackets.

Under the bill, tens of thousands of additional families will be immediately affected. Under subsequent levies that will be needed for defense purposes most tax-paying, married couples may be concerned provided each spouse has some separate income, no matter how large or how small.

4. It is stated that the discriminatory penalty tax applies only to families whose income exceeds $4,000 per year.

Is a tax which is unfair and unjust less so merely because it is limited to the families whose income is over $333 per month?

What about the unfairness to those families whose income is less than $333 per month, who are bound to be included in subsequent tax legislation, and who are not even aware that their interests are being affected?

Another group consists of those who will be immediately concerned under the pending legislation but who have not heretofore filed separate returns merely because there was no advantage for them to do so. Most of these people do not realize the significance of the proposed change.

5. Since the mandatory joint-returns requirement would single out married couples for discriminatory tax treatment, it would in effect constitute a penalty upon marriage. This penalty, though small in the case of families having moderate incomes, becomes an appreciable item to the well-to-do and amounts to thousands of dollars a year in a wealthy family.

Admittedly men and women would not or should not let a tax disadvantage stand in the way of their marriage, but no support in principle can be found for tax legislation

[1] Mandatory joint returns prepared for the use of the Committee on Ways and Means by the staff of the Joint Committee on Internal Revenue Taxation.

which puts barriers of any sort in the way of marriage.

6. Enactment of the proposal would place an estimated annual tax of $329,000,000 a year upon the institution of marriage, of which $275,000,000 would be derived from married people in the 40 States not having community-property laws.

7. In addition to penalizing marriage, compulsory joint returns likewise would place a premium upon divorce.

Is there any justification whatsoever for a tax law which grants a financial advantage to a husband and wife who obtain a divorce?

8. It has been stated that separate returns are not permitted in Great Britain and that the divorce rate is not as high in that country as in the United States. This argument has no validity in the present situation.

In England where divorce is difficult to obtain, there is not the situation of separate states having widely differing laws with respect to the granting of divorces. Furthermore, in the United States, divorce apparently is not looked upon with the same disfavor as in England and some other countries. Any law that would tend to increase the already high percentage of divorce in the United States would certainly be objectionable from the standpoint of public policy.

In Great Britain, moreover, at the time mentioned in the report upon mandatory joint returns, the income-tax situation was not altogether comparable to that proposed under the bill. Greater reliance for revenues was placed upon the normal rate than we place upon our normal rate. High surtaxes upon low income brackets, such as are contemplated in the pending bill, are at variance with the traditional British income-tax procedure.

No less important is the fact that no question of States' rights and the powers of a federal government are involved in income-tax legislation in Great Britain.

9. The report states that "Congress has from the beginning recognized the family status as sufficiently singular to permit of special treatment."

The singular treatment of the family, heretofore, has looked to the protection and to the benefit of the family, whereas, now for the first time, the family is to be discriminated against by taxing individuals in the family at higher rates than other individuals simply because each spouse happens to have some separate income.

Any penalty placed upon marriage is, by the same token, a penalty upon the raising of children.

Personal exemptions were originated to encourage the family and family life. Under this proposal they would be minimized.

10. The special tax imposed by mandatory joint returns upon marriages, the home, and children, is escaped entirely by unmarried and divorced people.

11. Married women have struggled since historical times to achieve their rightful place in the social, economic, and political structure. The requirement of mandatory joint returns, by merging the identity of the wife with that of her husband for tax purposes, is a long step backward in social progress.

In this country Congress adopted the resolution that led to the adoption of the nineteenth amendment, giving women the right to vote, then shortly thereafter it adopted the legislation which permitted wives to retain their own citizenship even though they married aliens. Next, Congress adopted the Fair Labor Standards Act, which gave women equality in employment. Now, it is proposed to reverse this trend by taking away from the rights of women.

12. No amount of language to the effect, as stated in the report, that "there is no imposition of a liability upon one person for the taxes payable by another" will disguise the fact that women would lose an important right, namely that of the complete and separate control of the income from their property.

The statement that the proposal "treats her exactly in the same manner as her husband for Federal-tax purposes" offers no consolation to the proponents of women's rights. This proposal, by accomplishing the very thing it purports to do, would tend to return married women to the old common-law status of chattels of their husbands—the very status they struggled so long to overcome forever.

13. Should tax laws be so designed as to constitute a measurable factor in determining the relationship between husband and wife? Is it a sound social policy to so frame tax laws as to make it profitable on the one hand for a husband and wife to live apart or, on the other hand, where, for justifiable reasons, a husband and wife desire to live apart, to direct them to act together in sharing a tax assessment? Under the pending bill this dilemma cannot be avoided.

14. Married women in community-property States share the ownership with their husbands of the property and income of the community property acquired during their marriage. The proposal would remove an important incentive and otherwise make it impractical for husbands in the 40 noncommunity-property States to give property to their wives. Is this fair to the women who live in the noncommunity-property States?

15. Under our constitutional form of government taxes are based upon individuals and not upon relationships, yet the report states that the proposal "merely regards the marital community as the taxable unit instead of the individuals who make it up."

Is so fundamental a change in our theory of taxation in accordance with State's rights and delegated powers to be overturned by the adoption of a new tax policy?

16. Are the rights of the sovereign States to determine for themselves how property and income therefrom can be owned, to be nullified by a tax measure of the Congress passed by the House without even the formality of a public hearing?

17. Even if an apparent discrimination exists as between married couples in different States by reason of the divergency of State laws, or by reason of the fact that some married couples have separate incomes where others do not, is it the less desirable from the broad, social standpoint to hold firmly to our established policy of holding inviolate the rights of the States?

18. Is it sound policy in a period of national emergency to rely upon any substantial amount of tax revenue from a source which the Supreme Court very likely will hold does not exist and which is certain, in any event, to lead to prolonged litigation?

19. If the tax is a direct tax on property, is it a tax on income within the meaning of the sixteenth amendment, or is it without the scope of that amendment and, therefore, subject to the provisions of the Constitution providing for apportionment (art. 1, sec. 2, cl. 3, and art. 1, sec. 9, cl. 4)?

20. Is the classification which is the basis for the tax so arbitrary as to violate the due-process clause of the fifth amendment, which is applicable whether the tax is an excise tax or a tax on income within the meaning of the sixteenth amendment, or otherwise?

This question may be subdivided as follows:

(a) Is the tax arbitrary in classifying spouses as constituting an economic unit, without so classifying other family relationships, such as parent and children or brother and sister?

(b) Is the tax arbitrary in requiring spouses to reveal to each other the amounts and sources of their respective incomes?

(c) Is the tax arbitrary in requiring a husband and wife each to be responsible for the filing of a joint report of their respective incomes?

(d) Is the tax arbitrary in imposing a joint and several liability on the spouses for the amount of total tax due on their combined income unless either spouse shall seek an apportionment under Rules and Regulations prescribed by the Commissioner?

(e) Is the tax arbitrary in requiring that the income of one spouse be combined with the income of the other spouse to determine the surtax rate applicable to the income of each spouse, thus applying a higher surtax to married persons, each of whom have separate or joint or community income, than to single persons having the same amounts of income as each of said spouses?

(f) Is the tax arbitrary in classifying alike, married persons, each of whom have separate or joint or community income, and married persons, one of whom has no income?

(g) Is the tax arbitrary in classifying alike, married persons, each of whom have separate or joint or community income, without reference to whether such income was acquired either directly or indirectly by a gift from the other spouse instead of being derived by law or by gift, devise, or descent from some other party than the other spouse?

(h) Is the tax arbitrary in classifying alike spouses who have derived joint income from engaging in a joint financial enterprise, and those who have only separate income derived from properties separately owned by them?

Respectfully submitted for your consideration by: Hon. JOHN M. COSTELLO, California; Hon. CHARLES A. EATON, New Jersey; Hon. CHARLES L. GIFFORD, Massachusetts; Hon. LOUIS LUDLOW, Indiana; Hon. EDITH NOURSE ROGERS, Massachusetts; Hon. OVERTON BROOKS, Louisiana.

Profiteering in Gift Food Packages for Great Britain

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

EXCERPT FROM RADIO ADDRESS OF FULTON LEWIS, JR.

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt from broadcast of Fulton Lewis, Jr., Mutual Broadcasting System, from station WOL, Washington, D. C., Friday, July 25, 1941:

Now, I have a rather unusual story for you this evening, a matter which I've been investigating personally for more than 20 days—not only here but also in New York City.

You've heard all the talk, for many months past, about the need for preventing high prices, and profiteering. The President has said, time and again, that he is determined to prevent any fortunes being made out of this war, and in order to prevent any unfair or unreasonable prices, even here in this country, he appointed Mr. Leon Henderson as price control administrator.

Now, with that in the back of your mind, it develops that a new and very flourishing business has sprung up in New York, and it's now spreading out, and operating through agents or representatives in other cities, perhaps in yours. It's a business that's founded

on the misfortune and privation and need of the people in Great Britain—especially on the shortage of dairy products, and fats, and such things.

We might just as well mention names, in this case, so you'll know all of the facts. The particular organization is named "Parcels for the Forces, Inc.," with offices in Rockefeller Center. It's a private, profit-making corporation. There are other concerns, including some of the New York department stores, that also are in the business, but the head of this organization—a man named Leonard Morris—said very proudly that he does almost all of the business along this line, so we'll use his case.

I have one of their advertising sheets in front of me. It says at the top, "Send a gift parcel of rationed food to relatives or friends in Great Britain." Then, underneath, it says:

"Have you ever measured out 2 ounces of butter, 2 ounces of tea, or 4 ounces of sugar? These are the amounts that British people are allowed weekly on their ration cards.

"Why not let us send your relations and friends in Great Britain, one of the following desirable food parcels? It will be a welcome addition to present allowances, and it will not detract from their existing rations."

At the bottom of the sheet is this statement, and listen to this carefully:

"Ten percent of the sum of your order will be contributed to the"—and there in print is the name of a very prominent British charity—"to assist them in their humane work."

Then it lists some nine different parcels which this organization will send to any address in Great Britain for you, for various different prices.

Now, if you'll listen carefully, I'm going to read the contents of a few of these and then tell you the price on each one. For example, here is parcel A—

A 1-pound can of vegetable shortening—that's the smallest can, you know—and vegetable shortening means margarine or any of the ordinary lard substitutes.

A half pound of Kraft's cheese.

A half pound of Hershey's breakfast cocoa.

One pound of orange marmalade and one can of orange juice—the can of orange juice, incidentally, is quite a little smaller than a can of Campbell's soup—and the price for that parcel is $3.25.

And here is parcel F—

A half pound of tea, a half-pound package of Kraft's cheese, 1 pound of sugar in small lumps, 1 pound of butter, one tin of dried onions, a can of orange juice, and a packet of seedless raisins, and the price for that is $4.85.

And one more—parcel I—

One pound of Borden's powdered milk, a small can of boned chicken, a can of orange juice, a tin of dried tomato soup, a can of consomme, a can of lemon juice about half the size of the can of orange juice, one packet of seedless raisins, and a packet of 72 vitamin capsules, and the price for that is $9.95.

Now, in order to be perfectly fair and to get all sides of this story, I went to New York over the week end, to the offices of Parcels for the Forces, Inc., and I interviewed Mr. Leonard Morris. He said quite frankly that it was a profit-making business, and he explained that these prices include not only the cost of the food but also the packing, handling, shipping, insurance, and payment of customs duties. And on checking I find that that is correct.

In fact, in doing that checking, I went so far as to contact the British Embassy here, and the Post Office Department, and the Customs Service, to find out exactly what those costs are, and the facts are these:

These parcels are mailed not by air mail, but by common ocean mail—parcel post—and the rate for them is 14 cents a pound, and, incidentally, British law provides that no food packages may come into the country which have a total weight of more than 5 pounds. That means that even the largest of these packages can't be more than 5 pounds, and even in the case of the $9.95 package, the shipping cost cannot possibly be more than 70 cents.

As for insurance, the Post Office Department says that the absolute maximum cost for insurance would be 20 cents, even on the largest package.

So far as customs duties are concerned, let's take parcel A as an example. The vegetable shortening would have to pay a duty of less than 3 cents; the cheese, less than 2 cents; the breakfast cocoa, 3 cents; the orange marmalade, 3 cents; and the canned orange juice—that is duty-free—so the total customs duties are less than 11 cents, all told.

As for the contribution to the British charity, that's mentioned, I asked Mr. Morris about that, and he made quite a point of those contributions. Remember, the circular which I have here and which Mr. Morris himself gave me, says, "Ten percent of the sum of your order will be contributed to this particular British charity, to assist them in their humane work."

Now, it so happens that this organization is registered with the State Department, under a provision of law that requires the licensing of organizations engaged in charitable work in belligerent countries. The State Department issued a license to this Parcels for the Forces, Inc., and under the law the organization is forced to report its income to the State Department. So I got the latest figures on record for you. The last thing the Department has is up to and including June 1—which, of course, does not include any of the growing business since that time—and the figure was $78,000 then.

But forgetting about the income since that time—just taking that much—10 percent of that, if Parcels for the Forces is donating 10 percent of the sum of all the orders that come in—10 percent of just that much would be $7,800.

I checked with the heads of that charity on Monday, and Tuesday, and again today, and they inform me—the treasurer informs me—that even up to date, the contributions they have received from the organization are only about half that amount.

Mr. Morris, when I called on him, showed me letters that he has received from lord mayors of various cities in England, thanking him for parcels of this kind which he has sent to them, for distribution to the poor. In fact, on the back of this advertisement, facsimiles of some of the letters are printed. There's one from the mayor of Westminster. It speaks of "regarding the allocation of 100 more gift parcels for Westminster people, bombed out of their homes and living in shelters," and it tells how those will be distributed. Mr. Morris played very heavily, in his conversation with me, about this wonderful work that his organization is doing.

On further questioning, however, he admitted that his organization was not footing the cost of those parcels. On the contrary, Parcels for the Forces, Inc., was being paid the full list price by charitable-minded American citizens who wanted to help those in need on the other side, and who bought so many of the packages, to be shipped over for distributing as the lord mayors of the stricken towns might see fit. Parcels for the Forces made the full profit, out of each one.

So it seems that strange commercial successes can be made by capitalizing on the want, and the privation, and the suffering of the very heroic people of Britain. For your own guidance, it's perfectly simple to buy these materials in your corner grocery store and ship them over yourself. You can even buy the canned butter, in most places, condensed milk, and any condensed food in cans is deeply appreciated by the people over there. And there are, of course, numerous established charities that are highly admirable, most of the ones you hear about are. The British War Relief for example has distributed $12,000,000 in money and materials to Britain at a cost of less than 6 percent, including shipping and everything else.

It would be most unfortunate if the activities of these private, profit-making concerns should injure the cause of those organizations, and it may be that one of those recognized organizations will take over this kind of work. In the meantime, the case of Parcels for the Forces has been laid before Mr. Leon Henderson, and his price-control agency, for Government investigation.

Profiteering in Strategic and Critical Materials

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

Mr. BRADLEY of Michigan. Mr. Speaker, it is said that we are dangerously close to war. It is a well-recognized fact that there are numerous small minority groups throughout this country actively engaged in pushing us further along the road to war. Sooner or later they may get us into such a position where we will have our neck out so far that we will be unable to back out without shooting our way out. Many of these minority groups are motivated solely with their quest for "blood profits." These groups are motivated solely by selfish greed and a desire to accumulate what the President himself called fool's gold back in 1936, when he was a candidate for a second term and, therefore, at that time was advocating over the length and breadth of this land the enactment of a neutrality act, which was to forever keep this Nation at peace and from again becoming involved in somebody else's war.

Now, Mr. Speaker, among these minority groups to which I have referred there is a certain class of commercial black and white striped wood-pussy, which not only selfishly seeks to bring about the ruin of this country by bringing about our involvement in this war, but at the same time seeks to pad his own pockets with filthy blood profits. The man I refer to is that man who knowingly bootlegs critical and strategic war materials to nondefense industries in order that he himself can reap wholly unwarranted and unjustified high profits. In every part of this country, Mr. Speaker, these individuals—comparable only to the bootleggers of prohibition days—are speculatively purchasing these critical and strategic materials and are selling them to individuals, firms, or contractors who for various reasons are unable to secure a priority rating, and at prices far above the regularly established and quoted price lists.

It is about time that the Government recognizes that this is going on and

clamps down on these individuals who, if they are sat upon, will be very much less active in their desire to involve this Nation in somebody else's war.

Therefore, Mr. Speaker, I have today introduced a bill which I hope will receive prompt consideration and action. The bill is very short and, I hope, is sufficiently all-inclusive to make the Government immediately assume control over these individuals and drive them out of existence. The bill imposes a $10,000 fine or not more than 10 years' imprisonment, or both, on anyone who sells strategic or critical war materials, upon which a priority rating has been established, to anyone who has not received a preference rating; and it provides that the President, or such agency as he may direct, shall give written approval of all such sales, deliveries, purchases, and acceptances of all such critical and strategic materials.

If we do eventually get into a shooting war, Mr. Speaker, let us not be guilty of not having done everything in our power to prevent the creation of another group of war millionaires, whose chief interest has ever been their own selfish greed for blood profits rather than patriotism.

Mr. Speaker, you know that in the past I have steadfastly opposed the granting of additional powers to the President, particularly those powers which rightfully belonged to the Congress. However, this is one power that the President should have and is one power he should use—and use now.

Defense Production

EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

ARTICLE FROM NEW YORK HERALD TRIBUNE

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on small factories in connection with the O. P. M. work:

[From the New York Herald Tribune]

SMALL FACTORIES BID O. P. M. USE THEIR FACILITIES—BUSINESS CONGRESS ASSERTS CONCENTRATION CUTS OUTPUT AND THREATENS SHUTDOWNS

The defense-production program is far behind schedule and thousands of businesses face possible shut-down, with resultant widespread unemployment, because the facilities of small industrial units are not being utilized for defense work, it was charged in a letter sent yesterday to William S. Knudsen, Director of the Office of Production Management, by the American Business Congress, an organization of small manufacturers.

The letter and data on defense-production activities gathered recently were discussed by C. J. Seedman, president of the American Business Congress, and other members of the organization at a meeting attended during the afternoon by newspaper executives at the Advertising Club, 22 Park Avenue.

Mr. Seedman said that the survey made by the organization had established that there was much inefficiency in the operation of the defense-production program, and that an "estimated 50 percent of the Nation's maximum productive plant capacity is not being utilized."

"These unused facilities are essentially in the hands of business concerns who have been unable to secure defense work or the necessary material for their normal civilian production," it was stated in the letter to Mr. Knudsen.

"As you know, small business concerns who pay out about 85 percent of the Nation's pay rolls are the most seriously affected. Yet while they face wholesale extinction, a handful of giant corporations are overloaded with about 75 percent of all defense orders, according to your bureau of statistics."

The American Business Congress suggested to Mr. Knudsen a seven-point program for correcting the situation and protecting small businesses during the crisis. It follows:

"A. Every prime contract awarded should carry a provision for mandatory subcontracting of a portion thereof, wherever possible.

"B. O. P. M. should encourage and assist in the development of 'pools' consisting of a number of small plants whose facilities can be coordinated to produce defense goods.

"C. Procedure should be simplified and assistance rendered by O. P. M. officials to enable small manufacturers more readily to understand how they can participate in production of defense goods. Present regulations are unnecessarily complicated and cumbersome; information required is sometimes unobtainable.

"D. Priorities should not be granted for new plant equipment until it is ascertained that existing facilities are inadequate.

"E. The allocation of civilian supplies should be coordinated with the change-over from 'business as usual' to wartime industrial production.

"F. Unwarranted accumulation of 'priority' materials by one group at the expense of another should be controlled.

"G. Plans should be devised looking to the economic welfare of nondefense industries which face curtailment or shut-down."

The communication also was addressed to Sidney Hillman, Associate Director of the O. P. M. The letter was signed by Mr. Seedman for the board of directors of the small manufacturers' association.

Our "Red" Brethren

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

Mr. HOFFMAN. Mr. Speaker, while the President is struggling to find ways to give the Communists in Russia under the leadership of bloody Joe Stalin, the hard-earned tax money of American patriots, the Communists, who believe in and have worked for the overthrow of this Government by force, are doing their dirtiest in California to disrupt the President's so-called fight for the democracies.

While Harry Hopkins, the President's personal friend and special agent is conferring in Russia with the rapist of Poland, with the would-be oppressor of Finland, the "red" leaders in California are doing what they can to impede our national-defense program.

Note the following clippings from the Los Angeles Times sent me by an unnamed but indignant citizen of that community:

MOSCOW-LED "RED" DRIVE IN LOS ANGELES UNFOLDED—COMMUNIST PARTY SECRETARY TELLS STATE ASSEMBLY BODY OF SUBVERSIVE MOVES

While Los Angeles little dreamed of what really was happening, the Communist Party—

Organized Los Angeles harbor fishermen and sailors, and conducted "successful" cannery strikes;

Penetrated Hollywood to foment the motion picture studio strikes that proved disruptive within the industry;

Gave "great help" in the Douglas Aircraft Co. strike, the Tea Garden cannery strike; the 1937 San Pedro water-front strike; and "possibly contributed" in the Los Angeles Railway Corporation and Venice celery growers' strikes;

Secretly conducted "schools" for children as young as 9 years old;

Aided in "labor organization" at the Ford Motor Co. plant; and

Inaugurated the recall petition against former Mayor Frank L. Shaw.

Jack Moore, youthful secretary of the Communist Party in Los Angeles, so testified yesterday before a State assembly committee investigating un-American activities.

"RED" TELLS STORY

He was under oath in the State Building before Assemblymen Jack Tenney, James H. Phillips, and Jesse B. Kellems, and questioned by Richard Combs, Visalia attorney, assisting the committee.

He testified further that at Los Angeles Harbor the Workers' Alliance is a Communist Party fraction, and that some of the party's local funds came from "people interested in doings in Moscow."

Mr. Speaker, is it not about time that the President, who insisted upon the recognition of the Russian Government, his wife, who entertained in her own home and in the Executive Mansion members of the Communist Party, who has appeared at public meetings where their influence was powerful, be a little more choosy in his selection of those who, if he be successful in his present program, will have the power of life and death over American conscripts—American soldiers and men of the Navy.

The President should remember that while the "Bear Who Walks Like a Man" is at present engaged in clawing Hitler, it is quite capable of crushing in its Soviet arms this Republic of the West.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

Mr. LAMBERTSON. Mr. Speaker, the new lease-lend-leave bill should include freezing in Harry Hopkins in Moscow.

If it is true that Russia is winning, then we should rush aid to Hitler. We must keep Joe and Adolf tied.

We should adopt as the theme song for our State Department, "We won't go over till it's over over there."

George Washington threw a dollar across the Rappahannock. Another has thrown over $7,000,000,000 across the Atlantic.

We wonder how the 100,000 American boys who gave their lives in vain during the last war would vote on a shooting war.

The most recent message on inflation and price control calls for more power to the President. Who would have thought it?

Churchill's wish of our being on the "verge" no doubt is father to the thought but is not in line with the Father of our Country.

If Willkie were speaking at Coffeyville this summer, a handcar would be the only special train needed from northeast Kansas.

Like Ruth to Naomi, only militantly, HIRAM JOHNSON said to BURT WHEELER, "If you must go to a concentration camp, I will go with you."

There is a suspicion that a large part of our Pacific Fleet was moved into the Atlantic to help convoy. Japan fooled Mr. Hull by starting something.

Franklin backed Stimson on his charge of near treason. The Secretary of War apologized to the Montanan, which leaves the former on the proverbial limb.

Hyde Park Cleaners: Specializing in taxpayers' pants and bundles for Britain. Deliveries promised anywhere in the world. For quick service phone Congress 1776. (Advertising.)

We are on both sides and in the middle of the present war. We gave deadbeat Britain the planes to bomb pay-up Finland and we gave Finland the guns and money to defend her democracy.

W. P. A. Projects

EXTENSION OF REMARKS
OF
HON. JOSHUA L. JOHNS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

LETTER FROM E. P. BOLAND, GREEN BAY, WIS.

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

GREEN BAY, WIS., *July 15, 1941.*
Congressman JOSHUA L. JOHNS,
Eighth District of Wisconsin,
Washington, D. C.

DEAR MR. JOHNS: I want you to know that I have enjoyed reading your weekly letters. They certainly contain a lot of information and it is too bad that everyone, not only in the eighth district but throughout the Nation, does not have an opportunity to read them.

I also want you to know that I enjoyed your last talks over the radio, and as I listen to you talk and read your weekly letters, I often wonder where the American people are headed for.

There is one thing at this time that I would like to bring to your attention although I believe you are very familiar with conditions, and that is when farmers are begging for men to do their haying and harvesting, there still continues to be operating a lot of useless, worthless W. P. A. projects. The one that I am going to describe should be one for the book.

Out in the town of Hobart—that used to be part of the Oneida Indian Reservation—there are still quite a number of Indians who, up to the time the relief took over, were all willing to work and able to make their own living. This took a period of about 25 years to bring them up to this point. Within 30 days after the relief set in, it put the Oneida Indians back about 25 years. One of the W. P. A. projects which I have in mind is about 12 big fat lazy Indians sitting up at the Episcopal Hall for about 2 years, supposed to be writing the Oneida Indian language. After they had it written, they didn't know what to do with it, so they continued with the same project, or a new one, to write a dictionary of the Indian language and they are still sitting there writing a dictionary for the Indian language; each one of them getting $70 a month.

(Now, can you tell me who wants to learn the Indian language, and what are they going to do with the dictionary?)

The reason why I set this project out is because of the fact that many of the farmers in this locality are unable to get help to put in their hay. Four of those fellows used to belong to my crew, but while they can get $70 a month writing the Indian language they will never work for me or for anyone else owning a farm, and the best part of it is that most of the money those fellows earn on W. P. A. goes for booze.

Now, in my opinion, that is one project that should be halted immediately, as there is plenty of work right in their neighborhood that they can do and get, and would be doing something for the good of their country. (Of course, those fellows are our new dealers.)

Then we have several projects over in our courthouse. A bunch of loafers are sitting around tables blocking the hallways, supposed to be working on old records or trying to clear up the family tree of a lot of the old, early French frog catchers or muskrat hunters who lived along the banks of Fox River in early days in little shanties.

I feel, Mr. JOHNS, that you will agree with me, and I know that it is hard, single-handed, to do anything to remedy matters and break up the political machine, but I believe that if more publicity were given to the useless, worthless projects of W. P. A., that today there is absolutely no cause for it, and that some of the "rubber stamp" Congressmen would wake up.

In closing, I will say that it is just too bad that 75 percent of our Congressmen and Senators are not men of your caliber and ideas, and the other 25 percent could be "rubber stamps." With kind personal regards, I remain

Respectfully yours,

E. P. BOLAND.

Will the Government Survive If We Fight in the Present World War?

EXTENSION OF REMARKS
OF
HON. JOSHUA L. JOHNS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

RADIO ADDRESS OF HON. JOSHUA JOHNS, OF WISCONSIN

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech which I made over the radio on July 30:

Ladies and gentlemen of the radio audience, I am pleased to be able to address you tonight upon the subject: Will This Government Survive if We Fight in the Present World War? I feel that, as your representative, I should occasionally report to you what is going on in the Nation and get your ideas of what should be done to solve the public problems that are facing us.

It is needless for me to say to you tonight that, in my opinion, we face in the United States the greatest crisis that we have seen since the early pioneers struggled through those serious days between 1783 and 1787 when there was a question in the minds of all people whether or not our great country could survive. We are a liberty-loving people and we have always had great independence in this country, and the problem that faces us today is whether we can continue with liberty and independence. In studying this problem, I turned to Abraham Lincoln, and a speech that he delivered at Edwardsville, Ill., on September 13, 1858. In that address, he said:

"What constitutes the bulwark of our liberty and independence? It is not our frowning battlements, our bristling seacoasts, our Army, and our Navy. These are not our reliance against tyranny. All of these may be turned against us without making us weaker for the struggle. Our reliance is in the love of liberty which God has planted in us. Our defense is in the spirit which prizes liberty as the heritage of all men, in all lands everywhere. Destroy this spirit and you have planted the seeds of despotism at your own doors. Familiarize yourselves with the chains of bondage and you prepare your own limbs to wear them. Accustomed to trample on the rights of others, you have lost the genius of your own independence and become the fit subjects of the first cunning tyrant who rises among you."

Today, the world faces this sort of a problem. The question we must decide is to what extent, for practical and effective purposes, can the Government of the United States fulfill its military, naval, and economic commitments on the basis of applying them anywhere and everywhere beyond our own country? This question is not propounded to you capriciously. It recognizes what is increasingly in the minds of the American people as you witness the experiences of Great Britain and new phases of our American policy.

As you perhaps know, I have favored giving aid to Great Britain and the other countries which are trying to preserve civilization, but I am not unmindful of what a great task this is and above everything else, I am for America first. Then, if we can aid somebody else, let us do so.

Let us review briefly the condition of Great Britain at the present time. As an Empire, it is spread all over the map. As a result, her defense is not strong in any particular part of the world. Because of her diversity of territorial and economic interests, calling for first protection, Great Britain has not been able to help much those allied with her in resisting Axis aggression. For instance, the military force that Great Britain was able to send Greece was only about 60,000 men. Compared with the threefold forces the Nazis had in the Balkan area, British help to Greece could not have resulted in other than the forced evacuation that attended the British, fine and heroic as it was.

Because the British Empire is scattered all over the earth, Great Britain, being undermanned in comparison with Germany, cannot concentrate great forces outside of the British Isles themselves to minimize the risks to her own empire and the communications vital to keeping it well knitted. Britain simply cannot give any decisive assistance to what are loosely referred to, here and overseas, as "the democracies."

We have already, to give aid to Great Britain, diminished our naval forces considerably. We have already dispersed troops to Hawaii, Guam, the Philippines, and other American possessions in the Pacific and to the new leased bases all the way from Newfoundland north and east of Canada to the semitropics.

We have assumed responsibility for protecting Greenland, a Danish possession. Then, there is South America. The latter is, truly, in our hemisphere. We also have in effect a wide and ranging sea patrol, so that our naval and military forces are, like Great Britain's, becoming more scattered all the time.

Great Britain's greatest and most disturbing peril is not only a Nazi juggernaut. A grave danger of the British people is inherent in Great Britain's many tenuous and undependable political alliances and obligations, in her vast expanse of territory, and in her great Navy and armies of many races and colors being distributed all over the globe. In this thinment of Great Britain's dispersed power is a signal for the United States not to sprawl itself out too far or bite off more than it can chew. We must have the vision, and courage to think of our own country, too.

The people of this country are interested in what our Government is doing about our own national defense. They feel that if that defense is all powerful the American people will be able to do their part toward ending this conflict, if and when it becomes necessary to do so. The place to find out that this is the sentiment of the people is not down here in Washington, your Capital, but out among my radio audience, away from Washington, where you are able to do some clear thinking. You may be influenced by the propaganda over the radio and in the newspapers and on the screen, but out of all the confusion in your minds, in time you think matters through and come to a correct conclusion if you can sift out the truth from the false statements that are being made to you. In our foreign policy our great need is for orderly thinking, devotion to our Constitution, and faith in the American people.

We need leadership that will unite America in a policy that is unmistakably a policy for the defense of America, on whatever scale and whatever plan is demonstrated to be necessary to meet the needs of the present day. This calls for a program of defense, invincible in modern warfare on land, on sea, and in the air. It must command the unquestionable respect of those who listen only to the strong. We should seek a strength so great that it will guarantee to ourselves and to the world either that we shall be let alone, or that, if attacked, we shall and must win. The Nation already supports and is committed to a policy of this kind. What we need for it, most of all, is time to make it effective.

This naturally means the wholehearted support and preservation of our constitutional structure and procedure and of our Bill of Rights. It means full cooperation between the executive, legislative, and judicial branches of our Government. It means that if new governmental policies, such as the authorization of price fixing or the establishment of important executive branches of the Government, are to be adopted, this shall be done by law after consultation with the executive branch of the Government, and should not be by Executive order issued without consultation with Congress. This means freedom of the press, of assembly, of worship, and, as far as possible, of individual opportunity. It means patient and cordial recognition of the right of freedom of speech by those loyally opposing as well as those loyally supporting the administration. This means just now, for example, no convoying by American naval vessels of war materials to belligerents. It does not mean any lack of diligence in policing or patrolling the high seas in defense of American rights, people, and properties, including our insular possessions and the areas that come within our Monroe Doctrine and the pan-American agreements that have grown from it. It means diligent defense, but it does not mean aggression or incitement to aggression. It means limiting our aid to other nations to the lending or leasing of things, not of men. It means a bona fide and convincing recognition of the fact that the American people and the Congress, which is their constitutional representative on this issue, have not declared war, that they do not want to declare war, and that they do not want to enter upon an undeclared war.

Our policy of national defense does not authorize war unless we are attacked or unmistakably threatened with attack. We are not now so threatened. Our national defense does not now authorize an attack by us on anyone. It does not authorize our provocation of attack upon us by anyone. It does not authorize our cargo carriers to enter combat areas. It does not authorize our naval vessels to convoy war materials to belligerent nations, although it does fully authorize the production and supplying of those materials as rapidly as possible and in as large and effective quantities as the President shall deem to be necessary for the defense of nations whose defense he now deems, under the law vesting him with that discretion, to be vital to the defense of America.

In carrying out these policies it must mean unity between the Government, the manufacturer, the farmer, the industrial worker, and the taxpayer. It means that we must have unity between capital and labor in the interest of uninterrupted production. With all of this, it means a Government guaranty of fairness and a governmental policy of firmness toward employer and worker alike. The employer and the industrial worker are at heart the same kind of patriotic citizens out of uniform as are the general and the soldier in uniform. We all are in a common, essential, patriotic service. Genuine, fair leadership can secure the same complete response to a call for patriotic service from men out of uniform as it can from those whom it places in uniform.

The President, in carrying out these policies, should demonstrate a deep faith in the people and in their representatives. He should take the people and the Congress into his confidence and, in return, he will receive their confidence. He should not attempt to force America further than he can carry a substantially united Nation with him. Divided, a free people is helpless. United, a free people is invincible.

A free people will go to whatever limits are necessary to defend and preserve their freedom, but to have the dynamic strength inherent in freedom their action must be voluntary. It must be based upon deep conviction freely arrived at on the basis of facts clearly understood. America will follow a leader who points the way of truth, but he must not hide or color the truth. He should lead in the exposition and analysis of the true facts and in the determination of policy based upon them. This calls for a knowledge of facts by the President and his staff and also for a frank sharing of these facts, and his interpretation of their meaning, with the Congress, the Governors, the mayors, and the industrial, agricultural, military, civic, and religious leaders of the Nation.

There is no doubt in the minds of the American people that with teamwork in industry and a united Nation we can defend America. We must have faith in one another and faith in God. Courage is conviction translated into action. It is as great as the conviction is deep. We shall save America in proportion to our conviction of its soundness and our faith in it. The heart of our foreign policy, as well as of our domestic policy, must be our complete and immediate personal and official dedication of ourselves, our fortunes, and, if necessary, our lives to the service and defense of America.

We are not prepared for war unless we do happen to be attacked and the thing for us to do is to attend strictly to our own business of national defense. When a country sets out to conquer such seasoned customers as Germany, Japan, and Italy together, it is a good idea to have something more tangible than rhetoric with which to conquer them. The risk involved in thinking we can conquer with our bare hands because our hearts are pure is one of the gravest any nation can take. All we need to do to assure ourselves of this fact is to consult the Finns and the Greeks about it. If we go to war unprepared and suffer serious reverses abroad, our position in Latin America will be greatly weakened.

The percentage of Americans who do not want to go to war with actual fighting is about 4 out of every 5, and should they be compelled to get into and fight a war they do not believe in, they would be apathetic about the whole thing. It will be necessary for us to get results if we are to inculcate enthusiasm in them. We may have to fight later and should prepare for it to the hilt, but history has too many surprises to justify the word "inevitable" in connection with our decision.

If we entered the war, what would be our situation after it was over? Not only would we have the crushing burden of war debts, contracted for the material implements of warfare, added to our enormous peacetime debt, but we would have the moral and economic load of war's human wreckage, including insurance and other benefits to the families of the dead. When we were through, we would have widespread want and fear, and we would have the maintenance of order by a Government scarcely distinguishable from those we fought against. In my opinion, it is fairly certain that capitalism would not survive our participation in this war.

The totalitarian powers are reasonably united now and would be much more so if we attacked them, they may not be so united later as Russia is now on the defensive instead of the offensive.

It is too late now to save the little nations as sovereign states. The power age and the

bombing plane have made it impossible for any nation to insist on its sovereignty without the military force to protect it and supply all strategic raw materials within its borders. Only about 4 countries can qualify for sovereignty today: The United States, Germany, Japan, with its resources from China, and Russia. The British Empire is too scattered geographically to form a compact fighting unit. Little nations will have to snuggle under the aluminum wings of one of these 4 countries, or build up federations of their own, to which they must perforce, surrender their sovereignty. The little countries of Europe can only be saved in some kind of United States of Europe. The question arises—have we the plans or the power with which to set this up?

Some day, this unspeakable war will end and the rebuilding of the world, already being planned, will occupy the focus of our minds. Even now, in the midst of the din and chaos, of starvation, death, and disaster, the eternal verities of life and the principles which underlie any order of society that can be called good, need to be affirmed and kept alive. Every voice of reason cries out against this war. Every note of revelation in Christ's Gospel is leveled against it. The still, small voice within our souls insistently speaks against this way of solving the problems of life.

In this crisis and during these distressful days, when each one of us at times feels that the way of life which we call civilized may be lost and forgotten, it is imperative that we take stock of the forces which we can employ to perpetuate it among men. We all owe a positive duty to our community at this time, the neglect of which we cannot excuse on the plea of duty to our private affairs. We are in a great crisis. We should follow understandingly the course of public events and we should then endeavor to act intelligently and efficiently in support of the principles which we believe to be right and which will perpetuate our civilization. In order to better accomplish our objectives, we must develop leaders of inspired idealism; leaders who have been granted great vision; who do much dreaming and are constantly striving to make their dreams come true; who can kindle in the hearts of all true Americans, this spirit, with the fire from their own burning souls; those leaders who not only preach, but those who put into actual practice what they teach.

The world must not fail in the present crisis. Civilization must be preserved—and that it will be—but not unless God shall give us men and women cast in heroic mold; men and women endowed not only with the understanding heart which feels and appreciates the condition of the present, but with the philosophic mind which weighs with just discrimination the accumulated experience of the past; men and women who can withal lift up their eyes in abiding faith to the hilltops of the future which even now are touched and glorified by the light of the approaching day.

You, as good citizens, mindful of your country's traditions and its welfare, should uphold a proper respect for constituted authority and assist in preserving and advancing the integrity and prestige of our Government. As I have stated before, we are now passing through a great emergency, and may I ask of you that you look proudly toward our country, revere its traditions, fight for its prosperity and future, and above all, live that life, whatever be its intrinsic reward, which will cause us to know that we have been honorable citizens, appreciative of the privileges our country affords us, jealous of its integrity, and alert in its defense. Be not afraid of patriotism; it is the soul of citizenship. Be not afraid of service; it is the road to contentment, and it is a thing we can all give.

Lend-Leasing for Atheism

EXTENSION OF REMARKS

OF

HON. STEPHEN A. DAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

RADIO ADDRESS OF STEPHEN A. DAY, OF ILLINOIS

Mr. DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio yesterday:

Last Saturday, there arrived in Washington high officials of the Soviet Union. Immediately upon their arrival they went into a huddle with our State Department. Yesterday, Harry Hopkins landed in Moscow. These two events are of such far-reaching importance to the people of the United States that I feel it my duty to speak plainly.

Last March the Congress voted $7,000,000,000 to implement the lend-lease bill. This action followed the message of President Roosevelt, which he delivered in person in the hall of the House on January 6, 1941. In that message he stated in part as follows:

"In the future days, which we seek to make secure, we look forward to a world founded upon four essential human freedoms. The first is freedom of speech and expression everywhere in the world. The second is freedom of every person to worship God in his own way, everywhere in the world. The third is freedom from want, which, translated into world terms, means economic understandings which will secure to every nation a healthy peacetime life for its inhabitants, everywhere in the world. The fourth is freedom from fear—which, translated into world terms, means a world-wide reduction of armaments to such a point and in such a thorough fashion that no nation will be in a position to commit an act of physical aggression against any neighbor—anywhere in the world. That is no vision of a distant millennium. It is a definite basis for a kind of world attainable in our own time and generation. That kind of world is the very antithesis of the so-called new order of tyranny which the dictators seek to create with the crash of a bomb. To that new order we oppose the greater conception—the moral order. A good society is able to face schemes of world domination and foreign revolutions alike without fear. * * * The world order which we seek is the cooperation of free countries, working together in a friendly, civilized society. * * * Freedom means the supremacy of human rights everywhere. Our support goes to those who struggle to gain those rights or keep them."

We now learn that the President has promised total aid to the Soviet Union and that all necessary steps are being taken to make that aid just as effective as our aid to Britain. It has been stated and not denied that the President will soon come to the Congress for additional billions of lend-lease funds to aid the Soviet Union. The presence of the Soviet officials in Washington and the presence of Harry Hopkins in Moscow totally remove any doubt that this aid has become a part of our foreign policy.

We all know that none of the "four freedoms" exists in the Soviet Union at this time and can never exist there unless the blood-soaked dictatorship of Stalin be overthrown. Millions have been murdered in Soviet Russia without trial or hearing, including thousands of priests. Organizations of the Godless exist everywhere under Stalin and on the walls of the Kremlin are the words "Religion is an Opiate." It is monstrous even to suggest that the second freedom proclaimed by the President, "Freedom of every person to worship God in his own way," can ever exist under the rule of Stalin. There can be no doubt that when the President spoke on January 6, 1941, of "tyranny which the dictators seek to create with the crash of a bomb," he referred not only to Hitler and Mussolini but also to Stalin. It is also perfectly clear that when he said "our support goes to those who struggle to gain those rights or keep them", he manifestly did not include the Soviet Union.

By what right then does Harry Hopkins fly to Moscow and assure Stalin that the Government of the United States will provide lend-lease funds for the Soviet Union? I charge here and now that this is plain usurpation of power on the part of the President and that it is the duty of Congress to proceed at once to revoke the authorizations granted to him under the lend-lease bill.

To enable the people of the United States to understand the violent departures which have been made and are being made from our constitutional system of government, I have written a book entitled "We Must Save the Republic." On page 89 of my book in speaking of the lend-lease bill, I state as follows: The lend-lease bill was an act "further to promote the defense of the United States" and was passed as a peacetime measure. There can be no question as to this point. No representative of the administration, from the highest to the lowest, ever advocated any reason for its passage, save that it would preserve peace by aiding Britain "short of war." There was great apprehension that enormous powers were being granted to the President, and, to allay such fears, provisions were inserted expressly limiting the granting of such powers. And the following was quoted from the lend-lease bill:

"After June 30, 1943, or after the passage of a concurrent resolution by the two Houses before June 30, 1943, which declares that the powers conferred by or pursuant to subsection (a) are no longer necessary to promote the defense of the United States, neither the President nor the head of any department or agency shall exercise any of the powers conferred by or pursuant to subsection (a)."

Can anyone honestly state that what Harry Hopkins is now doing in Moscow is necessary to promote the defense of the United States? Can anyone honestly state that the perpetuation of the power of Stalin is necessary to promote the defense of the United States? Fully convinced that the time has come to revoke the powers of the President, and such powers he may have delegated to Harry Hopkins as totally unwarranted, illegal, and unconstitutional, I am introducing a concurrent resolution in the House of Representatives, in conformity with the provisions of the lend-lease bill, which I have just read, to put an end to these activities. I call upon the American people to support me in this effort so as to insure the passage by the Congress of this concurrent resolution. A concurrent resolution passed by both Houses of the Congress does not require the signature of the President and he cannot veto it.

There is another phase of this question that I must once more call to the attention of the American people. It is the grave danger that rests in the attack that has been made on the independence of the

United States of America. If we break down this spirit of American independence, we will be wide open to communism that is creeping into the midst of our people. No one thought that when President Roosevelt in 1933 recognized the Soviet Union that in a few years he would pass beyond mere recognition to active support of the ideologies of communism by actually embracing the Soviet Union. As I have said, the Soviet Military Commission is now in Washington. Harry Hopkins, director of the lend-lease billions, is now in Moscow. These Soviet agents, working with the British agents, are perfecting plans for the total aid to Stalin promised by the President. Though blessed by Winston Churchill and Under Secretary Welles, they are still Communists and have not recanted one word of their blood-soaked doctrines of mass murder.

Communists may be popular in London and Moscow, but they are very much hated in South America. We have assumed the dominant place in the Western Hemisphere. The South American nations are largely Latin in their basic stocks. They will turn from the United States and leave us a colonial dominion of the British Empire without a friend in the New World, except Canada. Why do I say this? The answer is clear. Hating communism more than they do Hitler, all of the Latin nations of Europe—Italy, France, Spain, and Portugal—side with Hitler, not with Stalin. Every student knows that the blood of these Latin nations is the same blood that runs in the veins of the inhabitants of the nations of South America. Communism has poisoned the four freedoms and South America is questioning the close tie that President Roosevelt has established with the Soviet Union.

This should make us pause and reflect. What have we to gain by helping Stalin defeat Hitler if such action will alienate the friendship of South America? In my opinion, we must lose no time in declaring an American foreign policy that will keep our soldiers on the soil of this hemisphere. We dare not add to the $7,000,000,000 lend-lease gift another $7,000,000,000 gift to Stalin. If we do, our own defense is in great danger, not from a foreign invasion by Hitler on our shores, but from the loss of the friendship of our neighbors in South America. It is quite likely that we may witness a general repudiation of President Roosevelt's foreign policy that will be deeply humiliating to the American people. Our great Catholic population repudiates communism and are beginning to seriously question the sincerity of the "four freedoms," if the freedom of religion means the approval of godless Russia. Was there ever such a travesty?

Some may say that after Stalin, with our aid, has overthrown Hitler, Stalin will reform and proclaim, as has the President, the "four freedoms." Have we any evidence of this? Does anyone believe that Stalin will turn Christian and bow on bended knee and ask forgiveness for the 2,000,000 innocent men and women that he has murdered?

Men and women of America, this thing has gone far enough. We have been patient, but we are not fools. The last 9 years have been full of pain and suffering, but we are not ready to admit that all of our history, our great traditions, and our great institutions shall be surrendered to the domination of Stalin. I may be wrong, but I want to go on record now that I shall resist this sell-out of America to Britain and Soviet Russia just as strongly as I shall resist the successful overthrow of this country by Hitler or the Axis Powers. To me it is unthinkable that our foreign policy should condone the cruelties and atheism of the Soviet Union, and just because a foreign nation is at war with another foreign nation in Europe, the American taxpayers should be bled white to pay for gifts which President Roosevelt and Harry Hopkins have promised to Churchill and Stalin.

In a few days the Congress is going to be asked to vote upon the declaration of a national emergency to authorize President Roosevelt to keep our American boys for an unlimited period. He has said that the sole responsibility rests with the Congress. The Congress will give its answer, and from all indications as I speak tonight the answer of the American Congress will be an honest answer. And that answer will be "no." We shall keep faith with our boys and stand by the contract that was made with them in September 1940. The President has passed the buck to Congress. Mothers of America, it is our turn now, and the Congress will keep faith with you.

For the triumph of constitutional liberty in one part of the world, for the sanctity of promises given and accepted, for the example to your sons and the children of America to come after us, I pledge you here tonight that I shall be true to my oath of office and shall not betray you in this your hour of anguish.

A great cleric has recently stated:

"Today the mask is off; it is communism, communism, communism everywhere gaining ground. We are in danger of being slowly poisoned, debilitated, and disarmed by this monstrous malady. Now, in the name of the 'four freedoms' all aid to 'red' Russia is urged upon us while Britain in desperation has allied herself with a devil. So Britain has been fighting the battle of Christianity? There is a fallacy exploded. If we go into this war now we shall be nothing more nor less than a criminal nation, and let no one look to our Catholic people for support."

The law which President Roosevelt signed—the lend-lease bill—provides the way to end this crying shame about to be visited upon the American people. A concurrent resolution of the Congress can do it. It must be done. It shall be done. I shall introduce the resolution and I want your support to make it successful. If you agree with me kindly write or wire your Representative, as I am only the representative of the 8,000,000 people of the great State of Illinois. It will require the favorable votes of a majority of both Houses of the Congress. There is no time to lose. No one can say how far Harry Hopkins has gone in his promises to Churchill and Stalin. Those promises do not bind the American people, if the Congress of the United States shall exercise its power to put an end to the authorizations of the President under the lend-lease bill, by a concurrent resolution.

Sentiment Grows for Separate Air Force

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

Mr. RANDOLPH. Mr. Speaker, there is a sentiment for a separate air force for this country which is a moving and vital undertaking—and cannot be stopped. We expect continued opposition, but we are certain that a real case is being made which will be part of a record which is to stand the test.

In the New York Times of last Sunday appeared a letter to the editor, which endorsed an independent air force. It was written by Maj. Gen. William C. Rivers, United States Army, retired. I shall not quote the entire letter, but the following is especially pertinent:

What we require at this important time is an additional Cabinet officer—a Cabinet Minister of Defense.

Such an official should aid the President in inspecting and supervising the efficiency and relative progress of three coequal armed branches—the Navy, the Army, and the Air Corps, as is done in Britain, Germany, and 20 other countries. A small national-defense college should be created, under the minister of defense. The students would be a limited number of officers of the three services, with a few civilians from some of the other Government Departments.

SMALL STAFF NEEDED

The minister would require but a small staff. The three civilians at the head of the three armed services would each have large staffs as at present. Unity of command would be assured because the portions of the Air Corps which go to war with the Navy and with the Army would be all the time in peace actually with and under the orders of these respective branches—for training and indoctrination. A Reserve force of the Air Corps would be retained by the Chief of the Air Corps, subject to the disposition of the Minister of Defense. We need a single homogeneous United States Air Corps with its own laws for pay, promotion, and retirement.

Such an organization would result in great improvement in operations and in great savings of public funds.

As to our having in the Army some officers who are not competent, this is natural, because we lack any system of selection in the promotion of Army officers in the grades up to that of colonel. All the navies of all nations have such a system and all the important armies save only ours also use the system of selection in promoting Army officers. Therefore we are now doing much the same thing we have done when an emergency appears. We are experimenting with some of our Army officers in order to compare their relative efficiency when this should have been done carefully in peacetime.

COMPETITION FAVORED

This experimenting with the assignments of some of our higher officers has in the past produced almost unbelievable results. It inevitably delays and mars the early training of some of the new forces. The history of administration indicates that no bureau in which the officials have a life tenure of office will ever retire or discharge in a thorough manner the less competent persons. An automatic system such as selection insures the competition which is effective.

The question of air power and the proper organization for our defense forces must now be viewed after study of the capture of Crete. The capture of Crete in a few days was an epoch-making event in warfare. The British were in possession of Crete. They had an army there, with defended positions, artillery, tanks, and other heavy equipment. The Germans carried to Crete thousands of infantry soldiers in transport planes and in gliders. The Germans captured Crete without tanks and artillery and special equipment. The airplanes not only brought the German troops to Crete, but the dive bombers acted in the place of tanks and artillery in battle to aid in defeating the British forces on the island. We now see that airplanes can be the principal instruments both in seizing and in

holding positions. The Air Corps is not, therefore, as many have claimed, merely an auxiliary force in war.

WILLIAM C. RIVERS,
Major General, United States Army, Retired.

NEW YORK, *July 24, 1941.*

Mr. Speaker, editorially of recent weeks the movement is growing stronger for increased emphasis on our air force and for an independent unit, which was advocated with strength by the late Billy Mitchell, and hundreds of persons since that time. At this point I include the comment from an editorial in Collier's of July 12:

After Crete and the *Bismarck* nobody outside Bedlam has any doubt about the striking power of an air force. The only machine able to resist a hostile airplane is another and better airplane. Against attack from the air the best ship in the German Navy went down. Against air bombs the valiant seamen and the splendid ships of the British Mediterranean fleet were helpless.

We cannot afford to ignore these plain lessons if we want to survive as a free people. In addition to whatever else we want and need to defend ourselves, we need planes and many more planes than we are producing now.

We don't have to fool ourselves or to try to fool anybody else. Our only possible enemies—Germany, Italy, and Japan—know very accurately what we have and what we are producing. The fact is—and it's no secret from possible enemies—we have not enough. Not that we have not done well since once we started. We were slow in starting. Whatever our shortcomings, we are all responsible for that, too. The incredible happened. We did not believe it would. So we were caught unprepared.

We don't have to continue unprepared, however, and we are not. Neither the Government nor the aircraft manufacturers have performed any miracles, but hard, honest, and intelligent work has been done and is being done. Good ships are being built and good minds are being focused on problems of design and of mass production.

We still continue, however, to act as though air power were an adjunct, and a subordinate adjunct, to something else. We underrate the importance of the air force. The military men and the admirals quite naturally have managed to keep the air force subordinate to themselves.

Collier's is not setting itself up as another strategist. Quite enough amateur strategists are struggling for attention. We won't add to their numbers. But without assuming an expert wisdom that we don't possess, we may point out that air power should be raised to equal rank and dignity in our defense establishment with land and sea power.

It is foolish to dogmatize as to just how this should be done. Perhaps a Secretary for Air in the Cabinet would fill the bill. Or perhaps a single department of defense, with coordinated, coequal bureaus for air, land, and sea, would be the proper formula. Of one thing we're convinced—that the naming of Gen. Henry H. Arnold as deputy Chief of Staff for the air arm, though a step in the right direction, is not a long enough step.

It looks as though we were going to rely upon planes to do most of whatever fighting falls to our lot if war be ultimately declared. We shall need planes to keep enemies away from our shores—not that any military authority expects any serious effort at invasion of continental United States—and we shall need planes for offense, if we get into the war.

The only force anyone has pictured carrying the war to Germany is an air force. If we are forced into war we will want planes capable of such fighting. We will want long-range bombers in multitudes never before assembled.

We are getting up speed in production. We are probably past the worst of the delays due to strikes. Organized labor is at heart as much interested in maximum production as any other group of Americans. Stupid and foreign-inspired local leadership led to bad interruptions in California and elsewhere, but that is over. Our guess is that the Army won't find it necessary to intervene in many places.

We need and we are getting a large army of trained fliers. Fortunately, the civilian training program is being continued and expanded. There are some 65,000 licensed private pilots in the United States and 17,000 privately owned planes. These men and women are obviously not military pilots. Some of them at least are able to do defense work in an emergency. We hope that no departmental rivalries or jealousies will prevent the full use of these civilian pilots and plants for whatever services they are actually qualified to perform.

Air power has suddenly come of age. It behooves us to gather up and utilize all the air power we now possess and to make more of it as rapidly as we can.

Tax on Marriage

EXTENSION OF REMARKS
OF
HON. FRANK FELLOWS
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

EDITORIAL FROM THE BANGOR (MAINE) DAILY NEWS

Mr. FELLOWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bangor (Maine) Daily News of July 29, 1941:

[From Bangor (Maine) Daily News of July 29, 1941]

TAX ON MARRIAGE

Aside from all discussion of the relations between church and state, or the clergyman's proper role in civic life, there is wide agreement that there was a time when the cleric was as generally correct as he was generally effective in matters of politics. There is also a widespread belief that, later, this ceased to be the case. Today, though the American clergy are so sharply divided over America's war policies, there is a feeling that they are again beginning to speak of public affairs "not as the scribes."

A striking contribution to this feeling was made at Bar Harbor, the other day, by Protestant Episcopal Bishop William T. Manning, of New York, protesting against the proposed Federal law to exact joint income-tax returns from husband and wife:

"We have got to pay greatly increased income taxes to defeat Hitlerism," said the bishop, "and we must all be willing to do this; but * * * the proposal in question would tend definitely toward divorce, celibacy, and a declining birth rate, and would be a reversal of the progress which has been made, in recent decades, in giving women their true status as individuals and citizens. The strength of our Nation lies in happy marriages and in happy homes and families. This proposed law would say to married couples that they must pay far larger income taxes if they live together than if they break up their homes and live apart, or if they were not married."

The bishop, a staunch supporter of all-out American aid to Britain, urges every citizen to shoulder a full share of the tax burden, but denounces as a bill calculated to force a man and a woman, married and living together, to pay a larger tax than a couple unmarried, divorced, or living apart. Although Dr. Manning speaks primarily as a clergyman, his religious arguments are cogent additions to the purely economic reasons against a measure essentially discriminatory and antisocial.

Amendment of Sugar Act of 1937

EXTENSION OF REMARKS
OF
HON. J. W. ROBINSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

Mr. ROBINSON of Utah. Mr. Speaker, the national emergency confronting this country today has created a sugar problem which was not contemplated when Congress passed the Sugar Act of 1937. Under this act three-fourths of the requirements of consumers in continental United States depend upon shipments of raw sugar from offshore producing areas. It is obvious that the Sugar Act was written on the assumption that a continuous supply of shipping bottoms would be available to transport sugar from these off-shore areas to this country. It is not necessary to do more than point out that this Nation is facing the most acute shortage of merchant ships in its history. This factor will tend to disrupt the flow of sugar to the United States market and this situation seems increasingly serious in the case of the Philippine Islands.

H. R. 3582 which proposes to amend section 204 (a) of the Sugar Act of 1937 constitutes a necessary step toward meeting the effects of a rapidly increasing shipping shortage.

Since the enactment of the Sugar Act the Philippine quota has been in excess of the duty-free quota established by the Philippine Independence Act. However, the Philippines have never shipped any of their full-duty quota but have always filled their duty-free quota. Now, however, our rapidly increasing shipping shortage makes it at least probable that a deficit in the duty-free portion of the Philippine quota will occur in the near future.

Under the law as it now stands this deficit must be allotted among foreign countries other than Cuba, and it is highly questionable whether these countries could supply the sugar, even if it were deemed advisable to permit them to do so.

The following table shows that in no year, since the Sugar Act has been in effect, have foreign countries other than Cuba been able to fill their quota. This table shows that last year when no Philippine deficit was declared, the total

of these countries was 24,177 tons, and they were able to bring in only 17,400 tons.

Sugar quotas for foreign countries other than Cuba, charges against quotas, and Philippine deficits, 1934–40

[Short tons, raw value]

Year	Final quotas	Charges against quotas	Charges as percent of quotas	Philippine deficits
1934	25,836	29,750	115.15	None
1935	25,228	10,977	43.51	None
1936	29,103	29,024	99.73	[1] 651
1937	114,641	89,155	77.77	86,805
1938	80,683	75,114	93.10	53,883
1939 [2]	85,812	62,021	72.28	59,111
1940	24,177	17,400	71.97	None

[1] Under the Jones-Costigan amendment all areas shared proportionately in deficits wherever occurring. Actual Philippine deficit in 1936 was 97,909 tons, of which full-duty areas were allotted 632 tons. These areas were also allotted 19 tons from a Virgin Islands deficit of 2,230 tons.

[2] Quotas suspended by Presidential order on Sept. 12, 1939.

Feb. 27, 1941.

It has been argued by those opposed to this amendment that it violates, at least in spirit, the provisions of the world sugar agreement. Nothing of the sort is true. The important provisions of the world sugar agreement as it relates to the Philippine Islands and the position of foreign countries other than Cuba in the American market are as follows:

First. The United States undertakes to permit each year the importation from full-duty countries of an amount of sugar proportionately as large as those authorized for the calendar year 1937 under General Sugar Quota Regulations, Series 4, No. 1.—The quotas thus established totaled 26,610 tons at a consumption estimate of 6,434,588 tons.)

Second. The United States undertakes to permit, in case the Philippine quota is reduced below 850,000 tons, the importation from full-duty countries of an amount of sugar at least equal to the reduction.

Third. The Commonwealth of the Philippines agrees not to seek an export quota in the world market so long as its quota in the United States market is not less than 850,000 tons, or until basic quotas in the world market are increased.—The Philippines get 4 percent of any such increase.—However, in case the United States duty-free quota of the Philippines is reduced below 850,000 tons, the Islands are to be allotted world market quotas equal to the reduction.

This amendment makes no attempt to reduce the Philippine quota below 850,000 tons; and the law still specifically provides in section 204 (a), which deals with reallotments of deficits, that "the quota for any domestic area, the Commonwealth of the Philippine Islands, or Cuba, or other foreign countries shall not be reduced by reason of any determination made pursuant to the provisions of this subsection." Since this amendment does not reduce the basic United States quota for full-duty countries, and makes no reduction in the Philippine quota, it cannot be contended that the world agreement is in any way involved. All that it proposes is a change in the distribution of a Philippine deficit, and this point is no part of the world agreement.

This bill is wholly consistent with the position taken by the State Department when the Sugar Act of 1937 was under consideration.

When the Sugar Act of 1937 was being given congressional attention, Secretary Hull made two recommendations with respect to the quotas of foreign countries other than Cuba; that is, those countries whose sugar shipments to the United States pay the full rate of duty. He suggested, first, that deficits occurring within the quotas of these areas be reallotted to the other sources of supply within the group, and second, that the deficits in the full-duty portions of the Philippine quota be reallotted to these full-duty areas.

With respect to the first proposal, Mr. Hull on March 23, 1937, directed a statement to Representative Marvin Jones, then chairman of the House Committee on Agriculture, in which he said (record of House hearings, p. 367):

> It would be highly advantageous to our export trade if some arrangement were to be made to increase the quotas to be allotted to other foreign countries. If, for example, deficiencies in the sugar quotas of any one or more foreign supply areas were to be reallocated with this end in view agriculture and industry would gain additional markets for their products.

On April 30, 1937, in another statement directed to Mr. Jones, the Secretary of State made reference to deficits in the Philippine quota as follows (record of Senate hearings, p. 182):

> In order to increase the full-duty quotas without disturbing the basis of the existing quota allocations, the draft of a bill presented by the Secretary of Agriculture proposed that any part of the full-duty share of its quota not utilized by the Commonwealth of the Philippine Islands be reallocated on a pro rata basis to the full-duty countries. Under the Jones-Costigan Act, the Philippines have not elected to use any part of the full-duty portion of its quota so that it would seem reasonable to assume that usually this part of its quota would be available for reallocation.

There was never a suggestion on the part of Mr. Hull or anyone else that the deficits in duty-free portion of the Philippine quota be reallotted to these foreign countries.

Finally, there is one more point. If we are interested not only in protecting our American consumer in his supply and the price of sugar, but believe it more important to keep our pledge to aid England than to promote the interests of a few American capitalists having sugar investments in foreign countries, then we should remember that every acre of land utilized by our American farmers to produce sugar for the American consumer will correspondingly release vital shipping tonnage for use in our national effort to aid Great Britain and the other democracies.

This bill covers only one phase of this major problem by recognizing a greater danger in the Philippine situation in view of the fact that ships must travel over 7,000 miles to bring sugar from the Philippines to San Francisco, Calif., and over 13,000 miles to bring it from these islands to New York City, and the further fact that, according to the Maritime Commission, during the first 10 months of 1940 it required a total of 143 sailings by 103 vessels to move bulk cargoes of raw sugar aggregating 724,335 long tons from the Philippines to the United States. If Congress and the administration are going to be consistent in this emergency there should be no question about the passage of this bill.

Although the Sugar Act is primarily farm legislation this bill is a definite step toward assuring the American housewife that adequate supplies of sugar will be available at reasonable prices despite the imminent threat of a disrupted ocean commerce.

During the last World War there was also a shortage of merchant ships available for the transportation of sugar from the offshore areas. The demand for sugar in continental United States exceeded the supply, the retail price of sugar skyrocketed, and the records show that the National Shipping Board and the Food Administration had constantly before them the problem of restricting the consumption of sugar in the United States for the purpose of relieving our merchant marine of its war burdens.

It may be that there is no immediate shortage of sugar in this country, but history teaches that whenever there becomes a substantial lack of ocean vessels to carry sugar a sugar crisis will develop. Then, of course, quotas will be suspended and domestic producers, instead of being called greedy for wanting to supply the American market, will, as in the last war, be called upon to raise more and more sugar as a patriotic duty. But we also learned that domestic production cannot be stepped up on such short notice. One hundred and thirty million American consumers use approximately 100 pounds of sugar per capita annually, representing 23 percent of the world's consumption. It is the duty of Congress to use every possible means now to prevent an unnecessary shortage of this essential food product.

New Jersey's Contribution to National Defense

EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

RADIO INTERVIEW

Mr. VREELAND. Mr. Speaker, the Nation, as a whole, does not perhaps realize the important part that the State of New Jersey is playing in the national-

defense effort and I know of no clearer expression of that activity than an interview had with my very close friend and a person in a position to know whereof he speaks, Mr. George E. Stringfellow, vice president of Thomas A. Edison Industries, Inc., and president of the Chamber of Commerce and Civics of the Oranges and Maplewood.

For that purpose I include the following address, given over station WINS in New York City on July 26, 1941, entitled "New Jersey's Contribution to National Defense":

Mr. ADONIS. Men, money, and machines—machines, money, and men—day after day, in ever-increasing quantities, this endless procession of men, money, and machines is enrolled in the cause of American liberty. This, our great program of national defense, is America's No. 1 job.

In this time of national emergency, few citizens realize either the magnitude or the importance of the State of New Jersey's contribution toward our national defense. It is, therefore, the purpose of today's program to better acquaint you listeners with the herculean task shouldered by one of the smallest States in the Union. The simple facts will surprise you.

Our special guest today is Mr. George E. Stringfellow, vice president of Thomas A. Edison, Inc.; president of the Chamber of Commerce and Civics of the Oranges and Maplewood; and a member of the board of directors of the New Jersey State Chamber of Commerce.

Mr. Stringfellow was selected to speak on our radio forum because of his intimate knowledge of the many phases in New Jersey's national-defense program.

Mr. Stringfellow, in the brief time at our disposal it will be impossible to hear a detailed story of New Jersey's contribution to national defense, but it will be of great interest to our listeners, if you will tell us about a few highlights in this vitally important program.

Mr. STRINGFELLOW. It will be a pleasure to do so, Mr. Adonis. First of all, I think we ought to keep in mind the following important facts: That only 3 of the 48 States are smaller than New Jersey, which ranks only forty-fifth in size. However, in population New Jersey jumps to ninth place in the national ranking.

Mr. ADONIS. That's quite a jump and indicates a very high percentage of people per square mile.

Mr. STRINGFELLOW. Yes; New Jersey is one of the most densely populated States in the Union, and a large percentage of that population is busy working on our national-defense program, too. In fact, here is something of real interest.

Mr. ADONIS. I presume it deals with awards and contracts for defense production.

Mr. STRINGFELLOW. Yes; it does. You see, New Jersey takes great pride in being first of all the States in the Nation in both the variety of defense products and also in the value of defense contracts placed with our manufacturers.

Mr. ADONIS. That's a startling statement. Could you explain it more fully, Mr. Stringfellow?

Mr. STRINGFELLOW. Certainly. During the year beginning with July 1, 1940, New Jersey, through Government contract authorizations and direct expenditures, received defense awards and contracts totaling, $1,469,897,918

Mr. ADONIS. It's difficult to comprehend what a huge sum that really is.

Mr. STRINGFELLOW. Well, I'll break it down a little. For instance, the United States Government has awarded to the State of New Jersey Army contracts totaling more than $486,000,000 and Navy contracts totaling more than $891,000,000. Other appropriations in the grand total of nearly a billion and a half dollars include W. P. A. defense projects, the Reconstruction Finance Corporation, defense housing, Federal loans from the Defense Plant Corporation, and the Office of Education Defense Training.

Mr. ADONIS. I agree with you, Mr. Stringfellow, that those facts and figures are surprising; but can you give us more specific information concerning the number of New Jersey plants which now have defense contracts?

Mr. STRINGFELLOW. At the present time there are more than 400 New Jersey plants which have each been awarded one or more national-defense contracts. Many others, operating under subcontracts, are furnishing special defense materials and equipment.

Mr. ADONIS. What are some of the more important products being turned out by New Jersey for the national-defense program?

Mr. STRINGFELLOW. The list of New Jersey-manufactured products for national defense is far too long to be recited in this brief radio program. However, I'd like to mention just a few. Note the amazing variety of sizes, shapes, weights, and materials involved. For instance, New Jersey industries are turning out smokeless powder, military luggage, radio equipment, battleships, parachutes, cables, uniforms, chemicals. * * *

Mr. ADONIS. They tell me that New Jersey is also responsible for a large portion of the hospital supplies.

Mr. STRINGFELLOW. Yes; to say nothing of 37-millimeter antitank guns, hydraulic presses, aerial bombs, airplane instruments, propellers, shells, lathes, machine tools, fire extinguishers, long Navy guns, destroyers, small patrol boats, airplanes, airplane motors, compasses, instruments of fire control—all necessary if our national defense is to be complete and thoroughly efficient.

Mr. ADONIS. How about air-raid helmets, portable oxygen sets, maintenance parts for engines, pneumatic life belts and rafts, pyrotechnics, signal assemblies, and footbridges?

Mr. STRINGFELLOW. All made in New Jersey—as are powder and cartridge containers, road-building equipment, pipe lines, wool blankets, bathrobes, pajama suits, handkerchiefs, neckties, raincoats, badges, steel barrels, shaving brushes, coffee urns, drafting material, flares, furnaces, fuses, suction hose, kitchenware, linoleum, mapping equipment, mess and canteen equipment, mirrors, motion-picture necessities. * * *

Mr. ADONIS. Quite a list.

Mr. STRINGFELLOW. * * * Lead pencils, tent poles, electric fans, wire cloth, batteries, hammers, saw blades, scissors, springs, telescopes, concrete mixers, pumps, valves, dental supplies, and surgical instruments.

Mr. ADONIS. It would be difficult, indeed, to imagine anything else that could be made for our national defense. That list includes just about everything, doesn't it?

Mr. STRINGFELLOW. Well, no. As a matter of fact, that's only a partial list. I was simply trying to confirm what I said a few minutes ago—that New Jersey ranks first and foremost among all the States of the Union, both in the value of its awards and contracts and in the diversification of the articles produced. And, incidentally, Mr. Adonis, I'd like to point out how fortunate we of New Jersey have been. To date, we've been remarkably free from serious strikes and labor disputes, especially within the industries now working on national-defense contracts. In New Jersey, we're particularly proud of our employer-employee relations and of the patriotic spirit demonstrated by the steady speeding-up of our defense work.

Mr. ADONIS. Can you tell us something about the Office of Production Management? What is New Jersey's program for the various divisions of that Office?

Mr. STRINGFELLOW. The Federal Office of Production Management recognizes the position of leadership which New Jersey occupies in the national-defense program. Accordingly, in the principal cities throughout the State, departmental activities have been organized. Thus, their various services have been better developed. This stimulates a maximum yield from the State's production facilities. For instance, the Labor Division of the Office of Production Management has a subdivision called Training Within Industry. This subdivision has its headquarters in Newark, under the able leadership of Mr. Glenn Gardiner, who has been loaned by his employer, the Forstmann Woolen Co., of Passaic, as a dollar-a-year man. Through this division of the Office of Production Management, foremen, semiskilled workers, machinists, and other personnel of our industrial concerns receive intensive training. This training equips them for more skilled operations and for more responsible positions in the rapidly expanding defense plants, which, by the way, are all working night and day in the present national emergency.

Mr. ADONIS. That sounds like a mighty fine idea and seems to be working as smoothly as could be desired.

Mr. STRINGFELLOW. Yes; it's functioning very well. * * * And so are the offices of the Defense Contract Service. The main offices of this service are in New York and Federal Reserve districts. However, in Trenton and Camden, suboffices of the Defense Contract Service cooperate with State and local chambers of commerce and with other public-spirited service clubs. These organizations are recruiting every suitable factory, large and small, and harnessing its full productive powers for national-defense purposes.

Mr. ADONIS. Sounds like another splendid part of the program.

Mr. STRINGFELLOW. Yes, sir; and in closing I'd like to add that the services of the Production Division, Priorities Division, and other departments of the Federal Office of Production Management are now available to all New Jersey industries.

Mr. ADONIS. This has been exceedingly interesting, Mr. Stringfellow, and I believe we'll have time for just one more question. Aside from the production of battleships, long-range guns, airplane motors, ammunition, and the various other materials, what would you say is New Jersey's greatest contribution to national defense?

Mr. STRINGFELLOW. That is a difficult question, Mr. Adonis. Of course, any State's greatest contribution to the national-defense program is its quota of fine young American men who are serving their country in military and naval bases everywhere. However, I believe that we at home in New Jersey have reason to be particularly proud of one more great contribution.

The men and women in all sections of our State, agricultural and industrial alike, are buckling down to this job of national defense in a spirit of national unity. We believe that to make our Nation powerful enough to defeat any invader or group of invaders, and to make our citizens patriotic enough to stamp out all subversive activities within our borders, every man, woman, boy, and girl has a job to do. To do this job, each and every true American in the State of New Jersey is helping us build an ever-stronger morale to stand behind the entire defense program of the most glorious country on earth.

Mr. ADONIS. Again I thank you, Mr. Stringfellow. You have given us an inspiring story of little New Jersey's gigantic part in the national defense of our country.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. WALTER M. PIERCE
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

ARTICLE FROM THE TIMBERMAN, PORTLAND, OREG.

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Timberman:

[From the Timberman, Portland, Oreg., of July 1941]

ST. LAWRENCE SEAWAY

At Washington the Rivers and Harbors Committee is again studying economic and political aspects of the St. Lawrence seaway at hearings expected to last a month. The project, if brought to completion, would provide deep-water navigation to the Great Lakes, enabling foreign and American vessels to pass directly from the Atlantic to the heart of the Middle West. In addition, power would be developed along the St. Lawrence as an adjunct to river improvements.

Six successive Presidents of the United States have endorsed this international waterway, beginning with William Howard Taft. The railroads east of Chicago and the power interests of eastern cities have thus far been able to prevent the culmination of the St. Lawrence project by formidable and well-entrenched opposition.

Former President Hoover has contended that the deepening of the St. Lawrence River would reduce the grain rate to Europe during normal times as much as 5 to 7 cents a bushel. The late Howard Elliott, former president of the Northern Pacific, saw interesting possibilities in the project because western transcontinental lines could establish Atlantic terminals and free themselves to a considerable extent from domination of the carriers operating east of Chicago.

William S. Knudsen, Director of O. P. M., regards the St. Lawrence improvement as a vital part of the all-out defense effort. President Roosevelt favors cooperation with Canada in the completion of the work, a portion of which already has been undertaken by our northern neighbor.

The interest of the western lumber industry in this development would seem to lie in increased purchasing power for the midwestern farmers who would enjoy lower freight rates to primary markets, equivalent to an increased price at point of origin. The greatest value of this new transportation route will come about when peace is restored and highly competitive readjustments must inevitably be made.

The strong opposition to the project, already mentioned, appears to offer one of the most convincing arguments for its completion as an effective regulator of transportation rates.

The project calls for a minimum channel depth of 27 feet, sufficient to accommodate 85 percent of the world's merchant fleet.

Wheat Loans and Marketing Penalties

EXTENSION OF REMARKS
OF
HON. WILLIAM L. NELSON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1941

Mr. NELSON. Mr. Speaker, not all the talk in the Missouri district which I try to represent in this House deals with peace or war.

While at home a few days ago representatives of farm organizations, as well as many individual farmers, talked to me about wheat. There were decided differences of opinion regarding marketing regulations and especially the 49-cent penalty as a part of the wheat loan quota program. Supporters of the plan, all of whom have been cooperators, held that even with the penalty fixed at 49 cents, one-half of 98 cents representing 85 percent of parity, they were much better off, the price being double the penalty. It was further contended that but for some such arrangement present prices for wheat would be very much lower. The opposite view was that the 15-cent penalty should immediately be restored, it being asserted, and not without reason, that many did not fully understand the situation when voting on the loans and quotas.

Some held that to make any changes, to accept any compromises, would be to endanger the present farm program, which has been so helpful to so many. Others, equally sincere, were fully convinced that "arbitrary and unyielding action" on the part of those who administer the law, or refusal on the part of Congress to make minor changes, would wreck the farm program.

Mr. Speaker, farmers now, as never before, need to work together. It is with this thought in mind that I suggest that even though it may not be possible to lower the 49-cent penalty, voted for one year, some changes may well be made. The privilege of storing wheat ought to be granted, with the further understanding that, by sufficiently reducing acreage for the 1942 crop, excess wheat now held may be marketed without penalty. Furthermore, where there has been a partial crop failure, the result being not more than an average farm yield, such wheat might well be sold without payment of penalty. In other words, make production rather than acres seeded the basis, as the 49 cents per bushel penalty was not in force, had not even been mentioned, when the 1941 harvest was seeded.

I have still another suggestion. Allow surplus wheat to be fed on farms where produced, this without payment of the 49-cent penalty. To me this seems reasonable at a time farmers are being urged to raise more meat animals, especially hogs. Right now there are farmers who, with a little over-quota wheat on hand, are buying corn to "tide over" until green corn comes.

All legislation, it is said, represents compromises. There is enough war in the world without a "war" between farmers who feed the world. Let us compromise for the present, then look to the future. In the days that are to come—dark days, I fear—there will be required the friendly, united efforts of all farmers if all we have gained is not to be lost.

One further thought about wheat and I conclude. Big as is the wheat supply in the United States, and in the entire world for that matter, this surplus does not scare me a bit. The only fault I find is that there is too much talk about it. A farm surplus is always advertised, always "shouted from the housetops," with price-depressing influences. Not so with a labor surplus, a steel surplus or anything else. I am no prophet, but I venture the guess that before the crop to be seeded 2 years hence has been harvested, a hungry and war-torn world will need every bushel of wheat then available. The world will not be drowned in an ocean of wheat.

Tulsa Tribune Endorses Public Power Development—Proposes Federal Government Take Over Grand River Dam

EXTENSION OF REMARKS
OF
HON. CLYDE T. ELLIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

EDITORIAL FROM TULSA (OKLA.) TRIBUNE

Mr. ELLIS. Mr. Speaker, one of the clearest and most logical statements I have seen yet on the question of the development of the vast power potentialities of the rivers of Oklahoma and Arkansas, and of the ultimate use of the Grand River Dam in Oklahoma is contained in a powerful editorial which appeared in the Tulsa Tribune on Monday, July 21. I take great pleasure in inserting it in the RECORD in full:

[From the Tulsa (Okla.) Tribune of July 21, 1941]

FOR A POWER EMPIRE

Ten years ago, before every Federal project took on gargantuan proportions, an announcement that the Federal Power Commission had recommended the construction of the Fort Gibson and Markham's Ferry Dams

on the Grand River at a cost of $15,000,000 each would have had news banners. Today the news editors reserve a No. 2—not good, not bad—headline for it.

Yet potentially it is the biggest news story in Oklahoma's recent history and the actual construction of these dams, and the Tenkiller on the Illinois River and several on the White in Arkansas, will do more to bring lasting reasonable prosperity to this region than anything else. Integrated into one grid system, they will offer such a quantity of cheap power to defense industry and to normal industry later that blocks of both are bound to shift this way.

We have to be realistic in looking at the power problem. The Public Service Co., the Oklahoma Gas and Electric, the Tulsa Tribune, or the Tulsa Chamber of Commerce haven't been able to, and can't build this region industrially alone or cooperatively. Count on the fingers of your hand the industries any of these, or any others of us, have been able to attract here, other than specialized defense or oil supply factories. We've all tried, but we haven't had the magnet.

Now the Federal Power Commission proposes as a step to an adequate defense to spend an even billion dollars over a 5-year period to add 9,000,000 kilowatts to the country's present 42,000,000-kilowatt capacity. Private as well as public power projects will be expanded. Grand River's two additional dams are high on the list to be built as they should be, for with Pensacola Dam completed for about 60,000 kilowatts yearly, they become sound auxiliaries using the same water a second and third time to produce electricity.

One of the Power Commission's recommendations is that "the United States engineers, the Bureau of Reclamation, the Tennessee Valley Authority, and other agencies concerned should construct a series of river basin projects calling for installation of approximately 1,000,800 kilowatts a year." Now you can't carry out this order every place. In the entire Southwest the Grand and the White Rivers offer the best opportunities for development.

And what is the alternative to thus seeking a good balance between farm and factory for Oklahoma? Those who will give a quick snort at the proposal to spend more Federal money for power projects should ask that question of themselves seriously. Shall we continue to deplete our oil slowly and be prepared to move on to newer pools when the inevitable exhaustion comes—no matter how far away it seems today? Shall we continue to depend so greatly on our comparatively poor efforts at farming in an ever narrowing market as the population we can reach with reasonably priced transportation slips away from us one census period after another?

Indeed, we should not be content to depend on either oil or agriculture or both, but should widen our support as quickly and as soundly as possible, taking advantage of every reasonably good opportunity offered.

Such an opportunity is in the announcement that the two additional Grand River dams have been recommended for construction by 1943. And now the time is at hand to face the inevitable. We believe Oklahomans and Arkansans should seriously consider not waiting for the Government to take over Grand River power operations but should propose that it be done and integrated system developed for the Grand and White River Basins.

For the long pull it looks as though this will be best for Oklahoma, which we think should offer a living and a life for our children, too. Congressman DISNEY and Senators THOMAS and LEE should quickly find a basis of cooperation to this end with their Arkansas colleagues and with Oklahoma G. R. D. A. officials.

Protest Against Joint Income-tax Returns

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

Mrs. ROGERS of Massachusetts. Mr. Speaker, the Women Investors of America asked for a hearing before the tax committee regarding the joint income-tax return. They wrote to every member of the committee, but they were not given a hearing. So women must approach the matter on the floor of Congress, through the press, plus the radio, which seems to be the only medium through which the women can present their protest against this unjust tax.

I would like to state to the House that I have received just as many letters from men against the proposed joint income-tax return as I have from the women.

I would like to point out to the House also the fact that many Federal employees will be taxed and will come within the high surtax brackets if this joint income-tax provision goes through. They have appealed to me in this matter.

This proposed joint income tax certainly place a penalty upon marriage and puts a premium upon divorce as alimony settlements are tax exempt. They are not prorated. It is interesting that the churches of different denominations are opposed to this joint tax. They believe it penalizes matrimony, that it penalizes the family.

It has been stated repeatedly that England has this joint income tax. We all know that the status of English women is not as good as the status of American women. They are serfs as compared to the wives of America. It has been used as an argument that France and Spain have joint income taxes. The status of women is extremely poor in those countries. The status of women in the United States surpasses the status of women of every country in the world. Women for years struggled and fought for many rights and privileges which were finally granted them. I do not believe that this Congress will set the clock of progress back.

Under leave to extend my remarks, I include the following statement and letters:

SPECIAL TAX LETTER

MANDATORY JOINT RETURNS

WOMEN INVESTORS IN AMERICA, INC.,
Washington, D. C., July 28, 1941.

The independence of married women in this country will be at stake in the House of Representatives this week when the Ways and Means Committee presents its new tax monstrosity and urges its immediate adoption under a gag rule barring amendments.

If the mandatory joint income-tax return—which the committee inserted in the bill in secret sessions behind closed doors without giving the women of the country any opportunity to voice their opinions—becomes law, married women in the United States will be returned to the old common-law status of chattels of their husbands, the position married women have occupied in Europe for centuries.

If the mandatory joint return is adopted, its effects on the family life of the country and on the income, savings, capital, and assets of wives cannot be estimated. If the Government can merge the incomes of husband and wife for tax purposes, will that make the wife's income attachable for her husband's business and bankruptcy debts? And if the Government can merge their income, cannot it also merge their capital and assets, again making everything the wife may have liable for attachment in case her husband is forced into bankruptcy?

NEW SPENDING RECORD

This new tax bill should give the people of this country some inkling of what lies ahead if this Nation enters the present European war. While we still are supposedly at peace, this bill is designed to raise an additional $3,550,000,000 in new revenues, which, added to those that will automatically be raised under existing law, brings the tax levy to the all-time high of $12,750,000,000.

This action is termed necessary, according to statements of Secretary of the Treasury Morgenthau at committee hearings on the new tax bill. He informed the committee the Government expects to spend the astounding sum of $19,200,000,000 during the present fiscal year.

That amount—$19,200,000,000—is approximately $700,000,000 more than this country spent during the fiscal year 1918–19 and represents a figure equal to 60 percent of the total amount we spent from 1917 to 1919, when we were at war.

SPEEDY PASSAGE DEMANDED

Attempts to force speedy passage of the tax bill under gag rules apparently is in keeping with what seems to be the present policy of those in power in Washington—rush legislation through before the people can find out what it means—and take steps to protect themselves.

WOMEN ARE AROUSED

Our mail indicates that the women of the country are thoroughly aroused over the unjust treatment accorded them by the Ways and Means Committee and the manner in which it adopted this proposal for mandatory joint income-tax returns.

COMMITTEE MISINFORMED

It would appear from statements by members of the committee that there is a complete misunderstanding about the number and type of families which will be seriously affected, the principles which are involved, and the far-reaching social consequences of this family-disrupting legislation, should it become law.

A careful study of available Government statistics establishes that this proposal will affect at least 17,500,000 families—not about 250,000, as has been announced. Further, it will bear most heavily upon the families of small incomes, not upon the wealthy, as has been claimed by proponents of the measure.

HITS SMALL FAMILIES

In addition, it will bring within the income-tax law approximately 8,400,000 families whose incomes are so small they now are not taxable under present income-tax laws, the majority of them being small suburban and farm families.

These are a few of the facts that would have been made available to the committee by the women, had we been accorded the same consideration extended by the committee to representatives of business and industry.

The printed record of the hearings discloses that the committee listened to the protests

of 110 representatives of the tobacco industry, 73 from the gasoline industry, 8 from musical-instrument manufacturers, 8 representatives of the carbonated-beverage industry, 9 from candy manufacturers, as well as 7 from the liquor distillers and 10 from the beer brewers.

WOMEN RECEIVE NO CONSIDERATION

Yet not one woman nor one women's organization was extended the courtesy or opportunity to voice their opinions or to speak in defense of their rights as individuals or in defense of the American home.

Whoever produced the estimate of 250,000 families to be affected by this tax proposal gave consideration only to statistics relative to present independent tax filings of husbands and wives. No consideration, apparently, was given to the vast number of families—now tax-exempt—who will be brought into the tax-collector's net by this proposed mandatory joint-income return.

The following statistics relative to families and their income are found in the United States Statistical Abstract. This table reveals that about 80 percent of the families earned less than $2,000 per year in 1935. The present chaotic condition of Government statistics makes accurate analysis impossible, but applying the family-group ratios of the 1935–36 table to the family-unit figure for 1940, which is quoted by the Bureau of the Census, we find the following:

Family income groups

Family income	Number of families	Percent of all families	Cumulative percent
Under $250 to $750	9,457,559	27.13	27.13
$750 to $1,250	9,674,100	27.75	54.88
$1,250 to $2,000	8,426,055	24.17	79.05
$2,000 to $3,000	4,479,719	12.85	91.90
$3,000 to $5,000	1,879,042	5.39	97.29
Over $5,000	944,750	2.71	100.00
Total	34,861,625		

Considering the above table, it reveals about 15,000,000 families fall within the family-income band from $1,2500 to $5,000 per year. To this should be added another two and one-half million families in the $750 to $2,000 band who unquestionably will be affected by this proposal.

If official statements relative to increased earnings for workers are correct, then a large percentage in the $750 to $2,000 band in 1935–36 are now above the $2,000 joint-income figure. It must be recognized that the families in this band who, according to official statements, have benefited in the past 6 years by increased earnings, are those of the farmers and mechanical and industrial workers.

INCIDENTAL EARNINGS BECOME TAXABLE

By forcing even the small, incidental earnings of women,[1] as well as the earnings of all minors, into the joint return, the incomes of millions of families will exceed the $2,000 exemption allowed for husband and wife and $400 for each dependent, and therefore will be subject to Federal income tax.

The women of these families have experienced economic hardships during the past several years, but now, due to increased demands for industrial and mechanical workers, are receiving their first real pay envelopes in years. These pay envelopes will be taxed 16½ cents out of every dollar in them over the $2,000-exemption base if this joint-return proposal is adopted, whereas under the present law they would not be reached other than by the existing innumerable hidden taxes which all of us now pay.

PENALIZES HAPPY MARRIAGE

Summing up—the proposal, which was adopted in secret session of the committee, will affect not only the incomes of a comparatively small number of wealthy couples—as has been suggested—but also will place a heavy and unnecessary tax burden on the families of workers with small incomes.

Further than this it will destroy the independence of women and wipe out benefits of wills, trust funds, individual property ownership and legacies. It will return women, free-born American women, to the primitive status of being the chattels of their husbands.

The penalizing of happy married life by levying a discriminatory tax burden thereon, and the subsidizing by Government of separation and divorce by way of lesser tax burdens, is something to which no Member of Congress should be a party.

If there is no intent to penalize marriage why is this proposal designed to apply only to those married couples living together? If living under the same roof is used as an excuse to join their incomes for tax purposes why should it not also apply to brothers and sisters who live together, or to any group of relatives who jointly occupy the same household and benefit by the joint income of all who live under the same roof?

* * * * * *

Sincerely,

CATHRINE CURTIS,
National Director.

WOMEN INVESTORS IN AMERICA, INC.,
New York, N. Y., June 25, 1941.

Hon. ROBERT L. DOUGHTON,
Chairman, House Ways and Means Committee, House Office Building, Washington, D. C.

DEAR MR. DOUGHTON: Many women are greatly distressed at the recent newspaper items relative to the action taken by the Ways and Means Committee in connection with the joint income-tax return of husband and wife, and the merging of the wife's income with that of her husband, regardless of the situations or circumstances existent in connection with that particular issue.

I am sure that, had an opportunity been given for individuals or organizations to present their views on this issue, much enlightening testimony would have been developed for the information of the committee and the public.

I am also very sure if the members of your committee realized the aroused sentiment of countless women throughout this country on this particular issue, you would make it possible to have open hearings in order that some equitable tax program for married couples may be developed in place of this suggested one.

I strongly urge that you give us an opportunity to have such public hearings, and would appreciate hearing from you in this connection.

Very truly yours,

CATHRINE CURTIS,
National Director.

COMMITTEE ON WAYS AND MEANS,
HOUSE OF REPRESENTATIVES,
WASHINGTON, D. C., *June 26, 1941.*

Miss CATHERINE CURTIS,
National Director, Women Investors in America, Inc.,
New York City.

DEAR MADAM: By direction of the chairman, I acknowledge receipt of your letter of June 25, relative to the tentative proposal that mandatory joint return be required of husband and wife if living together, for Federal income-tax purposes.

It is not likely that the hearings on revenue revision of 1941, which were conducted from April 24 to May 28, will be reopened. It is expected that the Senate Finance Committee will conduct public hearings on the bill as it passes the House.

During the hearings which have recently been concluded a number of witnesses proposed mandatory joint returns.

Yours very truly,

BARRON K. GREER, *Clerk.*

Freedom and Liberty—Not License—No Broken Contract

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

ADDRESS OF HON. CHARLES A. PLUMLEY, OF VERMONT

Mr. PLUMLEY. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I include an address delivered by me before the Vermont American Legion convention, held at Barre, Vt., on July 25:

To you, my friends of the American Legion, I have but two things, principally, to say: First, you should renew and keep up your fight against the "fifth column," Communists, "lick-spittle," parlor pinks, "wise boys," pseudo liberals, and all subversive and un-American influences, as you have started out to do.

The principles, methods, and aims of the Communists and their friends, "fellow travelers," sympathizers, and supporters are the very antithesis of American and of academic freedom. A group that is organized and acts for the purpose of spreading communism through schools and colleges and in youth groups, or elsewhere, carrying on its effort underground and clandestinely, has no place in the American system of education, no place in America anywhere, nor has any individual so inclined. We have a few of that rattle-brained type here in Vermont; the people have their number. That's plain talk, but true.

Let me say again that candor is a bitter pill for such people, however high they ride, or think they ride, to have to swallow, but millions of Americans agree with me and hold that the greed of this group and some individuals for money, their love of power, their demonstrated irresponsibility and incompetency, their obsession for experimentation, their egocentric monomania for publicity at the people's expense, their exaggerated idea of their own importance, and a hundred other things too impractical, crazy, and too numerous to mention, characteristic of them, are responsible for the weakening of the moral fiber, the breaking down of morale and morals, the turmoil, and the lack of confidence found in the body politic today. It is too bad and too true, but not too late to correct it.

The light of pitiless publicity should be mercilessly turned on the activities of these very people. They are not smart nor are they funny. They should be exposed. Names might possibly be called and perhaps ought to be. They may be. No one should be overimpressed, awed, coerced, or cowed by the

position any of these people happen to occupy or by their delusions of grandeur, their obsessions with respect to their own brainstorms, and least of all by their fantastic theories—social, economic, and paternalistic.

Thank God nobody with brains is influenced by or pays any attention to the ravings of these close to un-Americans. It is not to be denied that they appeal to a class of irresponsible people newley rich and to disappointed and disaffected derelicts and wrecks on the sands of time, who have demonstrated their lack of ability to make an honest living or to function normally. To that extent, and to that extent only, they are dangerous. They should be scraped off the ship of state as barnacles are. They impede progress. They are blood suckers on the body politic. Nobody knows it any better than they themselves. That is what makes them mad at us. That is what makes them enemies of yours and mine—and of their country, when reduced to its final analysis. Nobody is fooled by them, but we are foolish to tolerate them. Perhaps they should be put in a concentration camp "for the duration," for they are the real enemies of the Republic whether we know it or not.

That such people are suspected and are listed with the Dies committee and the F. B. I. as potential enemies, or Fascists, or Communists, does not help us too much. We are just too dumb. We should assert ourselves and rid ourselves of these people as we would rid our hands of a wart.

Freedom is not license. It is time some folks were made to know it. We have been played as suckers too long by too many. I shall not hesitate to say what I think despite the efforts of some of these people to criticize me for so doing. You may rest assured of that.

I cannot say too often that if these milksop, lip-service, hybrid Americans love some other country better than their own and what it affords, then they should go to that country, or we should send them there. We should not tolerate them in Vermont. We know them by name. Of whom are we afraid?

There is no neutral ground. This country was established as an independent republic. It is high time, if not already too late, that we should advise these people that we propose to be up and at those who directly or surreptitiously are undertaking in our schools churches, in the press, and elsewhere, subversively to undermine our Government by innuendo, socialistic, fascist, and communistic and thereby to deprive you and your children of the priceless privileges it is yours and theirs to enjoy. It is either we or they. They had better get out of Vermont, and of the United States of America, while the going is good, for we will not tolerate them here.

Every red-blooded American ought to join in heart and spirit with the cadets at West Point in their Sunday morning prayer when they say, "Strengthen and increase our admiration for honest dealing and clean thinking, and suffer not our hatred of hypocrisy and pretense ever to diminish. * * * Endue us with courage * * * that knows no fear when truth and right are in jeopardy."

I am for freedom of the press and of speech and for every right guaranteed to us by our Bill of Rights, but, in his personal feud with the President, Senator WHEELER has, I think, gone too far. What he says and has done may not be treasonable. It certainly breeds disunity. He has permitted his antipathies to get the better of his usually good judgment. He is an able man, but wrong. He is wrong and so are those who follow him at a time when your liberties and mine are at stake. I do not hold the President blameless for fanning the flame.

There is no neutral ground when national defense is the issue. Methods and policies may be questioned. The necessity for unified action cannot be controversial. Talk is cheap. The Senator is fiddling while Rome burns.

If we do not wake up to realize this and to defend ourselves by adequate preparation and action instead of theory, we shall go down into the limbo of the governments that have been with Rome and Sparta and France. We need practical men these days.

It is time to wake up and get up and put on our clothes for defense against the bloodiest, most cruel tyrant the world has even seen or known. In fact, we may have slept too long already.

In the second place, I want to talk for a minute about the selective-service proposition. It is my well-considered opinion that the way to keep from sending our best blood and brains to Europe is to keep both here and train the selectees to that point of efficiency that no man or combination of men will ever dare to attack us. So far as I am concerned, we have shed the last drop of American blood to be sacrificed on European soil.

We have broken no contract and do not propose to break any. The Selective Service Act, for which I voted, provided that whenever Congress has declared that the national interest is imperiled, such 12-month period may be extended by the President to such time as may be necessary for the national defense.

Our American boys are no quitters, if some of their elders are. We owe it to them to see to it that they are properly trained and prepared. That is our obligation. It would be a crime to break that part of the contract. The great majority of them know it. They will stay in if the outsider will be half as patriotic as they are.

All this talk about a broken contract is a red herring drawn across the trail by those who do not or will not realize that we are preparing for a defensive war and every minute counts.

I knew what I was voting for and realized that the term of service provided by the act was made conditional and was contingent on circumstances and conditions which might arise to change the existing situation. This was freely discussed in the cloak rooms and corridors of the House, and everybody else understood it as I did, who read the act or knew what it was all about. Moreover, attention was called to the fact that the condition with respect to possible extended service was explicitly expressed. There was nothing hidden about it. It was made a part of the contract about which there is so much talk. We made a contract to properly train the men inducted, and if there is any breach of contract involved, it is found or would be found in our failure properly to train them, or in the failure of the trainees to carry out their part. The selectees knew that they were in for a year, at least, and longer possibly, as provided by the act. All this talk about breaking a contract is an alibi or a camouflage used in an attempt to justify opposition to training for preparedness and to vent a spite. That is an untenable position in view of the circumstances.

The President and the Chief of Staff of the United States Army have told us that our peril grows greater daily and nearer and nearer, and that for us to disrupt and to destroy our Army that is in the making would be suicidal from a national standpoint. When such statements are made by those in authority who take full responsibility for them and who advise us what should be done, you just cannot laugh them off, nor fail to follow the advice safely. Events corroborate the statements daily.

We should tolerate no recurrence of such a situation as obtained prior to 1917. Such a lack of national preparedness as then existed was nothing short of criminal. The thousands of crosses over graves of American boys at Chateau Thierry and Belleau Wood are mute monuments to that fact. It should never be permitted to happen again.

To turn back the trainees and selectees into civil life half prepared for such duties as they might be called upon eventually to perform, as soldiers, would be tragic—and worse than that. It would be as near criminal negligence on our part as anything could be for it would mean, possibly, a horrible holocaust and the needless sacrifice of the lives of hundreds of thousands of American boys because of their unpreparedness.

Now I do not propose to be an accessory to any such program. I know from 14 years' experience how long it takes to make a soldier. The time at our disposal is short anyway. I know the emergency is greater and nearer than a year ago. We should spare neither money nor men in order to train and to maintain the Army at a state of effective and necessary preparedness for our defense. Those who oppose this proposition are treading on very dangerous ground from the standpoint of either politics or patriotism.

So far as I am concerned I will not be a party to breaking the contract which calls for adequate preparedness of the boys in service, nor will I permit such a state of unpreparedness as that of 1917 to happen again if I can help it. And that is that.

The deliberate acts of certain people in an attempt to confuse and disturb the men in the Army are not patriotic, to say the least. The purposeful efforts to delay possible action in order to embarrass those in command of the armed forces find their underlying motive in hate of the President rather than in love of country. This is obvious. It is proved by the statements made by the objectors themselves. If, as they say, the President is leading us into war, then we should go into it as well prepared as possible, and they are making such preparation impossible. They are out on a limb.

The President has advised Congress that the National interest is imperiled. Nobody in his right mind can doubt it. He has stated officially that the national peril is nearer and greater than ever before or than that which existed at the time the act was passed. Everybody knows it is true who does not indulge in wishful thinking.

The President is Commander in Chief by vote of the people. He has asked Congress to make such a declaration as is provided for and was provided by the act. Congress should make such a declaration. It will. To do less would be to betray everybody.

There should be no delay. This is no community picnic to which we have been invited. We are in this war whether we like it or not, and without regard to who is to blame for it. It is too late to talk about that. I am for all aid to England short of the sending and the sacrificing of our men. We need them here and we need them trained to the highest possible degree of defensive efficiency if we are to remain and be independent, else the Declaration of Independence is a joke and the Constitution a scrap of paper.

The Minority Has a Mandate, Too

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

Mr. MUNDT. Mr. Speaker, Winston Churchill is undoubtedly the greatest

orator in the world today. While there may be some who question his military genius or his diplomatic tact, I think none can successfully challenge the statement that he is without peer or equal on the contemporary scene in his ability to convey ideas and convince people by use of the spoken word.

It is probably at least in part because of his great prowess as a debater and orator that Churchill holds so tenaciously to the democratic processes of free speech, free criticism, free press, and free assemblage. He relies on his own ability to meet all comers, convince all critics. He is a strong advocate of the two-party system of government, and a firm believer in the important part to be played by a vigorous minority party in time of stress. He welcomes criticism. He never confuses unity of purpose with unanimity of thought.

A DETERMINED MINORITY AS IMPORTANT AS A DETERMINING MAJORITY

I am one who thinks there is a mountain of prophetic truth in the song, There Will Always Be an England, and one reason I so firmly believe this is that the English have learned that a determined minority party is just as important in a period of national crisis as a determining majority party. In fact, England has seldom emerged from any great war with the same leadership with which she entered it. Churchill, himself, is today's Prime Minister of England because of the critical opposition which he and his fellows laid against the policies of Chamberlain. As the ivy climbs the tallest wall by clinging to its roughest spots, self-government in England has a habit of capitalizing on criticism and testing its most important decisions in the fierce crucible of public debate so that only the soundest can survive. Above all, times of national emergency are the worst in which to proceed with untested, untried recipes born of the moment and not subjected to careful criticism and examination by the opposition party.

Churchill offered a good pattern for today's America in his speech to the House of Commons on June 10 describing the debacle of Crete. His opening paragraph set the tempo for a great orator's great speech. Said Churchill—

> No one, however ministerially minded, could complain of the tone and temper and the matter of this debate. The kind of criticism we have had today—and some of it was very searching—is the kind of criticism the Government not only accepts but welcomes.

It is a tough job to batter down a country that builds upon its criticism in such a manner.

A LESSON AMERICANS SHOULD LEARN FROM BRITAIN

We Americans, younger in form of self-government by many years than the English, can learn something from the manner in which the English "muddle" through adversity. We must learn the value of criticism in the art of government. We must come to learn from those with whom we disagree as well as to lean upon those with whom we are in agreement. We must have the courage to criticize as well as the candor to concede. We who belong to the opposition party in these trying times must recognize our responsibilities to test, to examine, to scrutinize, to question, to amend, and to criticize decisions and drifts in public policy just as the majority party must recognize its responsibility to formulate, to promote, to propound, to explain, and to project the determinations which it has the power and the votes to enact. It is only thus that the strong can help the strong and that the functioning of democracy—government by discussion, by debate, by concession and by compromise—can best succeed.

This most definitely does not mean the minority or the opposition should criticize simply for the sake of being critical or that it should ever be perverse simply to be partisan. Such behavior is neither good politics nor good patriotism. As an opposition party, we Republicans must never be mere obstructionists for the silly exercise of being obstinate. But, since criticism does not function freely on an intraparty basis, it is essential that the opposition party does not withhold from the majority the benefits which both it and the Nation can harvest from a frank and fair and full analysis of proposed paths of public policy. To do less, is for the opposition party to cease to give good reason to exist; it is certainly to cease to give any reason at all for ever changing its label to that of the majority party. An opposition which dares not to oppose would be a majority which lacked the courage to propose and that would be fatal alike to the party and the people.

AN EXAMPLE OF WHAT FAILURE WOULD MEAN

Recent developments in Washington, however, give proof more postive than any words that I command of the validity of the thesis which I have above defined. On June 2, S. 1579, prepared by the executive department bill drafters of the Capital was introduced. Known as the property-seizure bill, the following exact quotations from the bill suggest the scope of its significance:

> During any period of national emergency proclaimed by the President, the President is authorized, when he deems it in the interests of national defense, (a) to requisition and take over, either temporarily or permanently, property of any kind or character, whether real or personal, tangible or intangible, or any part thereof, or any right or interest therein or with respect thereto, whether by virtue of contract, patent, license, or otherwise.

And furthermore:

> Whenever the President shall requisition and take over any property pursuant to the provisions of this act, the person or persons having any right, title, or interest therein shall be paid as compensation therefore such sum as the President shall determine to be fair and just. If any such person or persons entitled to receive it are unwilling to accept as full and complete compensation for such property the sum determined by the President, such person or persons shall be paid 75 percent of the sum as determined by the President and shall be entitled to sue the United States for such additional sum.

And, finally:

> This act shall be effective notwithstanding the provisions of any other act.

With the exception of the capitalizations, the foregoing statements are precisely as they appeared in the body of this legislation as introduced by the majority. What should a patriotic and purposeful opposition do? Accept it? Rubber stamp an O. K. because it is labeled for national defense? Or test, examine, scrutinize, question, amend, and criticize? We who comprise the current opposition party in Congress chose the latter course, with capital letters, with emphasis, with gusto, from the platform, on the typewriter, and through the microphones. Result? It is still too early to predict, inasmuch as a week before this is written President Roosevelt was quoted as saying he wanted the "bill passed in the form it was written." I have made bad predictions before and this may be another one, but "I'm predicting" that the opposition will not surrender to this challenge to the fundamental rights of freedom and private ownership in this Republic. "I am predicting"—and it is a dangerous practice in these dubious times—that the bill will not be enacted "in the form it was written." Just how much protection of private rights we can write into the bill depends upon how large a segment of American public opinion adheres to the philosophy of two-party government and continues to subscribe to the doctrine of private ownership and political freedom upon which this republic was founded.

Suffice it to say in summary, that without criticism the "property seizure bill" would by now already be the law.

A RESPONSIBILITY WE CANNOT DODGE

Without patriotic opposition and sound criticism, whether it comes from an active and organized minority party whence it should emanate or from individuals grouping themselves together in an unofficial opposition bloc, the democratic processes cease to be effective. Without loyal opposition which stresses not only its obligations to be loyal but also its obligations to supply intelligent opposition, the democratic form degenerates into what is actually an oligarchy in function. Without such opposition from some source in the present crisis, America would already be engaged in the convoying of foreign and American ships into belligerent waters, which means that American boys would by now be laying down their lives in actual war in support of their Russian "comrades." President Roosevelt's statement that "convoys mean shooting and shooting means war" has never been successfully denied.

Without opposition to opinionated majority leadership, in this country, both the leadership and the country would suffer seriously, and the very existence of minority-party opposition would cease to continue because it had failed to function when its courage was most needed. Without sincere and loyal opposition, the administration is denied a crucible in which to test its theories; and, in critical times, above all others, a nation cannot afford the luxury of adopting untested recipes or illy considered courses of action.

THE REPUBLICAN PARTY CANNOT EXPAND BY EVASION

If fair-minded citizens will seriously reflect upon the destinations both in foreign policy and in the loss of democratic processes here at home at which this Nation would have already arrived had there been no opposition to "test, exam-

ine, scrutinize, amend, and criticize," it will stimulate increased demand that the Republican Party continue and expand its patriotic function as the opposition party in this all-important era. It, too, has a mandate from the people. It, too, has responsibilities which it cannot evade without rendering great disservice to this Republic. It, too, stands on trial before the Nation as its fitness to serve is being tested by the events which come and go. There is no other party or group in America which can fulfill this function. Should the Republican Party fail to meet its obligations and its challenge, the cause for which it preaches will soon perish. If the Republican Party fails to function as an opposition should in government erected on the two-party system, we shall be as guilty of dilatory action as the administration is of dictatorial aim. And if an American form of administrative absolutism shackles itself upon this country while we fail to protest the separate steps by which it develops complete and total power, we shall be accessory to the crime.

It is to be hoped that the Republican Party will write a record of courage and valor, of patriotic opposition and constructive criticism, of real service to the common cause which today challenges the best that is in us all if the American way of life is to survive in the American sphere of influence.

The decisions facing America, today, are too monumental in importance to be left to the judgment of any one man or to any group of men personally selected or nominated by him. They are too vital to be delegated to volunteer prescriptionists outside the main tent of Government whose position as laymen exempt them from assuming direct responsibilities for possible errors in judgment. They are too far reaching to be left solely to the unchecked dictates of appointed men who have not been elected to office by the people and who therefore feel no responsibilities for conforming with the public will. They are too significant to become the sole province of the party which happens to be in power at the time their consideration becomes imperative.

SOUND DECISIONS BEST COME FROM A CLASHING OF SOUND MINDS

America today needs the best minds of its best people throughout the country in focus upon the problems at hand and devoted to working out solutions which will best serve the destiny of this Republic. It is going to take the best collective judgment of the great cross section of American intelligence and common sense in this dark hour, if this country is to avert the catastrophe of national bankruptcy, of loss of its freedoms here at home, of an American totalitarianism, of war, and of the threats to our American destiny resulting from dangers here at home and disrupters from abroad.

We have a crying need these days for the sound decisions which can only emanate from the clashing of sound minds and the determined drive of opposing forces which unite their strength toward a common goal only after each has explored and exposed every possible weakness and error of the other. Against the driving power of such a strength directed down a path selected by such means, no power on earth can offer successful resistance. It is to be hoped, therefore that, like the Churchill government in England, the Roosevelt government in America will cease berating critics as defeatists or obstructionists and some day rise to heights enough to sagely say, "The kind of criticism we have had is the kind that the Government not only accepts but welcomes."

To do less is to follow the totalitarian trail to total tyranny.

Floor Under Industry and Labor, But Ceiling Over Agriculture

REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

Mr. CANNON of Missouri. Mr. Speaker, the Price Administration, which has been laboring industriously ever since its establishment to keep farm prices below parity, has brought down to the House a bill to give it authority to do what it has been futilely trying to do for the last several months. Fortunately, the subject matter of the bill falls within the jurisdiction of the Committee on Banking and Currency, and, according to newspaper reports, Chairman STEAGALL is refusing to introduce the bill as Mr. Henderson has written it and, over vigorous protest, is scrapping the measure and rewriting it in an attempt to make the best out of a bad matter. Evidently he is having a hard time harmonizing the demands of the Price Administration for arbitrary authority over the economic system of the country with the national welfare, as he has not yet brought in the bill or made any announcement as to its form or provisions.

Certainly, in the form in which it was drawn by the Price Administration, the bill is inequitable, ineffective, impracticable, unworkable, and unpassable. In the first place, it cannot achieve the purpose for which it was ostensibly written—the freezing of prices and the control of the cost of living—for the reason that the bill completely ignores wages, the principal factor in the price of commodities and the cost of living. The first editorial on the editorial page of yesterday's New York Times calls attention to this defect and says:

> Wages are not only an inherent part of the price structure, entering into all costs, but the greatest single part of the price structure.

And we all know by experience how true that is. For example, following the last war, when wheat dropped from $3.20 per bushel to 30 cents a bushel, and we asked why bread still sold at 10 cents a loaf, we were told that the amount of wheat in a loaf of bread was negligible and that the principal cost was the labor, which had not come down, and so bread was still 10 cents a loaf whether wheat was $3.20 a bushel or 30 cents a bushel.

Likewise, when cotton dropped from 35 cents a pound to 5 cents a pound and we asked why shirts did not come down, we were told that there was less than 10 cents worth of cotton in a shirt and the determining cost in the production of a shirt was wages, which were higher than ever. Therefore we paid more for a shirt when cotton was low than we had paid when cotton was high. Such instances could be multiplied, but it is self-evident that the essential factor in the price of commodities and the cost of living is labor—and labor is not so much as mentioned in this bill. How can you hope to affect costs of living when you put on blinkers and go blind every time the one fundamental consideration in the proposition passes by? As the editorial just quoted from the New York Times very pertinently inquires:

> Can prices be fixed while wages are left free? There could hardly be a more effective way of ultimately disorganizing industry and production. Such discriminatory treatment would be certain to have dangerous results politically as well as economically.

And in like vein, in this morning's issue of the Washington Star the leading editorial also stresses this point. The Star says:

> Wages are perhaps the most important single cost factor. But the President does not ask that they be brought under direct control. Instead, he warns of the hardship which inflation would bring the working class.

As if the farmer, working 14 hours a day, does not himself belong to the working class. As a matter of fact Mr. Henderson's bill is apparently aimed primarily at farm prices and is drawn to give him statutory authority to fix the price of hogs, butter, poultry, and eggs which he attempted to fix at subparity prices on his first venture into the price-fixing field—along with the price of all other products of the American farm.

Of course, this is vigorously denied by Mr. Henderson's staff, and they point out that while it was omitted in the earlier versions of the bill, the last draft carried a provision specifically exempting farm products. But they studiously overlook the obvious fact that control of prices of processed commodities fixes the price of the constituent raw materials, and you can lower the price of wheat by lowering the price of bread and lower the price of cotton by lowering the price of sheeting, and so forth.

However, if you entertain any lingering doubts along this line, they were effectively disposed of when the wires carried the announcement of the arrival of this bill here in the House. Pandemonium reigned on every exchange. The newspapers reported the "wildest decline in cotton since 1935." The wheat pits closed near the bottom. Every agricultural market was paralyzed and this morning's radio reports all market operations at a minimum because of the uncertainty created by the price-control bill. Now, wages were not affected. Industrial prices were unchanged. Markets were normal on everything except farm products, which, notwithstanding

vigorous bolstering, continue to drop steadily throughout the country on the mere possibility—a long possibility—that Mr. Henderson's bill will become a law. You can judge for yourself what the bill is aimed at. You don't have to look any further than the daily quotations to see what the purport of the bill is, and what will be its effect on the farm income once it is enacted and Mr. Henderson has the autocratic power he seeks to wield.

It is rumored just now that the bill, as amended by the committee, will contain a provision to fix a ceiling on farm prices at 10 points above parity and that this should reassure everybody. But there is nothing in such a provision to reassure anybody—except those who want to saddle the cost of this war program on the farmer. It is not a floor of 10 points, it is a ceiling of 10 points; and, while under that provision farm prices cannot rise above the ceiling, they can drop beneath it and undoubtedly will. By depressing the price of processed goods—either by throwing supplies on the market, as the Government threatens to do in the case of sugar, as reported in this morning's papers, or otherwise by the exercise of the dictatorial powers granted by this totalitarian bill—the price of any farm commodities can be forced below parity whenever the bureaucrats in the Price Office choose to do so. And your hands will be tied, for, as David Lawrence well says in his column this morning:

> Once the law is passed, Congress will be a bystander, too.

Why all this assurance that they will put a ceiling over farm products? They put floors under wages. They put minimum prices under bituminous coal. They guaranteed minimum returns to the railroads. They provided established prices under the fair-trade bill, and so forth. But all they have for the farmer is ceilings. And they have built a very low ceiling at that, with barred windows in this subbasement they are constructing for farm labor, while they give the wings of the morning to industrial labor already "standing tiptoe on the misty mountain peaks."

They want to send vast supplies of food to England, bought from the farmer under the ceilings of the price of administration, in the same ships which also carry guns, tanks, and other war munitions bought at cost-plus profits to industry and the highest wages ever paid since Columbus discovered America.

Now do not misunderstand the farmer. He is not advocating the fixing of wage scales—and emphatically he is not urging the inclusion of industrial labor in Mr. Henderson's bill. The farmer believes in collective bargaining, and the farm organizations have always supported labor's right to collective bargaining—as I have, consistently, and on all occasions supported and voted for all major labor legislation on this floor. But the farmer does protest against the drastic discrimination in the Henderson program, and against ceilings over his prices when others are given floors under both wages and prices.

The patrioteers preach to the farmer about the economic sacrifices which must be anticipated and cheerfully borne. The farmer is getting less than 10 cents an hour for his labor while the Bureau of Labor Statistics reports average hourly earnings in building construction as 98.2 cents per hour. Why ask the farmer to do all the sacrificing?

Formerly when Uncle Sam took in $100 of the national income he paid the farmer $19.20 out of the hundred dollars. But the last report from the Department of Agriculture showed that out of each $100 Uncle Sam took in the farmer got only $6.60. The farm share of the national income dropped from $19.20 in 1919 to $6.60 in 1941 including all Government payments, and Mr. Henderson wants to put a ceiling over the $6.60.

In 1919 hogs sold for $21.50 and the average wage for auto mechanics, according to the Bureau of Labor Statistics, was 59.8 cents per hour. Today hogs are selling at $11.60 and the average hourly wage of the mechanic has gone up to 98.2 cents per hour. And Mr. Henderson says put hogs down to $9 but let wages alone.

And that is the basis of the farmer's objection to Mr. Henderson's bill. Not that it fixes his prices. He is ready to make sacrifices—if anybody else will sacrifice. Put farm prices down if necessary, if the occasion demands it, and the farmer will cooperate. But if you put his prices and wages down, put other prices and wages down with them. Or better still, why not give the farmer his fair share of prosperity along with everybody else. He works 14 hours a day—often 7 days a week—his boys have been drafted or toled away to the nearest munition factory. Letters from Missouri this morning report crops totally destroyed by drought. Labor gets its pay envelope every Friday night, but the farmer must take his chances and too frequently never gets his at all and all his year's work lost. The farmer fights weather, fire, flood, plagues, and pests—and the injustice and inhumanity of those who would take from him the products of his toil and sweat and the toil and tears of his wife at less than the cost of production—yet he feeds the Nation better than it has ever been fed before. There is food and to spare for everyone both at home and abroad. What more can you ask of him? Is not the laborer worthy of his hire?

A Price-Control Program

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

EDITORIAL FROM THE WASHINGTON EVENING STAR

Mr. MASON. Mr. Speaker, when an engineer hangs weights on the safety valve and orders the fireman to stoke her up something is sure to happen to the engine internally when the steam pressure gets too high—something is also going to happen to the engineer and fireman.

When President Roosevelt seeks to establish a ceiling over prices and at the same time other Government officials and department heads order increases in the two main factors that produce high costs, namely, wages and farm prices, something is going to happen to the economy of the country and to the men now tinkering with that economy. It is impossible to control prices without controlling the principal factors that produce high prices. If you try to do so something is bound to happen to upset the orderly functioning of our economic system. This thought is so well discussed in the following editorial from the Evening Star of Thursday, July 31, 1941, entitled "Control of Prices," that I submit the same for consideration by the Members of this House:

[From the Washington Evening Star of July 31, 1941]

CONTROL OF PRICES

The President's price-control message to Congress is an excellent summation of the evils inherent in any pronounced inflationary movement, and, furthermore, it plainly indicates that a serious inflationary trend already is well under way. There is nothing in the message, however, which leads to the belief that the administration is prepared to take the politically difficult steps which are essential to any adequate and effective treatment of the problem.

Pending the introduction of specific legislation embodying the President's broad recommendations, appraisals of the administration's price-control plans necessarily must be tentative. Nevertheless, certain conclusions can be drawn from the language of the message.

The President told Congress that any legislation "should include authority to establish ceilings for prices and rents * * *." That is broad language, but since the President did not stress the point, there is good reason to believe that he was not asking Congress to bring farm prices, which have played such an important part in the rise in living costs, under the regulatory authority. And if an attempt is to be made to clamp a lid on the price of farm products, what then becomes of the administration's parity-price program?

The parity program has no relation to realities. It is an arbitrary and politically inspired attempt to give the farmer a guaranty—at public expense—that the value of his products in terms of purchasing power shall not be less than during a base period when agriculture enjoyed its greatest prosperity. It has been but a few weeks since Congress passed and the President approved legislation intended, in net effect, to assure the farmer of a 100-percent parity price. Is this to be abandoned, or is the farmer not to share in the "economic sacrifices" which the President said must be anticipated and cheerfully borne?

Control of farm prices, however, is but one phase of the problem. If they are excluded from the regulatory process, it is extremely doubtful that price control can be effective, but that is a doubt which might persist even if farm products are brought under a price ceiling, for any price-control effort is apt to fail unless accompanied by some adequate method of controlling the cost factors that directly and inevitably influence prices.

Wages are perhaps the most important single cost factor. But the President does not ask that they be brought under direct

control. Instead, he warns of the hardships which inflation would bring to the working class, and, in effect, appeals for a voluntary wage-control system. At best, that would be an exceedingly frail foundation upon which to erect a price-control structure, and if it fails and there is to be no power to regulate wages, any effort to control prices in an effective and equitable manner is almost certainly doomed to failure.

High, or relatively high, wages also influence the price level indirectly. As the President pointed out, "Every dollar spent for defense presses against an already limited supply of materials." It is equally true that every dollar of new purchasing power left in the hands of wage earners likewise presses against the limited reserve of materials. The administration has set its face against all proposals to siphon off the excess purchasing power, which competes with defense buying, by a broadening of the tax base or by some system of compulsory saving. But the official frowns directed at these proposals will not check the unfavorable economic consequences which result from pushing up buying power in a restricted market. The problem is there, and it cannot be ignored merely because it carries unpleasant political implications.

It should be recognized, of course, that there is a limit to the authority which the President can hope to get from a Congress in which the various pressure groups will be striving to advance the interests of their particular constituents. That, too, is a fact which cannot be ignored, and this consideration, coupled with the far-reaching importance and complexity of the contemplated legislation, is sufficient reason why Congress should make haste slowly in this matter. If the price-control bill in final form turns out to be a hodge-podge of political compromises, it might well prove to be more harmful to the country than the economic evils against which it is to be directed.

Defense Policies Supported—St. Elmo Legion Takes Position For Dealing Sternly With Nazis and Japs

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

RESOLUTION OF JAMES CRAIG LODOR POST, NO. 148, AMERICAN LEGION

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I include a resolution passed on July 28, 1941, by the members of James Craig Lodor Post, No. 148, American Legion:

ST. ELMO, CHATTANOOGA, TENN.,
July 28, 1941.

Whereas there is at the present time in this country a movement on foot among and by a certain group of people, so-called isolationists or pacifists; and

Whereas the tactics of this group, led by Senator WHEELER of Montana, and Mr. Charles A Lindbergh, are devoted primarily to criticisms of President Roosevelt and his foreign policy; and

Whereas the actions of this group tend to weaken the confidence of our people in their President and his policies, and to lend strength to the subversive activities and propaganda of those aggressor nations which are doing all in their power to overthrow all the principles and ideals on which our Nation was founded and in which its citizens believe and which they hold dear; and

Whereas these actions are hindering and delaying the defense efforts of our whole country: Therefore be it

Resolved, That the members of the James Craig Lodor Post, No. 148, American Legion, in meeting duly assembled, affirm their support of President Roosevelt in his handling of the foreign policy of the Government under present conditions and denounce the activities of Senator WHEELER, Mr. Lindbergh, and all such critics who are trying to undermine the President and who thus destroy or weaken the defense efforts of our people and encourage the activities of the aggressor nations; and be it further

Resolved, That we call upon the President and the Congress of the United States to deal with a firm hand with the German, Japanese, and Italian Nations, using our Army and Navy whenever and wherever it may be necessary to do so in order to protect our rights, and with this end in view to see that both our Army and Navy are at full fighting strength and efficiency in order to cope with any emergency that may arise, enacting such legislation as may be required to continue all selectees, Reserves, and National Guard men in active service as long as is necessary to accomplish this purpose, and also authorizing the use of these men in any foreign countries where they may be needed; and be it further

Resolved, That copies of this resolution be furnished to the two Senators from Tennessee, the Congressman from our district, the local daily papers, and that a further copy be spread upon the minutes of this post.

E. W. MCMILLIN,
Chairman, Resolutions Committee,
James Craig Lodor Post, No. 148,
American Legion.

National President of the Young Democrats

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

RESOLUTION OF ALABAMA STATE LEAGUE OF YOUNG DEMOCRATS

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas one of the native sons of our neighboring State of Tennessee is a candidate for the office of national president of the Young Democrats; and

Whereas we heartily endorse the good-neighbor policy: Now, therefore, be it

Resolved, That the Alabama State League of Young Democrats does unqualifiedly endorse the candidacy of Mr. Joe Carr, of Tennessee, for national president of the Young Democrats and pledge our sincere efforts to secure his election at the national convention at Louisville, Ky.

Done this 26th day of July 1941 in Montgomery, Ala.

The Congressional Front

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

TAXES

Mr. DIRKSEN. Mr. Speaker, taxes are as old as time. More than 4,000 years ago, when the overseers of the Pharaoh of Egypt went abroad on the land with their lashes and said, "Come now with corn," the people knew of taxes. The second chapter of Luke recites that—

> There went out a decree * * * that all the world should be taxed.

And it was. That same chapter records that "all went to be taxed." And they were. Since the beginning of organized society, governments have imposed taxes to provide funds for the discharge of the functions of government. It is no different today. Taxes are important not alone because they touch all living persons, but because the taxing power can become the instrument for completely altering the structure of society and changing the mode of life of a nation. Crushing taxes had as much to do with the decline of the Roman Empire many centuries ago as any other force because it blacked out the substantial middle class and left only a nation of large landholders on the one hand and half-enslaved peasants on the other. All this is by way of preface to some comment on the Revenue Act of 1941, passed this week by the House of Representatives. It is one of the most gigantic tax bills ever passed by Congress.

THE NEED FOR REVENUE

For a dozen years, as a result of the depression, that far-flung corporation known as the Government of the United States was spending more than it took in. On June 30, which marks the end of each official year, the Government bookkeepers hauled out the red-ink bottle and inscribed a huge figure in red on the Government ledger to show by how much the expenses exceeded revenues. It is known as the annual deficit. It is becoming rather permanent. For the fiscal year 1941 it was more than $5,000,000,000. Fiscal wizards who preach the gospel that a nation can spend its way to prosperity call this operation deficit spending. But no matter what it is called, the fact is that the Government is making generous use of red ink. Moreover, it looks as if we shall have to provide an extra supply. We may even have to place red ink on the priority list of essential items because it seems indispensable now to the operations of government.

THEN CAME THE WAR

In the 8 fiscal years from 1934 to 1941, inclusive, Uncle Sam took in forty billion and spend sixty-seven and one-half billion. He, therefore, owed twenty-seven and one-half billion. But instead of

making contractors, steel companies, grocers, tailors, stenographers, clerks, mail carriers, and others wait for their money, he borrowed the money and paid them as he went along. This was a simple operation. He printed his seal and a lot of nice writing on a piece of parchment paper and called it a Government bond. These he sold to banks, insurance companies, trust funds, individuals, and others. He now owes these folks instead of the clerks, contractors, mail carriers, and others. But the debt is still there. Came the war, and with it the necessity for providing battleships, cruisers, soldiers, food, guns, camps, ammunition, airplanes, and what not. We have offered to help the democracies to the extent of seven billion. The two-ocean Navy will cost seven billion. Other items for our own defense will bring the total of defense and aid appropriations to $52,000,000,000. That is real money. For the 12-month period which begins July 1, 1941, and ends on June 30, 1942, we expect to spend $22,000 000,000. That is real spending. It will take expert spenders to spend that amount in 12 months. That is over $1,830,000,000 every 30 days. If our best 18-carat spenders can do it, we would draw on the red-ink supply on June 30, 1942, and close the books for that year by recording that we were $12,800,000,000 in the hole for the year. There are two ways of raising this money which will be spent and which we do not have. The first is to borrow. But borrowing is old stuff. We have been doing it for 11 years. Soon Uncle Sam will be in hock to all his children. The public debt is now at $50,000,000,000. These are Uncle Sam's notes. Sooner or later, they must be paid. But if too many of these notes go floating around, it will be like the case of the man who owed everybody and could not get any more credit. So the thing to do is to raise a larger part of this expenditure through taxes. And that is where the new tax bill comes in.

WHAT THIS BILL DOES TO YOU

For a full year, this new tax measure will raise about $3,500,000,000. That is real money. That is on top of what is now being paid in taxes. In round figures, thirteen hundred million will come out of corporation incomes, twelve hundred will come out of individual incomes, one hundred and fifty million from increased taxes on gifts and estates, and nine hundred million from taxes on liquor, automobiles, saxophones, cold cream, pinochle decks, theater and night club admissions, radios, coca-cola, matches, wrist watches, fur coats, slot machines, pool tables, electric curling irons, and other items which are simply too numerous to mention. These are known as indirect taxes. They are collected from the manufacturer and added to the price. Thus, the public pays them but does not exactly see them. That is why they are called "painless."

THE OVER-ALL RESULT

The revenues to be derived from all sources under existing law as well as the revenues under this new bill will still leave the Government in a deep hole. Since this measure will not become law until later in the year, it is estimated that for the fiscal year which begins July 1, 1941, and ends June 30, 1942, it will bring in a little less than $2,000,000,000 for that year. When the $2,000,000,000 is added to all other receipts of the Government, we will still be shy about $11,000,000,000 of making both ends meet for the year 1942. In other words, we are still in the hole, but not quite down to the bottom. That is to say that if this fiscal hole is 100 feet deep, we are still 40 feet from the top.

ONE EXAMPLE

One example will serve to indicate the proportions of this tax bill. Under present law, a single man whose net income was $2,000 would pay an income tax of $44. Under the new bill, he will pay $110. This is a jump from 2⅕ percent to 5½ percent.

British War Aims

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 4 (legislative day of Monday, July 28), 1941

ARTICLE BY JOHN KNOX

Mr. NYE. Mr. President, some days ago I made a request for printing in the Appendix of the RECORD of an article entitled "British War Aims in the Conflict Beginning September 1939," by John Knox, of Chicago, a graduate of Northwestern University and of Harvard, a law clerk in the Supreme Court of the United States in 1936 and 1937, and at the present time a member of the editorial committee of the Chicago Bar Association.

I now have before me a statement of the estimated cost of printing the article, which is $495. Therefore, I repeat my request for unanimous consent to have the article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRITISH WAR AIMS IN THE CONFLICT BEGINNING SEPTEMBER 1939

(By John Knox, Ph. B., Chicago; J. D., Northwestern; LL. M., Harvard; law clerk, Supreme Court of the United States, 1936 and 1937; member, editorial committee, Chicago Bar Association)

THE AMERICAN PEOPLE DO NOT REALIZE WHAT THEY WILL BE UNDERWRITING IF THEY ENTER THE PRESENT CONFLICT

BRITISH WAR AIMS

Herewith are listed the war aims of the British Empire in the conflict now devastating Europe. Most of the aims are admirable enough, but in view of subsequent military defeats these aims cannot be realized unless the United States dispatches a huge expeditionary force to the aid of the empire. Moreover, even if this country drained itself of men and money in order that these aims might be realized, there would result only a substantial reestablishment of the European status quo as of 1938. Nothing fundamental would have been solved, and we would have spent our resources abroad in order merely to reaffirm the boundary lines laid down by the Versailles Treaty.

Let us not forget that Europe has been at war 323 years out of the last 500, and no battle has ever proved to be the last one. As an American of draft age, I ask that this Government inform the British Government without delay that "short of war" means just that, and that there will be no American expeditionary force or naval force sent abroad to the aid of the British Empire.

(Listed chronologically in the order in which they were announced)

1. Poland will be restored and its partition negated by force of arms. Its frontiers must be as unchallengeable as those of September 1, 1939. There must be an access to the sea. The deliberate depopulation of western Poland and the overcrowding of central Poland, as practiced by Germany, will be set aside. Polish populations will be moved back to their former geographical areas, which are now occupied by Germans. (England is determined to fulfill these objectives even though the U. S. S. R. now occupies part of the former Polish Republic.)

2. Restoration of the independence of Rumania. (This war aim was first stated in a modified form on October 16, 1939, when it was announced that the independence of Rumania must be retained despite the disturbed Balkan situation. Rumania did not fall until November 1940.)

3. The United States must take an interest in this war as soon as possible. Visiting Englishmen must play their part, both as exchange professors and public lecturers, in enlightening American public opinion. (By the spring of 1941 this aim had progressed to such an extent that an Anglo-British union was being openly broached.)

4. Restoration of the independence of Czechoslovakia. But Slovakia must be given an opportunity to express herself to a greater extent than she formerly enjoyed.

5. Germany must pay reparations. All the damage that Germany has inflicted upon her weaker neighbors must be repaired as far as it is reparable after the havoc of war. The recurrent acts of aggression of Germany must not benefit her in any way.

6. Liberation of all the foreign races conquered by Germany. This all-inclusive war aim was pronounced on November 20, 1939. It has been followed ever since and was last restated on April 23, 1941, when the restoration of Yugoslavian independence was vowed. It is momentarily expected to be again restated as regards Greece.

7. Political independence must be given to Austria providing she should desire it.

8. A new kind of league of nations or postwar system of cooperation must be made to succeed where the old League failed. It must be strong enough to prevent such acts of injustice and violence that gave rise to the present war.

9. The responsibility for the war must be placed on the whole German people, so that it will not be possible, as it was after the last war, for one section of the populace to blame another section. Any armistice or peace terms must bear the signatures of (1) the government in power at the conclusion of hostilities; (2) the army; (3) the Nazis; (4) the monarchists; and (5) the German democratic element. (It was suggested that Allied troops also show themselves in Berlin and other German cities.)

10. Restoration of the independence of Norway.

11. Restoration of the independence of Denmark. (Because of the great importance of the Norwegian campaign, the above two war aims are separately listed despite the wording of aim No. 6.)

12. Restoration of the independence of Holland.

13. Restoration of the independence of Belgium.

14. Restoration of the independence of Luxemburg. (The above three war aims arose from the events of May 1940, and are separately listed because of the great importance of the occurrence of that month.)

15. Germany must ultimately be defeated in the field in an offensive land war. Victory cannot be won by a mere concentration upon defense of the British Isles.

16. Italy will be crushed and Mussolini punished.

17. Restoration of the independence of France. Germany must not only be expelled from France, but from all the lands that she has overrun. (In other words, Germany must be forced back into her pre-war boundaries.) Security for France must also be the necessary basis for any peaceful settlement of the war, since in 1919 England did not sufficiently recognize the legitimacy of the French demand for security.

18. The British Isles and Empire must be defended to the utmost and the present status quo maintained. The same also applies to the Dutch East Indies, etc.

A realization of these aims, therefore, would be a virtual reestablishment of the status quo in Europe as of 1938, when the boundaries defined by the Versailles Treaty were still in effect.

NOTE.—Quotations and citations listed in the following annotated material merely serve as examples of each war aim. Other similar material was not included. Had it been, this paper would have been of great length. It is believed the material included is sufficient to illustrate each war aim.

J. K.

INTRODUCTION

On January 18, 1941, the Honorable Joseph P. Kennedy, former United States Ambassador to Great Britain, delivered a radio address, in which he said, in part:

"What would be our war aims? We have not had any debate on that score. We certainly are not going into the war just to underwrite the war aims of another country without knowing what they are. * * * Are we to sign a blank check? Common sense would seem to require that there be the most complete clarification of American aims in this conflict before we take the fatal step."

On March 25, 1941, Lord Halifax, British Ambassador to the United States, delivered his first official speech in this country. For a month previous to this address those "in the know" had been whispering that Halifax had brought with him from Britain a complete statement of what Britain is fighting for. But nothing of the sort. He confined himself to generalities, mostly of a moral sort.

On March 27, 1941, Prime Minister Winston Churchill said that the "interests of national unity" caused him to forego producing a "catalog of war aims and peace aims." He also said, "Everyone knows quite well what we are fighting about." I am not so sure of this.

On May 6, 1941, Secretary of War Henry L. Stimson demanded convoys and called upon the youth of America "if need be to die for the conviction that the freedom of America must be saved." This speech was delivered with the knowledge and consent of President Roosevelt, who had not only pledged to keep this country out of the present war but who had said, "Convoying means shooting, and shooting means war."

It is therefore clear that in this month of May 1941 a momentous hour has arrived for the United States. We stand at the crossroads of remaining at peace here at home or of waging a war abroad because the greatest empire the world has ever seen is in danger of destruction. This empire we were once a part of, so its cries for help in its hour of desperation tug all the more at our heartstrings. In our boundless sympathy we forget that long ago the ancestors of the men now dying for the British emblem came to our shores, burned our Capitol, and scattered our population. We forget that only two decades ago we toiled mightily and gave in blood and property that this emblem might not die. We forget many, many other things because there is loose in the world today a terror of destruction that is sweeping Europe. Our foremost military experts agree, however, that this terror can never come to our own shores, under its own power, and successfully invade our territory. The great question soon to be decided, therefore, is, Should we, or should we not, go to war abroad in order to save once again the British Empire, thereby saving certain economic benefits for ourselves?

It may not be amiss for one of draft age to inquire into this problem. My generation perhaps should expect to suffer and not be heard from. Until now I have said little, as have the other millions who registered for the Selective Service Act last October 16, but certain British defeats make it impossible for me to keep silent any longer. I therefore presume to say a few words upon the struggle now raging in Europe.

For many weeks past our interventionists have skillfully brought this country nearer and nearer to the brink of war. In the vanguard of this group has been the Committee to Defend America by Aiding the Allies. The policy of this committee has always been several leagues ahead of the public opinion of the day, and its trial balloons seeking to mold public opinion have always been approved by the White House. An effective campaign to silence all opposition has long been under way. It has now progressed to a point where an American can no longer be for America first but must be for England first or China first or Greece first. If he still insists upon being for his own country first, last, and always, he is looked upon with suspicion.

Senator PEPPER (Democrat, Florida), with the knowledge and consent of the President, has demanded a total war on two oceans and the creation of a totalitarian dictatorship. On May 6, 1941, the Senator declared that the American people are ready, if necessary, "to spill their blood" and that "all they need is a Government to make up their minds."

Early this year our President announced the now familiar "four freedoms." He, who was elected on a promise that we would not get into a fighting war, suddenly proposed to establish a new world order. In all parts of the globe he was going to bring freedom of speech and expression, freedom of every person to worship God in his own way, freedom from want, and freedom from fear. A new Sir Galahad had mounted his charger and was ready to set forth; only he had forgotten the pressing problems of the round table at home.

Then followed the great fight on the lend-lease bill. Thereafter billions were voted by our Congress upon the President's plea for all-out aid to Britain. We had begun the journey but did not know where we were going. But now we do know, for we are face to face with total war.

Do any of us know what England is really fighting about? Of course, we have heard many high-sounding phrases such as "ridding Europe of the menace of nazi-ism," but nothing really definite is stated these days.

When I was at Harvard studying law we had to state reasons concretely and not deal in generalities. When I go into court these days I have to do the same. Our interventionists, who deal only in generalities and fine words, would have been "washed out" of Harvard after the first semester for not getting down to the heart of the problem.

Let it be understood that I am thoroughly in agreement concerning the necessity of building up a strong defense for this country. I am in total disagreement with all of the policies of the Axis Powers. I believe in aid to Britain short of war. But I do not believe that we should enter the conflict as an active belligerent. Why? Because I have gone to the libraries in Chicago and read every issue of the London Times since the war began. As a result, British war aims have become very definite indeed, and I feel that the American people have not the slightest idea what they will be underwriting if they formally enter the conflict on the side of Britain.

I need not pause to discuss whether the London Times represents the official British point of view in its columns. All would admit that no publication in the British Empire so represents the official viewpoint of the Government as this one. The Times is the voice of England. Its columns of law reports are cited in the courts as authority. Its editorial columns represent the voice of 10 Downing Street. Its verbatim reports of Parliamentary proceedings intimately disclose statements of even the Prime Minister.

The fourteenth edition of the Encyclopedia Britannica (1938), at volume 16, page 337, says:

"The Times, which occupies the premier position among English newspapers, was started by John Walter on January 1, 1785, under the name of the Daily Universal Register. * * * On January 1, 1788, its title was changed to the Times, and this great newspaper has ever since been the preeminent national journal and daily historical record. * * *

"The Times excels in every department, mainly by employing experts in particular subjects. * * * The Times specializes in its presentation of foreign affairs."

What, therefore, does the Times say concerning British war aims? Let us draw the veil aside.

BRITISH WAR AIMS BEFORE THE FALL OF FRANCE AS STATED IN THE EDITORIAL COLUMNS OF THE LONDON TIMES

September 1939

The war got off to a flying start, and within a few days it became apparent that Poland might be crushed by Germany. Later in the month she was attacked by Russia on the east, so Polish collapse became certain. As the republic was toppling the Times thundered:

"There will be no peace which leaves the brigand in possession of his loot. * * * It is our part, and well within our power, to carry out the official decision to prepare for and to endure, if necessary, a long war, united in a single resolve to secure the final victory for Polish and European freedom." (Leading editorial of September 13, 1939, entitled "War by Land and Sea.")

"None of these speculations can in the slightest degree deflect the determination of the Western Powers to pursue to the end their cardinal war aims, in which the liberation of Poland will take a foremost place. Whether soon or late, that end will be achieved." (Leading editorial of September 19, 1939, entitled "The Price of Freedom.")

"The Poles have therefore laid their allies under an enormous debt. It cannot be fully discharged until complete victory and the overthrow of Hitlerism have restored the liberty of Poland. That may be a long task, but in the immediate present there is an opportunity of repaying some very small part of what we owe." (Leading editorial of September 22, 1939, entitled "The Czech Revolt.")

"They [the people of Warsaw] have proved the greatness of the Polish Nation and have made the world see that its restitution to its proper place among the free peoples of Europe is one of those causes in which the greatest powers may be proud to fight and hazard all that they possess. * * * In 1939 they [England and France] are determined to devote the utmost of their strength

to her restoration." (Leading editorial of September 29, 1939, entitled "Warsaw Surrenders.")

"Freedom and independence for the Polish Nation, within frontiers as unchallengeable as that which Germany violated on September 1, and with full and guaranteed access to the sea constitute in their own right an article of any conceivable peace." (Issue of September 30, 1939, Saturday, leading editorial, The Nazi-Soviet Compact.)

On the 20th of September Prime Minister Chamberlain reviewed the situation in the House of Commons, saying, in part:

"In this situation His Majesty's Government authorized the issue of a statement on September 18 that this attack by the Soviet Government upon Poland (a country with whom she had a nonaggression pact) at a moment when Poland was prostrate in the face of overwhelming forces [hear, hear] brought against her by Germany could not be justified by the arguments put forward [loud cheers] and that while the full implication of these events was not yet apparent, nothing which had occurred would make any difference to the determination of His Majesty's Government to fulfill their obligations to Poland and to prosecute the war with all energy until these obligations had been achieved. [Renewed cheers.] * * *

"The scale of our preparations, and the fact already announced that we are basing them on the assumption that the duration of the war may be at least 3 years, insures that our strength will increase progressively to meet whatever may come." (Issue of September 21, 1939, Thursday, p. 4, Parliament.)

So in September 1939 Britain's war aim No. 1 was stated, namely:

The partition of Poland will be negated by force of arms; Germany, and perhaps Russia, will be driven out of Polish territory; something equivalent to the Polish corridor will be reestablished; and an approximate return to the Polish status quo of September 1, 1939, must be made before England will even consider peace.

October 1939

Poland was now crushed. The first phase of the war had ended. Germany stopped for breath. The conflict was still far removed from England and France.

The leading editorial of October 4, 1939, was entitled "Responsibility for War." Already it was firmly decided who was responsible, and a quotation was printed from an address by Chamberlain. The Times reiterated this statement as being the policy of England. It was:

"No threat would ever induce this country or France to abandon the purpose for which we have entered upon this struggle." (Issue of Wednesday, October 4, 1939.)

With Poland out of the war, England became uneasy about the Balkans. Her attention was turned to Rumania, and war aim No. 2 appeared:

"Rumania is herself uneasily placed. The policy of neutrality adopted by King Carol is wisely conceived and is well understood in this country, which is just as determined that his kingdom shall retain its independence at the end of the war as that Poland shall regain hers." (Issue of Monday, October 16, 1939, editorial Poland in Eclipse.)

Rumania did not fall until November 1940. At that time war aim No. 2 was modified to read that England would restore the independence of Rumania.

In October 1939, England began looking toward America. The Neutrality Act was discussed, and close attention was paid to the debates in Congress regarding the repeal of the arms embargo. A veiled definition of war aim No. 3 appeared, which gradually proved to be: Let us get America interested in this war as soon as possible. Discussion on this point was rather innocuous at first.

"The United States, built up through centuries largely as a sanctuary from the feuds and rancors of Europe, defined its policy of withdrawal through the mouth of President Monroe and maintained its doctrine consistently down to 1917. The Republic entered the four years' war directly challenged by German lawlessness but also inspired by the hope that, by thus departing from their ancient principles, they might make a supreme contribution toward finally exorcising the causes of war from the whole world. When that hope faded, Americans resolved that never again should their blood be shed to such little purpose on foreign battlefields; and it was in that mood that the Neutrality Act was passed.

"* * * The purpose of the [neutrality] bill is not financial; it is simply to keep America out of the war." (Leading editorial Embargo and Neutrality, Monday, October 30, 1939.)

November 1939

The prospect of active American military assistance was very remote, and the Times was gloomy concerning war aim No. 3:

"The ideals that we hold in common with the United States are too fundamental to the whole conception of life and politics in both countries to leave any doubt that the overwhelming weight of American opinion is with us in our fight. At the same time we entirely understand and appreciate the reasons why America is resolved not to participate in warfare on another continent." (Editorial Europe and America, Friday, November 3, 1939.)

A few days later Czechoslovakia was considered and war aim No. 4 announced (restoration of that country):

"Among the Czechs and the Poles today there are thousands of inconspicuous heroes who will never bow to their conqueror and who know that their nations, like Belgium, will some day regain the independence which has never altogether ceased to exist because it has never been banished from their hearts." (Editorial for Tuesday, November 7, 1939.)

German destruction continued apace during November 1939, and war aim No. 5 was pronounced in anger and resentment (Germany must pay reparations):

"We have learned, he said [Lord Halifax, now British Ambassador to America] that there can be no opportunity for Europe to cultivate the arts of peace until Germany is brought to realize that recurrent acts of aggression will not be tolerated—and, he might have added, will in no case be allowed to benefit the perpetrator. For that reason it is all-important that the damage successively wrought by Germany upon her weaker neighbors shall be repaired so far as they are reparable after the havoc of war." (Issue of November 8, 1939, Wednesday, leading editorial The Cause for Which We Fight.)

With the arrival of the first wartime Armistice Day, the Times admitted:

"In a remarkable degree the present conflict is a continuation of the last. We have to fight the same enemy and for the sake of the same principles, though on this occasion those principles are more sharply defined and their full significance is more clearly understood." (Issue of November 11, 1939, Saturday, leading editorial The Faith of Armistice Day.)

In other words, World War No. 1 had to be charged off the books as a total loss. All the blood and tears and casualties and expenditures had been in vain. England and France had so bungled the peace that there had been no peace but only a temporary armistice.

Later in the month war aim No. 6 appeared—a very inclusive and far-reaching aim: Liberation of all the peoples conquered by Germany. (This aim was last restated on April 23, 1941, when the restoration of Yugoslav independence was vowed:)

"No doubt the uprising of the Czech national spirit has drawn sustenance—which is not to say instigation—from the sympathy felt for the Czech cause in Great Britain and France and the knowledge that one of our own professed war aims is to liberate the foreign races which have been conquered and enchained by the Nazis." (Issue of November 20, 1939, Monday, leading editorial Martyred Czechs.)

Ten days thereafter the Russo-Finnish war began (November 30, 1939, at 9 a. m.)

A final event of importance during November 1939 was President Roosevelt's signing of the Neutrality Act on the 4th of November. Congress, after a month's debate, had finally voted for the repeal of the arms embargo. The Times paid close attention to these events. England was another step closer to a realization of war aim No. 3.

December 1939

The English people were shocked that Russia should actually attack Finland. Much attention was paid by the Times to the military aspects of the struggle, but it was the attention that resembled the attitude of an onlooker at an interesting chess game.

England hesitated to send active military assistance to Finland. There seemed to be a feeling that Finland would be defeated as rapidly as Poland and that any military supplies would be eventually lost to the Russians.

England had been at war 4 months, but the struggle in Europe seemed far away. The Times felt that England and France should, of course, give their moral support to the hard-pressed Finns.

Finland surprised the world by hurling back the Russian advance. With the Soviets at bay, England felt that certain supplies should be sent. Ether and antitetanus serum was dispatched late in December, together with £5,000 worth of anesthetics, catgut, antigas ointment, etc. The Times commented that some military equipment had also been sent but did not enumerate what such equipment consisted of. It was admitted that only a small supply had been forwarded to Finland.

December 1939 was a month of victory for the British Navy, and the British public felt very secure. On December 17 the *Graf Spee* was scuttled 5 miles off Montevideo after a losing battle with three British warships. On the 19th the North German Lloyd liner *Columbus* (32,000 tons) was scuttled 300 miles off Cape Henry, Va.

Other events favorable to the Allies were happening. The first contingent of Canadian troops landed in Britain on the 17th. On the 26th the first squadron of the Royal Australian Air Force reached England. On the 27th the first Indian units arrived in France. And, finally, on the last day of the year the Finns won an impressive victory near Lake Kianta and destroyed an entire Russian division. On the same day the second contingent of Canadian troops reached England.

An empire may have been at stake, but England scarcely realized it as yet. During December the readers of the Times were treated to such innocuous announcements as:

"The Queen has been pleased to appoint Lady Helen Violet Graham, D. C. V. O., to be an Extra Woman of the Bedchamber to Her Majesty." (Court news of December 30, 1939.)

"Sir George Ogilvie-Forbes (who kissed hands upon his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Habana) and Mr. David Kelly (who kissed hands upon his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Berne) were received in audience by the King this morning." (Court Circular of December 15, 1939.)

Finally, frequent and prominent pictures of the Maginot line were published. Articles

were written about its impregnability. For instance, it was suggested that if a dent should ever be made in one section of the line the isolated forts could hold out for months against the enemy.

January 1940

The English began the new year with considerable optimism. Accurate forecasts of the future were made, but the public was lulled into a sense of security. For instance:

"Meanwhile there was more than one hint that the area of the conflict might be extended. At one time a German invasion of the Low Countries, in order to turn the flank of the French position and establish bases for air attack against England, seemed to be seriously threatened; but Hitler apparently thought better of the plan, at any rate for the time. * * *

"The opening of the new year finds the Allies supreme on the sea; in the air their machines and men are evidently superior in quality, while their prospects of expansion, thanks to a great project of building and training in Canada, are almost unlimited; on land the battle has yet to be joined. But here also the immense reserves of British manpower have not yet been touched." (Article entitled "Review of the Year 1939" in issue of Monday, January 1, 1940.)

The war, however, was interfering with the peacetime volume of British export trade. Comments were made, for instance, on America's entrance into the Argentine market to an extent not enjoyed before. To combat such developments, which would undoubtedly become more serious in the future, the following was suggested:

[From issue of January 1, 1940, Monday, p. 4]

"Trade Propaganda Abroad—Work of the National Council

"The vital importance of Britain's export trade in war as well as in peace has been emphasized so strongly by your excellent articles and by other correspondents that it would be redundant to add to what has been said in this connection. We would, however, like to urge that more attention should be given to the planning and dissemination overseas of suitable publicity or propaganda on behalf of British commerce. We consider this to be essential if after the war British exporters are to maintain and improve their position in foreign markets.

"The National Council for British Commercial Propaganda Overseas hopes that advertising agents will collaborate with it and that it may also have the valuable cooperation of publishers of British trade and technical journals. Contributions to the fund of the National Council will be welcome and can be used for the general propaganda fund, or firms and companies can arrange for the allocation to them of specific advertisement space in its journals.

"National Council for British Commercial Propaganda Overseas: Sempill, president; D. A. Bremner, Geoffray R. Clarke, Gilbert Gledhill, Dudley Gordon, G. M. W. Macdonogh, Ronald Matthews, W. Norman Vernon, Cecil Weir.

"WALTER HOUSE, BEDFORD STREET, W. C. 2, *December 28.*"

Thus did the month of January 1940 begin. On the 3d President Roosevelt addressed the third session of the Seventy-sixth Congress and said, in part:

"I can understand the feelings of those who warn the Nation that they will never again consent to the sending of American youth on the soil of Europe. But, as I remember, nobody has asked them to consent, for nobody expects such an undertaking. The overwhelming majority of my fellow citizens do not abandon in the slightest their hope and expectation that the United States will not become involved in military participation in the war."

The Times noted this statement in a headline to one of its columns: War Aim No. 3 was apparently not proceeding so well. (Attempt to get America interested in the war as soon as possible.)

On the 6th of January 1940, a most important change in the British Cabinet occurred. Mr. Hore-Belisha resigned from the secretaryship of state for war and left the Government. He was succeeded by Mr. Oliver Stanley. Lord Macmillan resigned from the ministry of information and was succeeded by Sir John Reith. For the next few days the Times gave more attention to this cabinet shake-up than to the Finnish war.

On the 8th of January rationing began, 18 weeks after the outbreak of war. Bacon, ham, butter, and sugar were to be rationed first. A real wartime economy was beginning.

Serious inroads were made on the British Navy during January. On the 16th the loss of three submarines was reported, H. M. submarines *Seahorse, Undine,* and *Starfish*. On the 21st the loss of H. M. destroyer *Grenville* was announced, with 68 casualties reported. On the 23d the loss of H. M. destroyer *Exmouth* with all hands on board was announced.

General Hertzog, leader of the opposition in South Africa, introduced on the 23d a motion in favor of concluding peace with Germany. On the 27th the motion was defeated 81 votes to 59.

The entire month of January was marked by severe cold over Europe. Even in Berlin the lack of fuel was so pronounced that the public suffered considerable hardships. Conditions in Poland were very deplorable.

Some more war aims were announced during the month of January 1940. War aim No. 7 appeared (political independence to Austria if she should desire it):

"The immense resources of the British Empire were referred to by Lord Snell in an address broadcast by the British Broadcasting Co. this week. Recalling the help that was reaching the country from every dominion, he said:

" 'Small nations have as much right to live as Germany. This right requires that Czechoslovakia, Poland, and, if it desires, Austria should regain their political independence.' " (From issue of January 6, 1940, Saturday, p. 3.)

"Let the great cities of Warsaw, Prague, and Vienna banish despair even in the midst of their agony. Their liberation is sure." (From issue of January 22, 1940, Monday, p. 6. Quotation from January 20 broadcast by Winston Churchill, First Lord of the Admiralty, entitled "The State of the War.")

War aim No. 8 concerned some new kind of League of Nations or post-war system of cooperation that might succeed:

"Beyond question the ultimate task that awaits the nations, neutral and belligerent alike, after the immediate injustices have been set right, is the building up of a new international system capable of succeeding where the League of Nations has failed and of preventing the acts of injustice and violence that gave rise to war." (Leading editorial, The War in 1940, issue of January 1, 1940, Monday, p. 9.)

There was a restatement of war aim No. 5 (reparations):

"One of the more obvious reasons why peace cannot be made tomorrow is that the German Government have as yet given no sign whatever of their readiness to repair the damage they have wrought upon their weaker neighbors." (Leading editorial The Allied Cause, issue of January 22 1940. Monday, p. 7.)

War aim No. 4 concerned the restoration of Czechoslovakia. A slight variation of this aim next appeared (Slovakia must be given an opportunity to express herself):

"It must be recognized that until Germany has suffered some serious disappointment our terms could not be accepted. They must include the restoration of the Polish and Czech peoples as fully independent, and this restoration must be secured in act, and not only in word. The Poles and Czechs must themselves, as sovereign peoples, take part in the settlement of the terms of peace.

"Similarly Slovakia must have the opportunity to determine its own future. Most of us wish the same opportunity to be given to Austria, but it is arguable that this should occur as part of the process of peacemaking rather than as a condition precedent to negotiation." (Excerpts from broadcast by Archbishop of York on war and peace aims of Britain. From issue of January 23, 1940, p. 3.)

February 1940

This month was one of comparative calm for the English. The war in France was at a standstill. Casualties were so unusual that considerable prominence was given to the ambushing of 20 French soldiers who had driven across the German line by mistake.

Shipping losses were at a minimum. During the second week in February, for instance, there was only 1 chance in 460 that a ship in a British convoy unit would be sunk. During the third week in February there was only 1 chance in 472. The Times, however, warned that unprotected merchant ships traveling alone would be in considerable danger of being sunk. During the month a destroyer was sunk. On the 17th the loss of H. M. destroyer *Daring* was reported. One hundred and fifty-seven casualties were reported.

On the 8th of February the third contingent of the Canadian active service force landed in England at a west-coast port. On the 9th all men in England of the age of 23 were required to register for military service in the next few days.

On the 9th another event of interest took place. President Roosevelt announced that he was sending Mr. Sumner Welles, United States Under Secretary of State, abroad to gather information about conditions in Italy, France, Germany, and Great Britain. Welles visited Rome, Berlin, Paris, and London. His visit was given great publicity in the Times. Nothing must be left undone to give the American a great welcome.

A minor naval encounter took place in a Norwegian fjord on the 16th. On that day nearly 300 British prisoners were rescued by H. M. S. *Cossack* from the German auxiliary naval vessel *Altmark*. The *Altmark* was boarded by an armed party from the destroyer after the German ship had taken refuge in a fjord. Upon their return to England the prisoners were accorded a great demonstration while the German press raged at what it called a violation of international law. The prisoners had originally been captured by the *Graf Spee* when that warship was plundering in the South Atlantic.

On the 26th the first squadron of the Royal Canadian Air Force to leave Canada arrived in England.

This month, though marked by great calm in England and France, nevertheless witnessed the Finnish war raging to a desperate conclusion. England and France felt that they should do something for the Finns, so the matter was discussed in Paris on the 5th at the meeting of the supreme war council:

"The fifth, and by far the largest, meeting of the supreme war council was held in Paris yesterday. In addition to Mr. Chamberlain, Mr. Daladier, and Lord Halifax, the two countries were represented by the ministers and commanders of the three services and by their chief diplomatic officials—a council of 20 in all.

"Of the four previous meetings, two have been in France, two in England. * * *

"At the fourth meeting it is understood that one of the questions discussed was the

possibility of giving assistance to Finland. During the 6 weeks since then the Finnish needs have increased in urgency. More appeals have been made. The Soviet attacks have been intensified on land. Towns have been bombed with ruthless deliberation from the air. Great Britain and France were among the first countries to promise help to Finland in accordance with the League's resolution early in December, and they have not been unmindful of that promise. No doubt they find it useful from time to time to discuss the whole situation as it develops, together with the problems of the wider war. * * *

"After the meeting M. Daladier (quoted by the British United Press) said: 'Harmony was complete. It was the finest war council meeting I ever attended.'

"Technical discussions took place between the defense staffs, over which General Gamelin presided." (From issue of February 6, 1940, p. 8, article entitled "Supreme War Council Meeting in Paris.")

After this meeting France decided to release a small amount of obsolete military equipment to the Finns. Despite the obsolescence angle the Finns profusely thanked the French and said they (the Finns) were "highly satisfied."

Great Britain also sent Finland war material to aid in the struggle which had been in progress since November 30, 1939. England dispatched 144 airplanes (five-sixths of them were announced to be fighters), 59 guns and howitzers, 24 antiaircraft guns, 100 machine guns, with ammunition, "as well as large quantities of warlike stores." The Times said this was "encouraging" and "that nothing we send will go to waste or fall into the hands of the aggressor without serving its purpose." (Issue of February 26, 1940, p. 7, editorial The Cause of Finland.)

On the 27th, however, the Finns admitted the loss of the important island fortress of Koivisto, which had protected their right flank on the isthmus since the beginning of the war. By the end of the month Viipuri had also been reduced to ruins by the Russian bombardment. The Finnish lines were near collapse, and any Allied help that might be on the way would probably arrive too late. Sweden had also refused to give any active assistance other than to allow 10,000 volunteers to leave the country for Finland. No military aid of any kind had been allowed to pass through Sweden. The King of Sweden insisted that his country must not be involved in the war, but he expressed his deepest sympathy for Finland.

Shipments from the United States to the Soviet Union were discussed in Parliament on the 27th:

"Replying to Mr. Mander and Mr. Price (Forest of Dean, Laborite), Mr. Cross said he was aware that shipments of tin and rubber from the United States to the Soviet Union had increased during the last few months; shipments of petroleum appeared, however, to have decreased. He had no information to show whether part of these raw materials was being resold to Germany. * * *

"Mr. Leach (Bradford, Central Laborite), 'Is it not a fact that America prefers Mammon to democracy?' [Laughter.]" (Issue of February 28, 1940, p. 3, Parliamentary debates, Shipments from United States.)

The security of France in the post-war period was also mentioned at this time:

"The Archbishop of York (Dr. Temple), addressing the Rugby branch of the League of Nations Union last night, said that security for France was the necessary basis of any peaceful settlement of the war. In 1919 we, in this country, did not sufficiently recognize the legitimacy of the French demand for security. The France of today had no aggressive designs. We must be ready, as we were not ready in 1919, to accept our share of effort to insure French security." (Issue of February 6, 1940, p. 10.)

A variation of war aim No. 1 also appeared during the month. It will be remembered that this aim concerned the reestablishment of Poland with a guaranteed access to the sea, etc. Since that aim had been announced in September 1939 dire things had been happening to the Polish population. Areas formerly Polish were being forcibly depopulated and Germans were moving in as part of a German plan to Germanize a vast strip of territory.

"The brutal way in which the Germans are driving tens of thousands of Poles from their home lands brought a Government statement in the House yesterday.

"The Prime Minister was asked whether he would state now, without prejudice to the ultimate peace settlement, that those parts of Poland ethnographically Polish from which Poles are being so cruelly removed would be as effectively repopulated by Poles who wished to return to their homes after victory. Mr. Butler, who replied for Mr. Chamberlain, gave an effective reminder that one of the objects for which we are fighting is a vindicate the rights of the Polish people to an independent national existence and to right the wrongs done to them.

"The whole sordid process is being closely watched in London and in Paris. The Allies went to war because of the German invasion of Poland; the restoration of the Polish people is one of their clearest aims; and they are not to be deflected from it because the Germans, in their moment of power, try to fake the map and override all considerations of humanity." (Issue of February 8, 1940, p. 8, Thursday, article entitled "Righting Wrongs of Poland, Families Evicted by Germans.")

"This policy of the deliberate depopulation, as Mr. Chamberlain has called it, of western Poland and of the overcrowding of central Poland has the obvious purpose of making a subsequent appeal to a plebiscite work in Germany's favor; but so crude a maneuver can, of course, deceive no one and must never be allowed to succeed." (Issue of February 14, 1940, Wednesday, p. 9, leading editorial entitled "Lebensraum and Todesraum.")

March 1940

Events began to move more rapidly during this month. On the 2d it was announced that France would begin rationing food on April 1. All citizens were to register for ration cards by that date.

March 3 marked the entry of the Russians into the southern suburbs of Viipuri, where hand-to-hand fighting took place. As the Finnish war entered its fourth month the Finnish press expressed its disappointment at the dilatoriness of sympathizers in sending help.

On the 6th the British Government announced the issue of a war loan of £800,000,000 at par, carrying interest at 3 percent. The loan was to be paid in 15 to 19 years.

The next day the Government disclosed that the unfinished White Star liner *Queen Elizabeth* (85,000 tons) reached New York after a secret 10-day trip without passengers. The liner docked near the *Queen Mary* and the *Normandie*.

The 9th brought the first confirmation of Russo-Finnish peace talks. Sweden was acting as an intermediary. The Finns, however, were still hoping for help, and the Army announced that it was determined to fight on. Fierce fighting took place on the ice of Viipuri Bay despite the peace discussions.

Sumner Welles arrived in London on the 10th (by air from Paris). The Dorchester Hotel, where Lord Halifax had been staying since November 1939, assigned Welles a large suite. On the 12th the Court Circular announced that the King had received Mr. Welles, who had been accompanied by Ambassador Joseph Kennedy.

Meat rationing began in England on the 11th. The same day a settlement was reached of a misunderstanding between Great Britain and Italy. Italy agreed to import no more coal from Germany by sea, and Great Britain agreed to release 13 colliers that she had detained. The colliers had been stopped by the contraband control.

On the 12th it was announced that M. Daladier had stated in the Chamber of Deputies that an allied expeditionary force, the French contribution to which would be 50,000 men, was fully equipped to go at once to the aid of Finland if the Finnish Government should request such aid, and if Norway and Sweden would grant the right of passage. Mr. Hore-Belisha, who had left the British Government in January (resigning from the post of secretaryship of state for war) doubted that any such allied expeditionary force was fully equipped or ready to go to the aid of Finland.

British shipping losses were reviewed on the 13th. Since the war began 12,816 ships (1,614 of which were neutral) had been convoyed by the British Navy. Only 26 of all the ships convoyed had been lost (2 being neutrals, and they had struck mines). The figures of the French Navy were equally impressive. France had convoyed over 2,000 ships since hostilities began, and only 4 of them had been lost.

On the same day (13th) Sir John Simon announced that England was spending £6,500,000 daily in the prosecution of the war.

The same day also brought the announcement of a peace treaty between Russia and Finland. Finland was to cede Karelia, with the town of Viipuri (second largest city in Finland) plus a military base on the peninsula of Hangö. Hostilities continued, however, pending peace negotiations. The Russians occupied part of Viipuri on the 13th, after surrounding the city.

On the 14th it was announced that hostilities in the Russo-Finnish War officially ended at 11 a. m. on the 13th. But sporadic fighting still continued. Holland immediately blamed the Allies for the Finnish defeat. The Dutch view was published in the Times of the 14th (Thursday, at p. 7, in an article entitled "Holland Blames the Allies—Finns 'Abandoned' By Their Friends"). It was said in part:

"The Allgemeine Handelsblad represents the view of the great majority of people when it writes:

" 'Hard words must be said; the Allies have left Finland to her fate. Their assistance came too late, and it came at a moment when Finnish morale was already too greatly affected. The credit of the Allies has suffered another shock. The Finns are in the same boat with Poland and Czecho-Slovakia.' "

The Times itself said on the 14th (in its leading editorial, entitled "Finland," p. 9):

"The criticism that can reasonably be made is that, if the same readiness to help had been shown in the earliest days of the conflict as has been shown in the last few weeks, the Russian forces might never have made the advances which, at the cost of half a million men, they have achieved in a hundred days of hard fighting. Time was spent in exploiting the rather cumbrous machinery of the League when swift and resolute action by Great Britain and France would have had an immense material and moral effect in Finland and in all the neutral countries as well. It was pointed out in these columns very early in the war that a special responsibility rested on the two states, Great Britain and France, who were powerful, within striking distance by air, deeply concerned for the survival of small nations, and already in a state of war. But it was some time before even the movement for volunteers was given any sort of momentum, and only last month that ar-

rangements were made to assemble an expeditionary force. What was done tardily would have had twice the value if it could have been done promptly. Not until the last moment did the western democracies appear to be really in earnest about helping Finland. They must not make the same mistake with other neutral countries whose independence may be threatened."

Debate of a rather heated character followed in Parliament concerning the Finnish defeat. Chamberlain was called upon to explain, and he defended himself with courage and conviction. Certain members of Parliament insisted, however, that there must be a new British war aim. So war aim No. 9 took shape (after the Allies win the war the Finnish status quo must be reinstated).

"Mr. Hannah (Bilston, U.): When we have won the war, shall we allow these terms to stand?" (Chamberlain made no reply to this question, addressed to him in Parliament on the 13th. See Times for March 14, Thursday, Parliament.)

So on the 19th the question was again brought up.

"Mr. MacMillan (Stockton-on-Tees, U.) said that perhaps the most damaging criticism of His Majesty's Government was that having begun to regard the Finnish war as part of the strategic front they did not move sufficiently rapidly or with sufficient determination. In the end we had obtained the maximum of disadvantage with a minimum of advantage. He hoped the Government would find it possible, in consort with the Finnish Government, to issue a definite pronouncement that in the event of the successful victory of the Allies they would do everything in their power to reinstate Finland." (Issue of March 20, 1940, Wednesday, p. 5.)

Chamberlain, however, made no comment on this suggestion. A war with the Soviets, following a victory over Germany, was a proposal of such magnitude that the Times did not adopt it as a war aim, either. The Times thought England should help in the regeneration of Finland by sending her needed supplies. Finland could also count upon English sympathy Finland had put up a brave fight which England admired, but it was clear that Finland need not look forward to any reincarnation after an allied victory on the western front. War aim No. 9 therefore failed of official sanction.

The war had been going 6 months and no blitzkrieg in the west had as yet transpired:

"Few of us can have failed to recall yesterday that other Sunday morning, 6 months ago to a day, and the quiet and incisive words which announced the choice that Britain had made between war and surrender * * *.

"The certainties of 6 months are that there has been no blitzkrieg in the west and that none in the strict sense is now possible; that there will be no shoddy and illusory peace; and that a new phase of the war is at hand * * *." (Issue of March 4, 1940, p. 7; leading editorial After Six Months.)

Another war aim was suggested in Parliament. Mr. Butler, the Under Secretary for Foreign Affairs, speaking in behalf of the Prime Minister, approved of this aim. Having received official sanction it can therefore be classed as war aim No. 9:

"Mr. Mander (Wolverhampton, E., Opp. L.) asked the Prime Minister if he would consider the advisability of making clear that at the close of the war it would be essential that any armistice or peace terms should bear the signatures not only of the German democratic element but also of the representatives of the Army and Nazis, with a view to the assumption of joint responsibility.

"Mr. Butler, Under Secretary, Foreign Affairs (Saffron Walden, U.): It is clearly premature to specify the signatories of any armistice or peace terms at the end of the war. Our first aim must be to win it. (Hear, hear.)

"Mr. Mander: Does not the right honorable gentleman think it important to place the responsibility on the whole German people so that it will not be possible, as it was after the last war, for one section to blame any other section?

"Mr. Butler: Yes, sir." (Issue of March 7, 1940, p. 4, Parliament.)

"Mr. Mander (Wolverhampton, E., Opp. L.) said that the Government had been found guilty of culpable indecision and delay in regard to Finland * * *

"He hoped that one of the armistice terms would be that the German people should see for themselves who had won the war and that Allied troops should have an opportunity to show themselves in Berlin and other cities. He hoped also that the Allies would insist on the signatures being given not only of the Government which might then be in power in Germany but also of the Army, the monarchists, and the Nazis if there were still any members of the party—so that no section of German opinion could lay the blame for the defeat on any other section." (Issue of March 23, 1940, Saturday, p. 11, Parliament.)

This suggestion met with approval, so War Aim No. 9 concerned placing the responsibility on the whole German nation for having started World War II. There could then be no talk about "stabs in the back" which was heard from sections of the German population after World War I.

On March 15 it was announced that Government expenditures during the coming financial year had been placed at £2,750,000,000 or more, "of which we cannot expect the amount covered by taxation to exceed £1,300,000,000. Some of the remainder can be drawn from capital, but the amount to be borrowed in one way or another will have to be about £1,200,000,000, or at the rate of £100,000,000 a month." (Issue of March 15, 1940, Friday, p. 9, leading editorial Paying For the War.)

On the same day the Finnish Diet ratified the peace treaty with Russia by 145 votes to 3.

Criticism of the Government became more pronounced during March:

"Mr. Dalton (Bishop Auckland, Labor) said that the morale of the country was not being sufficiently sustained by the Government actions, and the question was whether our morale might outlast that of the slave populations under Hitler. Germany was being allowed to draw big supplies from outside, and our blockade was leaking like a sieve so far as cotton imports were concerned. We were much too gentlemanly, slow-witted, and traditional. Hitler was not gentlemanly, slow-witted, nor traditional, and he was making circles round us so far as the economic management of the war was concerned." (Issue of March 20, 1940, Wednesday, p. 5, Parliament.)

Fears were even expressed that a third World War might follow this one:

"Sir Cyril Norwood, president of St. John's College, Oxford, and former headmaster of Harrow, who recently expressed the view that public schools should have to be run by the state after the war because there would not be enough people able to afford to send their children there, lectured to the advanced air striking force [in France] on reconstruction when peace is restored.

"He said he assumed that we should win the war. * * *

"The restoration of civilization must depend on the maintenance of an irresistible air force, an undefeatable navy, and a strong army. The way to bring it about was by close cooperation with France, then bringing in the neutrals, and progressively encircling Germany—an encirclement of good will. When Germany could prove her good will she could join in and start on the long road to get back her own place. But unless we went very carefully, inevitably a third war would follow this one." (Issue of March 11, 1940, Monday, p. 7, article entitled "Europe After the War.")

On the 18th of March Hitler and Mussolini met at the Brenner Pass and conferred for 2½ hours, partly in private and partly in the presence of their Foreign Ministers. The same day Prime Minister Chamberlain celebrated his seventy-first birthday.

Two days later M. Daladier and his entire Cabinet resigned--following a resolution in the Chamber of Deputies demanding a more vigorous prosecution of the war. President Lebrun called on M. Reynaud to form a new Cabinet.

It was announced on March 22 that the *Mauretania* and the *Queen Mary* had left New York for unknown destinations—presumably to act as troopships in the vicinity of Australia.

On the 28th the Supreme War Council met for the sixth time. The meeting was held in London. M. Reynaud led the French representatives, and the whole war situation and the Allied policy passed under review. While the Frenchmen were being wined and dined the First Lord of the Admiralty was at home preparing an address which pointed to the handwriting on the wall. On the 30th Winston Churchill delivered this speech over the radio in a program that was relayed to the forces in France, to all parts of the Empire, and to the United States. He said, in part:

"All's quiet upon the western front, and today, so far, nothing has happened on the sea or in the air. But more than a million German soldiers, including nearly all their active divisions and armored divisions, are drawn up ready to strike at a few hours' notice all along the frontiers of Luxemburg, Belgium, and Holland. At any moment these neutral countries may be subjected to an avalanche of steel and fire. * * * That is the situation of Europe tonight." (Issue of April 1, 1940, Monday, p. 10, article entitled "Mr. Churchill's Broadcast.")

Gamelin and Reynaud posed for photographs in front of 10 Downing Street, and these pictures were published in the Times during their stay in London. The general looked very smart in his highly polished boots and neatly pressed military coat. Little did he realize what the future was soon to bring.

April 1940

With the close of the Russo-Finnish War, the English turned their undivided attention to the subject of Germany's importation of iron ore. Such ore was proving a vital necessity to Germany in her prosecution of the war. Most of it, and that portion which was the most valuable for war purposes, came from Sweden. Some of this ore reached Germany after being shipped through Lulea and other Baltic ports, but a much larger part came via the Norwegian port of Narvik, on the North Sea.

The British and French Navies controlled the European sea lanes, but they felt unwilling to interfere with the Lulea route. It was closed in winter by ice, and in summer its capacity was believed to be strictly limited. However, if the Narvik route could be effectively closed, it was thought that Germany would be deprived of a very large proportion of her entire iron-ore supplies. A powerful, perhaps a crippling blow, would have been struck at the Reich.

Certain incidents occured in Norwegian waters at the beginning of December 1939 which caused the British Government to complain that German submarines were using such waters for operations of war. By January 1940 English and French newspapers took up the cry and accused Norway of being a base for German operations. Protests were made to the Norwegian Government, which declared that such complaints were unfounded. Finally, on March

19, 1940, Prime Minister Chamberlain stated in the House of Commons that, since the incidents at the beginning of December 1939 which caused the complaint, the British had since detected no sign that the Germans were abusing Norwegian territorial waters.

Following Chamberlain's statement, however, the British and French newspapers continued to make the same accusation and even called on their respective Governments to take control of Norwegian territorial waters. The war on the western front was at a stalemate. Certain people had long been saying that after all it was only a "phony war." British and French citizens were perturbed that the Allies should drag along for months without doing anything more vital than talk about sending an expeditionary force to Finland, and by the time such force was supposedly ready to set out Finland had been defeated.

The attitude of the man on the street in London and Paris was, "Why don't we do something? The Germans are always one jump ahead of us. All we do is sit back and wait for the Nazis to strike." French public opinion gradually caused the downfall of the Daladier government, and Reynaud took the helm upon the solemn promise that he would prosecute the war more vigorously than his predecessor had done. Further Cabinet changes also took place in England. On April 3, 1941, Sir Samuel Hoare became Secretary for Air; Sir Kingsley Wood, Lord Privy Seal; Lord Woolton, Minister of Food; and Mr. R. S. Hudson, Minister of Shipping. The office of Minister of Coordination lapsed.

A former Prime Minister, Lloyd George, kept urging Parliament to be more positive. One of his barbed thrusts, which related to agriculture, was:

"Mr. Lloyd George (Caernarvon, Opp. L.) said that the House ought to have some sort of idea of what the agricultural policy of the country was going to be. [Hear, hear.] There had been too much, in our war preparations, of doing a thing just a little and then finding that not enough and doing a little more. We had been getting on with what might be called rabbit jumps—[laughter]—a little jump, then a nibble; then another little jump and another nibble. [Laughter.] In the end we might find ourselves one day in a position with regard to food production when it would not be adequate for the need that would suddenly confront us." (Issue of April 4, 1940, Thursday, p. 5, Parliament, commenting on parliamentary proceedings of April 3, 1940.)

Prime Minister Chamberlain did not respond too favorably to the increasing pressure of public opinion. Essentially a man of peace, he who had carried the umbrella at Munich in 1938 hesitated to start a real shooting war in 1940. An example of his attitude follows:

"No doubt it is the British Government's hope, expressed by Mr. Chamberlain when Parliament reassembled 3 days ago, that it (the war) may be won with the least possible destruction of a spiritual and material civilization, which is the common heritage of many nations; and it is at least certain that the possibility of establishing a just peace will diminish in proportion as the ferocity of the fighting increases." (Issue of April 5, 1940, Friday, p. 9, leading editorial entitled "Mr. Chamberlain's Confidence.")

The newly formed British and French Governments, however, overrode such hesitation. It was now spring with the status quo on the western front unchanged. The generals decided that the modest attitudes of the Allies would henceforth cease, but that attention would not first be given to the western front. The Maginot Line was, of course, impregnable, so nothing needed to be done about that. The air attacks over England had never materialized, and much needless energy had been lost evacuating children, etc., though it was possible that air raids might materialize. After some deliberation it was resolved that the first test case would be made concerning the iron-ore problem. The die was therefore cast. Thereafter events moved so rapidly it is imperative that close attention be given to dates.

During the latter part of March 1940, 10 Downing Street made quiet preparation to choke off further German imports of iron ore. Full support to this plan came from Paris, of course.

On April 3, 1940, which was a Wednesday, the Times carried a picture on page 12 entitled:

"NARVIK.—A view of the Norwegian port of Narvik, through which the Germans are obtaining the greater part of their supplies of Swedish iron ore. The question of stopping this trade is receiving the special attention of the Allies."

Two days later (Friday, April 5, 1940) the British and French Ministers handed to the Norwegian Foreign Minister (Professor Koht) an important note, which was simultaneously transmitted to Sweden. This note declared that the developments during the last 3 months had clearly shown that "without regard to the wishes of the Norwegian or Swedish peoples, the German Government was not willing to allow the Norwegian and Swedish Governments to have that freedom in matters of foreign policy to which they were entitled. The difficult position of the two Governments owing to the threats and pressure from Germany was appreciated, but under the present circumstances the Swedish and Norwegian Government could not be regarded as free organs in every respect."

The Allied note went on to say:

"'Apart from this fact, the Allied Governments can no longer tolerate the present situation, which means that Germany receives from Norway and Sweden important war materials and that Germany benefits from advantages in those countries to the disadvantage and danger of the Allied Powers. They consequently feel that the time has now come to state clearly to the Norwegian Government that the Allied Governments will maintain certain vital claims and defend these claims in every way that they deem necessary themselves.'

"The note also added that they (the Allies) were bound to take appropriate steps to defend their interests, if the Norwegian Government refused to grant or cut down those advantages to trade and shipping which the Allied Governments deem necessary for their warfare, and which they feel that a neutral government may reasonably approve. The Allies were fighting as much on behalf of the small nations as for their own cause, and they could not tolerate their progress being hampered owing to the advantages which Germany was now getting from Norway and Sweden. Consequently they reserved the right to take any steps which they deemed necessary to prevent Germany from receiving from those countries materials or advantages which would benefit Germany in war or be harmful to the Allies. * * *" (For verbatim quotations from the first Allied note to Norway see issue of April 9, 1940, Tuesday, p. 7, Imperial and Foreign.)

Berlin immediately announced with a growl that reprisals would be made if the Allied threats were carried into effect. The Times, however, reported that the man on the street both in Paris and London felt that the Allies had done right and that at last the Allies were showing some initiative.

Berlin could hardly have failed to notice the following words regarding the Allied note:

"The Allied Governments will maintain certain vital claims and defend these claims in every way that they deem necessary themselves. * * * Consequently they reserved the right to take any steps which they deemed necessary to prevent Germany from receiving from those countries materials or advantages which would benefit Germany in war or be harmful to the Allies."

The Reich had destroyed Poland in 3 weeks and had spent the winter of 1939-40 consolidating its conquests to date. The question in the mind of 10 Downing Street, was: What will Berlin do if we cut off this iron ore? What difference did it make, however, since the Allies controlled the seas?

The Norwegian Parliament met on Saturday, April 6, 1940. The Parliament, or Storting, was in an angry mood. Was Norwegian neutrality going to be violated? If so, by whom?

"In the Storting on Saturday the Foreign Minister, Professor Koht, made a statement on Norwegian foreign policy. Professor Koht began by emphasizing the fact that Norway adhered to a policy of strict neutrality. To treat one side differently from the other was out of the question, because that was not true neutrality and might give one side or the other cause for complaint, perhaps forcing Norway into war.

"'A neutral country has to observe the same rules of conduct toward all the belligerents,' he continued. 'This maxim the Norwegian Government have tried most carefully to observe, and I dare to assert that nobody can justly complain that we have broken it. Regarding trade, too, we have pursued the same policy. When the war began, Norway immediately informed Germany that she would maintain the normal amount of commerce, and the same information was given to France and Great Britain. On this basis trade agreements were signed with Germany on February 23, and with England on March 11, and an agreement with France will be signed in the near future. I was pleased to see, some days ago, that Mr. Chamberlain had declared in the House of Commons that the agreement between Norway and Britain complied with British claims of what Norwegian neutrality should be in matters of trade. * * *

"'Three months ago the British Government thought they had reason to accuse us of allowing German submarines to use Norwegian waters for operations of war. We asserted that the complaint was unfounded, and I noted with great pleasure that Mr. Chamberlain on March 19 stated in the House of Commons that, since the incidents at the beginning of December which caused the complaint, the British had detected no sign that the Germans were abusing Norwegian territorial waters. I appreciate highly that Mr. Chamberlain should so honestly have admitted this. Unfortunately, French and English newspapers continued long afterward to make the old accusation against Norway, and even called on their Governments to take control of Norwegian territorial waters. I hope that our British and French friends will understand how offensive was this discussion of plans for enterprises within our borders. They must understand that we wish to maintain our independence without encroachments from any side, because we love our liberty as greatly as they love theirs.

"'I suppose, however, that this inclination to violate our territory arises not so much from the imaginary war activities of Germany as from the desire to secure the peaceful and legal passage of cargo ships, which they believe is a one-sided advantage enjoyed by Germany.'

"Professor Koht then referred to the transport to Germany of Swedish ore via Narvik. 'The export of ore via Narvik to Germany had,' he said, 'been reduced to one-fourth of its previous quantity during the war, and at present more ore was being shipped from Narvik to England than to Germany.

"'Moreover,' he continued, 'the free passage of merchant ships through our territory is more to the advantage of England than of

Germany, as our trade with England is much larger than with Germany. If the Allies should ask us to stop the free passage of merchant ships, it would be a great disadvantage to themselves, and if they demanded that we should only forbid passage to the ships of one belligerent party, it would be an open infringement of neutrality, which would immediately bring us into the war.'

"The Foreign Minister warned all the belligerents that in the future the Norwegians would try to shoot down any foreign airplanes violating their borders. He went on to refer to the encroachments committed by foreign warships in Norwegian waters.

"With regard to the *Altmark*, he said that England and Norway were now agreed about all the facts, and the dispute was only concerned with the interpretation of a principle of international law. He hoped to reach agreement also on this point, so that Norway could obtain reparation for this undoubted violation of her neutrality. There had been no other British encroachments so serious as the *Altmark* affair, and after the speeches of Mr. Chamberlain and Mr. Churchill he was convinced that England had no intention of breaking international law or violating Norwegian independence." (Issue of April 8, 1940, Monday, p. 7, article entitled "Neutrality of Norway—An Impartial Policy.")

Having been assured by their Foreign Minister that England did not really intend to violate Norwegian neutrality or independence, the Storting adjourned for the week. It was Saturday evening, April 6, 1940, and the Storting agreed to meet on the following Monday.

Things did not look so well on Sunday, April 7, 1940, though Norway observed the day as usual, and nothing really amiss was noted. How Norway spent that last Sunday of her independence is not described, nor did she know that on that day 10 Downing Street was preparing a second note.

At 5 a. m. on Monday, April 8, 1940, the British and French Ministers telephoned to Professor Koht and told him that the Allies had prepared another note.

At 5:45 a. m. on the same day the allied Ministers reached Koht's residence and handed him the note in person. The contents of the second note were alarming in the extreme, and the fateful week of weeks for Norway had begun.

A few hours later the Storting met again. Professor Koht began his address by reviewing the first allied note, which had been handed to him on the 5th. In regard to this note he commented:

"Professor Koht said that he told the Ministers that there was no reason to accuse the Norwegian Government of not being free and independent, and that it was unfair to address the Norwegian Government in that way.

"'I placed the note before the Government on Saturday,' he continued, 'and spoke by telephone with the Swedish Foreign Minister. We agreed to prepare replies following the same line, but before our replies could be sent, developments occurred which created a completely new situation. At 5 o'clock this morning the British and French Ministers telephoned to the Ministry of Foreign Affairs and said they had another note. Forty-five minutes later they came to the Ministry and delivered the note, which said that their Governments would at once publish a statement to the effect that they were laying mines in certain areas off the Norwegian coast.

"'I am not going to say much about the ideas and thoughts underlying that note. These violations are carried out solely because they have the power to do so. The Western Powers are carrying the war into Norwegian territory because they think they can more easily win the war by doing so.

"'The Norwegian Government at once published a statement today, and the replies sent to Great Britain and France have the same contents as that statement. I have not a single word to add to that statement.'" (Issue of April 9, 1940, Tuesday, p. 7, "Imperial and Foreign." Article entitled "Allies First Note to Norway—Statement by Foreign Minister.")

A hue and cry immediately arose from the Scandinavian peninsula when the Allied mining operations became known. Was the battle of the giants to be moved northward into a new field of warfare? We can consider the Swedish viewpoint as an example of the editorial comment of the day:

"STOCKHOLM, April 8.—Completely endorsing the Norwegian view, the Stockholm evening newspapers today are strong in condemnation of the Allied breach of Norway's neutrality. N. Y. A. Dagligt Allehanda writes:

"'One cannot be blind to the profoundly serious implication of this neutrality violation carried out with cold deliberation. It means in plain language that Norway now stands nearer than ever to the great war. Already during the discussion which has been going on for about a week concerning the expected Allied measures the German press has let it be understood that Germany is ready for reprisals. In both belligerent camps it is being said that the northern countries are incapable of defending their neutrality. These contentions are nothing but camouflage for measures in contravention of international law.'"

"A war measure

"Aftonbladet says:

"'The Allied measure is aimed directly against northern neutrality and thus violates the principles which have been represented as the very inspiration of the war policy of the Western Powers. The whole plan in reality is a war measure carried out on Norwegian territory and in conflict with Norwegian sovereignty. In Sweden there is particular reason to observe the events in the light of the restiveness of the Western Powers in connection with the war in Finland. That the war is carried all the way to the shores of Norway means a resumption of the intention which could not be realized in time in connection with a Finland expedition. The help for Finland emerges even clearer as a pretext, while the principal aim, the spread of the war into the Scandinavian region, was the real motive.'" (Issue of April 9, 1940, Tuesday, p. 7, article entitled "Criticism in Sweden—Norwegian View Endorsed—Neutrality Violated.")

In reviewing the events of April 8, Monday, the Times announced:

"The Allied Governments have laid minefields at three points along the Norwegian coast. They justify their action in a statement which has been broadcast to the world.

"The Norwegian Government has issued a solemn protest against the allied action, which also meets with bitter comment in the Norwegian and Swedish press.

"In Berlin news of the Allied action has been received with a show of virtuous indignation and 'icy indifference' to the consequences." (Issue of April 9, 1940, Tuesday, p. 9). (From Today's News-Imperial and Foreign.)

Hardly was the ink dry on newspaper editions of April 9, when the story of the German invasion was received in London. At first the news was so incredible as to be unworthy of belief. When the announcement was confirmed, however, England was in a rage. The British attitude seemed to be: "Stop! You can't do this thing! We were supposed to be taking the initiative in this war! You are upsetting our plans!" Subsequently the question was gravely raised in Parliament as to how the German invasion could have taken place when the Allies controlled the seas. Chamberlain did not known and said he would have to wait for more news. He did, however, confirm the following:

The German invasion of Denmark began on the morning of Monday, April 9, 1940. It was made effective by the afternoon of the same day. The King of Denmark and the Danish Government, under protest, decided that they must submit to the force of circumstances and accept German protection.

The German attack on Norway also began on the 9th. Landings were made at various points along the Norwegian coast, and ships entered the Oslo Fjord. Oslo, the capital, was captured. The Norwegian Government retired to the interior—to Hamar in Central Norway.

The Allied Supreme War Council met in London while the Scandinavian events were taking place. It was agreed to give Norway full naval and military aid. At noon on the 9th the British Foreign Office broadcast that the Allied Governments would extend full naval and military aid to the Norwegian Government. In the evening Lord Halifax broadcast a message to the Norwegian people. He said that Britain and Norway would fight side by side until victory was won.

The next day the Times announced war aim No. 10—restoration of Norwegian independence:

"Norway is courageously resisting the invader. German bombers have been over her capital and the Government has moved to an inland town. The full, unstinted, and unceasing help of Great Britain and France has immediately been promised, and will be afforded in increasing measure until her independence is absolutely and finally restored. * * *

"The consequences of making the iron-ore mines a direct prize of war will probably be far-reaching. But the immediate and energetic taking up of the new Nazi challenge by the Allies may prove that Hitler has made his worst and his final miscalculation." (Issue of April 10, 1940, Wednesday, p. 9, leading editorial entitled "Aggression Without Limit.")

The same editorial mirrored the controversy then beginning as to whether Germany invaded Norway before England started to mine the Norwegian coast. The editorial denied that England had ever intended to send troops into Norway or Denmark. It also alleged that the rapidity of the German invasion could only mean that Hitler had long been preparing for it and had dispatched his troops before the mining of the coast had been commenced by the English. The truth of this allegation will have to wait until both German and English archives are opened to historians in some post-war era. Suffice to say that:

(1) On April 11, Thursday, Churchill, First Lord of the Admiralty, reviewed the Norwegian matter at length in the House of Commons. He said: "The mine fields * * * were laid and declared on Monday last at dawn, and British patrolling craft were actually stationed around them in order to warn all ships off these dangerous areas." (Issue of April 12, 1940, Friday, p. 4, Parliament.)

(2) Subsequent events of the war proved the Nazis could move with lightning rapidity once they set out for an objective. This new and rapid type of warfare was incomprehensible to the English. As for the French, their greatest exertions so far had been to man the Maginot Line. After that had been accomplished there was nothing to do but sit and wait. At least so thought the French General Staff.

(3) It is true beyond dispute that many English and German vessels appeared simultaneously in Norwegian waters—each steaming at full speed in order to gain an advantage over the enemy. The situation at Narvik is an example. Five British and six German destroyers converged on the port. A furious battle ensued, which also involved German merchant ships accompanying the destroyers. One German destroyer was torpedoed; three were heavily hit and burst into

flames; and six merchant ships were sunk as well as a large vessel carrying ammunition. Of the British destroyers H. M. *Hunter* was sunk; H. M. *Hardy* was severely injured, run ashore and wrecked; H. M. *Hotspur* was seriously damaged; H. M. *Hostile* was slightly damaged; and H. M. *Havoc* was unharmed. The Germans were so rapid in landing and erecting shore batteries that even Churchill admitted in the House on the 11th: "The Germans are very quick in landing and making themselves fortified—they are very nimble about these things."

War aim No. 10: Restoration of Norwegian independence was restated by the Times on the 11th:

"Henceforth her cause (Norway's) is ours until victory is complete. The determination of the Allies to fight on until Norwegian soil is cleared of the invaders will not be affected even though her rulers may be compelled in appearance to acquiesce in the usurpation." (Issue of April 11, 1940, Thursday, p. 9, leading editorial entitled "The Eternal Struggle.")

On the same day War Aim No. 11 was announced (restoration of Danish independence):

"Mr. Eden, secretary for the dominions, speaking at the Midlanders' dinner at the Connaught rooms last night, dwelt on Nazi tyranny, and declared that no nation was secure unless it was prepared to join in overthrowing Hitler. * * *

"Mr. Eden said * * * 'the cause of Norway and Denmark was our cause. There could be no peace for Britain and no relaxation of our efforts until their liberties were reestablished and their national existence restored.'" (Issue of April 11, 1940, Thursday, p. 10, article entitled "Ruthless Crime on Small Nations—The Price of Freedom.")

Churchill also restated both aims.

"Another violent outrage has been perpetrated by Nazi Germany against a small and friendly power, and the Norwegian Government and people are today in arms to defend their hearts and homes. [Cheers.] We shall aid them to the best of our ability. [Cheers.] We shall conduct the war in common with them, and we shall make peace only when their rights and their freedom are restored. [Cheers.] * * *

"We are also at this moment occupying the Faroe Islands, which belong to Denmark and which are a strategic point of high importance, and whose people showed every disposition to receive us with warm regard. [Hear, hear.] We shall shield the Faroe Islands from all the severities of war and establish ourselves there conveniently by sea and air until the moment comes when they will be handed back to the Crown and people of a Denmark liberated from the foul thraldom in which they have been plunged by the German aggression. [Cheers.]" (Issue of April 12, 1940, Friday, p. 4, Parliament, text of Churchill's message to the House of Commons regarding Norway and Denmark.)

After Churchill finished speaking before the House on the 12th, further assurances to Denmark were given by Mr. Alexander (Sheffield, Hillsborough, Laborite), who said, in part:

"They [the Prime Minister of Denmark and his colleagues] might feel convinced that when we had finished this fight we were going to see to it that they got their independence and their rights restored." (Issue of April 12, 1940, Friday, p. 4, Parliament.)

The Allied resolution to stop the German importation of iron ore via Norway had brought things to a disastrous pass. The English were not slow to realize that Denmark would henceforth be unable to export products to Britain and Norwegian trade would also be cut off if that country were lost to the Allies.

"Britain imported half her bacon from Denmark, over a third of her eggs, a quarter of her butter. * * * More important * * * are the stocks of petrol now to be seized by Germany. In Denmark alone the stocks had grown to not far short of a quarter of a million tons, a pleasant windfall for the Germans. * * *

"Through Norway, Great Britain gets 40 percent of her iron ore, all of a special grade for which our steel industry is built and equipped. To receive supplies from elsewhere would cause a certain amount of dislocation and reorganization. From Norway also come the highly important ferro-alloys, indispensable for producing hard steel. About 50 percent of British imports of ferromanganese comes from Norway, and over 80 percent of molybdenum and similar products that go into aircraft manufacture. Then there is a great volume of British imports of timber, wood pulp, and newsprint; Great Britain has taken by far the greatest part of her supplies from the Scandinavian countries. Finally, there are the valuable acetylene products used in shipbuilding, artificial rubber, artificial petrol, and many other industries. In the last war one of the great tasks of the British Navy was to insure the transport of these products from Norway and to keep them from Germany." (Issue of April 11, 1940, Thursday, p. 4, article entitled "German Need of Supplies—Danish Petrol Stores.")

All winter long the Times had not been giving much attention to the United States. Even letters to the Times concerning America had all but ceased. There has been a flurry of such letters in the fall of 1939. It was at that time suggested that issues of and cuttings from the Times should be sent to as many of the States as possible in order to help mold public opinion in America. Then followed the stagnant period of the war during the winter of 1939–40, and the subject of the United States faded into the background.

A strange thing happened, however, as soon as Britain realized the seriousness of the Norwegian struggle. The engine of propaganda was suddenly turned toward America, and much attention was paid to war aim No. 3—Let's get America interested in this war as soon as possible.

It was still the month of April 1940. The Committee to Defend America by Aiding the Allies was not formed in this country until May 1940. On April 15 the Times did an almost unheard of thing by publishing on its editorial page a message from an unknown American citizen.

"A Cable from New York

"To the Times, Printing House Square, London:

"Well done Royal Navy. Thanks from a darned pro-British Yankee."

"HAROLD A. TITCOMB,
of Farmington, Maine."

"NEW YORK, *April 12.*"

Long articles about the United States began to appear in the Times. Isolationism was first considered in an entire column on the editorial page, which column continued onto the succeeding page. It was said, in part:

"The American people as a whole do not want to become involved in the war; once bitten, twice shy, is the prevailing temper. * * * Some highly placed personages and influential thinkers are doubtless aware that the character of the war may change in such a way as to make American participation desirable in her own self-interest. * * * There is ample room for the enlightenment of America. * * *

"What could be done to enlighten American opinion? The main step has in a sense been taken, in that the leaders of American thought are realizing their country's lack of knowledge, or at any rate of clarified thinking, on the war and after-war problems, and the danger of such a situation for its future. Bodies like the Federal Council of Churches, League of Nations Association, Federal Union, Carnegie Peace Foundation, and Foreign Policy Association are already campaigning to bring out the issues and to demonstrate the need for coming to definite conclusions on them. * * *

"Visiting Englishmen can play their part, whether as exchange professors or public lecturers, but their influence will be greater if they are not self-invited guests." (Issue of April 15, 1940, Monday, p. 7, editorial page, column headed "America Looks at the War.")

"Those in Europe who may be impatient of the American attitude would do well to remember our policies of nonintervention and appeasement, which provoked similar impatience in America. But with the growing assurance that their country is not likely to be involved in the war Americans are beginning to pay more attention to their possible role in the peace. In this field there is psychological resistance to be overcome in Europe. Many Englishmen evince great hostility to any idea of such participation. 'If they don't choose to do their bit now, why should they come in and tell us all what to do afterward?' They do not realize that American public opinion could not by any possibility have been mobilized to support American entry into the war. * * *

"Most important of all, perhaps, Americans must realize that the economic world in which their brains, energy, and resources will be called on to play a vital part after the war will be very different from the world before the war. When the fighting is over, all national economies in Europe will be, in essentials, controlled economies; and there is little likelihood that the controls will disappear later, as (largely at American bidding) they did after 1918. * * *

"To put it bluntly, the existing economic machinery of the United States may well look rather old-fashioned by the end of the war. And one of the urgencies of the situation is that American public opinion should realize this, and that American economists should set themselves to consider whether their system needs overhauling if they feel that it should be geared in with that of Europe when destruction again gives place to constructive effort." (Issue of April 16, 1940, Tuesday, p. 7, editorial page, column headed "America looks at the war.")

Important events were occurring in Norway at this time. On the 15th the following took place:

British troops were landed at several points in Norway; British marines landed at Narvik, after the Germans had been shelled and the marines drove the remainder out of town; King Haakon broadcast an appeal to all Norwegian people to do their utmost to save the freedom and independence of the country.

On the 16th it was announced that men of the age of 27 would be required to register for military service on May 25.

While England was in trouble in Norway the Italian press taunted the English about the "colossal fiasco" that was taking place in Norway. The Italians also hinted that Italy had certain rights in the Balkans. The Times immediately took up the challenge.

"The destroyers *Hardy, Hunter, Glowworm,* and *Gurkha* have been sunk, the *Thistle* (submarine) destroyed, one cruiser damaged, and the *Rodney* hit by a bomb, but only very slightly damaged. The 'colossal fiasco' does not seem to have been on the British side. Other losses must no doubt be sustained; but in the meantime Great Britain has 150 more destroyers and flotilla leaders to go on with, and over 50 cruisers, as well as her capital ships and her submarines—all of them ready to proceed, in conjunction with the powerful French Fleet, anywhere the interests of the Allies are endangered or where a threat to the independence

of a small country calls them. They have the power and the determination to intervene forthwith against such a threat. Their instant reply to the attack upon Norway has made it impossible to suppose that they would remain inactive in face of an assault upon the integrity or independence of any of the Balkan nations." (Issue of April 20, 1940, p. 7, Saturday, editorial Italians Misinformed.)

The same day (20th) it was also announced that total expenditures to be met in the 1940–41 Budget would be £2,500,000,000. The Budget was to be presented by Sir John Simon.

The eighth meeting of the Supreme War Council was held in Paris April 22–23. Churchill attended. For the first time the Polish and Norwegian representatives were present. They were heartily welcomed into the Allied ranks.

On the 23d sharp fighting began in Norway north of Trondheim, where the Germans counterattacked. A combined Allied and Norwegian assault on Narvik began. The allied forces occupied Stenkjer, north of Trondheim, but were soon forced to withdraw to a less exposed line—as a result of continuous bombings by German aircraft. A day or so thereafter German pressure in central Norway compelled the Allies to withdraw north of Lillehammer. In a lightning advance the Germans captured Röros 300 miles north of Oslo.

The only cheerful Allied news was that 26 German supply ships were reported sunk on the voyage to Norway. In Oslo Fjord alone 3,000 bodies had been washed ashore between April 9 and 22. Paris also reported that the new French battleship *Richelieu* (35,000 tons) was nearly ready for active service. The English were very gratified to hear this as they had not anticipated the ship being finished so soon.

On the 27th it was announced that, "In face of strong German forces, supported by artillery, armored cars, and low-flying airplanes, Allied forces south of Dombaas have been forced to make limited withdrawals." (Issue of April 27, 1940, Saturday, p. 7, To-Day's News.)

The same day (27th) the ninth meeting of the Supreme War Council was held in London. It "reached unanimity on a number of questions arising out of the present phase of the war" and "considered various situations that might arise in the near future."

The month ended with further Allied losses in Norway. Each day marked a gradual retreat, though the Times cautioned the public not to become excited. The Allies still controlled the sea lanes, so the Germans would ultimately be defeated in their Norwegian project. Much comment was made on the man Quisling, and "fifth column" activities among the Norwegians themselves were blamed for the continuous Allied retreats.

May 1940

Despite allied retreats in Norway, war aim No. 10 was restated on May 1:

"The process of expelling the aggressor is bound to be longer than was contemplated in the optimism engendered by our first naval successes. But, however long the struggle may be, there is, of course, no thought anywhere of relaxing the effort required for the ultimate deliverance of Norway. * * * 'The war,' the Norwegian Government declared on Monday, 'will go on until the invaders are thrown out of the country.' King Haakon and his gallant subjects may rest assured that the utmost strength of his Allies will be exerted, with steadily accumulating power, until that resolution is made good." (Issue of May 1, 1940, Wednesday, p. 7, leading editorial Setback at Trondheim.)

The same issue, however, carried reports of a storm that was brewing in Parliament. On April 27 Stephen King-Hall, a member of the House of Commons, had expressed himself in this fashion:

"While our counterattack was in committee, the Germans were flying troops to their military objectives at 200 miles an hour. There was a moment when our enemy, having gained by treachery and speed a great tactical success, was in grave strategical peril. The moment passed, and with it the opportunity of dealing a shattering blow to Hitler's prestige. Let us profit from this experience * * *. We have a budget which is based on the estimate that during the next 12 months our average expenditure a day for war purposes is going to be only 25 percent higher than our average expenditure a day during the first 7 months of this war. At this rate of progress we shall not have attained our maximum economic war effort until somewhere around 1943–44." (Issue of May 1, 1940, Wednesday, p. 7 (Conduct of the War.)

On the 2d it was announced that British troops, after stubborn resistance, had withdrawn "to prepared positions in the Dombaas area. Allied positions have been improved near Narvik." (Issue of May 2, 1940, Thursday, p. 7, Today's News.)

The next day Aandalsnes and Namsos were evacuated by the Allies. Conditions became steadily worse, until Chamberlain was compelled to announce to the Commons on the 7th that there has been a complete Allied withdrawal from southern Norway.

"The [Norwegian] episode, although the Germans have paid heavily in men and ships for their great gain of territory, remains a conspicuous reverse for the Allies; the impression left of a tame ineffectiveness in the direction of the war is painfully obvious in neutral countries, and has here some substantial evidence to support it, as Sir Roger Keyes showed in a devastating speech." (Issue of May 8, 1940, Wednesday, p. 7, leading editorial, Mr. Chamberlain's Case.)

A deluge of criticism broke over Chamberlain's head, and on May 8 the Prime Minister bravely faced a great ordeal in Parliament. He was severely criticized in both the Lords and Commons, and in the Commons events reached such a pass that the opposition challenged a division on the adjournment motion. Mr. Chamberlain then said he would make the issue one of confidence. The division gave the Government a majority of 81, and the Prime Minister was technically saved from being turned out of office. But such men as Lloyd George rose during the Commons' debate and demanded Chamberlain's resignation. In a stirring address Lloyd George said, in part:

"Scandinavia and Norway, one of the great strategic possibilities of the war, were in German hands. It was no use criticizing Sweden, which was now between Germany on the left and Germany on the right. What right had we to criticize little powers? (Hear, hear.) We had promised to rescue and protect them. We never sent an airplane to Poland; we were too late in Norway. * * * German airplanes and submarines were brought 200 miles nearer our coast. Could anyone doubt that our prestige had been impaired? It was only necessary to read friendly American papers to find that out. We had promised Czechoslovakia, we had promised Poland, we had promised Finland. Our promissory notes were now rubbish in the markets. * * * Tell me one neutral country that would be prepared to stand up to the Nazis upon a mere promise from ourselves. (Hear, hear.) What is the use of not facing the facts? * * * The world knew the state of our preparations. We were promised rearmament in 1935, and in 1936 actual proposals were laid before the House. Everyone knew that whatever was done was done half-heartedly, ineffectively, without drive, and unintelligently. Then came the war. The tempo was hardly speeded up. There was the same leisureliness and inefficiency. Could anyone say he was satisfied with what we had done about airplanes, tanks, guns, and especially antiaircraft guns, and about the steps we took to train an army to use them? All the world knew that we were in the worst strategic position this country had ever been placed in. * * * I say now, solemnly, that the Prime Minister can give an example of sacrifice, because there is nothing that would contribute more to victory in this war than that he should sacrifice the seals of office." (Issue of May 9, 1940, Thursday, p. 3, Parliament.)

The next day, May 10, 1940, proved to be one of the most important days in the entire history of the British Empire. On that day Germany invaded Holland, Belgium, and Luxemburg by land and air. Chamberlain immediately resigned, and the King invited Churchill to be Prime Minister. Other Ministers in the Cabinet were requested to remain at their posts pending the formation of a new government.

The Dutch resisted fiercely, but German parachute troops landed near Rotterdam on the very first day of the attack. In Brussels the sound of antiaircraft guns firing at German bombers over the city was the first intimation to Belgium that she had been once again invaded by Germany. Luxemburg collapsed immediately, and its grand duchess fled to France.

British troops immediately crossed the Belgian frontier in response to an urgent appeal from King Leopold. The British were warmly welcomed by the Belgian people.

Switzerland ordered general mobilization. Simultaneously Britain landed a garrison in Iceland.

In the closing hours of this fateful day the English announced three more war aims:

War aim No. 12 (preservation of the independence of Holland. This was later changed to a pledge to restore the independence of Holland).

War aim No. 13 (preservation of the independence of Belgium. This also was later changed to a pledge to restore the independence of Belgium).

War aim No. 14 (restoration of the independence of Luxemburg—that country having fallen immediately to the invaders).

In a radio address King George VI earnestly talked to the people of all three countries and pledged the aid of the Allies in carrying out the new war aims.

Events thereafter moved so rapidly that the attitude of the English people seemed to be, "My God! What's happening? This isn't like any other war we've ever been in."

Within a day or two after the invasion the Belgian Armies on the Meuse and on the Albert Canal, after resisting with all their resources, fell back to their second line of resistance. It was announced that the British and French troops were hurrying to their assistance.

At the Ijssel River the Dutch forces managed to delay the Germans for 48 hours before retreating to the flood zone—also their second line of defense. When this happened the royal family fled to England. Princess Juliana, Prince Bernhard, and their two young children reached London on the morning of May 13. In the evening of the same day Queen Wilhelmina also arrived in London.

The Dutch populace was deeply stunned to learn that the representatives of the House of Orange had left the Netherlands in such haste, especially after the Queen had proclaimed to her people that they must hold fast. But later the public became reconciled to the matter, since it was evident that Holland would be entirely overrun. The royal family would have been captured had they not left immediately.

On the 13th certain changes were made in the British Cabinet. Mr. Amery was appointed Secretary of State for India and Burma, Mr. Bevin became Minister of Labor, and Mr. MacDonald the new Minister of Health. Lord Woolton retained the office of Minister of Food.

By the 14th the battle for Belgium was raging along a hundred-mile front. German columns had broken through the Belgian defenses at Maastricht and were attempting to spread out fanwise in the rear of the Belgians.

The Germans were practically in control of Holland by the 15th, on which day the Nazis formally entered The Hague and Amsterdam. Dive-bombing tactics had practically destroyed Rotterdam. Simultaneously Mr. van Kleffens, the Dutch Foreign Minister, admitted that the Dutch Army had lost one-quarter of its total of 400,000 men. He hastened to add, however, that neither the Government nor the country had capitulated.

Men of 28 years of age were ordered to register for military service in England on May 25.

By the 17th the British Expeditionary Force had withdrawn to new positions west of Brussels. On the 19th the German offensive from the Meuse turned westward. To meet this threat the Allies appointed General Weygand Chief of the French General Staff and Commander in Chief of all the theaters of operations. Weygand, a disciple of Foch in World War I, had been serving as commander of the French forces in the Near East.

The situation was desperate by the 21st, on which day the Germans captured Arras and Amiens and claimed to be in Abbeville. The French Ninth Army had been defeated, and its commander, General Giraud, was a prisoner of the Germans.

For the next few days the British public lacked definite information from the western front. It was known that a great and decisive battle was in progress and that the Allied position was "serious," later becoming "grave." On the 26th Gen. Sir John Dill was appointed to succeed Gen. Sir Edmund Ironside as Chief of the Imperial General Staff. Ironside was designated as Commander in Chief of the British Home Forces.

At this point the Belgian Army was defending the left flank of the Allied forces and the northern approaches to the city of Dunkirk. On Sunday, May 26, King Leopold talked with Allied military representatives, and at that time nothing unusual in his attitude was noted. True the British Ambassador to Belgium had long since noted that Leopold, even in pre-war days, was in a most unfortunate position. Bereft of friends of either sex, crushed since the death of his wife in an automobile accident, temperamental and stubborn, Leopold had not even been seen to laugh since the year 1935. Though possessed of a winning smile and a charming voice, the King had long been in such a state that none of his ministers or acquaintances dared cross him in any vital matter. For some years Leopold had feared a French attack on his country as much as a German attack and had decided to remain aloof from both the French and the Germans. However, his closest advisor was very anti-French, and Leopold was inclined to follow his advisor's viewpoint in this regard. The British Ambassador had mournfully shaken his head and informed 10 Downing Street, "It is too bad the King does not get married again." (After the surrender of Belgium the British Ambassador wrote a long article for the Times describing these matters in detail.)

On the night of the 27th the King decided to withdraw from the conflict without even informing the Allied generals, whose aid he had so recently sought in protecting the sovereignty of Belgium. At 4 a. m. on the 28th the Belgian Army capitulated at the order of Leopold. The King's decision had been taken against the unanimous advice of his ministers, and they soon disassociated themselves from it and from him.

The indescribable confusion that took place within the next few hours need not be noted here. The British and French Armies appeared to be trapped. Officers and men discarded everything they could not carry on their backs, and a stampede toward Dunkerque began. Harassed by German dive bombers, they soon found themselves in a position that the Times called "extremely grave."

On the afternoon of the 28th Churchill addressed the House of Commons and said, in part:

"The House should prepare itself for hard and heavy tidings. I have only to add that nothing which may happen in this battle can in any way relieve us of our duty to defend the world cause to which we have vowed ourselves [cheers]; nor should it destroy our confidence in our power to make our way, as on former occasions in our history, through disaster and through grief to the ultimate defeat of our enemies." [Loud cheers.] (Issue of May 29, 1940, Wednesday, p. 6, article King Leopold Orders Surrender.)

The 29th was marked by difficult British and French maneuvering toward the coast, at the cost of very heavy fighting. The Allies were rushing to Dunquerque strong naval forces, which were powerfully supported in the air. Simultaneously Ostend, Lille, Ypres, and other towns in Belgium and northern France fell to the Germans.

Despite all this confusion the Times restated war aim No. 12:

"The Dutch home fleet will join the Allies very soon, and a Netherland Legion is being formed. Great Britain and Holland and the other Allies will fight side by side to overthrow the pretensions of the usurper, and reestablish the rights of the Royal House which has shared the fortunes of its country through dark days and bright for so many centuries." (Issue of May 30, 1940, Thursday, p. 7, editorial Seyss-Inquart for Holland.)

The Royal Navy began evacuating troops from Dunquerque on the 30th, and possibly a few on the 29th. The British and French forces in the North continued their retreat to the coast. On the last day of the month the death was announced of Lord Frederick Cambridge, Coldstream Guards. Born September 23, 1907, and a first cousin of King George VI, he had been killed in action while serving in France with the B. E. F. Noblemen and commoners alike were being slaughtered in the wild confusion caused by the unexpected loss of Belgium.

June 1940

With the opening of this tragic month the evacuation of British and French troops from Dunkirk was proceeding steadily. "The number so far exceeds all expectations. The men were weary but in good spirits." (Issue of June 1, 1940, Saturday, p. 7, To-Day's News.)

On the 1st it was also announced that the allied troops were pushing ahead in Norway. Narvik had been occupied by them, also Fargernes and Forneset, on the Beis Fjord and Rombaks Fjord, respectively. A British warship, H. M. S. *Curlew*, had been sunk in these operations.

Churchill was in Paris on the 1st for another meeting of the supreme war council. This council was the first to meet with new prime ministers and new military commanders on each side.

The allied retreat in Flanders was turning into a rout. As a result some of England's greatest names began to appear in the casualty lists. The ninth Duke of Northumberland was killed in active service, and his death announced on the 3rd. Born July 15, 1912, he had been head of the great family of Percy. Lord Erne died of wounds, and his death became known on the 4th. Born November 22, 1907, he had been a large landowner in Ireland.

Churchill appeared before Parliament on Tuesday, the 4th of June, and reviewed the situation at length. Announcing that 335,000 men had been brought from Dunkerque before the city was abandoned. He said in part:

"The French Army has been weakened, the Belgian Army has been lost, a large part of those fortified lines upon which so much faith has been reposed is gone, many valuable mining districts and factories have passed into the enemy's possession, the whole of the channel ports are in his hands with all the tragic consequences that follow from that, and we must expect another blow to be struck almost immediately at us or at France. * * * If, which I do not for a moment believe, this island or a large part of it, were subjugated and starving, then our empire beyond the seas, armed and guarded by the British Fleet, would carry on the struggle until in God's good time the new world, with all its power and might, steps forth to the rescue and liberation of the old." (Issue of June 5, 1940, Wednesday, p. 3, Parliament.)

Churchill did not mention the United States by name, but for the first time an English Prime Minister was openly hinting that American materials and manpower might ultimately be needed to defeat Hitler.

The blow that Churchill feared was struck on the 5th of June. On that day the Germans launched a new offensive along the Somme and the Aisne, with massed infantry, tanks, and aircraft.

"The wasted years are come to reproach us for past levities and to warn us against repeating past mistakes." (Issue of Thursday, June 6, 1940, p. 7, leading editorial entitled "The End of a Phase.")

Reynaud dropped Daladier from the French Cabinet on the 6th. General de Gaulle, "a brilliant young military theorist, is the Under Secretary for War."

The Battle of France, as had been called the struggle that was now beginning, reached a crucial stage on the 9th. The Germans had reached the Seine at Rouen. General Weygand "exhorts his men to stand fast for the dernier quart d'heure." Simultaneously the English announced a new war aim. War aim No. 15: We will ultimately defeat Germany in an offensive land war.

"In his great speech on the miracle of Dunkirk Mr. Churchill warned the nation that victory is not to be won by any concentration upon defense. The aims of the Allies cannot be less than the frustration and defeat of Germany in the field." (Issue of Monday, June 10, 1940, p. 7, leading editorial, Aggressive Defense.)

But hardly had this aim been announced when staggering news was received. Italy had declared war (June 10). The rage of the press knew no bounds when contemplating Mussolini's action. He was likened to a jackal accompanying a tiger on the hunt for human flesh. But this was not all. The 10th also brought news that the British and French had entirely withdrawn from northern Norway. The King of Norway and the Norwegian Government had fled to Great Britain. The German flag was flying over Narvik. But there was yet hope:

"The Italian assault is as unashamed as any national crime that history records. The resources of the British Commonwealth and Empire are hardly yet tapped." (Issue of Tuesday, June 11, 1940, p. 7, leading editorial, Perfidious Italy.)

The next day (11th) the French withdrew south of the Marne. Now, indeed, would another great Battle of the Marne take place and France would once more be saved. Churchill rushed to France for a conference with Reynaud, Marshal Pétain, and General Weygand. Though furious fighting was occurring along the Seine, it was heartening to know that Italian air bases in Africa had been bombed.

At this point war aim No. 16 was announced. Italy will be crushed and Mussolini punished:

"The British Nation accepts the challenge of Signor Mussolini, and will henceforth wage war to the end against the forces of Italy. * * * Deeply as the Allies are involved in their death grapple with Germany, Mussolini has been watched for many months, and powerful forces have been reserved to punish the expected crime." (Issue of Wednsday, June 12, 1940, p. 7, leading editorial, The Stiletto.)

But on the same day that this aim was made public, the Germans crossed the Marne.

The unbelievable was now happening. The grim fight for Paris was at hand, but this time there was no "taxicab army" to save the situation. The wireless also brought news that the Germans were attacking Rheims with heavy mechanized forces. Under these circumstances the English announced that men of 29 years would register for military service on June 15; and that men of 30 years would register on June 22.

War aim No. 17 was next announced. Paris will be saved. If not, the Germans will ultimately be expelled from the city and all the lands that they have overrun. (This aim was later changed to read that the sovereignty of the entire French Nation would be restored.)

"We are in the presence of world war * * *. The defense of Paris is the defense of England; it is the defense of civilization; it must not be allowed to fail. Nothing in our power to give for that cause may be withheld. If the enemy is thrown back from the gates of Paris he has lost the war. If he enters we shall still fight on till he is expelled from the city, and from all the lands that he has desecrated." (Issue of June 13, 1940, Thursday, p. 7, leading editorial The Focal Point.)

Events were now moving so rapidly that they can only be briefly summarized. On the 13th, the following happened: A pincer movement was in progress around Paris. The Germans crossed the Marne at several new points. Paris had just been declared an open town, and the Government had fled to Tours. The French counter-attacked near Persan-Beaumont, 17 miles west of Paris, in the Oise Valley, and bravely advanced a distance of 5 miles. Reynaud, the French Foreign Minister, was hysterically appealing via radio to President Roosevelt to send the Allies all moral and material help, short of an expeditionary force.

But France had slept too long and put too much faith in its much-vaunted Maginot Line. The 14th of June brought the following: Germans entered Paris at last. (The English cried that the light of civilization had been extinguished.) The French moved to new defense positions south of Paris, after blowing up armament works in the suburbs. The Government fled from Tours to Bordeaux. The Germans made a violent frontal assault, with tanks and aircraft, on the Maginot Line west of the Saar. New British troops arrived in the fighting line to aid the French. Italy had now lost 210,855 tons of merchant shipping, by capture or scuttling, since she had declared war.

With all this disaster staring the English in the face, they nevertheless determined that there would be no lessening of war aims since the resources of the Empire and the American Continent were inexhaustible. The English, however, still hesitated to refer to the United States by name. Of course, there was no mention of American manpower at this stage.

"For the unsparing use of all those forces we stand pledged to France, as France to the world. The British Government repeated their undertaking yesterday:

"'We renew to the French Republic our pledge and resolve to continue the struggle at all costs in France, in this island, upon the oceans, and in the air wherever it may lead us, using all our resources to the utmost limit, and sharing together the burden of repairing the ravages of war.'

"However great the loss of French territory, and of French and British lives in defending it, the reserves in this island will remain great, and those of the Empire and the American Continent inexhaustible." (Issue of June 15, 1940, Saturday, p. 7, leading editorial Paris in Captivity.)

The crack-up, however, began in earnest on the 16th. On that day the Reynaud cabinet resigned. Eighty-four-year-old Marshal Pétain became the new head of the French Government. The Germans were swiftly advancing southward into territory beyond Paris. General Weygand became the new Deputy Prime Minister. The Germans claimed to have broken the Maginot Line at Metz. Roosevelt telegraphed sympathies to Reynaud and concluded:

"I know that you will understand that these statements carry with them no implication of military commitments. Only Congress can make such commitments."

English determination stiffened:

"An authoritative statement issued in London yesterday made it clear that Great Britain would continue the strugg'e until victory was won, and that the Allied Fleets were fully able to enforce the bl ckade of Germany." (Issue of Monday, June 17, 1940, p. 7, Today's News.)

"The following authoritative statement was issued in London yesterday:

"'Great Britain is firmly and resolutely determined to continue the struggle until victory is won. * * * We are prepared to continue the war just so long as it may be necessary to secure the downfall of our cpponents, even though it may take years to accomplish that task. In their unshaken determination to achieve victory no matter what the cost, the Government of the empire have the united support of their people.'" (Issue of June 17, 1940, Monday, p. 6, article, Continuing the Struggle.)

On Sunday evening, June 17, 1940, Marshal Petain ordered the French Army to stop fighting. The aged warrior asked Hitler for peace terms, and the fateful message was dispatched via the Spanish Government. On the same evening Churchill broadcast:

"What has happened in France makes no difference to British faith and purpose." (Issue of June 18, 1940, p. 6.)

A horrible fate had now overtaken the Allied cause. In the ninth month of the first year of the war all had been lost except for the fact that the English were determined to fight on.

"It is quite impossible as yet to estimate the effect of this immense disaster upon the future course of the war. * * * We are back in something like the situation after the Battles of Austerlitz and Jena. * * * On the other hand we possess now, what we did not enjoy in 1806, not only the strong cooperation of an empire grown to manhood, but the promise of full assistance from the boundless resources of the United States." (Issue of June 18, 1940, Tuesday, p. 7, leading editorial, We Fight On.)

At last the United States was mentioned by name. Did "boundless resources" include manpower or only materials of warfare?

As the French Empire expired the English announced that in the final hours before the end the British Government had offered to conclude a solemn act of union with the French Government, by which France and Britain would no longer be two nations but one Franco-British union. This idea the French spurned, preferring complete defeat to loss of individuality and identity. One of the paragraphs in the document read:

"The Union appeals to the United States to fortify the economic resources of the Allies and to bring her powerful material aid to the common cause."

In the months to come the English were to think again of union, but this time an Anglo-American Union. This proposal was later to find hearty acceptance among certain types of American citizenry residing on the Atlantic seaboard.

Churchill reviewed the situation in Parliament on the 18th. In an historic address he reaffirmed the war aims that had been previously proclaimed by him, by Prime Minister Chamberlain, by the Times, and by other members of Parliament.

"I indicated a fortnight ago, as clearly as I could, to the House that the worst possibilities were open, and I made it perfectly clear then that whatever happened in France would make no difference to the resolve of Britain and the British Empire to fight on if necessary for years, if necessary alone. * * * During the first 4 years of the last war we repeatedly asked ourselves the question, 'How are we going to win?' and no one was able ever to answer it with much precision, until at the end, quite suddenly, quite unexpectedly, our terrible foe collapsed before us and we were so glutted with victory that in our folly we cast it away. * * * We abate nothing of our just demands—Czechs, Poles, Norwegians, Dutch, Belgians, all who have joined their causes to our own, shall be restored." (Issue of June 19, 1940, Wednesday, p. 2, Parliament.)

On the 23d Hitler's armistice terms were accepted. Half of France was to remain occupied. The surrender of the fleet was demanded, and on that subject England began to be very apprehensive. General de Gaulle was in England calling on "free Frenchmen" to resist.

France signed an armistice with Italy on the 24th. The Times moaned that this was double indignity since the French and the Italians had never really come to blows. Never had such a great prize been won so cheaply, but the Times warned that revenge would come ultimately and surely.

War aim No. 17 was restated at this time. (Restoration of the independence of France.) The first hint was given of war aim No. 18, which was later restated many times. (The British Isles and Empire must be defended to the utmost and the present status quo maintained. The same also applies to the Dutch East Indies, etc.)

"The British Empire will fight to the last for its own survival and for the resurrection of France, and in so doing will believe that it responds to the true will of the French people." (Issue of June 26, 1940, Wednesday, p. 7, leading editorial, After the Armistice.)

As the month ended it was noted:

"The apparent surrender in Europe and Africa is so colossal that it is still impossible to appraise it." (Issue of June 27, 1940, Thursday, p. 7, leading editorial, France Despoiled.)

Nor was this all to aggravate the English. On the 27th Russia sent an ultimatum to Rumania demanding satisfaction of Russian claims on Bessarabia and northern Bukovina. On the 28th the Soviets began their march into Rumania, taking possession of Bessarabia and Northern Bukovina. On the same day Great Britain formally recognized the Government of General de Gaulle as being the true Government of France.

The month passed without any attempted invasion of the British Isles. Such an invasion was daily anticipated, and the papers contained full instructions to the public what to do when parachute troops landed. The Government remained calm, but it was evident that the people were more or less demoralized.

July 1940 to May 1941

This period marks the second stage of the conflict, during which England stood

firm on all of her war aims and, in fact, kept gradually adding to them. The latest one to date was announced on April 23, 1941, when the restoration of Yugoslavian independence took its place under war aim No. 6.

"The British Government for its part declares that it is its firm intention to fully restore the independence of Yugoslavia. Meanwhile the Yugoslav Government may count on the fullest possible measure of help from the British Government in the prosecution of the struggle against the common enemy." (Statement in the House of Commons by Foreign Secretary Anthony Eden, made April 23, 1941.)

Unfortunately, however, war aim No. 3 gradually became the most important during this period (the United States must take an interest in the war as soon as possible). England was not holding her own but was being slowly but surely reduced to desperation. Shipping losses had increased to an appalling figure, English diplomacy in the Balkans had been a failure, and finally the Greek fiasco resulting in a second Dunkirk had struck a serious blow to the Empire. The one hope lay in America. That hope was developed to the utmost, and English efforts also met with the warmest official response from the United States. War aim No. 3 was apparently a great success. Federal Union and a proposed new flag for America became the ultimate goals of aim No. 3. Gradually and yet almost imperceptibly the United States was being led into the conflict by an articulate minority against the wishes of a confused majority.

To trace this course of events in detail would make this paper unduly long Incidents are also moving so rapidly that the third stage of the war already looms up ahead (active American participation in manpower as well as in materials). To prevent this third step from becoming a reality should be the aim of every American who loves his country and all that it stands for. This is not our war. It was not of our making. It will not be the last European conflict. We have not gone so far into it that we cannot turn back. Beware of the noisy minority. Paul Revere must ride again.

CONCLUSION

With the fall of France the British Empire was brought to the lowest ebb it had ever experienced in its centuries of existence. One of the great foundation stones of the Allied cause had been removed in June 1940, and the Empire was in danger of imminent collapse. Henceforth it must fight the war alone or fight it with the assistance of the United States. It was only natural that a great effort should therefore be made to entice the United States in as an active military participant. It is therefore fitting that we consider three things at this point:

I. British propaganda tactics during World War No. 1.

II. Britain's attitude when the United States was last in grave danger.

III. Attitude of the early founders of this Republic concerning involvement in Europe's incessant struggles.

I

Some years before the present war Lloyd George published his war memoirs. Concerning these memoirs Winston Churchill said:

"Mr. Lloyd George's war memoirs constitute a record of unfading historic interest. * * * No one who wishes to be well informed about the great war should fail to study them."

This endorsement was printed on the paper cover advertising the work.

Lloyd George was not only Prime Minister of England during World War No. 1, but he was also the only member of the British Cabinet who remained continuously in office throughout the war. He therefore could speak with the voice of authority. In six long volumes he traces the tragic course of the war and in the fourth volume he deals with the subject of British propaganda.

In a chapter headed "The tactics of deception," beginning at page 408 of volume 4, Lloyd George says in part:

"While the ghastliness I have inadequately summarized was proceeding, and brave men were being sacrificed to the stubborn infatuation of the high command, the public at home, official and unofficial, were all dosed day by day with tendentious statements about victories won and progress made toward more assured and ever greater triumps. Enemy depression became as deep and his morale as quaky as the bogs of Passchendaele. We were assured that the German peace maneuvers were the indications and expedients of despair. * * * The reports passed on to the ministers were, as we all realized when it was too late, grossly misleading. Victories were much overstated. Virtual defeats were represented as victories, however limited their scope. Our casualties were understated. Enemy losses became pyramidal. That was the way the military authorities presented the situation to ministers—that was their active propaganda in the press. All disconcerting and discouraging facts were suppressed in the reports received from the front by the War Cabinet—every bright feather of success was waved and flourished in our faces. * * *

"Every disquieting fact was explained away without any difficulty. * * *

"The statements about German morale were sometimes grotesque in the gullibility they displayed. * * *

"It may be said that we must have been a very simple lot to have been taken in by all this selected trash. Politicians are liable to be attacked from every flank—simultaneously. They are suspicious, subtle, crafty, and designing, and at the same time they are gullible, simple, and foolish. In this case we were not taken in, but our means of ascertaining the facts were blocked by the complete cooperation that existed between the war office and G. H. Q. * * *

"Nowhere was there a more ecstatic belief in these imaginary victories than at the chateau and village where the field marshal and his staff were quartered. * * *

"During this visit Sir Douglas and his staff dwelt repeatedly on the visible deterioration in the physique and smartness of the German soldiers, judged by the specimens captured in recent victories. I expressed a desire to see them. The proposition was received without any enthusiasm. Would I not prefer to see the Vimy Ridge where I could get a view of the German positions? I preferred to see the last batch of German prisoners. I saw the last 'cage,' and I thought the men were a weedy lot. They were deplorably inferior to the manly samples I had seen in earlier stages of the war. It was some years after the war that I ascertained on authority which is unimpeachable that on that occasion general headquarters rang up fifth army and stated that the Prime Minister was coming down and would go to corps headquarters to see German prisoners. Instructions were given to inform the corps—I forget which one it was—of this, and to tell them to see that able-bodied prisoners were removed from the corps cages. * * *

"There was an elaborate and sustained effort to create an atmosphere of impending victory on an eventful scale. The reports from the front, official and unofficial, became rosier and ruddier. General headquarters could not capture the Passchendaele Ridge, but it was determined to storm Fleet Street, and her strategy and tactics were superb. The press correspondents at the front were completely enveloped and important publicists and newspaper proprietors in this country were overwhelmed. Lord Northcliffe had, ever since 1916, been the mere kettledrum of Sir Douglas Haig and the mouth organ of Sir William Robertson."

Pages of the same reflections appear in Lloyd George's Memoirs. It is well for us to keep such statements in mind, now that World War No. 2 is in progress and every effort being made to involve the United States in the struggle as an active military participant.

II

What was Britain's attitude when our own country was last in danger of invasion? The closest parallel we can draw is to look back to our Civil War period, when the established Government at Washington was threatened with invasion.

During our Civil War period, the London Times (then called simply the Times) commented editorially that England was enjoying considerable prosperity at a time when the United States was tottering on the brink of destruction. By June 1863, General Lee was moving northward with one of the largest armies ever assembled on this continent. Following is a typical editorial comment of that day, taken from the Times for Saturday, July 4, 1863:

"What is America today? How is she keeping the annual festival which she consecrates to her own glorification and the vilification of all the rest of mankind? * * * The signal failure of five successive invasions must, we should hope, have done something to shake northern confidence in the skill of their generals and the invincibility of their Army. The deity of size and magnitude, so often and so devoutly worshipped, has fatally deceived her ardent votaries. Big guns, big ships, big threats, and bulletins replete with statements more enormous than any of them, have all been tried in vain, and the North finds itself the object of that very invasion with which it has so continually and so vainly menaced its antagonist. * * * These are the military prospects for the Fourth of July 1863."

As the war progressed, a group of English citizens formed the Society for Obtaining the Cessation of Hostilities in America. A year later (July 15, 1864) they called on Lord Palmerston, then Prime Minister. Palmerston was not interested. On July 18, 1864, the Times applauded Palmerston's attitude, and its editorial for that day concluded by saying:

"The best service the Government of this country can render the cause of peace is to let events run their course, and not interfere in American politics by word or deed."

It is not difficult to imagine what the attitude of 10 Downing Street would have been had President Lincoln requested Lord Palmerston to supply us with munitions and loans to beat off the Confederate invasion.

As late as 1939 Britain exhibited the same attitude when the duly elected government at Madrid was faced with the invading army of General Franco. Upon the fall of Madrid the London Times said editorially on March 29, 1939:

"The British Government, beset for so long by the clamour of those who would urge them to support of one or the other of the Spanish contestants, now reaps, after much contempt and obloquy the reward of their resolution to commit themselves to favour neither side in a quarrel irrelevant to British principles and interests. * * * Hard things are always spoken of neutrals while war rages, but an honorable and consistent neutrality comes to be appreciated when peace is won."

III

What was the attitude of the early founders of this Republic concerning involvement

of this country in Europe's incessant struggles?

First of all, the interventionist propaganda of 1941 is lifted wholesale from the very words of prominent residents of the eastern seaboard in the first decade of the nineteenth century.

On October 31, 1803, Fisher Ames wrote to Theodore Dwight ("Works of Fisher Ames," vol. 1, p. 330):

"Great Britain is fighting our battles and the battles of mankind, and France is combatting for the power to enslave and plunder us and all the world."

Today France has merely been changed to Germany.

John Rutledge wrote to Harrison Gray Otis on July 29, 1806 (Morrison's Life and Letters of H. G. Otis, vol. 1, p. 283):

"I have long considered England but the advanced guard of our country * * *. If they fall we do."

Timothy Pickering rose during the second session of our tenth Congress and attempted to throw our people into alarm by saying that Napoleon would send troops to the United States "in thousands of British ships." (CONGRESSIONAL RECORD, Dec. 21, 1808, annals of 10th Cong., 2d sess., p. 276).

Finally John Adams himself commented on the situation so similar to that prevailing today. On July 25, 1808, he wrote to Rush (Old Family Letters, pp. 191–192):

"Our Gazettes and Pamphlets tell us that Bonaparte * * * will conquer England, and command all the British Navy, and send I know not how many hundred thousand soldiers here and conquer from New Orleans to Passamaquoddy. Though everyone of these Bugbears is an empty Phantom, yet the people seem to believe every article of this bombastical Creed and tremble and shudder in Consequence. Who shall touch these blind eyes?"

Jefferson saw the danger of the rising hysteria, which mounted after each Napoleonic victory. As early as March 21, 1801, he wrote in a letter to Logan (Ford's Works on Jefferson, vol. 9, pp. 219–220):

"It ought to be the very first object of our pursuits to have nothing to do with European interests and politics. Let them be free or slaves at will, navigators or agricultural, swallowed into one government or divided into a thousand; we have nothing to fear from them in any form. * * * To take part in their conflicts would be to divert our energies from creation to destruction."

By October 1803 Jefferson wrote to Benjamin Rush (Ford's Works on Jefferson, vol. 10, p. 32):

"Tremendous times in Europe! How mighty this battle of lions and tygers! With what sensations should the common herd of cattle look upon it? With no partialities, certainly!"

In 1807 Jefferson wrote:

"I cannot, with Anglomen, prefer a certain present evil to a future hypothetical one."

In that same year, 1807, Richard Peters wrote to Timothy Pickering, February 4. (Taken from the Pickering manuscripts in the possession of the Massachusetts Historical Society):

"I think myself sometimes in a hospital of lunaticks when I hear some of our politicians eulogizing Bonaparte because he humbles the English; and others worshipping the latter, under an idea that they will shelter us, and take us under the shadow of their wings. They would join, rather, to deal us away like cattle."

Senator Beveridge in his life of John Marshall says (Life of John Marshall, vol. 4, p. 6):

"Never did Americans more seriously need emancipation from foreign influence than in the early decades of the Republic—never was it more vital to their well-being that the people should develop an American spirit, than at the height of the Napoleonic wars."

Nor must we forget recent statements of Winston Churchill himself. In his volume, The World Crisis, he says at page 110:

"The stake of the United States in the European scene was incomparably small."

At page 450 in the same volume:

"President Wilson sought to play a part out of all proportion to any stake which his country had contributed or intended to contribute to European affairs."

The last book which Churchill published before the war was Step by Step (1939). In it he says:

"It would be a mistake, however, to assume that these friendly declarations imply any intention on the part of the United States to become involved in the quarrels and combinations of Europe. No European statesman should be so foolish as to count upon the armed assistance of the United States even if his country were the victim of unprovoked aggression. It is much better to face the real facts" (p. 111).

"We may be certain that the United States will not intervene in any British or European quarrel" (p. 312).

"Except for a few handfuls of ferocious romanticists, or sordid would-be profiteers, war spells nothing but toil, waste, sorrow, and torment to the vast mass of ordinary folk in every land. Why should this horror, which they dread and loathe, be forced upon them? How is it that they have not got the sense and the manhood to stop it? Nowadays the masses have the power in all democratic countries" (p. 25).

Senator Wheeler and Secretary Stimson

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, August 4 (legislative day of Monday, July 28), 1941

EDITORIAL FROM MAYSVILLE (KY.) PUBLIC LEDGER

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and enlightening editorial from the Maysville (Ky.) Public Ledger, reprinted from the Cincinnati Times-Star, on the subject of the remarks made last Monday with regard to Senator WHEELER and Secretary Stimson.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Maysville (Ky.) Public Ledger]

THE SENATE GIVES ITS OPINION OF WHEELER

It is to the credit of the Senate that it put on quite an uprising Monday in favor of the senior Senator from Montana.

WHEELER has been a Member of the Senate since 1923. His character ought to be fairly well known to Members of the Upper House.

WHEELER had just replied to Secretary of War Stimson's attack upon him in which he charged the Montanan with near treason because some antiwar post cards he had sent out had gone to soldiers. WHEELER repeated his explanation that the cards were sent to a commercial mailing list of a million names; that the order went out before the proposal to extend the service of draftees and National Guard men had been advanced; and that, to the best of his knowledge and belief, only three cards went to soldiers.

Senators LA FOLLETTE, TRUMAN, CLARK of Missouri, and CHAVEZ spoke for WHEELER. TYDINGS called Stimson's statement "an unjust attack on one of the outstanding men of his time." "If this country should become involved in war," said TYDINGS, "no one will work harder to win that war than the Senator from Montana."

"Senator WHEELER," said VANDENBERG, "represents not the seeds of treason but the hope of democracy." The applause at this point was so great that the Vice President warned that another demonstration would cause him to close the galleries. Even BARKLEY described WHEELER as "one of the ablest and most courageous men in the United States." Under questioning by Senator TAFT, the administration leader in the Senate said that he did not believe that WHEELER's action in sending out the cards justified the charge of treason.

ELLISON D. (COTTON ED) SMITH, of South Carolina, asked the Senate to call on the executive departments "to keep their mouths out of our business."

The most dramatic tribute to WHEELER came from HIRAM JOHNSON. "Every man in this Chamber should be proud of you," he said, * * * "I take my stand for the Senator from Montana." * * * "For God's sake, have we reached the point in government where there is no right of petition, where there is no right of free speech? * * * If WHEELER goes to a concentration camp, I will go with him."

WHEELER and JOHNSON make quite a pair. They have been elected time after time by the people of California and Montana. In 1940 JOHNSON had no opposition, having won at all the party primaries. Without having made a speech in Montana before the election WHEELER, with opposition, ran considerably ahead of Roosevelt.

Who ever heard of Stimson getting office by vote of the people, anywhere?

Probably no American has ever been subjected to such a smear campaign as has been directed at WHEELER in recent weeks. They have called this Massachusetts Yankee, transferred to a Montana environment, a user of subversive methods and an ally of Hitler. Of course, those who take the trouble to read history know it's all a part of the usual technique of getting a country into war. The advocates of war always try to frighten and beat down the opposition by methods similar to those which have been used against WHEELER. It is only when men believe very strongly in the cause they are standing for that they will stand against the terrific pressures of a time like this. (Cincinnati Times Star.)

Happy Days Again on Midwest Farms

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, August 4 (legislative day of Monday, July 28), 1941

ARTICLE FROM NEW YORK TIMES

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in

the RECORD an article which appeared in yesterday's New York Times, by Roland M. Jones, entitled "Happy Days Again on Midwest Farms."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of August 3, 1941]

HAPPY DAYS AGAIN ON MIDWEST FARMS—GROWERS BASK IN PROSPERITY MADE UP OF GOOD CROPS AND GOOD PRICES

(By Roland M. Jones)

OMAHA, NEBR., August 2.—Barring worry over the war, happy days are here again for the middle western farmer. Look in whatever direction one may from this watchtower the prospect is one of agricultural prosperity. It is a prosperity compounded of two parts, good crops and good prices.

Wheat came through better than was expected, the small feed grains have yielded satisfactorily. Hay is abundant, especially that soil-conserving and highly nutritious forage crop, alfalfa. And corn is now going through its critical pollination stage without the accompanying anxiety which has been so common in recent years. There have been some hot, blistering days, but they have been tempered to the plumy, pollen-bearing tassels of the corn by reserves of moisture in the ground and intermittent thunderstorms which count for so much on the farms at this time of year.

HAPPY STATE OF PARITY

Along with the happy state of having an abundance to sell, the farmer is faced with the perfectly pleasing condition, rarely experienced in the last 20 years, of being able to sell it at parity prices. He can buy with his produce a volume of nonagricultural goods equal to what he could in the days before the first World War, perhaps just a shade more. The prices he gets and the prices he pays have both been going up during the last 2 or 3 months, but the prices he gets have been rising at a little faster rate than the prices he must pay.

According to the computation of local agricultural economists, farm prices, as of July 15, stood at 102 percent of parity in Iowa and 103 percent of parity in Nebraska.

In this condition the natural impulse of the farmer is to view price fixing with suspicion and alarm. And yet these feelings have not so far been greatly manifested. His attitude has been so persistently represented as that of seeking justice by way of the parity formula that he is in no position to ask for more. Whatever form price-fixing legislation takes he thinks he is entitled to have the parity principle recognized, and that agricultural prices should be permitted to rise to that level before any kind of arbitrary control is exercised over them.

What is the farmer going to do with all the additional money he is getting and expects to get for a while yet?

That question recently occurred to the editors of Wallaces' Farmer and Iowa Homestead. So they went out and asked a lot of farmers. Good intentions loomed large in the answers.

The first reply of nearly half was that they would pay debts. This may be as much a reflection of how badly farmers are in debt as it is of how much they want to get out. Those who remember the last war were especially anxious to clean the slate now so that they could meet the expected bumps ahead without interest and principal payment charges to complicate the problem of making a living in an agricultural depression.

HOPES OF TENANT FARMERS

A good many, principally tenants, hoped to buy more breeding stock and equipment, a natural desire since the best-equipped tenant usually gets his pick of the farms for rent and the best chance to stay once he has found one that suits him.

A few, also mostly tenants, looked forward to buying land, but only if prices remained reasonable. The savers were more inclined toward Government bonds than toward private investment, an intention that does not augur so well for the promoter as the condition 20 years ago, when "blue sky" stocks were peddled to farmers by the basketful.

Our Madness Increases as Our Emergency Shrinks

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 4 (legislative day of Monday, July 28), 1941

ADDRESS OF HON. GERALD P. NYE, OF NORTH DAKOTA

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered by me at St. Louis last Friday evening, entitled "Our Madness Increases as Our Emergency Shrinks."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In this hour when our actions grow madder while the emergency confronting us grows smaller, we owe it to ourselves to speak plainly.

There are those who interpret every reference of even the mildest critical nature against the British as some sort of condemnation of those brave and splendid people the British people themselves.

This is childish reasoning. But the Government of Great Britain is trying for its own reasons to get us into its war. It is our business and our intention to stay out of that war. To stay out of it, we must oppose those who desire us in that war, and continue this opposition at every turn. The Government of Britain, unblushingly and without reservation, does want us in that war. Our cause today, get it clear, is America's cause, and America's only. Today we must think of, act for, and if necessary fight and die for America—but America only.

When the last war ended and men began to look around at the sinister means that had been used to lure the United States into that terrible and futile war, when they saw how they had been tricked and lied to, they became angry. They began to ask, Who did this to America? Books were written, magazine articles by the score were published and finally a great investigation was held nearly 20 years later to find out who it was and why America had been pushed into the last war. And we did find out. The accusing finger of history all through the years will be pointed at the great American and European bankers and the powerful international munition makers who committed that crime against the American people. But it was too late when all this became known. Our boys were dead and buried beneath the soil of France. Our veterans' hospitals were filled with twisted, suffocated, blinded men. All the terrible costs of that war are still upon us.

And now we see America being stripped, and oiled and groomed for another such war—only a more terrible and an even less justifiable one from our point of view. But this time the people are wiser. They want none of that slaughter and terror in Europe or Asia. Yet, despite that, we are rudely awakened by the British Prime Minister who tells the House of Commons that America is on the verge of war. Well, maybe we have to find out about this from the British Prime Minister. But there is one thing we can find out for ourselves. And the time has come to find out. Who has brought us to the verge of war? Let us ask and demand the answer to this question now. Who is pushing and hauling at America to plunge us into this war? Who are the men? Who is putting up the money for all this propaganda? Who are they? We want to know. And we want to know now. Now, before we plow a million American boys under the dust and mud of Africa, Indo-China, France, and far away Russia, to make the world safe for Empire and Communism.

I have not time to name all those contributing (knowingly or unwittingly) to our march to war. But I will name some of them.

You know that this, as in the last war, has been a propaganda job. To carry on propaganda you must have money. But you also must have the instruments of propaganda. And one of the most powerful, if not the most powerful, instrument of propaganda is the movies. In Germany, Italy, and in Russia—the dictator countries—the government either owns or completely controls and directs the movies. And they are used as instruments of government propaganda. In this country the movies are owned by private individuals. But, it so happens that these movie companies have been operating as war propaganda machines almost as if they were being directed from a single central bureau.

We all go to the movies. We know how, for too long now, the silver screen has been flooded with picture after picture designed to rouse us to a state of war hysteria. Pictures glorifying war. Pictures telling about the grandeur and the heavenly justice of the British Empire. Pictures depicting the courage, the passion for democracy, the love of humanity, the tender solicitude for other people, by the generals and trade agents and the proconsuls of Great Britain, while all the peoples who are opposed to her, including even courageous little Finland now, are drawn as course, bestial, brutal scoundrels.

You have seen these pictures—Convoy, Escape, Flight Command, That Hamilton Woman, Man Hunt, Sergeant York, The Great Dictator, I Married a Nazi. At least 20 pictures have been produced in the last year—all designed to drug the reason of the American people, set aflame their emotions, turn their hatreds into a blaze, fill them with fear that Hitler will come over here and capture them, that he will steal their trade, that America must go into this war—to rouse them to a war hysteria.

You do not have to take my word for this. The President himself after he had forced Congress to pass the lend-lease bill, in a speech to the Academy of Motion Picture Arts complimented the industry on their help in "explaining" the bill. In fact, only day before yesterday, he had Sergeant York at the White House and told him that the new picture would do much to rouse our people.

"Only," the President said, he "didn't like so much killing in the picture." He doesn't like so much killing. Yet he is glad to see that picture and a score of others rousing

the American people to get into the killing and to be killed on a real battlefield, not a movie lot, and on a scale which will make that killing seem mild. Do not take my word for it. Only a few days ago, Mr. Will Hays warned the movie moguls himself, telling them that their great industry is an instrument of entertainment and not of propaganda. But the movies have ceased to be instruments of entertainment. They have become the most gigantic engines of propaganda in existence to rouse the war fever in America and plunge this Nation to her destruction.

And now, let me ask, Who are the men who are doing this? Why are they trying to make America punch drunk with propaganda to push her into war?

There are eight major film companies. The men who dominate policy in these companies—own or direct them—are well known to you. There is Harry and Jack Cohn, of Columbia Pictures. There is Louis B Mayer, of Metro-Goldwyn-Mayer. There is George J. Schaefer, of R. K. O. There is Barney Balaban and Adolph Zukor, of Paramount. There is Joseph Schenck and Daryl Zanuck, of Twentieth Century Fox, dominated by Chase National Bank. There is Murray Silverstone, of United Artists, and the great Sam Goldwyn, of Samuel Goldwyn, Inc. There are the three Warner brothers, Arthur Loew, Nicholas Schenck, Sam Katz, and David Bernstein, of Loew's, Inc.

In each of these companies there are a number of production directors, many of whom have come from Russia, Hungary, Germany, and the Balkan countries.

Now, do not misunderstand me. I say nothing against the sturdy peoples of these countries. They should have here the same opportunities that are open to every other dweller in our midst. But in this great era of world upset, when national and racial emotions run riot and reason is pushed from her throne, this mighty engine of propaganda is in the hands of men who are naturally susceptible to these emotions. Great Americans like Senator Wheeler, Colonel Lindbergh, and General Wood are in many places denied the use of a hall to speak up for America. But these men, with the motion-picture films in their hands, can address 80,000,000 people a week, cunningly and persistently inoculating them with the virus of war.

Why do they do this?. Well, because they are interested in foreign causes. You cannot doubt that. Go to Hollywood. It is a raging volcano of war fever. The place swarms with refugees. It also swarms with British actors. In Hollywood they call it the "British Army of Occupation." The leaders are almost all heavy contributors to the numerous committees of all sorts organized, under the guise of relief to Britain, Greece, or Russia, to propagandize us into war.

Why do they want to push us into war? Well, they have all sorts of interests. But here is one I can give you: One of the leading Wall Street investment houses made a study of these movie industries only a few months ago. It told its clients that if Britain loses, seven of the eight leading companies will be wiped out.

That report revealed that the quarters and half dollars of the American movie patrons barely pay for the cost of producing these gigantic movie spectacles. The profits depend on the sales in the foreign market, which is now reduced to England and her dominions. Take one of these companies alone. In 1940 the company collected eighty millions of dollars. But eight millions of that was collected in England. That eight millions of dollars just exactly represented the profits of the company. That British market accounted for the profit. The company, it was estimated, could pay $5 a share. But if Britain loses, then that $5 would be reduced to zero. Another company depends for 35 percent of its earnings on the British market. The war has already cut that to 20 percent. And if England loses, the company will lose all of that profit. Moreover, countless millions of dollars of these companies' earnings are tied up in England, held there in blocked sterling, frozen there, and they cannot be taken out unless the war ends and Britain wins. This movie industry has a stake of millions of dollars annually in Britain winning this war. The question is, Are you ready to send your boys to bleed and die in Europe to make the world safe for this industry and its financial backers?

I cannot tell the whole story here. But you have a right to know that story. You have a right to know why it is that patriotic Americans are attacked at every turn as they rise to speak for America, denied halls and stadiums, while these can use 20,000 movie theaters every day to talk to eighty millions of people. But these movie moguls and directors are patriots—these men who only a few years ago filled their pictures with so much immorality and filth that the great Christian churches had to rise up in protest against it and organize the League of Decency to stop it. You have a right to know all about this sordid story of war propaganda in the films, and Senator BENNETT CLARK and I have today called on the United States Senate to investigate it. We want to know what part the Government has played in this—and whether the Government here, like the governments in Hitler's Germany and Mussolini's Italy, is using the films to poison the minds of the American people against most of Europe in order to plunge us into the bloodiest war in history. And for what reason? To make the world safe for British imperialism and Russian communism?

I have said that the people would like to know what part the Government has had in aiding the moving-picture magnets or even compelling them to do this job. Out in Hollywood there is, or was, a certain gentleman named Dr. Leo Rosten. He seems to be the fountain of ideas and data on the Army and the Navy and the air force. And another Government figure, Maj. Gen. Charles S. Richardson, has been sent out there to prepare war films. I am informed that there are Government men on every moving-picture lot in Hollywood for the same purpose. The Government has seemed particularly anxious to whip up the warrior spirit in our young men, glorify war, glorify militarism. Of course, this is all called national defense. Troops and paraphernalia of the Army and Navy, including ships, have been loaned by the Government to the producers to make war-propaganda pictures. All of which is very nice for the producers, because they get it all free, gratis, for nothing, from the Government.

Not only has the industry obligingly cooperated with the American Army and Navy, but with the British Army and Navy. One of the theatrical magazines reports that in 1940 Lord Lothian worked with Mr. Schaefer, head of R. K. O. Mr. Schaefer and R. K. O. furnished the money and England and France furnished the actors—that was back in the days when France was an Ally and before England was starving France. A beautiful propaganda picture was born and the proceeds went to the agencies Lord Lothian was interested in.

What I would like to know is this: Are the movie moguls doing this because they like to do it, or has the Government of the United States forced them to become the same kind of propaganda agencies that the German, Italian, and Russian film industries have become? I have excellent reason to believe that this governmental influence has prevailed.

Remember, this is the worst kind of propaganda because it is the most insidious. When you come to an America First meeting you come expecting to hear an argument in favor of America and if you don't happen to be in favor of America, or if you think more of Britain or Greece or Russia than you do of America, why naturally you steel yourself against what we have to say. If you go to one of these Fight for Freedom Committee meetings, designed to get us into war, well, you know what to expect there—your mind is on guard. Or better still, you don't go at all—they never get a chance at you But when you go to the movies, you go there to be entertained. You are not figuring on listening to a debate about the war. You settle yourself in your seat with your mind wide open. And then the picture starts—goes to work on you, all done by trained actors, full of drama, cunningly devised, and soft passionate music underscoring it. Before you know where you are you have actually listened to a speech designed to make you believe that Hitler is going to get you if you don't watch out. And, of course, it's a very much better speech than just an ordinary speech at a mass meeting. And you pay for it. The truth is that in 20,000 theaters in the United States tonight they are holding war mass meetings, and the people lay down the money at the box office before they get in.

Think that over. Eighty million people will go to the movies this week. Seventy-five percent of those people are against going into war. But those 75 percent will pay three-fourths of the bill for this propaganda designed to get them into a war they don't want to go into. Why, they ask—where are these peacemongers getting all the money to fight war? Well, they don't get much—most of it they get passing the plate at these meetings. But just think what a pitifully miserable pittance it is compared with the hundreds of millions of dollars that are spent making those pictures.

Have you noticed the newsreels? A minimum of 70 percent of the newsreels are what are called national-defense pictures, but really pictures to glorify war, glorify Britain, and now you'll probably begin to see pictures glorifying Russia. I am told that the movie industry has orders from somewhere that all the newsreels must be 70 percent devoted to war pictures. These pictures do not depict the horrors of war. You do not see men crouching in the mud of Greece, English, Greek, and German boys disemboweled, blown to pieces. You see them merely marching in their bright uniforms, firing the beautiful guns at distant targets, and, of course, the marines landing in London—40 of them, by the way. What those 40 marines are doing in London, I do not know. They are hardly enough to stop an invasion, however much we believe in and applaud our marines.

Propaganda is moving us into this dance of death, even while 80 or 90 percent of the people in this democracy of ours are breathing "No. No. No."

And this threat of war endures at a time when we should be breathing easier than we did a year ago. Without a serious or substantial threat against us which those in authority will undertake to define, our Government proceeds to let our country in for the greatest madness in all American history. This process, of course, could never be accomplished except with the aid of propaganda in furtherance of an undefined emergency.

Don't misunderstand me. We are not decrying the need for a furtherance of a defense for America. This need grows out of what we see to be madness abroad. It grows out of such foreign policy as has found us inviting enemies at every turn. A defense to match this sort of policy is of necessity expensive. But if we would confine ourselves to providing a defense adequate to meet the worst that might be brought against us as a result of the wars abroad, we could have it without wrecking our American economy, straining morale, or unnecessary sacrifice by

those thousands of our young men whose services we have contracted in the name of defense.

More billions we pour out, and we propose breaking faith with the men in training in this hour of madness when any emergency confronting our country is immeasurably less than it was a year ago. Look to the facts. A year in which to prepare and train, real defense progress, and potential enemies growing weaker with every hour of war abroad.

To find in such an hour as this, with these facts shouting at us, a serious effort to have Congress break faith with those called into training for a year by keeping them longer, is to find a state of affairs resembling degrees of fraud.

To let these boys and men return home when their contracted year of service is ended and to bring new trainees into their place is not going to cripple or mess up our defense. The propaganda which has us believing that training ending with 1 year will mean our military undoing is hardly called for.

And when some of our leaders persist in their talk about the need for giving the President power to send our troops outside this hemisphere, when they insist upon repeal of existing provisions of law forbidding use of these men abroad, the prospect becomes a most serious one, not only for the boys in camp, and their fathers and mothers, but for all of us and for our Government.

Nothing is more important to the national defense than morale. Belief, confidence, and faith today are essential in any ability which is ours to survive the penalty of these mad years. It is denied that morale in our military camps is low. I hope such denial is honestly founded. There could be larger confidence in the denial if only authorities would lift the restrictions which prevent the boys speaking their minds while we are free from war.

We do know that the men in the training camps are asking embarrassing questions. Like the rest of us, they would like to know just what the emergency is, just what are the causes at stake, that requires a demand for their retention in service beyond the year and for legislation that will let them be sent abroad without a declaration of war. Especially would they welcome knowing why, with their country at peace, more than a year of military training is necessary and legislative consent to their service abroad is called for when so different a situation prevails in neighboring countries which are at war. In Canada the boys are taken for only 4 months of military training and they serve abroad only as they volunteer for such service. Quite natural is the question: "Whose war is this one, anyway?"

Propaganda causes us to overlook some such questions. We can be made to ignore them. There was will to ignore the things that were said of those fine, courageous Americans, Col. Charles Lindbergh and Senator WHEELER. But the people can hardly ignore the conclusions to be drawn when the Stimsons, the Knoxes, and the Wedgewoods make public apology for the things they charged against WHEELER.

Some few weeks back a clergyman in one of our States wrote of an advertised America First meeting: "If I could have my way about it the meeting would be machine-gunned and bombed." The author of such lack of balance, such departure from good Americanism, is quite understandable when we see responsible members of our Government, like Cabinet officers charging treason against WHEELER, however much those officers apologize afterward.

Why shouldn't we have better reason, better balance here in our country? We could have it except for the clever propaganda which stirs our emotions, breathes hates, fans fears, and glorifies the destruction we would avoid.

One day the interventionists call those who exercise their American right to disagree, Communists. The next day they call us something else because we are not sympathetic toward making Red Russia our ally and singing her praises.

Why must there be those who charge disloyalty and worse against others who refuse to take British statesmen at their word, when their word today is so contrary to their word of only 3 years ago? Why do we let Eden and others guide us by asserting that Britain fights for freedom of the seas, when we know it was Britain that scuttled freedom of the seas when Woodrow Wilson presented it as point 2 in his 14 points at Versailles?

Why not use the strength that is ours to resist propaganda, remember the warnings of the fathers who paid so dearly for American freedom from European power politics and wars, and renew that pledge so often heard after our last war: Never, never again?

America is challenged today. To avoid involvement in this war is to avoid bankruptcy, futility, and needless waste of life and property. Yet the danger of such involvement is an hourly challenge.

To keep intact the institutions that are basic to our democracy is another challenge. We must avoid larger surrender to the Executive of power vested with the people and their Representatives in Congress. Just now, while we are at peace, not at war, there comes the demand for power for the President to fix prices, to hold the boys in service, to send the boys where he chooses. It was power, just a little more at a time, mind you, that made Hitler and Mussolini dictators. (In parentheses, I've offered this observation to balance accounts with those who are so persistent in their charge that the kind of talk I am responsible for tonight is the kind that led to the downfall of France, Belgium, Poland, and others.)

Americans, we want to be strong and ready always to effectively defend ourselves against the worst that any part of the world might choose to bring against us, of course. We want to leave no stone unturned that will aid in guaranteeing such a defense.

But, likewise, we ought to want freedom from foreign influence in times like these. Let's have courageous American thinking, not the kind which finds us waiting for the cue that Churchill gives; not the kind that has to be painted and pictured by propagandists or by forces whose profits are dependent upon foreign causes.

Let's be Americans because of and for causes that are American. Let us bury forever the thought that real Americanism is determined only by those who both hate Hitler most and love Britain best. Let us be giving larger thought to what is best for America.

If this be called selfishness, then let me suggest that it will at least bring us quickly to the hour when we can give to the world the most unselfish service, a service essential if the world is to be saved from worse than war. The hour of which I speak is that one soon to come—that hour when all the world, vanquished and victors alike (if there can be victors) will fall exhausted. Sick, hungry, and cold, that world will want a helping hand to supply the medicine, the food, and the clothes so necessary if it is to be saved from communism, which thrives upon destruction, hunger, and suffering. We can give that kind of hand only as we will now avoid the waste of our own involvement in the war; only as we build stronger our resources and reserves; only as we maintain a degree of solvency. Let us not throw away this chance for great service to mankind and to God; let us not do that by destroying the very things which are ours and which some would have us destroy in the name of affording the same blessings for others.

This is a wonderful hour for more America-first thinking; for a fine, clean expression by all our people of determination to stay out of these never-ending foreign wars, to keep faith with ourselves and with those who 150 years ago, won for us divorcement from the hates, the wars, and the power politics of Europe.

Isolationists and Soldiers

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, August 4 (legislative day of Monday, July 28), 1941

ARTICLE BY WALTER LIPPMANN

Mr. LEE. Mr. President, I have here an article by Walter Lippmann which was published in the Washington Post of July 24, 1941, and which I ask to have inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of July 24, 1941]

TODAY AND TOMORROW

(By Walter Lippmann)

ISOLATIONISTS AND SOLDIERS

As the debate on extending the term of service begins, we need to remember why this new American Army was first called up in the summer a year ago; if it was necessary to raise a large Army then, it is certainly impossible to begin disbanding that Army now.

For a Congress which decided now to demobilize two-thirds of the officers and men of this partially trained Army would be saying that there was no good reason a year ago for raising such an Army. The Congress which called these men into the Army would have wasted 12 months of the lives of these men and immense sums of the people's money; the country would not have an effective Army though the only conceivable justification in the first place for calling up these men was that the country needed a large Army.

The fundamental question, therefore, is why—beginning 12 months ago—the United States has needed a large Army. That is the real question for the men themselves and for their families. They have already made and they are making great sacrifices. Congress ought never to have asked these sacrifices of them unless the sacrifices were necessary. The sacrifices can never be justified unless the result is to produce a good Army. To disband these troops now would be to say to the men that they were not really needed in the first place and that their time in the Army has in fact been wasted. For they would go home, themselves only partially trained, and the country would be left without an effective Army.

The principal bill, namely, the Selective Service Act, for raising a large Army was introduced into the two houses of Congress on June 20 and 21, a year ago. The date is of the utmost importance. On June 13, the French prime minister, Paul Reynaud, had vainly made a final, desperate appeal for help; on June 17, Marshal Petain had asked

Germany for an armistice, and it was clear that not only France, but the French Empire and the French Fleet would give up the struggle. Thus, the decision to ask Congress to raise a large American Army was reached in the very days when Hitler knocked out France—and Britain was left standing alone, her Army driven from Europe with the loss of its arms and the British Isles open to aerial attack and invasion, the British Fleet subject to destruction and capture.

Before these events it had not been seriously suggested that the United States should raise a large Army; after these events there was such an overwhelming popular demand for a large Army that, despite the election campaign Congress voted compulsory service. It was plain to the American people that with the French catastrophe the outer line of defense had broken down, that the threat to Britain was such that the next line of defense might fall, and that we, having only a one-ocean Navy, must at once organize an Army for the final defense of the North American Continent. That is why the Army was authorized and that is why the men are now in the training camps. They have been there since the summer of 1940, because in the summer of 1940 the destruction of the Allied Armies on the Western Front, the capitulation of France and the dire peril of Britain, threatened to leave all the approaches to the Western Hemisphere undefended.

The raising of this large Army is part of the price we have to pay for our foreign policy during the past 20 years. We disarmed. We exerted pressure on Britain and France to disarm. When France was being overrun in 1940, we not only had no arms to send to the French but, owing to the dominance of the isolationist policy, we were unable to give the French any promise of future assistance if from the French Empire they continued the war with their navy.

Had we been able to say to France in June 1940 what we have since then said to Britain, we should possibly be living in a very different world today. With the French Fleet and the Empire in Africa, the Battle of the Atlantic would not be in serious doubt. Italy would probably be knocked out by this time. We should not be anxious about Hitler's march through Spain and Portugal to the Atlantic islands and to Dakar. We should have had Indochina with us instead of its falling to Japan, leaving the Philippines encircled and the southern Pacific gravely menaced.

We should not be feverishly training troops to defend our bases nor getting ready to stand guard in distant places. We are paying a most terrible price today because 12 months ago the United States Government was so paralyzed by the isolationist sentiment that it could do nothing to keep the French Fleet and French Empire from surrendering to Hitler.

It is all very well for the isolationists to present themselves as friends of the soldiers and their families. But the plain historical fact is that men had to be drafted, and that these men now have to be kept in service, because the isolationist policy of this country in June 1940 lost us the chance to keep in being the French Navy and the French Empire and the French colonial Army.

The gap in the defense of the Western Hemisphere, caused by the total loss of the French military and naval power, has had to be filled by a big American Army. Yet there are still public men at large who actually wish to compound this calamitous folly by abandoning Great Britain also and advising her to follow the course of Vichy France. Having learned nothing from a policy which has already compelled us to conscript a large Army and hold it in service, they advocate a course which would compel us to quadruple the Army and never demobolize it.

Even today, with the British Empire fighting, we have not enough trained troops to garrison effectively our own immediate territorial possessions—Alaska, the Philippines, Hawaii, Panama, the Atlantic bases. The more we pursue the isolationist line of letting our natural Allies fall, the more men we shall need in our Army and the longer we shall have to hold them under the colors.

We had to raise the Army because we had to let France fall. We have to keep this Army because the fall of France has left the whole southern flank of the Western Hemisphere dangerously exposed. The more we let the isolationists determine our policy, the more soldiers we shall need for an endless period of time. The isolationists cannot deny it. Do they not say that we must build, but all alone, an impregnable defense of the Western Hemisphere? With what, but with American soldiers, do they imagine that the Western Hemisphere and its outposts can be made a secure base for the air force and the Navy? It is isolationism which has driven this country to raising a great army and will, if it continues, fasten permanently upon the country the burden of an immense army.

Importations of Argentine Beef

EXTENSION OF REMARKS

OF

HON. JOHN THOMAS

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, August 4 (legislative day of Monday, July 28), 1941

STATEMENT BY AMERICAN LIVESTOCK ASSOCIATION

Mr. THOMAS of Idaho. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a recent statement issued by the American Livestock Association regarding the erroneous report that the ban on importations of Argentine beef would be lifted.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Wishful thinking only can be responsible for the despatch from Buenos Aires, dated July 19, stating that "the action of the United States in lifting the ban on the importation of Argentine beef, which was greeted with great satisfaction here, was believed connected with the recent visit to Argentina of a group of qualified American stockmen," according to F. E. Mollin, secretary of the American National Live Stock Association.

Mollin said that the ban against importation of Argentine beef has not been lifted and in his opinion will not be lifted. Apparently, he said, the despatch is based upon the opinion of the Attorney General dated May 16 and released in Buenos Aires on June 27. This opinion attempted to define the Province of Tierra del Fuego as a separate country under the meaning of the embargo provision of the Tariff Act of 1930, and therefore stated that importations of lamb and mutton from this newly defined "country" could be permitted within the discretion of Secretary of Agriculture Wickard.

"The decision when released to the American public by the Argentine friends of our diplomatic officials in the State Department raised such a storm of protest," Mollin declared, "that the Attorney General is now reconsidering it, and after conference with Treasury Department officials, Secretary Wickard announced that the bars were still up and would remain so until he gave official declaration that the embargo against Tierra del Fuego was lifted. Such declaration is necessary according to the terms of the Tariff Act, and since then Secretary Wickard has announced that the matter is now being restudied by his Department along with the reconsideration by the Attorney General's office."

So far as there being any connection between the action of the Attorney General and the visit of the American committee, of which J. Elmer Brock, of Kaycee, Wyo., president of the American National Live Stock Association, was a member, attention should be called to the fact that this committee did not return to the United States until Monday, June 16, a month after the opinion was rendered by the Attorney General, Secretary Mollin said. He added that statements by members of the committee since their return have been to the effect that they were convinced that the foot-and-mouth disease in cattle in South America constitutes a real threat to the health of our livestock.

Foot-and-mouth disease was found wherever cattle were found in Argentina, according to advices from President Brock, Mollin said, and he and the other members of the committee were unanimous in the opinion that the sanitary embargo, long maintained against Argentina and all other countries—some fifty-odd in all—which harbor foot-and-mouth disease, should be maintained in full force and effect, and they so advised Washington officials immediately upon their return to this country.

The committee found, according to President Brock, that not only was foot-and-mouth disease prevalent, but that cattle and sheep scab were common and that little effort was made to control any of these diseases and no effort to stamp them out.

Another member of the committee, Howard Hill of Iowa, said that the party saw evidence of foot-and-mouth disease on every one of the cattle ranches visited in Argentina, Uruguay, and Brazil. He furthermore said he saw no evidence of any effort to control the disease. "One operator of an estancia in Uruguay told us that we should take every precaution against the disease if our cattle are now free of it," he said. Harry Terrell, also a member of the 5-man committee, agreed with Hill's remarks.

Dr. T. W. Schultz, another member of the committee, said that "the Argentine leaders must be confronted with the facts of foot-and-mouth as a disease. They need to be told to quit talking discrimination and get to work and clean up their disease-ridden, infected herds. They have done and are doing nothing."

The executive committee of the American National Livestock Association, meeting in Colorado Springs on Saturday, July 19, after listening to a detailed explanation by President Brock of his trip to Argentina adopted a resolution declaring that the opinion of the Attorney General "violates the plain meaning of the Tariff Act of 1930, is contrary to the long-established policy of our Bureau of Animal Industry, and establishes a very dangerous precedent."

The resolution ended in this fashion: "Resolved, That we condemn this effort as a subterfuge to break down the sanitary embargo by administrative action, though the matter of the Argentine sanitary convention is now pending before the Senate Foreign Relations Committee; and be it further resolved that we deplore the tactics employed in allowing the facts of the action taken to become known here only by press despatch from Argentina many weeks after the opinion was given."

"The misleading, inaccurate statement referred to, similar to many which have emanated from Buenos Aires," Mollin declared, "indicates that Argentina will go to any length in attempting to force beef from territory infected with disease onto the markets of the United States."

Obligation to the Public of Motion-Picture Producers

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 4 (legislative day of Monday, July 28), 1941

ARTICLE FROM WASHINGTON TIMES-HERALD

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the RECORD an article appearing in the Washington Times-Herald on July 31, 1941, entitled "The Public Wants Entertainment and Not Propaganda."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of July 31, 1941]

IN THE NEWS—THE PUBLIC WANTS ENTERTAINMENT AND NOT PROPAGANDA

Moving-picture producers are wondering what is the matter with the moving-picture business.

Mr. Will Hayes has told them, and told them truthfully.

The facts are that, as a rule, the producers are making pictures for their own gratification and not for the enjoyment of the public.

Consequently, the producers are seeing the pictures and the people are not.

Mr. Hays very frankly says:

"When the public lays down its money at the box office it is primarily for entertainment.

"Those who demand that the screen subordinate its wholesome function of recreation for any cause, however sincere, are sadly mistaken. Significance is not achieved at the expense of entertainment.

"There are those who would use the screen to bemuse rather than to amuse the American public.

"The screen has no room for such propaganda."

This columnist has often ventured softly to intimate the same thing.

But, in the first place, he does not speak with the authority of Mr. Hays.

And in the second place, while he is modestly and moderately interested in the cinema business, he is primarily a publisher and nobody is supposed by moving-picture producers to know anything about popular taste and sentiment except moving-picture producers.

The fact that they have fallen off their high horse of infallibility with some force and frequency does not alter this opinion of theirs in the slightest degree.

It is not pleasant to level even the gentlest and kindliest and best intentioned criticism at fine people and close friends—especially when you sympathize with their sentiments and appreciate the naturalness and reasonableness of their impulses.

But moving-picture producers, like publishers, are in the business of serving the public and must consider the desires and feelings of the public, and also must consider the essential objectives of their industry.

The primary purpose of the moving picture is to entertain the public—to instruct and uplift the public, too, in cultural matters, but not to force down the public's throat a lot of preachment and propaganda which interest the producer but do not interest the public—which express the intense feelings and earnest advocacies of the producer, but which are not welcomed by the public and are often silently but deeply resented.

Speaking as a publisher, this columnist would assert without qualification that if newspapers and magazines were conducted on a similar basis they would not merely have "something the matter with them"—they would cease to exist.

A newspaper, for instance, has a department for the expression of opinion and usually in that department there is a variety of opinion from various contributors.

An editor who is halfway entitled to the name knows that he has to keep the news free from the color of his correspondents' opinion or his own opinion.

The plan and purpose of 95 percent of the space of his paper is to interest and inform and entertain his readers.

The remaining 5 percent of his space is to tell his readers what he thinks but also what other people think.

He must be fair.

He must be impartial.

He must be accurate even in his department of opinion.

Otherwise he has no influence.

And worse than that—otherwise he has no interest.

The screen is even less didactic than the magazine or the newspaper.

Its primary object, its function for which it receives public support, is entertainment.

The moving picture is presented to the public for the most part in the late afternoon and in the evening.

The people, weary from the day's work, go to the picture theater for relaxation—for entertainment and amusement.

Mr. Producer, they do not care what your opinions are, they do not want to be bored by them.

If the people do not want to read the opinions of a newspaper and its varied contributors they can turn to another page, but if they do not want to listen, look, and be bored by your opinions all they can do is to stay at home—and that they are doing to an entirely unnecessary degree.

You, Mr. Producer, are using your great medium of entertainment and cultural uplift for much less worthy purposes and for much less acceptable product.

You are dulling the edge of your fine and useful blades.

You are using your razor as a can opener.

It is a definite mistake.

Mr. Hays is emphatically right.

You will ruin your razor.

You are likely to cut a thumb off in the process and after all is said and done you are not going to be able to open the can.

The people are not going to be influenced by your propaganda or by anybody else's.

The whole country has been saturated with propaganda for a year.

Millions of dollars—yes, billions—have been spent to try to influence the American people into war.

Yet, according to every poll that has been taken, some 80 percent of the people have been on every occasion and still remain absolutely and obstinately opposed to war.

As a matter of fact, the people are getting sore about the matter and incensed at any individuals or agencies that try to get them into war.

In this situation you, Mr. Producer, come along with your propaganda—and not very subtle propaganda—and invite the full force of public dissent and displeasure.

Maybe your columnist is wrong, but not through any lack of kindly interest and good will.

Maybe Will Hays is wrong, too.

But he is a pretty wise guy and you retain him to advise you intelligently, and this he has consistently done.

Yes; we all realize that you know your business and that you know better than anybody the tastes and requirements of the public.

We are all willing to admit that you may be right.

But if you are right, for goodness sake, stop "bellyaching" about the troubles of the moving-picture business.

If you are the doctors, cure the patient.

Importations of Argentine Beef

EXTENSION OF REMARKS

OF

HON. JOHN THOMAS

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, August 4 (legislative day of Monday, July 28), 1941

EDITORIAL FROM AMERICAN CATTLE PRODUCER

Mr. THOMAS of Idaho. Mr. President, I ask permission to have inserted in the Appendix of the RECORD an editorial from the American Cattle Producer relating to attempts being made to avoid the ban on importations of Argentine beef.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the American Cattle Producer of August 1941]

TIERRA DEL FUEGO

For several months past the ingenious diplomats of the Argentine Republic have been racking their brains for some new subterfuge by which to evade, partially at least, the plain intent and purpose of the embargo provision of the Hawley-Smoot Tariff Act. From past experience they know that they have only to suggest it to the international ring in the State Department to have them accept it as their own.

The most astounding idea they have yet hit upon was that Tierra del Fuego, the island province of Argentina which lies just across the Strait of Magellan from the mainland, was a separate country and that therefore it was entitled to separate treatment under the embargo provisions of the tariff act. Accordingly, the idea was passed along to the State Department, which, of course, true to form, accepted it, and immediately the wheels of the governmental machinery were put into motion to grind out an opinion from the Attorney General in line with the suggestion of the South American diplomats. This opinion, written on May 16, did not come to light in this country until June 27, on receipt of a dispatch from Buenos Aires.

To say that the livestock industry and the country in general were amazed is to belittle the word. While we have known that the State Department has worked hand in glove with Argentine representatives in an effort to find some way to break down our tariff barriers and our sanitary embargo, up to the present time they have confined themselves within the limits of existing law, and this is the first time the law has been openly flouted and a device employed which to say the least is a shady one.

When the storm first broke in Washington, Acting Secretary Welles hastened to announce that this method had been taken to heal Argentina's wounded pride, and that actually there would be no importations of lamb from that province. A few days later, however, Argentina advices indicated that some 9,000,000 pounds of lamb and mutton were awaiting shipment to the United States, and in 2 or 3 weeks came information from other Argentines expressing their glee at the raising of the ban against importations of beef. It has never been claimed that there are any export cattle in Tierra del Fuego, and hence the dispatch just referred to probably gives the key to what is really in their minds.

When President Brock, of the American National Live Stock Association, returned from Argentina there were frequent discussions on the boat with an attaché of the Argentine Government. During one of these discussions a young Argentine headed for the United States to attend college observed that what they most wanted was to have some spot in Argentina declared clean. As he naively put it, "We want some place that we can ship our cattle so that they can be exported to the United States."

A group of influential western Senators immediately rallied to the defense of the livestock industry. They have protested vigorously to Secretary Wickard, to Acting Secretary Welles, to the Attorney General's office, and to Dr. John R. Mohler, Chief of the Bureau of Animal Industry. Their protests have been actively supported by representations made in Washington by Secretary Mollin and by communications which are going to Washington daily from livestock associations, sanitary associations, and many individual stockmen.

As a consequence, the Attorney General's office has announced that on the basis of new information received the matter is being reconsidered, while Secretary Wickard announces he is restudying the matter. In addition, it is now clearly understood that the bars are still up and that no importations will be accepted from Tierra del Fuego until Secretary Wickard officially notifies the Secretary of the Treasury that this particular province is not infected with foot-and-mouth disease and that it is safe to accept shipments therefrom. In view of the fact that we are advised that beef is being shipped to Tierra del Fuego for consumption from infected portions of Argentina and that bucks for breeding purposes are likewise shipped to southern Patagonia and Tierra del Fuego from infected herds, it seems unlikely that Secretary Wickard will run the risk of declaring Tierra del Fuego a clean territory.

It would seem that this foolishness has gone about far enough. For weeks propaganda was kept up to show that Argentina was in a desperate condition due to restricted shipping outlet caused by the war. The Brock committee has definitely proved this propaganda to be false. The coolers in Brazil, Uruguay, and Argentina were all practically empty, according to the committee's report, and packers had to ride far into the hills to secure beef for urgent European and African contracts. It is therefore clearly apparent that Argentina has deliberately tried to make capital of the war emergency as a means of breaking down our sanitary embargo and that the State Department international ring has worked closely with them in the attempt.

Argentina's purpose is clear. The United States market is well above the English market, and the Argentines would naturally prefer to sell where they can get the most money. The industry in Argentina, however, is and has been prosperous in recent years, much more so than here in the United States for the same period of time. There is no least excuse for the tactics that are being employed to break down the sanitary embargo. On the contrary, it seems inconceivable that responsible officials with the welfare of this country in mind (even if they have no consideration for the livestock industry) would deliberately run the risk of contaminating our herds and flocks with foot-and-mouth disease at such a critical time. Whatever obligation we owe to Argentina in connection with the emergency hemisphere defense plans is an obligation of the entire United States. It cannot and should not be met alone by the livestock industry.

We have not previously referred to the fact that the effort is a deliberate violation of the clear understanding given to the legislative committee of the American National Live Stock Association last February when the famous canned beef deal was made. We deplore this breach of trust. What has Argentina done for the United States that the State Department can afford to break faith with the livestock producers of this country and to run the risks involved as shown above?

Secretaries Stimson and Knox

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, August 4 (legislative day of Monday, July 28), 1941

EDITORIAL FROM THE CHICAGO DAILY TRIBUNE

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent that an editorial from the Chicago Daily Tribune of August 1, 1941, entitled "Stimson and Knox Should Get Out," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Daily Tribune of August 1, 1941]

STIMSON AND KNOX SHOULD GET OUT

Secretary Stimson of the War Department has apologized to Senator WHEELER for saying that the Senator was "near the line of subversive activities against the United States, if not treason" in sending out anti-war post cards, some of which were forwarded from home addresses to men in the Army.

Senator WHEELER, when defamed by intolerable reflections upon his loyalty, explained to the Senate that the names of the persons to whom the cards were sent were obtained from a commercial firm and that the matter was prepared before the question of the military term of service was raised. Mr. Stimson had accused the Senator of addressing the soldiers directly and thus spreading discontent in the Army. The Senate gave the Senator from Montana a demonstration of its confidence in him and it gave Mr. Stimson a demonstration of its lack of confidence in the Secretary of War.

There is a story in Washington that Stimson was guilty more of being a chump than a maligner. The statement he issued regarding WHEELER is reported to have come out of the White House and to have been written by Stephen Early of the secretariat. If that's true, then Stimson was only the proxy voice as he has been on occasions before. He was the tool for scandal. The episode should close the career of the present Secretary of War. No one in the Senate would undertake to defend him. He is an ineffective and unwise old man.

Stimson was appointed to the War Department just as Frank Knox, the other Republican, was appointed to the Navy Department, as a part of the political conspiracy topped off by the nomination of Wendell Willkie to make the phony campaign against the third-term candidate.

Mr. Roosevelt was trying to create the impression that there was only one ticket in the election and that was truer than the people at the time knew. They didn't know that he had a proxy on the Republican ticket, although they could see through the trick of putting two Republicans in his Cabinet as he was about to break down the limitation of tenure in office.

Vanity or other motives prompted these two ancient chair warmers to disregard their party in their declining years and carry their infirmities of judgment into two important posts which neither was at all competent to fill. Their incompetence didn't disturb Mr. Roosevelt. Incompetence never does.

Both these ancient political relics of a discreditable episode should resign. Stimson is a serious handicap to the Army which Mr. Roosevelt is trying to send into the war he is determined to have, and Knox—who was a part of the Willkie nomination conspiracy—doesn't know a battleship from a shuttlecock. He is making the Navy ridiculous.

Mr. Roosevelt is fishing in troubled waters. He should have a real Secretary of War and a real Secretary of the Navy. He needs more than phonograph records of White House speeches in both jobs.

Sale of Aluminum to Russia

REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. JOHNS. Mr. Speaker, I crossed this country 2 or 3 days ago and in every city I saw piled up scrap aluminum that the Boy Scouts and the women of this country have gathered together because there is a supposed scarcity of aluminum.

I call your attention to a brief statement in the Evening Star of last Saturday from Richmond, Va., in which Mr. Lewis Reynolds, vice president of the Reynolds Metals Co., states that he has sold 2,000,000 pounds of aluminum to Russia because he had no means of disposing of it, and he sold it for less than the regular price.

I hope that all Members will read this article, which is as follows:

[From the Washington Evening Star of August 2, 1941]

REYNOLDS PLANE TO SELL RUSSIA 2,000,000 POUNDS OF ALUMINUM

RICHMOND, VA., August 2.—J. Louis Reynolds, vice president of the Reynolds Metal Co., said today negotiations for sale of approximately 2,000,000 pounds of aluminum to Russia had been completed except for approval by the Office of Production Management and the State Department.

The metal, originally destined for France, has been stored in New Jersey since June 1940.

The Reynolds company repurchased about 3,000,000 pounds of the aluminum after the fall of France and sold about one-third after circularizing its customers and asking the O. P. M. to circularize prospective buyers. The metal was offered, Mr. Reynolds said, at prices below the company's regular price lists.

The 2,000,000 pounds sought by Russia is worth approximately $500,000 and is sufficient to make about 200 medium-size bombers, Mr. Reynolds said.

The company, which has expanded its facilities for the production of aluminum during the past year will be turning out finished aluminum at the rate of 15,000,000 to 17,000,000 pounds a month by this time next year, compared to about 4,000,000 pounds produced last month, the vice president said.

Price-Control Legislation

REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. PLUMLEY. Mr. Speaker, I do not pretend to be a political economist, but I have read a lot and seen a lot and heard a lot about price control and the attempts which have been made to enforce it since days beyond which the memory of man runneth not to the contrary. It never has worked well. Attempts to enforce it have been responsible for bloodshed and revolution time and again. It will not work alone.

As a remedy for the ills of the body politic, price control alone is as effective as a mustard plaster on a gas heater. It may cover a hole or stop a leak temporarily, tell it is dried out and tried out, but it is too late when it has to be offered as a remedy. The patient will not respond.

The proposed price-control law is no answer to the inflation problem. Standing alone it will not solve anything much.

That there can be no price control without wage control is too elementary and axiomatic a proposition to require demonstration. To say that we can avoid direct control of wages is wishful thinking. It is the only way an upward tendency of costs can be controlled. A general advance in wages, like an advance in the cost of living, means general inflation.

It is one thing to enact a law and two things to administer and enforce it. A lop-sided law falls as it trips over its own feet, and it gets nowhere except into trouble.

The time to think about price control and inflation was 6 years ago, when anybody who could see a hole through a ladder could see where we were headed. We tried to stop it, but the people were more interested in living off the Government than in prolonging their expectancy. I could take malicious pleasure in saying "I told you so" were it not for the millions of innocent taxpayers who are now about to be led to slaughter.

Realizing that if there is to be price control, the tax base must be broadened, and the taxpayers within the lower-income brackets must be included, the President so advised the Ways and Means Committee, whose first concern seems to be to find the easiest way to raise the necessary money, regardless of possible economic effect and notwithstanding the fact that the proposed bill leaves 95 percent of the people free of direct taxation. The committee's bill avoids taxation of ncome in lower-income brackets and centers tax increases on present payers. It is unjust and inequitable, but so are all tax bills.

There will be another bill. There will have to be.

The attempts of the committee to justify the inclusion of joint returns of man and wife are not convincing. To an old administrator of tax laws it would seem, practically, that if they were not killing, they were at least maiming, the goose "that lays the golden egg" and making her squawk.

There will be a tomorrow and a day of reckoning.

But to talk about price control, let me say that what the President did not suggest was the fact that if prices are to be controlled, so also will wages have to be, either by the same or another control board or authority. In fact, we are assured that there will be no attempt to freeze wage levels or to fix wage rates. There is to be a bar to fixing of major farm prices under parity.

Now, we can try to sail head-on into and against the bitter wind of experience if we will, but just as sure as fate we will be blown out of the water, wrecked, and economically sunk unless we realize that price control and wage control go hand in hand. It is probably true that either prices must be controlled or "the country will experience a runaway inflation." If control is the ultimatum, the runaway is on the way.

To attempt to control prices and not to control labor costs involves economic consequences of the most far-reaching nature and grave disturbance of the social order in time of peace or in time of war. Price control without wage control just will not operate, except disastrously, in a democracy any more than in an autocracy. The control of either should never be delegated by Congress to anybody other than to a committee of its own creation. Such action as is taken or had should be that of the people through their representatives in Congress, who should reserve to Congress, as such representatives, complete control, in the final analysis, of the attempt to exercise control of either or both prices and wages.

We are facing an inflation that has been superinduced by the foolish and unwise policies of this administration, but that does not relieve us from our responsibility to save ourselves insofar as it may be possible so to do.

Is price control a way out? Not without wage control, and possibly not then. We could broaden the tax base as has been suggested. Why not? No real satisfactory answer which takes into consideration our economic situation from all angles has been offered by anybody.

"Full control of prices or inflation" should read "full control of prices and wages, and inflation anyway," but possibly modified. There is no use trying to fool ourselves or in being fooled any longer.

That the proposed price-control law, when and if enacted, will not of itself "be an answer to the rising inflation problem; will not solve anything much," was well said by the man or men who are responsible for the column in the United States News called Trend of American Business. It is the truth.

Facing Facts

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

Mr. HOFFMAN. Mr. Speaker, under the caption "Facing facts" or "Being realistic," we are often told that, if England falls, America will be next and that, to save ourselves, we must give every possible aid to England. Those who so suggest often mean that we must send an armed force to aid her wherever her rulers may think we can help.

The war party in Washington and elsewhere tells us that we are lost unless we destroy Hitler and while, up to this time, they and the administration have denied that they intend to send an armed force to Europe, that denial stands contradicted by the facts.

Let me repeat just what three British spokesmen recently said. A Member of Parliament, Mr. Wedgwood, of Wedgwood crockery fame, here to sell the war and crockery to us, after stating that we were in the war "up to our necks" and that we better get a sensible Congress and get going, said, "The trouble with you Americans is that you are afraid to assume responsibility," and then said that this war was our war.

On July 4, last, the United Press contained this statement:

Gen. Sir Archibald P. Wavell, British commander in chief in the Middle East, was quoted as follows in an interview at Cairo with Harold Denny, of the New York Times: "Can you win the war without America's full-scale participation?" General Wavell answered with a slow shake of his head, then

he said, "We shall have to have airplanes, tanks, munitions, transport, and finally men."

"When?

"The sooner the better," was the reply, "but that depends on when you are ready, doesn't it? I suppose when you get into all-out production you will be able to equip any number of men for anywhere in the world."

On July 7, the United Press contained the following statement:

Lt. Gen. Sir. Claude Auchinleck, new British Middle East commander, said that American manpower eventually would be just as necessary "to win the war properly" as it was in the World War.

The administration intends to build up an army to send wherever Britain may demand.

So let us face facts. Let us be realistic and let us decide whether we would send a million or more American men to fight under a British board of strategy in Iceland, in Russia, to invade Germany, to maintain British interests in China.

Nothing is gained by dodging the issue and the only question should be how can we best defend America. It is my contention that we can best defend America by preparing for national defense here, by conserving our resources, including manpower, by putting our manufacturing plants in order, by making our Navy, if possible, invincible, and by ringing our homeland with airports and weapons of defense, including aircraft.

THIRTY-FIVE MILLION DOLLARS

Enthusiastically the House passed the $8,000,000,000 so-called defense bill, which included $35,000,000 for a building for War Department employees in Virginia. Inevitably, this must be followed by appropriations of other millions for either housing for such employees or a bridge or tunnel across or under the Potomac. Sober and second thought, induced someone in the administration to now suggest the size and cost of the building be reduced by half. Sometime Congress may learn that first things should come first, especially when war confronts us.

WHEAT

Wheat farmers who complied with the A. A. A. program are pledged to plant a specified number of acres. Where farmers sowed acreage in excess of the agreement the law requires the payment of a penalty of 49 cents a bushel, even though the yield was no more than what might normally have been expected from a quota acreage. The Senate passed an amendment to waive the penalty on all wheat up to the normal acreage production limit when the excess wheat was used on the farm for livestock feeding or other farm purposes.

COTTON

As a result of the Government cotton program the Government has become the owner of something over 6,000,000 bales of cotton. Do you know that since the second World War the price has gone up, but when the Government began to sell its stored cotton the cotton growers protested, and the Senate approved legislation prohibiting the sale of this Government cotton during the European war? So once more the taxpayers will hold the bag on the Government cotton purchases.

THE TAX BILL

While everyone else is being taxed, the Government again extends special privileges to labor unions. The Naval Affairs Committee recently sent out questionnaires, and from the replies received—105 from A. F. of L. and 45 from C. I. O.—it appears that on September 1, 1939, the total assets of these unions was $38,161,000. On March 31, this year, and undoubtedly because of the national emergency, the strikes to which support has been given by the present administration, and the organizing campaigns carried on in national-defense industries, the total assets had increased to $42,000,000—$11,000,000 of which, or 12 percent, was an increase in the assets of the A. F. of L. and $4,182,000, or 64 percent, was an increase shown in the assets of the C. I. O.

Just why these millions should escape taxation when every other business or industrial corporation, and practically every individual pays, in some form, a tax to the Federal Government, will not be understood by the average citizen. This special favoritism is understood by some of us here in Washington who know that, in return for favors granted, some unions, like the C. I. O., which contributed more than $700,000 to one of Roosevelt's campaigns, enthusiastically support the administration, which in turn extends favors, through the N. L. R. B., the National Defense Mediation Board, the Labor Department, and now the Treasury Department, to the unions.

In Memoriam—M. Michael Edelstein

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1941

RADIO ADDRESSES OF HON. SAMUEL DICKSTEIN, OF NEW YORK, AND EMANUEL LEWIS GREENE

Mr. DICKSTEIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio addresses of Emanuel Lewis Greene and myself over station WOV, July 27, 1941.

BY THE CHAIRMAN, EMANUEL LEWIS GREENE

I should like to express my heartfelt thanks to this public-spirited radio station, WOV, for granting its facilities to the M. Michael Edelstein Memorial Foundation. But while thankful, I cannot say that it gives me great pleasure to be present on such an occasion. I should prefer, as would millions of others, to be paying honor to the living Michael Edelstein. There would be such tremendous satisfaction if I knew, that after the various speeches, I'd be able to walk over to one whom I was honored to call friend, and say, "You're doing swell, Congressman." There's nothing in this world I'd rather be able to do. But, if that's to be denied me, I must not let grief blind me to the great work that lies ahead. Although I am most humbly aware of my many limitations, I accept the trust placed in me by the Congressman's army of admirers who earnestly desire that "he shall not have died in vain."

I had the great privilege of assisting the Congressman while he was among us. How much work he took upon himself, how much responsibility he shouldered, how unquestioningly he gave of himself beyond the requirements of his office, how unstintingly he served his fellow man beyond the confines of a district—all this I saw. And my heart was heavy as I realized that no creature of flesh and blood could long stand such a grueling pace. My mind was troubled as I saw this great man, this unselfish servant of the people, ignoring his own needs in his concern over the needs of his fellow man. I pleaded with him to show himself a little consideration—to relax, if only for an occasional week-end. But instead of resting, he poured out to me all that rankled in his heart. He pointed out the dangers that were menacing the Nation. Under such conditions, he refused to spare himself. These troubled times, he said, called for eternal vigilance, without which liberty is a hollow shell. With such turmoil in his heart, no wonder my pleas fell on deaf ears. The Congressman drove himself harder and harder—and liberty's gain is our loss.

Death may have cut short his career, but there is no reason for it to affect the influence for good which motivated his every act. Such a person as M. Michael Edelstein doesn't really die; in the ultimate significance of that word, "life," he remains as vital in the spirit as ever he was in the flesh. Only now, in the face of his premature departure, the fulfillment of his ideals is left to other hands. To be entrusted with any part of the cause to which he gave so fully is a privilege which we, the survivors, accept with profound humility. May we, the living, prove worthy of his great sacrifice.

As the means of best perpetuating his principles and ideals, the many admirers of the late Congressman have founded the M. Michael Edelstein Memorial Foundation, to raise a fund to be used for the betterment of human welfare. There can be no more fitting tribute to the man whose untimely passing has been such an irreparable loss to his family, his friends, his congregation, his profession, his constituents, his Nation, and, beyond that, to all believers in democracy and tolerance. God grant that our combined efforts should not fall too far short of the glorious goal that M. Michael Edelstein had set for himself.

We have with us this evening one who was close to the late Congressman, one who fought side by side with him in the legislative halls of our Nation, and one who will see that his ideals will gain strength and momentum toward that better United States of America which we all envision. I know that you are eager to hear from one so eminent. Therefore, ladies and gentlemen, I proudly present the Honorable SAMUEL DICKSTEIN, Congressman from New York City's Twelfth District, who came here especially from his many labors in Washington, D. C., to tell you about your friend, our friend, and liberty's friend, M. Michael Edelstein:

If ever a man deserved the admiration of his fellow citizens for his sincerity and devotion to duty, such a man was Michael Edelstein, a man who gave his life as a martyr to the cause of tolerance, liberty, and democracy.

Mike Edelstein was a product of the East Side of the city of New York. It was here where he grew up, and it was here where he came in contact with the many citizens from all walks of life who came to him for assistance. His life centered around his district, and in the democratic club of his district he would receive callers all day long, and far into the wee hours of the morning. People came to him with all kinds of trouble, both personal and business.

He was a lawyer by profession and, as such, was familiar with human life from all of its angles. The same knowledge of human life which he obtained in his profession he put into practical application, in his conduct in the club.

Mike Edelstein was one of the best-known men in the city. Representing as he did the many poor people who came to him for assistance and guidance, he necessarily enlisted for their support many men who were high up in the life of this community. Judges, Governors, even the President of the United States received calls from Mike Edelstein on behalf of his constituents. Mike was tireless in his work, conscientious in his duties, persistent in his efforts. It was because of the combination of these qualities that he was able to accomplish for his constituents all the good which he brought into their lives.

Mike Edelstein came to Congress only a year or so ago, but with the background of his work and attention to the duties of a district leader. He conducted as a Congressman the same work which he had been engaged in for years, helping the poor and unfortunate, and making their lives easier.

When accusations were made against the people of the Jewish race, Mike Edelstein could not let them go unchallenged. He took the floor. He branded as fabrications this slander against the Jewish race. He became indignant. He grew eloquent and finally collapsed and died.

There had not been many people of such character and sincerity. Michael Edelstein is a shining example of devotion to truth and making the supreme sacrifice in the cause of truth and justice.

I hope that Edelstein's death was not in vain. I hope that by taking the floor in defense of his people he was able to convince this country of the falsity of the charges which were leveled against the Jews. Michael Edelstein proved by his life and achievements that just as he was sincere and loyal, so was the people he represented. He proved by his devotion to duty that other men of his race are likewise devoted to duty. He proved by attacking injustice that others of his race will not tolerate any injustice. He proved by his ability that others as able as he are ready to take up the torch where it was dropped.

Let us pause for a moment and discuss the feelings of the average American as he is stunned by the death of this great leader. The American Commonwealth was founded on the principles of life, liberty, and the pursuit of happiness, and on the principle that all men are created equal. This is a community which makes no distinction of race or religion, a community which gives to its citizens equal protection of the law.

Every fair-minded person knows that there is no truth or substance or any intelligent basis for the many anti-Semitic charges leveled against the people of the Jewish race, and particularly the Jewish citizens of the United States. In times of stress, when governments are on the lookout for scapegoats, some group or particular people are singled out for persecution. When Germany lost the war the people of that country sought to fasten the blame for it on the inoffensive Jewish population of Germany, and in times of economic stress the Jews have been blamed in many countries of the world as being responsible for the misfortunes of others. But just because blame is cast upon one race, it does not mean that fair-minded people should follow this type of propaganda. It surely has no place in the United States which is erected on the principles of American equality, and which boasts of being the haven for the oppressed from all lands.

At the end of the World War people from many countries came to this country to escape persecution, and we have extended a welcome hand to refugees from many lands enabling them to become American citizens and partake of the blessings of American liberty. Men like Edelstein have labored for the welfare of all races, and in the congressional district which he represented one could find inhabitants of many racial strains. Mike Edelstein gave his services to humanity irrespective of race, and it did not make any difference to him what a man was as long as he was honest and law-abiding and devoted to American institutions.

In honoring the memory of Congressman Edelstein, we honor the memory of a champion for truth and justice. In a democracy like ours we must never forget that only by following the dictates of truth and justice can liberty prevail. Nations have lost their liberty because they were not vigilant, and because they took their democracy for granted. We cannot do so. We must learn that it is necessary to speak again and again without let-up about the blessings of American liberty, if we wish to preserve this race for our children and there descendants. We must not forget that bigotry and intolerance will raise their heads from time to time and seek to engulf our democracy in trouble. Whenever such a situation should arise, men like Mike Edelstein will come to the fore and proclaim to the whole world that America is not only a country based upon liberty but a country which will forever protect and preserve this Nation.

Price-Control Legislation

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

LETTER OF HON. RICHARD M. KLEBERG, OF TEXAS, TO THE DEPARTMENT OF AGRICULTURE

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by the gentleman from Texas [Mr. KLEBERG] to the Department of Agriculture:

JULY 31, 1941.

Mr. GROVER C. HILL,
Assistant Secretary, The United States Department of Agriculture,
Washington, D. C.

DEAR GROVER: Enclosed you will find copy of a telegram sent to me and signed by some good friends of mine and which is self explanatory.

This telegram is merely one of a great number of communications from farmers, ginners, and interested citizens in my district concerning their feelings with reference to the price-fixing recommendations recently sent to Congress by the President. Their uncertainty is occasioned primarily because of the change in conditions which render the original parity figure both obsolete and unfair with reference to cotton in particular.

I am transmitting the message to you and through you to the proper authorities in the Department of Agriculture, with the hope that that great Department will do its part on behalf of the farmers.

The maintenance of good credit on the part of the Government of the United States is of most vital importance today—now, more than ever before, and the most important stone in the foundation which supports the entire credit structure, both private and governmental, is made up of those elements which contribute to the maintenance of the proper balance between the earning power of real property and its evaluation for taxable purposes and for purposes of collateral. Unless something is done to maintain a reasonable earning power at least a little above cost, the farmers of the Southland will be unable to meet their land notes.

This was exactly the situation which finally occurred in Germany, and was the basis for Hitler's rise to power. As a student of government, I am considerably alarmed over the inevitable results of trends such as the one reflected by this telegram, as I have already said.

If you will check up on the liquidation of the Landshaft Banking System (this was the farm credit system which was set up in Germany) you will find that government money took the place of money of the members and stockholders in this system. In short, the Landshaft Banking System was turned into State capitalism and made the German Government the holder of enforceable liens on approximately 95 percent of the real property in Germany. When this was accomplished, Hitler rose to power and took charge.

At this juncture, I want to assure you, and whoever may read this letter that there is no intention contained herein, or in my mind to charge anyone with predetermined or deliberated effort, looking toward the establishment of a socialistic state, or to convert our government from a representative democracy into any one of the various forms which are referred to, for brevity's sake, as "isms."

Keeping this in mind, however, you will doubtless recall that in 1940, a bill came before the House Committee on Agriculture, known as the Wheeler-Jones Bill, which had for its purpose the lowering of interest rates to the farmers of America below those now available through the Farm Credit set-up The authorship of this piece of legislation is known to me, and here, again, I repeat I make no accusation.

I must point out, however, that this bill to attain the low interest rates, provided for the outright purchase of all stock (in agricultural loan associations and Federal land banks) by the Government, to be paid for by appropriation out of the Treasury of the United States.

At the time this bill was drafted I am sure that its authors and backers did not realize that this procedure set up a system of state capitalism in the Farm Credit Administration.

The reason that this plan (without regard to its mechanics) was considered and presented is found in the then low prices for agricultural commodities and the consequent inability of the farmers to meet their interest on their notes or make payments on the principal thereof. In short, the earning power of the farmers in the use of their property was below the requirements of the collateral which they gave for credit extended to them.

Now, with reference to the telegram, it should be perfectly clear that the parity price or figure used during the consideration and enactment of the Agricultural Adjustment Act is today obsolete because of mounting costs in the field of production of articles which the farmer must buy if he proposes to live as other folks, under our present-day American standards. For instance, there has been no ceiling whatsoever proposed with reference to the wages of organized labor. There has never been any serious contention that their demands for increases might be unreasonable, even though in many instances they have been made without reference to the industry which employs them.

The wages of money are generally referred to as interest, which, like the wages of labor, can be too high just as readily as they can be too low. The maintenance of a living wage by dispassionate assay as a part of the general picture is equal in importance to the maintenance of a fair and just interest rate in a nation where so much depends upon credit. So that, old friend, in this appeal to you for assistance, I am hoping that the great Department of Agriculture will remem-

ber that, with reference to cotton, for instance, the parity figure to be set, if the price-control legislation goes through, must in all events be at least 20 cents. There should likewise be, in my opinion, some elasticity, permitting in the case of unpredictable events, such as a still greater increase in costs, which would permit the price-fixing administration to increase the price up to 22 cents.

I hope that the Department will back us up if this legislation goes through. Personally I have very serious doubts concerning either its wisdom or soundness.

With every good wish and the highest of personal regards and confidence, I am, as always,

Sincerely your friend,

RICHARD M. KLEBERG.

John B. Kelly

EXTENSION OF REMARKS

OF

HON. JAMES P. McGRANERY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

TWO EDITORIALS

Mr. McGRANERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

RIGHT MAN FOR THE JOB

President Roosevelt, acting through Director of Civilian Defense LaGuardia, has picked the right man in appointing John B. Kelly as director of physical training in the Nation's civilian defense program.

Kelly is familiar with the need to "toughen up" America for national defense. Last fall the President asked Kelly to map a program for improving the national health. His recommendations were accepted by the President, although pressure of other duties kept the President from acting upon them.

Kelly is ideally suited to the job. One of the Nation's greatest athletes, he is at the same time an able organizer. Champion Olympic oarsman, war veteran, businessman, he still has found time to serve the community as Pennsylvania Secretary of Revenue and as chairman of the Democratic City Committee—a position he is now forced to yield for his new task.

And he exhibits the kind of health all of us would like to have. At 51, 21 years after he first won an Olympic rowing championship, he is still in perfect physical condition. He still rows regularly, plays golf and handball.

We wish him luck in making America strong for defense and for civilian life as well.

A CHAMPION ATHLETE FOR THE JOB

Both his business and political careers give Democratic City Chairman John B. Kelly valuable experience and background for his new job as national director of physical training, to which he has been appointed at the instance of Mayor LaGuardia in his capacity as Director of Civilian Defense.

But besides the organizing abilities Mr. Kelly undoubtedly possesses, he has an equally valuable asset. Past 51, there are few men anywhere near that area of life who can so well measure up to the athletic ideal as Jack Kelly. As a matter of fact, there are many younger men who might envy Mr. Kelly his present condition of health and fitness.

There is ample justification for his own comment yesterday that the health of young men in America is "in a shocking condition." The draft figures eloquently demonstrate its truth. Some facts of Jack Kelly's own life attest that this needn't be so.

By his own account he was a skinny youth when he became interested in rowing and got his chance to learn how on the Schuylkill. But the Kelly who became world champion oarsman was no stripling. He was 31 years old when he swept over the line at Antwerp, in 1920, ahead of Beresford, winner of the Diamond Sculls, and clinched his world title.

Mr. Kelly is stepping out of politics "for the duration." Even his opponents, who have admired his fighting qualities and his sportsmanship, may look upon that with greater regret than Mr. Kelly himself may feel. But he is taking up a task of immense usefulness.

It is one that calls for the qualities of a champion. The President and Mr. LaGuardia made a good choice.

Congress Should Awaken

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

STATEMENT OF CATHRINE CURTIS, NATIONAL DIRECTOR OF WOMEN INVESTORS IN AMERICA, INC.

Mr. HOFFMAN. Mr. Speaker, the following statement from Cathrine Curtis, National Director of Women Investors In America, Inc., should awaken every true Representative of the people to a program which is moving so rapidly that only prompt and vigorous action will prevent the complete establishment of a dictatorship here:

NEWS CENSORSHIP CONCEALED IN PROPERTY-SEIZURE MEASURE—BILL ALSO CAN END PRIVATE PROPERTY OWNERSHIP, WOMAN LEADER CHARGES

WASHINGTON, August 3.—Charging the property-seizure bill, S. 1579, combined with the newly expanded war-materials' list of the export-control office may sound the death knell of free speech and private property ownership in this country, Cathrine Curtis, national director of Women Investors In America, Inc., today called on Congress to return the bill to committee for further study and consideration. The House Military Affairs Committee, through its chairman, ANDREW J. MAY, of Kentucky, reported the bill to the House Friday after hearing only one witness, Assistant Secretary of War Patterson.

The bill will legalize the unlimited emergency declaration issued by the President May 27 and empowering him to requisition the use of any military or naval equipment, supplies, or munitions, or component parts thereof, or machinery, tools, or materials necessary for the manufacture, servicing, or operation of such equipment whenever he determines such action is necessary to the national-defense program. Maintaining that the export-control list—which was hurriedly expanded as the property-seizure bill was being rushed through the Senate—can be used to determine what constitutes "component parts" of such military supplies, etc., Miss Curtis points out this list now includes newspapers, books, magazines, and other publications, as well as newsprint, all types of printing paper and inks, cuts, engravings, and other materials vitally important to newspaper and printing production.

"Not only does this bill threaten the jobs and existence of nearly 6,000,000 workers and the 200,000 small manufacturing plants employing them, it now assumes the aspect of an iron-clad censorship control measure being rushed through Congress under guise of preventing a few second-hand dealers from profiteering in second-hand tools and equipment," Miss Curtis said in her statement. "If the bill becomes law it can be used—together with the export control list—effectively to suppress all printed opposition to the war-involvement program, including publication by newspapers of information which those in power do not wish made available to the public, as well as to end the right privately to own property in this country.

"This is the second time within a week the House Military Affairs Committee has taken such summary action relative to important legislation—hearing only Government witnesses and practically refusing to permit representatives of the people to testify. The last occasion was in the case of hearings on proposals to extend the service of men in the draft where—after protest—the committee finally did reopen its hearings on that measure and to listen to the statements of mothers and fathers of draftees now in camp.

"There are many things connected with apparent attempts to rush this property-seizure legislation through that should be brought to the attention of the public," she said. "In the first place, in testifying before this same committee some weeks ago, Assistant Secretary of War Patterson admitted there now are laws on the statute books permitting seizure of plants and equipment needed in the national-defense program. He also admitted there is no law now existent permitting seizure of personal property.

"It is interesting to note in this connection that—despite the insistence of those favoring the legislation that it does not grant power to seize personal property—the House committee added an amendment to the bill specifying that the personal firearms of citizens could not be seized under it. If there is no power to seize personal property concealed in this bill, why did the committee deem it advisable to add that amendment?

"Continually during Senate committee hearings on this bill, the question was asked as to what might be considered 'component parts' of military equipment and supplies—but no definite answer was offered by its proponents. Now we find an alarming similarity between the wording of this measure and that of the order issued late last month by the Export Control office expanding the number of items that may be considered military supplies, equipment, ammunition or the component parts thereof. It reads:

" 'Military equipment, or component parts thereof, or machinery, tools, or materials, or supplies necessary for the manufacture, servicing or operation thereof * * *.'

"That list now includes newspapers, books, magazines and other publications; newsprint, all types of printing paper and inks; cuts, engravings and other materials required to produce newspapers or booklets. In fact it includes almost every type of article imaginable—including the bathtub and kitchen sink!

"The chronology of this measure is most interesting. The Senate Military Affairs Committee reached an agreement as to its wording about 4 o'clock on July 17. The President issued a proclamation ordering an expansion of the war materials and supplies export control list at 4:30 o'clock the same afternoon—but the order was not published until July 19.

"Senator A. B. CHANDLER, of Kentucky, filed the Senate Committee's report with the Senate Clerk while that body was not in session on July 18. The following day, the Administrator of Export Control—acting under

authority of the President's proclamation of July 17—issued the new list—but did not file it until 10:06 o'clock on the morning of July 21 and it was not officially published until July 22—the day on which the Senate passed the bill after only a few hours debate.

"If there is no intent to suppress free speech in this country and to seize purely personal property for alleged national defense needs why all this hurried action on this bill—particularly since it is admitted there now is sufficient law to permit requisitioning materials and plants actually needed for defense purposes," Miss Curtis asked.

"The President alone is granted power under this bill to determine what constitutes component parts of military supplies. Will he use the newly expanded war materials list of the Export Control Office as his yardstick to determine what he can requisition under this bill if it becomes law?

"These are only a few of the questions to which Congress should obtain answers before it considers this legislation. If the House Military Affairs Committee had given notice of open hearings on this bill, considerable evidence would have been placed before it that would greatly assist Congress in obtaining these answers. The committee-hearing plan is an important part of our governmental system. Through it, the elected representatives of the people are given an opportunity to hear the testimony of their constituents—the people who are requested to provide the money for the support of government. Certainly they are entitled to be heard—in this case particularly—and Congress should refuse to consider this legislation at this time if it believes in Constitutional government and free speech."

The United States Repudiates Its Own Pan American Declaration

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of July 26, 1941:

[From the Saturday Evening Post of July 26, 1941]

OUR FORGOTTEN NEUTRALITY

Flies in the ointment of pan-American solidarity, especially Argentina's sullen neutrality toward what its Government still calls the European war, require to be dealt with patiently. We need to remember that neutrality was the first position of the United States Government and the one it very urgently recommended to all its good neighbors in the south.

In September 1939 the 21 American republics sent delegates to a meeting in Panama City to discuss and establish upon common ground a complete and uniform pan-American neutrality. Nine countries sent their foreign ministers in person; the 12 others sent their best substitutes. The Government of the United States sent Sumner Welles, Under Secretary of State, with 1 assistant, 4 advisers, 1 press officer, and a secretary.

Mr. Welles said, "It is our common desire to take under consideration the complicated question of our rights and duties as neutrals, in view of the outbreak of general war in Europe."

Eight resolutions and declarations were adopted. The important one was the general declaration of neutrality. This was to "reaffirm the status of general neutrality of the American republics," and to that end they agreed, among other things, to:

"Prevent on their respective territories the enlistment of persons to serve in the military, naval, or air forces of the belligerents; the retaining or inducing of persons to go beyond their respective shores for the purpose of taking part in belligerent operations; the setting on foot of any military, naval, or aerial expedition in the interests of the belligerents; the fitting out, arming, or augmenting of the forces or armament of any ship or vessel to be employed in the service of one of the belligerents, to cruise or commit hostilities against another belligerent or its nationals or property," and, "with regard to belligerent warships, that not more than three at a time be admitted in their own ports or waters and in any case they shall not be allowed to remain more than 24 hours."

Compare the precise terms of that declaration with these lines from the President's report to Congress on the first 90 days of the lease-lend law:

"Allied ships are being repaired by us. Allied ships are being equipped by us to protect them from mines, and are being armed by us to protect them as much as possible against raiders. Naval vessels of Britain are being repaired by us, so that they can return quickly to their naval tasks. * * * With our natural resources, our productive capacity, and the genius of our people for mass production, we will help Britain to outstrip the Axis powers in munitions of war, and we will see to it that these munitions get to the places where they can be effectively used to weaken and defeat the aggressors."

The American republics were not consulted about the lease-lend law, although it was going to involve the Government of the United States in the war and involve indirectly the whole hemisphere. The Government of the United States alone departed from its neutrality, as it had a perfect sovereign right to do; but, on the other hand, the Government of Argentina and, for that matter, all the other American republics, have a perfect right to stand on the articles of Panama.

If You Can't Laugh, Cry; If You Don't Swear, Pray

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. HOFFMAN. Mr. Speaker, it may be that we have been thinking about the new tax bill, which we just passed and which added $3,500,000,000 on top of the other taxes which you will pay this year.

Note this example: Under the present law, a single man, whose net income is $2,000, pays an income tax of $44. Under the new bill, he will pay $110.

Perhaps it will not make you laugh. It would not make you cry, if you knew that the levying of this new tax was getting us somewhere. During the 8 fiscal years from 1934 to 1941, your Uncle Sam took in $40,000,000,000, but he spent sixty-seven and one-half billions, which leaves him twenty-seven and one-half billions in the hole.

When this new tax money of $3,500,000,000 comes in and is added to all taxes which you will pay during the fiscal year which began July 1, 1941, and which will end June 30, 1942, the Government will still be shy, if we spend as planned on this year's business, something over ten billions.

You know, the administration is giving away the taxpayer's money right and left to China and Russia and others, and Congress has already appropriated, or authorized the expenditure, this year of something like fifty-two billion, and for the 12-month period which began on July 1, 1941, and which will end on June 30, 1942, we expect to spend twenty-two billion. That means over $1,830,000 every 30 days.

Even the New Deal spenders and wasters, experts that they are, cannot spend that much money—at least, they have found it impossible to do so up to this time. So do you know what they are doing? They are giving it away in million- and billion-dollar lots to foreign governments, including the communistic Government of Russia and the Chinamen.

Hang onto your shirt, brother, and do not take off your shoes at night, for the New Deal will get both if it has its way, and you will wake up some morning finding a comrade in Russia wearing their equivalent, while the war party uses more of your tax money to furnish gasoline to Japan, to blow the Chinamen to bits, while furnishing the Chinamen with aviators and planes to shoot down Japanese bombers flown by American gasoline.

For good measure, we are furnishing the Russians the implements of war to deprive the Finns of their territory and lives. And the Finns are the only people who are paying their first World War debt. The New Deal slogan in this instance seems to be, "Shoot your debtor if he starts paying his debt and, if he refuses, lend or give him more."

No, do not swear. I do not approve of swearing. But you might do a little praying, for if God does not help us, it does begin to look as though we shall never have sense or determination enough to keep ourselves from sliding down the broad and easy way to the hell that awaits all foolish nations.

Shall Congress Declare a National Emergency and Shall the Selectees Be Retained Indefinitely

EXTENSION OF REMARKS

OF

HON. GEORGE D. O'BRIEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. O'BRIEN of Michigan. Mr. Speaker, August 27, 1940, Public Reso-

lution 96 was adopted, authorizing the President to order the National Guard and Reserve officers into active military service for a period of 12 months. September 16, 1940, the Selective Training and Service Act was adopted. In regard to the National Guard, this act provided that whenever Congress determines that troops are needed for national security in excess of the Regular Army and those in active training and service under the Selective Training and Service Act, the National Guard, or such part thereof as may be necessary, shall be ordered to active Federal service and continued therein so long as such necessity exists.

The Selective Training and Service Act of 1940 also provided for the induction for training and service of persons selected between the ages of 21 and 36 (subsequently reduced to 28) for a period of 12 months, except that when Congress declares that the national interest is imperiled, the 12-month period may be extended by the President to such time as may be necessary in the interest of national defense.

There is a further provision that each selectee, after the completion of the training and service period, should become a member of the Reserve forces for a period of 10 years, subject to call for service. The number of selectees to be inducted for training and service under the act is limited to 900,000 men.

Both the Selective Training and Service Act and Public Resolution 96, in the case of the National Guard and Reserve officers, limit the service to the Western Hemisphere and the Territories and possessions of the United States.

I believe that the National Guard and Reserve officers are in a separate category, regarding the extension of their service, from the selectees under the Selective Training and Service Act, and I believe that Congress should pass such legislation as may be required to authorize their retention in service as long as may be necessary. Legislation to accomplish this does not require that Congress shall declare a national emergency, and I am not in favor of Congress declaring a national emergency. A declaration of national emergency under present circumstances may be interpreted as an authorization to carry on war. I believe that Congress should discharge its functions as the situations are presented.

The discharge of the selectees under the Selective Training and Service Act after the expiration of their 12-month period does not mean that the United States Army will become disintegrated by the sudden withdrawal of those so inducted. The first selectees were inducted on November 20, 1940. The numbers of selectees inducted by months thereafter are as follows:

November–December	19,327
January	73,633
February	90,238
March	153,437
April	124,902
May	62,456
June	79,522

From the hearings, it appears that the Army General Staff seek the extension of time because they object to being forced to release men after the specific termination of 12 months. They want to release them depending on where they are located and depending on the developments of the national situation. A strong argument is also made on the grounds that the selectees are mingled in divisions with other units of the Army and that some of the units containing selectees, have taken their posts at places such as Trinidad, Honolulu, and Alaska, and there is a time element involved in relieving troops at the end of specific periods.

I have carefully considered these arguments and reasons, and I am in favor of making it possible for our General Staff to form and train an efficient army for the purposes of defending this country and our interests in the Western Hemisphere. I am not in favor of amassing an army of such size that would be designed for an invasion of Europe or any other continent. I am persuaded by the testimony at the hearings that our Army General Staff are preparing a program for the defense of this country and the Western Hemisphere, with which I heartily concur. At the same time it is evident that there is a movement on foot to use our troops abroad. The Prime Minister of England stated in the British Parliament that this country was on the verge of entering the war. The British commander in India and the British commander in northern Africa have both publicly anncunced that they need our troops.

None of the European countries is quite like ours, and we cannot be sure that any of them in the long run will be our real friend. Europe through all the years since our country was founded, has had its royalty, oppression, wars, and poverty, and for these reasons the people who built up this country came here and established a nation which is distinct and different, and which I feel has a destiny for the whole world, and I believe that this destiny will be best fulfilled if we refrain from becoming just another totalitarian belligerent, as we would become if we undertook the invasion of Europe.

Therefore, I believe in a sane program fully to protect our Nation and our interests and our place in the future of the world.

To accomplish those ends, as applied to the present situation presented to Congress, I am in favor of enacting legislation authorizing retention of our National Guard and Reserve officers, or such part thereof as may be necessary.

I favor extending the time of service of future selectees from 12 months to a maximum of 18 months, which provision, I think, will fully meet the reasonable needs of the Army General Staff. I am in favor of releasing all selectees now in service no later than at the end of 18 months from their induction, with the provision that if war is declared by or upon this country, all are subject to service.

Tax on Outdoor Advertising

EXTENSION OF REMARKS

OF

HON. JOSEPH A. McARDLE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. McARDLE. Mr. Speaker, being fully cognizant of the task confronting the Ways and Means Committee in bringing about the tax bill known as H. R. 5417, I cannot agree with the committee that that section of the bill which seeks to impose a special tax upon the manufacturers of neon-tube signs, electric signs, and electric advertising devices, primarily because of the hardship which such taxes would impose on labor.

The proposed taxes would produce a comparatively small amount of revenue and the cost of collecting the tax on outdoor advertising would leave little, if any, net revenue for the Treasury.

The tax imposed by section 3269 of part XI, is a tax only upon the concerns engaged in outdoor advertising as a business and therefore would fall upon less than 20 percent of the outdoor advertising signs and structures maintained in the United States, as over 80 percent of the total number and particularly the small signs are maintained by those who use them to advertise their own business and would escape any taxation under this proposal.

This is patently unfair and discriminatory and moreover H. R. 5417 proposes to tax only a portion of outdoor advertising and radio advertising and levies no tax whatever on the other national advertising mediums, such as newspapers, magazines, and direct-mail advertising.

If one national medium of advertising is to be taxed by the Federal Government, then certainly all should be taxed, but I do not believe in excise taxes upon any of them, because they all produce sales and profits and we should tax profits instead of the source of profit. Organized labor would be most injuriously affected by the proposed tax on outdoor advertising companies.

The unions that will be most seriously affected by a restriction in the operation of the source of their employment as a result of the enactment of this section are the sign, scene, and pictorial artists, billposters, electrical workers, sheet-metal workers, carpenters, and common laborers. These are the crafts that are directly employed by the outdoor advertising industry. However, the influence of this industry extends to a great many other crafts which are employed in supplying the materials consumed by the outdoor-advertising industry such as paper, paints, printing ink, metal materials, lumber, brushes, and so forth.

Two of the above-mentioned crafts, namely, sign, scene, and pictorial artists, and billposters are composed of highly

trained mechanics, and since this particular industry offers the only possible employment for their particular type of work and it requires years of training to develop first-class mechanics in these two classes of employment, to place any restriction upon or retard in any way the activities in this industry would inflict a hardship on these two crafts. The other crafts may find other employment and the hardships may not be as great. However, the first two crafts mentioned could not possibly find any other source of employment which would permit these men and women to continue to enjoy the full benefits in compensation for their years of study and training to qualify them as mechanics in their chosen field.

I sincerely believe that the enactment of this section of the revenue bill will inflict a hardship on this source of employment and cause employers to discontinue some of the liberal practices which employees now enjoy, and the elimination or restriction of these practices would materially reduce the working periods of the members of these several classes of craftsmen and by the reduction of the working period, there would be a marked reduction in the amount of income tax which these craftsmen have paid to the Federal Government in past years. By such reduction, the amount of money which may be received by the Government as a result of this excise tax would be wiped out by the reduction in personal income tax.

Some of the practices now in force in the outdoor advertising industry which furnish employment and extend the working periods are the maintenance of plants and plus services which are furnished the advertiser to make the advertising dollar more effective.

On behalf of organized labor I strongly urge that before final enactment of H. R. 5417, it be either amended to include all advertising, such a tax being, in my opinion, economically sound. In the alternative I would favor the elimination of the proposed tax on people engaged in outdoor advertising.

Cutdoor advertising rendered a great service to the Government in the World War, and I am including in my remarks copies of commendatory letters received from the late President Woodrow Wilson, the then Secretary of the Treasury, William Gibbs McAdoo, and Dr. Livingston Farrand, chairman, central committee of the American Red Cross:

THE WHITE HOUSE,
Washington, July 9, 1919.

MR. W. W. WORKMAN,
Poster Advertising Association, Inc.,
Chicago, Ill.

MY DEAR MR. WORKMAN: I am very glad indeed to express through you my sincere appreciation of the cooperation of the Poster Advertising Association with the various publicity departments of the Government during the war.

The members of the association lent invaluable aid to the Liberty Loan, fuel, food, Red Cross and other campaigns by constantly reminding patriotic Americans of their duties to their country during the war.

The value of such a service cannot be overestimated.

Sincerely,

WOODROW WILSON.

TREASURY DEPARTMENT,
Washington, October 23, 1918.

F. H. FULTON, ESQ.,
Vice Chairman of Committee on Cooperation with the Government, Poster Advertising Association,
New York, N. Y.

MY DEAR MR. FULTON: Will you be good enough to convey to the members of the Poster Advertising Association my deep appreciation of their patriotic cooperation in the Fourth Liberty Loan campaign.

Without cost to the Government, the membership of the Poster Advertising Association donated the posting of more than twenty-three thousand 24-sheet Liberty Loan posters—a service which was of valuable assistance in carrying the message of the Government to the people of the country.

Individual posting companies in writing to the Treasury Department have uniformly volunteered their services in future loans with the same degree of spontaneity and loyalty that has characterized their assistance in the past. It is a pleasure to thank every member of the organization for their helpful cooperation.

Sincerely yours,

W. G. MCADOO.

THE AMERICAN RED CROSS,
Washington, D. C., May 20, 1919.

MR. W. W. WORKMAN,
Washington Representative, Committee on Government Relations, Poster Advertising Association,
The New Cochran Hotel,
Washington, D. C.

DEAR MR. WORKMAN: Through you we desire to thank the Poster Advertising Association for its patriotic and generous assistance to the Red Cross during its war campaigns for funds and membership.

I am informed by our Department of Development that in the two war-fund drives of 1917 and 1918, and in the two membership drives in the same years, your association handled 43,000 of the large 24-sheet posters. This assistance was given throughout the whole United States and was very helpful to the cause.

Very sincerely yours,

LIVINGSTON FARRAND,
Chairman, Central Committee,
American Red Cross.

The General Welfare Act

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

ADDRESS OF HON. HARRY R. SHEPPARD, OF CALIFORNIA

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I made before the General Welfare Federation of America on July 12, 1941:

Mr. Chairman and fellow workers, conventions are inspiring. They spur our efforts and stir our souls. But, like our work in Congress, most of the effective labor which results in the dress parade is performed in the committees before which the various problems of the day are brought and dissected. These committee deliberations are the essence of democracy and pave the way for such occasions as we have here this afternoon.

In Washington we meet much the same situations as you good folks meet out in the field. We have our day to day problems and must face them. As a member of the Appropriations Committee of the House of Representatives I have had my full share of these problems—your problems—and I have devoted full time and effort in helping to work out their solution.

Not the least of these problems is that of how best to provide real economic security in the sunset of life to those whom industry has cast aside with the comment, too old.

This problem is a real one. It is on our doorstep and is crying for solution. All our worry over the defense situation cannot obscure it or lessen its appeal. We must do something about it.

In the Congress of the United States there are 156 Representatives who believe that the measure you are all working for—the General Welfare Act, H. R. 1410—presents the solution. They have studied it. They believe in it. They have signed a steering committee resolution to work for it.

As chairman of this steering committee I am here today to bring you their greetings and to urge you to continue your battle for proper protection of our senior citizens in America. There must be no lessening of effort, no let-up in the struggle.

The international situation is such today that humanitarian reforms are likely to be given scant consideration unless a live, energetic group such as yours stirs up thought and action on behalf of a sound proposal to remedy conditions. I want to congratulate you upon your perseverance in sticking to your campaign all these years.

I want particularly to compliment you people upon the reasonableness of your demands and upon your legislative approach to the problem confronting you. You have asked nothing unfair, nothing that your Government could not grant on a pay-as-you-go basis. Impossible demands get nowhere legislatively, while reasonable demands are considered seriously.

Herein lies the reason for the fact that ever since you have been in existence as an organization you have been one of the outstanding groups in your field of endeavor. There were times when I wondered if your membership were large enough to muster the needed strength in Congress to keep the General Welfare Act alive. Always you have come through and your bill is in fine repute in the Congress with far more strength for it than was expected. It is a tribute to your legislative approach to the problem that you can produce a steering committee resolution with 156 congressional signatures thereon. That, in itself, is a remarkable achievement. To get that many supporters signed up as a steering committee on behalf of any legislative proposal is something unusual in Washington, where a steering committee of 50 Congressmen is considered large. You have over two times that many. You lack but 62 of having enough to pass the measure which is an indication of real strength.

So I say to you this afternoon, keep up the good fight. Try to get a floor under Federal pensions of $30 per month. Ceilings are meaningless in pension matters. It is the floor or guaranty that counts. The Federal Government can always raise the amount later. It should never lower it. Once any legislative gain is made in this field it will remain for all time to come, to protect all

succeeding generations as well as our own. If you can get your unconditional flat $30 per month Federal annuity for all senior citizens regardless of financial circumstances and on a pay-as-you-go basis under present conditions you will be accomplishing marvels. It simply isn't in the cards to get more. As a member of the Appropriations Committee of the House I know that this Congress will not appropriate more than $3,000,000,000 additional for pensions, and $3,000,000,000 more than we are now paying cannot be stretched to give more than $30 per month to the 9,000,000 senior citizens who could apply for such an annuity.

Legislative advance is always secured by a series of steps forward and compromise. What would happen if you could get your basic guaranty of $30 per month written into law time alone can tell. But if it is not adequate, you can continue the fight to have it raised, at the same time turning your guns on the State legislatures to get them to supplement this basic Federal annuity on the basis of need. You should have no trouble in this regard. In many States, such as California, Washington, Colorado, and Massachusetts, State pensions of $20 per month in addition to the Federal allotment have already been voted and no change in the law would be necessary to give a full $50 per month total Federal-State pension to those now on the pension rolls. In other States agitation could be created to supplement the general Federal annuity for those unable to live on the $30 granted and the main argument used by the States against such a supplement allowance—that is, its tremendous cost—would be gone, as the Federal Government would have taken over the main pension load of $3,000,000,000 per year. The States could therefore easily afford to at least continue their present total pension load for all the States of $20,000,000 per month or $240,000,000 per year. If the States did nothing more than they are doing at the present time, it would mean pension increases from the States to those now on the old-age assistance rolls, as this group is a diminishing group, and if the States did not have to take on new pensioners because of the Federal Government assuming that load, more and more State funds would become available for the present pensioners as this group becomes less and less numerous by the passing of time and the tolls of the grim reaper.

This is the practical way of looking at this problem. Let us make progress one step at a time and not expect miracles to happen. Let us develop a practicable, workable program that fits into the scheme of things and make what gains we can even in spite of the present emergency conditions under which we are living.

I recall the day when some opposed laws providing for 10 hours per day as a maximum workday on the ground that this would stabilize the hours at this figure. You all know what has happened. We have gone on and on, first from 10 hours to 8 hours and then from 8 hours to 6 hours. So it will be with pensions. If we get our basic principles enacted into law at this session of Congress we will be fortunate indeed. Then we will have our foot in the door. We will have a ladder to climb; the rest will be easy and progress will come in steady strides until we reach the ultimate goal we have set in our measure of $60 at 60, just as the Civil War veterans raised their pensions by successive steps from $6 per month to $60 per month.

I don't know if you people fully appreciate the stupendous possibilities of the reform we are advocating. Roughly, about one-half of our population is now guaranteed social or economic security in their later years under title II of the Social Security Act. We propose in one fell sweep, to grant this same security to the other half of the population by blanketing in all those not now covered by title II or some other form of Federal annuities. Approximately 65,000,000 people will be affected by our reform. The added charge on our Federal finances will be over $3,000,000,000 a year—a charge which must be met by taxation, for we propose a pay-as-you-go system. To ask more than this at the present time is sheer folly. That is why I congratulate you upon the moderation you have shown in your demands upon Congress, and that is why I feel that you will not only be able to keep your measure active at all times but will eventually carry it on to victory.

Just how long it will be before we can accomplish definite results along the lines we are advocating no one can say. The international situation is such that we in Congress have, of necessity, had to turn our attention mainly to the defense of our Nation. We must not, however, in our all-out efforts for defense forget the defenseless. We must not forget the gray-haired men and women who have striven and toiled to make this Nation what it is today. We must not forget our obligation to them. We must see to it that their declining days are spent in comfort and security.

One of the best ways to do this is through the General Welfare Act—H. R. 1410—America's adequate pension measure. No other measure seeks to protect the old folks with a guaranty, except one measure which carries a guaranty of $60 per month, or $9,000,000,000 per year, but which has no support whatever in Washington because of its extremist approach to the problem. No other measure seeks to protect our senior citizens through a reserve fund to take care of the situation should the war end and revenues fall, while more would be forced to apply for the annuity. No other measure carries funeral benefits. No other measure has a sound tax base to support it, a gross profit or added-value tax of 2 percent with exemptions for the cost of materials, and the first $80 per month, or $960 per year, of gross income.

The Tax Bill

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. SHANLEY. Mr. Speaker, I have a letter from very responsible authorities in connection with our tax bill which speaks for itself. I might add that even with the taxes from the three other subway concerns in New York, Philadelphia, and Boston, not listed in this letter, the yield for the entire industry as common carriers on common-carrier property will be but $75,000. I am certain that the costs of administration for this would be prohibitive from conversations I have had with those who know costs of collections.

As the committee has rightly expressed its desire to remedy the situation which concerns the outdoor advertisers in their plight, I am hopeful that this aid can be extended to these men who employ common carriers for their displays. The doubt about applicability to common carriers ought to be sufficient to remove this group, but that doubt, plus the inadequate returns, ought to definitely settle the question. The argument of the parties affected is so cogent that I am including it in my statement.

AUGUST 1, 1941.

Hon. JAMES A. SHANLEY,

House Office Building, Washington, D. C.

DEAR CONGRESSMAN SHANLEY: The Ways and Means Committee of the House of Representatives included section 3269 as part of the revenue bill of 1941, which section imposes a tax on outdoor advertising. The minimum rate of $5 for any outdoor billboard less than 300 square feet was subsequently amended by the Ways and Means Committee to $1 for any outdoor billboard less than 100 square feet. Whether this tax is applicable to advertising displays on properties of common carriers is not clear. If the tax is applicable to advertising displays on properties of common carriers, an amendment should be immediately adopted whereby such advertising displays are expressly exempted from this tax for the following reasons:

I. Any excise tax on companies handling advertising displays on properties of common carriers would be confiscatory and ruinous to every company now engaged in such business.

II. The 40 to 60 percent of gross revenue demanded and obtained by common carriers under long-term contracts with these companies makes any excise tax such a burden as to constitute a death penalty.

III. State legislation taxing outdoor advertising has always recognized and exempted as a class outdoor advertising on properties of common carriers.

I. ANY EXCISE TAX ON COMPANIES HANDLING ADVERTISING DISPLAYS ON PROPERTIES OF COMMON CARRIERS WOULD BE CONFISCATORY AND RUINOUS TO EVERY COMPANY NOW ENGAGED IN SUCH BUSINESS

If the revised rates of the excise tax imposed by section 3269 of part XI, outdoor advertising of the Revenue Bill of 1941, are applicable to the advertising displays on properties of common carriers, every company engaged in such business will have to cease such operations because income derived from this medium will not meet the added burden. No tax law should be designed to destroy legitimate businesses, but if this tax on outdoor advertising is applicable to these companies, it will be confiscatory and ruinous. These advertising displays are located on properties of subways, elevated lines, and railroads principally in and around the areas of Boston, Chicago, Philadelphia, New York City, and New England generally. Displays on these properties are commonly referred to in the advertising business as one-, two-, and three-sheet displays which consist of 9, 18, and 24½ square feet, respectively. It is readily apparent that the largest display of these companies is only one-quarter the size of the present minimum of 100 square feet as set forth in the amendment to this tax on outdoor advertising. By far the greater number of displays on these properties are one sheet which is less than one-tenth of the present minimum set forth in the amendment. Such arbitrary classification as contained in the provisions levying this tax is unfair and discriminatory, and could only yield in the instance of the three petitioning companies a gross tax of $25,140; obviously, the administration of such a tax as applied to the three petitioning companies would in our opinion involve more expense than the actual amount of collection.

It is inconceivable that this tax would have been proposed if any information had been sought as to the ability of these companies to pay even the revised rates. For example, of the petitioning companies, the approximate net income for each board for the first 6 months of 1941 before Federal income and social-security taxes, was as follows:

Transit Advertisers, Inc	$0.07½
Chicago Rapid Transit Co	.35
Transportation Displays, Inc	.64½

One of the reasons for this extremely low net income per board for the first 6 months of 1941 is that the companies operating these advertising displays on properties of common carriers always have considerable unsold space. For example, unsold space for this 6 months' period of the companies previously mentioned was as follows:

Chicago Rapid Transit Co., over 65 percent.
Transit Advertising, Inc., over 40 percent.
Transportation Displays, Inc., over 20 percent.

Even though the display spaces may not be sold, the common carriers require that every space have an advertising display in order that the blank spaces will not make their properties less attractive. These blank display spaces, of necessity, being always filled with nonrevenue displays, such as supplied by civic, national, and emergency organizations, Navy and Army and gratuitious showings from advertisers already purchasing space, create the impression with many unfamiliar with the business that it is highly profitable and could easily, without any financial difficulty, pay the taxes proposed by the revised rates.

Any depressed business such as the representatives for the sale of advertising displays on common carriers should not be forced to pay excise taxes as proposed in section 3269 of this revenue bill. Within the past few months additional hope has been manifested for the future of the small and independent companies operating these advertising displays. However, any tax such as that proposed would destroy every possibility of any profit to be derived from their activities, even though the advertising display business were now functioning at the degree of activity at which it formerly operated.

II. THE 40 TO 60 PERCENT OF GROSS REVENUES DEMANDED AND OBTAINED BY COMMON CARRIERS UNDER LONG TERM CONTRACTS WITH THESE COMPANIES MAKES ANY EXCISE TAX A DEATH PENALTY

Any common carrier which has space available for advertising displays exacts a high percentage of gross revenue because it brings together a private audience composed of its fare-paying passengers Being directly responsible for bringing together the private audience and also having complete control over the advertising material which is visible in and about their stations, platforms, and other structures, these common carriers have always demanded as a minimum 40 percent of the gross revenues derived by advertising display companies and in many cases as high as 60 percent of the gross revenues. This high percentage of gross revenues taken by the common carriers must be contrasted with the percentages taken by those other than common carriers. The minimum required by them is 10 percent of gross revenues with a maximum of about 20 percent. Upon analysis the reason is evident for this great disparity between the percentages of gross revenue taken by a common carrier and one not a common carrier. One who is not a common carrier does not assemble a private audience, nor do they provide the facilities for such an assembly, but must rely wholly upon the whims and fancies of the public to pass the location or upon the fact that the location is on some highway constructed and maintained by public funds. Obviously, one depending upon a public audience cannot maintain the same percentage of gross revenues that one can who assembles a private audience within the confines of private properties. For that reason, common carriers have always demanded and have obtained high percentages of gross revenues from advertising companies displaying advertising on their properties.

III. STATE LEGISLATION TAXING OUTDOOR ADVERTISING HAS ALWAYS RECOGNIZED AND EXEMPTED, AS A CLASS, OUTDOOR ADVERTISING ON PROPERTIES OF COMMON CARRIERS

Several States have already had a history in the taxation of outdoor advertising. This is particularly true of the New England States. In the States of Massachusetts, Maine, New Hampshire and Vermont, legislation has been enacted taxing billboards but such legislation expressly contains an exemption for advertising displays on properties of common carriers. The exemption provision of the Vermont taxing statute is as follows:

"This chapter * * * shall not apply to signs and other devices on or in the rolling stock, station, subways, or structures of or used by common carriers." (Sec. 8349, Public Laws, 1939.)

The exemption provision of the Massachusetts taxing statute is as follows:

"Certain signs, etc., exempted: Sections 29 to 31, inclusive, and 33 shall not apply to signs or other devices on or in the rolling stock, stations, subways, or structures of or used by common carriers, except advertising signs or other advertising devices on bridges or viaducts, or abutments thereof." (Annotated Laws of Massachusetts, ch. 93, sec. 32.)

Such advertising displays as will be on the above-designated properties will be one-, two-, and three-sheet displays. It has previously been indicated that these displays are only 9, 18, and 24½ square feet, respectively. Undoubtedly, the size of these displays and the gross percentages which the common carriers command have been extremely important to the State legislatures in granting this exemption. In addition, companies displaying advertising material on common-carrier property are actually agents of the common carriers. The companies don't own their own display structures as do the outdoor companies. Then, too, these companies have no control over where or how many displays are to be placed on certain locations. Common carriers not only require the right in the contracts to change the location of advertising displays but constantly demand and force the advertising companies to make such changes at the expense of the advertising companies. Furthermore, certain advertising, either because of the control exercised by the common carriers over the character of the advertising displays or because of State legislation, cannot be displayed on properties of common carriers. Thus, it is clearly evident, we repeat, that these advertising companies and in many cases as high as 60 percent of the gross revenues. This high percentage of gross revenues taken by the common carriers must be contrasted with the percentages taken by those other than common carriers. The minimum required by them is 10 percent of gross revenues with a maximum of about 20 percent. Upon analysis the reason is evident for this great disparity between the percentages of gross revenue taken by a common carrier and one not a common carrier. One who is not a common carrier does not assemble a private audience, nor do they provide the facilities for such an assembly, but must rely wholly upon the whims and fancies of the public to pass the location or upon the fact that the location is on some highway constructed and maintained by public funds. Obviously, one depending upon a public audience cannot maintain the same percentage of gross revenues that one can who assembles a private audience within the confines of private properties. For that reason, common carriers have always demanded and have obtained high percentages of gross revenues from advertising companies displaying advertising on their properties.

An excise tax such as that proposed in section 3269 of the revenue bill of 1941 would absolutely prohibit their regaining this foothold. In fact every company engaged in the business of one-, two-, and three-sheet advertising displays on properties of common carriers would have to cease such business if this excise tax were enacted.

We have attempted herein to set forth what are considered the salient factors to one considering the feasibility of this excise tax imposed by section 3269, if applicable to advertising displays on properties of common carriers. If any further information is desired, the same will be furnished, upon request, by any of the petitioning companies.

Respectfully yours,

Mr. Speaker, this fight has just begun. I am confident later review will prove the justice of these remarks.

The Alaska Highway

EXTENSION OF REMARKS
OF
HON. ANTHONY J. DIMOND
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

LETTER OF HON. WARREN G. MAGNUSON, OF WASHINGTON, TO HON. CORDELL HULL

Mr. DIMOND. Mr. Speaker, the immediate construction of a highway to Alaska is not only economically justified but is demanded by considerations of national defense. So much misinformation exists concerning this proposed road that I am submitting herewith copy of a concise and yet illuminating statement concerning the highway embraced in a letter dated May 8, 1941, addressed to Hon. Cordell Hull, Secretary of State, by Hon. WARREN G. MAGNUSON, Member of Congress from the State of Washington, and Chairman of the Alaskan International Highway Commission. The letter follows:

HON. CORDELL HULL,
Secretary of State, Washington, D. C.

MY DEAR MR. SECRETARY: We are submitting herewith a map and condensed profile of the proposed western route of the Alaska International Highway. The information upon which they are based is a compilation of recent reports of Canadian and American engineers made in connection with the reconnaissance for the highway. This is the first authoritative presentation of the project, and any previous information or conclusions should be revised in light of this study.

It will be noted that fully 90 percent of the route has been covered by foot traverses of the American and Canadian exploratory engineers. The map, recommendations and estimates are based altogether upon the data these engineers have secured. Further data for the remaining 10 percent of the line will be submitted later, but none of this area is critical, for it is covered by lay and other information.

From this map and profile may be derived the following conclusions, all of which are supported by detailed reports and plans too lengthy for discussion in this letter:

1. It is apparent from the data submitted that the highway lies in very simple terrain. The first 600 miles, for instance, only encounters 6,000 cubic yards of solid rock. Therefore, practically the whole area is in soil characteristically of loess mixed with sand, silt, and gravel.

2. For over 700 miles the line parallels and is adjacent to river, lake, and low-grade existing road transportation. The general cross-section is flat. Because of these facts engineers estimate that over half the project can be constructed for approximately $10,000 a mile which is roughly half the per mile cost involved in the total estimate.

3. From Mile 740 to Mile 950 the Canadian engineers' estimate of construction, including the crossing of the Stikine River, is around $14,000 a mile. From Fairbanks, Mile 0, through to Fort St. James at Mile 1430 which is the junction with the constructed road system of the continent and therefore the terminus of this new construction, the cost will approximate but will not exceed $20,000 a mile. All these estimates are based on a 24-foot gravel road or 40 feet between the ditches.

4. For a hard-surfaced road the cost, depending upon type, should be added to this estimate. Gravel is easily available practically throughout the whole route. Because of these favorable conditions, both the Canadian and American engineers are agreed that the road as a rush job could be built in 2 seasons or a period of 18 to 20 months. This is based upon both Alaskan and Canadian experience in road construction. In Alaska a crew of 30 men will construct from 12 to 16 miles of road in 1 season. This would mean the employment of 60 crews of 30 men each, mechanically equipped, the cost for the gravel road not to exceed $25,000,000.

5. The climatological conditions are surprisingly favorable. The areas immediately behind the coastal ranges are always areas of semiaridity. This is the area, of course, in which the highway is located. It is therefore evident that precipitation is very light, and a condition of relatively high visibility is characteristic. Snow depths, of course, will be light. From Fairbanks to Mile 1050 the average depth of snow during the winter months is around 2 feet of very light snow. The extreme average depth of snow is between 3 and 4 feet in limited areas. For a distance of about 75 miles, from Mile 1050 to Mile 1125, greater depths, not exceeding 6 feet, may be encountered on high summits. It is therefore evident that it would be possible to keep this roadway open throughout the winter with greater ease than in any of the Northern States. It also should be remembered that the roadway, even with a gravelled surface, from November 15 to April will be frozen hard and will be equivalent to a hard-surfaced road during that period. These conditions were checked from January 20, 1941, to April 24, 1941. A man was sent who covered the whole route of the project. His information was even more favorable than that indicated on the profile.

6. The great value of this project in a military sense as a defense measure is evident from these facts. It would be possible on such a highway to transport men, equipment, and supplies from Prince George, the most northerly point of the continental rail system, to Fairbanks in 60 hours as against 7 or 8 days, the present schedule by boat and rail from Seattle. This presumes a supply depot at Prince George and relay stations along the route. Vancouver, British Columbia, is 525 miles south of Prince George, Seattle 135 miles south of Vancouver, Fort Lewis 40 miles south of Seattle. Even though the Canadian National Railway system could not meet the transportation needs at Prince George, it would be in easy reach by highway. Also, it would be possible to serve the coastal cities which average about 125 miles from the route of the highway by either branches or by airplanes based on fields adjacent to the road. It is also understood and is clearly visible on this map that the highway closely parallels the line of flight of the western air lines. Therefore, the highway will greatly facilitate the construction of airports along the road and by the roadway; when the terrain conditions are favorable, emergency fields can be constructed. Also, the highway will render possible the supply and maintenance of these fields, and will furnish a ribbon for the flyers to follow.

The Commission feels the matter of supply to Alaska is a transportation problem of air, land, and water which should be considered and correlated as a single unit. At this time air fields are being projected for immediate construction which are not accessible by roads at present, and inasmuch as their location has been determined without reference to the possible location of the international highway it may be difficult to hook them up when and if the road is built.

Alaska is dangerously isolated. She is dependent altogether upon outside sources for all the means of peace or war.

The sea lanes to Alaska—the only available present means of transport—are notoriously dangerous, particularly in winter. The coast here is 26,000 miles long, a component of inlets, bays, islands, and arms uninhabited and seldom visited, subject to rain, fog, snow, and sleet. The channels are narrowly restricted in southeastern Alaska where more than one-half of the Territory's population lives.

As evidence of the dangerous conditions prevailing there have been two regular line ships on the rocks during the past 6 months. In addition, the U. S. transport *Kvichak* was completely destroyed with her valuable cargo and the loss of three men.

Another ship was lost off Katalla. Only the most precise navigation in these waters renders these narrowly predetermined channels usable.

Even in time of peace, the slightest distraction may involve a wreck. What could occur in time of war, with an alert enemy utilizing submarines, destroyers, or motorboats can easily be imagined. In this connection we quote Brig. Gen. S. B. Buckner, in charge of all military affairs in the Territory:

"The international highway will give us an all-land route for the movement of supplies, equipment, and reinforcements. It would make us independent of the control of the sea, temporarily or otherwise; it would not throw us out of Alaska."

Alaskans feel, once cut off by sea, they would be powerless to resist an enemy. They feel that such a catastrophe can occur, and that it should be provided for, is self-evident. They fear that the full force of our Navy may be deflected to the defense of the Atlantic coast, Hawaii, or the Philippines.

Because of lack of beacons, the low visibility, the sudden storms sweeping down glacial valleys, the dangerous icing temperatures in high humidity, have made it desirable for the air lines to take the route of the International Highway, this despite the fact that there are no airfields or road transportation for 600 miles.

In that area the low temperatures have dehydrated the atmosphere, and in both winter and summer flying conditions are favorable.

A year ago the reasons for not considering this project as a military need were given as follows:

1. The road would not be of the right type. Of course, it is evident that any type of road required can be built at a relatively low cost.

2. It was stated that the road could be operated only a couple of months. This is an assumption based on no information at all. We now know that the road could be kept open the whole year around.

3. It was also stated that Alaska could be supplied by air in event she was cut off by sea. The ordinary needs of Alaska are 600,000 tons, and the military needs would raise this to probably 1,000,000 tons. Without further discussion it is certainly evident that Alaska could not be supplied by air. If a road is assumed to be not of the right type for heavy transportation it is hard to see how an air route would solve this problem.

4. It was stated again that it would take years to build the project. This criticism has been effectively answered by both Canadian and American engineers. The Canadian, British Columbia-Yukon-Alaska Highway Commission estimates that a gravel road could be built in 24 months, given sufficient men and equipment.

5. It was considered as impossible to get an agreement with Canada and Great Britain that would give the United States the use of the highway as a military highway. We have now every assurance that this is no longer an obstacle. The State Departments of the two Governments involved are now studying the means to give expression to this accepted cooperation.

With the constant and increasing destruction of shipping the time may soon come when the need for ships may require the deflection of the Alaskan vessels to other more important emergency points. With a constructed highway, and millions of trucks available, this would not constitute a desperate condition.

Under the present unpredictable, catastrophic world conditions the Commission feels we must be prepared to meet any coalition of totalitarian force. Russia has been on many sides in the last year. Today, she has effected a tentative understanding with Japan. Such an alliance while improbable is possible. Alaska could be invaded from Asia 50 miles away. Troops could invade Alaska from a half dozen existing bases in Siberia adjacent to that Territory or by proceeding from Archangel, by the newly determined Siberian-Arctic coastal route. The United States Navy without icebreakers would be powerless to prevent such an attack.

The Commission is of the opinion that the highway should be started immediately. We assume no risks in building it. Its very existence, as an efficient alternate, would deter an enemy from attempting to cut the Territory off by sea.

The only risk is involved in unduly delaying the construction.

Constructed, its value as a powerful instrument of defense is only equalled by its utility as an instrument for developing an almost continental area.

Lastly, and more convincing, is the fact that not only there exists this military aspect but the indisputable fact that its value and benefits are continuing over many years, peace or war.

Respectfully submitted.

WARREN G. MAGNUSON,
Member of Congress, Chairman, Alaskan International Highway Commission.

WASHINGTON, D. C., *May 8, 1941.*

British Export Policy

EXTENSION OF REMARKS
OF
HON. CHARLES A. EATON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

LETTER FROM THE DEPARTMENT OF STATE AND STATEMENT FROM BRITISH EMBASSY

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following letter and statement:

DEPARTMENT OF STATE,
Washington, July 16, 1941.

The HONORABLE CHARLES A. EATON,
House of Representatives.

MY DEAR MR. EATON: This is in further reference to your telephone conversation with me on Friday, July 11, 1941, in which you requested information with reference to the allegations which have recently appeared in the newspapers to the effect that the British have been reselling in South America steel and iron products which they have acquired from this country under the terms of the Lend Lease Act and also to the effect that Canada has been selling United States airplanes similarly acquired by her. This Department has taken steps to inquire into this matter and, on the basis of the information now at its disposal, is unable to find anything which would substantiate these allegations.

The first thing that should be noted is the fact that, in case such sales had been taking place, they would be in direct violation of section 4 of the Act of March 11, 1941 (Lend Lease Act). Section 4 reads as follows:

"All contracts or agreements made for the disposition of any defense article or defense information pursuant to section 3 shall contain a clause by which the foreign government undertakes that it will not, without the consent of the President, transfer title to or possession of such defense article or defense information by gift, sale, or otherwise, or permit its use by anyone not an officer, employee, or agent of such foreign government."

It is clear from this paragraph that no transfer of any defense article acquired under the Lend Lease Act could legally take place without the consent of the President. If there has been any violation on the part of the British of the plain language of the act, no such case has been brought to the attention of this Department.

It may be that what some of those who have made these allegations really have in mind is the sale by the British to South America of iron and steel products of British manufacture, with the inference that the British are acquiring iron and steel products from this country under the Lend Lease Act and using them for their defense needs at home, thus making it possible to maintain commercial exports of their own iron and steel products meanwhile. The fact that appreciable quantities of iron and steel products had been going to South America from Great Britain in past months naturally raises this question and is no doubt a cause of misunderstanding.

On the basis of the inquiries that we have thus far been able to make into this matter, it seems clear that the amount of such exports of iron and steel products to South America is being rapidly reduced to, and is now practically at, the minimum essential to the acquisition by Great Britain of supplies of other products which she must have from South America for her own defense needs. In this connection the following facts are pertinent:

1. While Great Britain must necessarily concentrate her main efforts on production of war essentials, nevertheless many of the materials which are essential for her defense must be imported, and some of them must be acquired from sources other than the United States, as, for example, South America. Means must be found for keeping up the flow of these essential materials to Great Britain. Insofar as other means of payment for such essential materials cannot be found (for example, through invisibles, such as financial remittances, etc.), payment must be made by means of exports of goods. It is our understanding, however, that the present policy of the British Government is to restrict such exports to the indispensable minimum required in order to enable them to pay for absolutely essential imports.

2. It is our understanding that, as regards steel products up to the stage of and including rerolled products, plates, tools, iron rope, wire, etc., exports are not permitted except where they are clearly essential for the British war effort and where the materials cannot be obtained from the United States. As regards machinery, it is understood that exports to all countries have been drastically reduced and each proposed new order made subject to very careful scrutiny. For example, it has been necessary to discontinue supplying essential materials for construction of certain large projects under way in South America for which supplies had previously been promised. In some cases, where it has been found that the completion of orders already partly filled would not appreciably interfere with British defense efforts, shipments have continued. Also, quite naturally, there has been some effort to keep up the flow of spare parts in order to maintain British-made machinery in South America.

3. On the whole, however, it would appear that such exports of steel products to South America as are continuing to take place are diminishing in quantity, are due in every case to special or urgent circumstances which are easily explained, and are calculated to enhance rather than to diminish the effectiveness of Britain's war effort. It is understood that future British allocations of steel for export are set at less than a quarter of what they were even as late as 1940 and will constitute only an extremely minor fraction of their monthly production of approximately 1,000,000 ingot tons.

So much for the matter of iron and steel. Reference was also made by you to charges that Canada has been selling United States airplanes which she has acquired under the Lend Lease Act. Our inquiries reveal no evidence that such a plain violation of the terms of the Lend Lease Act has been taking place. It is true, of course, that airplanes of American manufacture acquired by Great Britain under the Lend Lease Act could go in part to Canada and be used there for training purposes. But they would be planes which had been lend-leased to Great Britain and not to Canada; and if some of them were retained in Canada for training or other purposes, that would be entirely irrelevant.

In connection with this whole subject, I call attention to a press release issued on July 14, 1941, by the British Embassy, a copy of which is enclosed.

Sincerely yours,

SUMNER WELLES,
Acting Secretary.

BRITISH EXPORT POLICY

Some questions have been raised recently concerning the relation of British export policy, particularly in South America, toward the provision of supplies for Great Britain under lease-lend.

Difficulties of shipping and of manpower have been making it increasingly difficult for Britain to maintain a level of export trade even approaching the peacetime basis. Nevertheless, before the lease-lend arrangements came into force it was of such extraordinary importance for Great Britain to maintain her power of purchasing goods abroad that trade was being maintained wherever possible, even at considerable sacrifice.

Since the generous arrangements came into force under the Lease Lend Act, a drastic reduction of British exports has proved possible, thus releasing manpower and shipping for other essential purposes. But the following considerations must not be overlooked.

There have been appearing in the pages of the press and in other connections recently a variety of charges to the general effect that articles or materials which are being lend-leased to Great Britain are either being themselves reexported by the British, perhaps in more advanced form, to foreign markets which Great Britain customarily supplies, in some cases in competition with American export trade, or else are being used in Great Britain to replace similar articles or materials which the British are thereby enabled to export to foreign markets.

These fears are quite without foundation. In the first place, supplies under the Lease Lend Act are only just beginning to flow, and it would have been physically impossible for such supplies to have been processed and exported by now. Careful inquiry indicates no instance in which a violation of the Lease Lend Act has occurred in letter or in spirit. Take, for example, some recent talk in the press and elsewhere in regard to the export of tin plate. In actual fact, tin-plate production in Great Britain has been drastically curtailed in order to release material and labor for war purposes, with the result that markets normally supplied by Great Britain, particularly Australia and the Argentine, now have to obtain their tin plate from the United States. In the second place, the United States departments in charge of the lease-lend procedure have to be satisfied in every case as to the ultimate disposal of the goods, and stringent precautions are taken to see that their instructions and requests are strictly regarded.

The British Supply Council would much appreciate it if any complaints or cases of apparent abuse could be reported to them in the first instance for investigation.

It should not be assumed that the mere fact that we are exporting goods of one sort or another which may be more or less similar in character to goods which we are obtaining from America under the Lease Lend Act or by cash payment is an indication of any violation of the spirit of the Lease Lend Act or that it is in any sense a violation of the letter or spirit of our obligations to the United States.

Obviously, the fact that we are obtaining American aid under the Lease Lend Act does not mean in the minds of Americans that Great Britain should completely abandon its export trade. It would not be in the interest of Americans for us to do so. By exporting Britain earns foreign exchange toward paying her way, and her dependence upon lease-lend aid is thus reduced and the burden of defense from the standpoint of American taxpayers is correspondingly less. Moreover, it is only by this method that we can command from countries other than the United States adequate supplies of many kinds of materials which we require for the prosecution of our war effort.

At the same time the passing of the Lease Lend Act has greatly reduced our dependence on exports, though there has been no time as yet for the change of policy to produce its effect in export statistics. We certainly do not export today just for the sake of doing business. Exports are now strictly limited by a Government licensing scheme to the minimum which is required to pay for current essential purchases.

As regards South America, this means that there is a very drastic restriction of British supplies to all markets except the Argentine, where large-scale British purchases of meat have to be paid for. Even in the Argentine trade is being reduced to about half what it used to be. Elsewhere Great Britain is not only restricting exports to a very small figure but is informing large contractors that it is now out of the question for Britain to facilitate a supply of material for schemes of capital construction in South America. For example, instructions have been issued that

two large schemes initiated before the war, which were of great importance to exporting contractors, must be abandoned, namely, the electrification of the Central Brazilian Railway, which was being undertaken by Metro Vickers, and the Rio Negro hydroelectric scheme.

In the particular case of steel products, including rerolled products—plates, tubes, wire rope, etc.—export is now totally forbidden except where they are needed overseas in connection with the supply of goods essential for the war effort and cannot be obtained from the United States. In the case of machinery, there has been a very great reduction, and every proposed new order is subject to careful scrutiny from the supply aspect.

It will be understood that these new instructions cannot be brought into immediate operation where there are partly completed orders using materials which could not be diverted to other purposes, and where half-finished goods in progress are occupying factory space. These orders tend to give a misleading impression as to the rate of current exports and to hide the extent to which new schemes have been cut out. It is also necessary to keep up a supply of spare parts to maintain British-made machinery in South America. There is, in particular, one large order for oil pipe line for the Argentine Government, expected to absorb some 7,500 tons of steel tubes, which is being allowed to continue for special reasons.

Nevertheless, in spite of the inevitable time lags, the exports in the first 5 months of 1941 were already heavily reduced. Exports of iron and steel manufactures to Mexico, Chile, Uruguay, and Argentina in the first 5 months of 1941 averaged only 6,000 tons a month out of a total monthly United Kingdom steel production of 1,000,000 ingot-tons. Exports of machinery and parts to Mexico, Peru, Brazil, Uruguay, Argentina, and Chile averaged just over 1,000 tons a month during the period mentioned. Iron and steel products exported to all destinations outside the British Commonwealth were averaging 14,000 tons a month, and exports of machinery 3,000 tons. Allocations of steel for export from now onward are less than a quarter of what they were in the corresponding period even of 1940.

It is clear, therefore, how mistaken it would be to suggest that Great Britain is using the facilities allowed to her under the Lease Lend Act to push her export industries. On the contrary, she is using the assistance thus granted to cut her own exports to the bone, only maintaining the minimum provision which is necessary for essential purposes.

Avoiding "Ghost" Towns

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

EDITORIAL FROM THE MILWAUKEE JOURNAL

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of August 3, 1941:

[From the Milwaukee Journal of August 3, 1941]

AVOIDING "GHOST" TOWNS

The Government, in its defense-housing plans, is rightly concerned lest when defense needs have subsided, there be a number of "ghost towns" in various parts of the country.

It knows that it is not likely that we shall have too much housing in this land of ours, no matter how many houses are erected for dislocated defense workers at this time. The thing it fears is that, when it is all over, the houses will be in the wrong places.

Mere villages have swelled to cities in the last few months, merely because a new defense factory has been built or a cantonment is near by. When defense needs diminish or the cantonment is abandoned, the workers who flooded into the erstwhile village will go back home. The village will return to its original size. The defense housing will be useless in the shrunken "boom town."

Government knows this and has been acting accordingly. Large numbers of prefabricated houses have been erected in these swelling towns—houses which can be taken apart almost as easily as they were put together, houses which can be moved hundreds of miles almost overnight as there is need for them elsewhere.

There is wisdom in this—and eventual economy. It is one example of long-range Government thinking, a thing to be encouraged.

Sabotage in Defense Factories

EXTENSION OF REMARKS

OF

HON. MARTIN DIES

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

STATEMENT OF J. EDGAR HOOVER

Mr. DIES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of J. Edgar Hoover, as it appears in today's Washington Post:

[From the Washington Post of August 4, 1941]

HOOVER CONFIRMS STORY OF PLOT TO BLAST DEFENSE FACTORIES

On the morning of last May 30, the Post, on the basis of numerous dispatches received from areas of camps, plane factories, and other American defense establishments, reported:

"Several agencies of the United States Government moved last night to nip what apparently was believed to be a Nation-wide sabotage effort, presumably timed for Memorial Day."

Troops' leaves at Fort Custer, Mich., were suddenly canceled, Fort Dix soldiers on leave were being rounded up at New York and ordered back to the post, soldiers were placed around aviation factories on the west coast, and heavy guards were put on water-front duty in many cities.

Today, J. Edgar Hoover, director of the Federal Bureau of Investigation, in a signed article in the American Magazine, describes in detail a vast plot to bomb American defense plants from privately owned planes on that day. Factories were to be wrecked, ships were to be blown up, and fighting planes destroyed in a conspiracy by organized saboteurs, Hoover writes.

The Memorial Day plot was foiled by the F. B. I. and widespread newspaper reports that troops had been rushed to the danger zones, Hoover's article says.

"It is now possible," he writes, "to tell the real story behind the headlines in the newspapers across the country last May: Troops Rush to Airplane Factories—Soldiers Guarding Ammunition Factories.

PLANNED MASS ATTACK

"The reports were accurate. They caused considerable speculation. Three weeks earlier, startling information from reliable sources had reached the F. B. I. that organized saboteurs were planning a mass attack upon vital defense industries during the long Decoration Day week end.

"Two general plans were to be followed. First, certain individuals were to be inside the factories to stop production bloodlessly, taking advantage of the holiday absence of many employees. If this failed, saboteurs in private planes would destroy the factories by bombing.

"Airplane and ammunition factories were to be the principal targets. On May 27, 3 days before the holiday, the F. B. I. confirmed the reports from foreign sources. The information was transmitted instantly to all field offices, to military and naval intelligence services, to the Treasury Department, to local law-enforcement agencies, and to the factories marked for destruction.

PRECAUTIONS IN TIME

"Precautionary measures were immediately taken to meet any eventuality. Word reached the newspapers and headlines shortly were blazoning a warning that America's defense industries were ringed with steel.

"And nothing happened. Here, national alertness and widespread publicity may have circumvented a disastrous outbreak of sabotage."

In his article, which enumerates many new tricks of spies and saboteurs, Mr. Hoover warns that "modern warfare does not limit itself to battlefields; it can be fought just as effectively in factories, on farms, in schools, and even in homes. In this war the spy and saboteur, working hand in glove, are as important to their country's armies as are the generals themselves."

George N. Peek

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. WOODRUFF of Michigan. Mr. Speaker, Mr. George N. Peek was special adviser to the President on foreign trade and president of the Export-Import Bank through 1934 and 1935. He was the first Administrator of the Agricultural Adjustment Act in 1933. He resigned from the administration at the end of 1935 because of irreconcilable differences in point of view on the farm and foreign trade policies of the administration.

For the past 20 years he has given a large part of his time to the study of farm and foreign trade matters. Prior

to that time he was in charge of trade—foreign and domestic—for one of our largest corporations.

He was a member of the War Industries Board in 1918.

It is generally agreed that Mr. Peek is one of America's outstanding authorities on foreign and domestic commerce, especially with reference to the exchange of agricultural products.

Recently Mr. Peek, at the request of the America First Committee, prepared an answer to the claims of the war interventionists that we cannot live in the same world economically with Hitler in the event of an Axis victory. He submitted his answer to the committee on May 14, 1941.

He was invited to present his views on the same subject to a meeting of Town Hall in Los Angeles on July 14, 1941.

In connection with these recent presentations of his views, he has directed particular attention to the addresses of the President and Secretary Hull on the occasion of the celebration of National Foreign Trade Week. At that time the President stated:

> International commerce in a world dominated by totalitarianism would never be carried on for the mutual benefit of all. * * * Therefore, it is idle for us to talk of future foreign trade unless we are prepared now to defend the principles upon which it is and must be based.

At the same time, Secretary Hull set up five peace points:

1. Extreme nationalism must not again be permitted to express itself in excessive trade restrictions.
2. Nondiscrimination in international commercial relations must be the rule, so that international trade may grow and prosper.
3. Raw-material supplies must be available to all nations without discrimination.
4. International agreements regulating the supply of commodities must be so handled as to protect fully the interests of the consuming countries and their people.
5. The institutions and arrangements of international finance must be so set up that they lend aid to the essential enterprises and the continual development of all countries, and permit payment through processes of trade consonant with the welfare of all countries.

Mr. Peek's views are especially timely, and on July 21 I inserted in the RECORD his remarks before Town Hall in Los Angeles, Calif., on July 14, 1941, to which I call the attention of the membership.

The Revenue Bill

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. ROBERTSON of North Dakota. Mr. Speaker, I desire at this time to pay my respects and appreciation to the distinguished gentlemen who make up the Ways and Means Committee. I am sure they have diligently applied themselves to this tedious task, a task that has extended over many, many hours of time. I readily appreciate that theirs is a more difficult problem than of many committees in this House, because nothing comes so close to the people in the matter of government as do taxes.

This tax bill is a difficult bill because it substantially, in its entire amount, represents an increase over and above what has been paid in the years of the past. It has called for the greatest consideration on the part of every member of the committee, and I can well recognize that it has been difficult as they have listened to various evidence that has been introduced against the various schedules to determine just what to do. I recognize that it is not always easy to stand firm against the presentation of what seem to be logical facts, and yet before them was the task of placing upon the Nation a new, comprehensive tax bill. It has required courage. They have shown it. And while probably most anyone may make objections to some phase of the bill, I recognize that such a measure cannot be drawn in a manner to be entirely satisfactory to all. There are many who will regard some phases of it as unjust. Some even will consider it as discriminating. But in a country such as ours, there must be elasticity in our action and in our thought.

It is my personal belief that resulting from the efforts of this committee we have before us for consideration a very satisfactory tax bill; and I am glad to indicate at this moment that I intend to support this bill. I feel that it is reasonably the duty of all of us in this House to assume a responsibility to place upon the people this tax burden. I recognize that it is not a popular thing to do, but most of us have gone along supporting the appropriations for defense, and in many instances the appropriations were not for defense. Most of us in one section of the country or the other have been the beneficiaries of parts of some of these appropriation measures. It is not reasonable, then, that we should fail to stand foursquare behind this committee and support this bill.

I believe the people of the great State of North Dakota, which I have the honor to represent, by and large, wish me to support this tax bill. I believe that the people of North Dakota recognize that the Nation cannot go on spending for defense without facing the inevitable problem of taxation. I should like, however, that my remarks would indicate that this is not an effort of beginning to pay for defense, but rather this tax bill is an effort to stabilize the finances of the Nation, which truly have arrived at a dangerous place.

During the period of 8 years under this administration, there has been little concern about a balanced budget. We have engaged in an unprecedented effort to spend the Nation into prosperity. I am sure that all will agree that this is contrary to the practice of centuries of the past, and I am sure, also, that we all quite agree that it has failed in this experiment.

No real American objects to the plan of preparing our Nation for war, but as we engage our talents in this effort, there is need for an immediate change of policy so far as our fiscal affairs are concerned. We cannot, as a Nation, live in the constant atmosphere of emergency and it is not necessary. There has always been and there must be now, a common-sense route to travel on the matter of economics. There is even greater need today, as we arm for defense, for prudence in our appropriations. These gigantic figures must be arrived at after the most comprehensive study and with the assistance of the Nation's greatest minds. It cannot be the handiwork of inexperience. It cannot come from men who have no knowledge of toil—it cannot come from the schoolroom—from those you have visions and theories. I am not inclined to disregard their part, but they must be balanced with men who know the hard way * * * who have been distressed in meeting pay rolls and who have had sleepless nights as they concerned themselves with the problems of their own economics * * * men who learned early in life that to remain solvent, both they and their business must operate with an income. This is the crying need of the hour as we arm for defense. It is more vital today than ever before, because long before we began this program of defense, we had tremendously impaired the credit structure of the country by impractical and untried day dreams that have brought us to the very brink of disaster, all too often used for a political advantage.

If America is worth saving, if it is worth taking the men into the trenches and on the ships of the seas—if there does exist in the hearts of men that devotion to the country, let it first be expressed in our fiscal policy. Yes; these were noble words once. They are familiar to you. They were expressed back in the year 1932, during the political campaign. They were fundamental then, and like all fundamentals, they do not change; they are fundamental now. They were expressed for political purposes then; they should be practiced for Government preservation now.

> Let us have the courage to stop borrowing to meet continuing deficits. Stop the deficits. Let us have equal courage to reverse the policy of the Republican leaders and insist on a sound currency.
>
> Our party says clearly that not only must Government income meet prospective expenditures, but this income must be secured on the principle of ability to pay. (Excerpts from address by Franklin D. Roosevelt, Albany, July 30, 1932.)
>
> I called attention in my address at Pittsburgh on Wednesday night to the great importance of Federal Budget making as the foundation of the national credit. I pointed out that the Hoover administration had been responsible for deficit after deficit; that as one disastrous year succeeded another, no attempt was made to arrange the finances of the country so that at least the mounting loss of revenue might not be turned into a deficit for the next year. It is my pledge and promise that this dangerous kind of financing shall be stopped, and

that rigid governmental economy shall be forced by a stern and unremitting administration policy of living within our income. (Excerpts from address by Franklin D. Roosevelt, Albany, July 30, 1932.)

Joint Tax Returns

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. BOGGS. Mr. Speaker, had the original rule on the tax bill been presented on last Tuesday, I believe that it would have been defeated. While I am not at liberty to speak for the Louisiana delegation, I would have voted against the rule as originally drafted.

Such a vote, of course, would not have meant that I was opposed to the tax bill, but it would have been the only recourse of the Representatives of community-property States to express their protest on the proposed joint returns for married people.

I realize the crying necessity for raising new revenues, and I, of course, know that our vast national-defense program, which I have consistently supported, must be buttressed by a new program of taxation. All Americans are prepared to make sacrifices and realize the necessity to protect the economic structure of the Nation through adequate taxation.

The Ways and Means Committee, however, did not hold hearings on the question of joint returns. Many Members of the House are unfamiliar with the fact that the community-property system has been recognized in Louisiana since before we were a State. It is an integral part of our law and is a fundamental rule of property. I am somewhat amused at those who say that there is now a discrimination in favor of community-property States. They assume without ever studying the question that the community-property system is merely a convenient device to avoid the payment of Federal taxation.

Nothing could be further from the truth. Under our system the husband and wife own jointly. Every type of property accumulated during the marriage is owned share and share alike by the husband and by the wife. Of course, such a system imposes burdens which are not found in the common-law States, and the system of taxation is eminently fair and equitable because it recognizes the fundamental concepts of the community-property system.

I realize that the defeat of the present provision in the law will result in the necessity of finding new sources of revenue. But I feel that these new sources should be found, and can be found, rather than adopting a plan which abolishes one of our fundamental concepts.

Joint Tax Returns

EXTENSION OF REMARKS

OF

HON. JAMES DOMENGEAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. DOMENGEAUX. Mr. Speaker, I have received many communications from both my district and other districts, urging my opposition to the proposed legislation which is embodied in the national-defense tax bill, which would require husbands and wives to file a joint-income-tax return. Many reasons have been advanced as to the unfairness, lack of economic justification, discriminatory, and arbitrary nature and its probable unconstitutionality. I am inclined to agree with many of our constituents that this bill discourages the type of family life this country is built upon, is discriminatory to certain classes, is economically unsound, and is legally unjust.

The very foundation of this country has been built upon family life, with our married couples living together and raising their families in a democratic manner, with its resultant fruitfulness, clean living, and strict adherence to the moral code. This measure naturally discriminates against married couples and tends to discourage marriage among others, and also stimulates the present recklessness of divorce. It justifies the separation of couples who cannot otherwise provide for children and dependents and in some cases would lead to living in sin instead of wedlock. In this connection I may call to your attention a letter I received from the Most Reverend Bishop Jules B. Jeanmard, bishop of the diocese of Lafayette, La., which is as follows:

The Honorable JAMES DOMENGEAUX,
House of Representatives,
Washington, D. C.

MY DEAR MR. DOMENGEAUX: No doubt your attention has already been called to Arthur Krock's article, A New Penalty on the Marital State, which appeared in the New York Times of Friday, July 4, and which makes such a clear case against the proposed revision of the 1941 Revenue Act, making mandatory joint income-tax returns by husband and wife. Whilst I am heart and soul in favor of any legitimate measure that has for its object the levying of the necessary taxes for the strengthening of our defense, this particular measure should, in my humble opinion, be opposed on the ground that it would, in many cases, penalize marriage, place a premium on divorce and upon celibacy—practiced for selfish and unworthy motives—and promote immorality. Surely no measure should be adopted which would further tend to decrease the birth rate, already at an alarmingly low ebb in this country.

For these reasons, then, I would ask that you oppose this measure, which, however well intended by its proponents, will, if enacted into law, be attended by such serious consequences.

With sentiments of esteem and with kindest personal regards, I am,

Sincerely yours,

JULES B. JEANMARD,
Bishop of Lafayette.

In addition to contributing to immorality, this bill is economically unsound. It not only increases the risk of new enterprise but it correspondingly reduces sources of future incomes and taxes. If passed, this would not only be an income tax but would also be an artificial supertax placed on the privilege of holy wedlock.

My home State and several other States in this Union have community-property laws under which husbands and wives do not inherit from each other. The marriage is a partnership and the wife as well as the husband is equal owner of this partnership and acquires the assets therein as a matter of legal right. This being the case, there is no more reason or justice in the proposed joint income-tax return to parties of a marriage contract, who are in reality partners, than there would be in the regulation of commercial or any other type of partnership. Under Federal laws and most of our State laws, partnerships are not required to pay income taxes. The partnership itself may be required to file returns; however, it is only the individual partner who is required to pay the taxes. Certainly a marriage contract, which is a partnership, should not be made an exception to this rule. This would be highly discriminatory, and inasmuch as the States themselves control marriage relations, the passage of this measure would annul by implication these State rights and would probably be unconstitutional.

It is the dignity and stability of Christian civilization we are raising these taxes to protect and defend. Defending democracy, we should not attempt to tear down its very foundation, we should rather seek means to uphold it. It is chiefly from married people that this country receives its taxes. Let us not destroy this relationship that has built this country up both morally and financially. Let us not invade State's rights and their organic laws nor pass discriminatory measures that would invade the due-process rights of individuals. I appeal to this honorable body to strike from the defense tax bill that provision which requires joint income-tax returns to be made by parties to a marriage contract. There are many other ways of producing the revenues necessary for our present program other than those that will demoralize and lower our present Christian civilization and probably degrade the sacred institution of marriage.

Radio Talks Over Station WAGE

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

LETTER BY HON. EDWIN ARTHUR HALL, OF NEW YORK

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the

following letter which I have addressed to my constituents:

HOUSE OF REPRESENTATIVES,
Washington, D. C., August 9, 1941.

DEAR FRIEND: Through the courtesy of Station WAGE, Syracuse, I will broadcast a regular program of informative talks for the benefit of the people of my district. This will start Monday, August 11, with a speech on the drought situation, and will continue every Monday evening at 6:45 daylight saving time.

These talks are designed to bring you in closer touch with the activities of your Congressman as well as with the workings of our constitutional form of government. They are offered as a public service from station WAGE.

I will appreciate your listening to these weekly broadcasts by dialing to 620 on your radio. Your comments will be most welcome if you will write to me or to Mr. Jack Curran, program director of station WAGE, Syracuse, N. Y.

Hoping you will hear my message every Monday evening and let me know your opinions, I am, with warm personal regards.

Your Congressman,
EDWIN A. HALL.

Wisconsin Republican State Convention

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, August 1, 1941

ADDRESS BY HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS

Mr. MICHENER. Mr. Speaker, under leave to extend my remarks, I include the following address delivered by Hon. JOSEPH W. MARTIN, JR., Republican leader in the House of Representatives and chairman of the Republican National Committee. This address was delivered before the Wisconsin Republican State Convention at Baraboo, Wis., on Monday, July 28, 1941. The address follows:

Mr. Chairman, my countrymen, this occasion offers me an opportunity to do something I have wanted to do for 3 years. That is, to come to the great State of Wisconsin and tell you how tremendously it heartened not only the Republican Party, but the Nation as a whole, when you sent to Congress such a magnificent Republican delegation of upstanding, able, courageous men to lend their efforts to the task of maintaining and perpetuating free constitutional government in America. Wisconsin has produced some great men and women, and her record is one of which all of you may be proud. Men and women from this great State have contributed much to the cause of their country and to good government, and they still are doing so. Let me congratulate you on your outstanding State delegation in the Congress of the United States.

This occasion offers me an opportunity to do something else I believe needs to be done. That is to direct the attention of the Nation, if my humble efforts can in some measure do that, to the greatest danger menacing this country, and which is receiving too little attention.

International affairs, wars, and conflicts have so occupied the attention of the press, the people, and the Government that we have almost entirely lost sight of domestic problems which may prove more dangerous to our peace and security, and to our form and philosophy of government than the clashes at arms in other parts of the world.

The problems of unemployment, of relief, of agriculture, of a rapidly rising national debt, of increasing State debts, of sectional and class divisions and jealousies and suspicions—all were assuming very grave proportions before they were obscured by the sudden outbreak of wars and the avalanche of propaganda loosed upon this country to get us into those wars.

Another problem—that of the efforts of some to strangle our American system of bi-party government and to substitute therefor a one-party system, a political monopoly—was challenging our attention when the storm of war broke and we began to look away from our own domestic difficulties to the more spectacular developments across the seas.

So today I want to sound a warning. In spite of the enormous expenditures for national preparedness, there is no indication of effort or intention on the part of the administration to try to cut down the nonpreparedness expenditures and to insist upon efficiency and economy in both the preparedness and the nonpreparedness expenditures. There should be most careful and earnest effort to do this because never in the history of our Nation has there been such need for efficiency and economy. We began the preparedness effort after 10 years of the most intense economic depression this or any other nation in the world ever experienced. Long before our preparedness program was begun a Republican study committee had sounded a warning that the national—and State—debts might prove the undoing of our national security if we became engaged in a war. No attention was paid to that warning. The result was that we had the most enormous and dangerous debt in our history when we were compelled by events and administration policies to engage in the most extensive and expensive national preparedness program ever envisioned by any people since the dawn of history.

National preparedness may well cost a hundred billion dollars. No man today can even guess what our national debt may be when finally exhaustion brings an end to these wars throughout the world. We must look forward to the day when these wars will end and when our national preparedness will be complete. What will we then face?

We will face a public debt so staggering that it will make generations of Americans round-shouldered to bear the burden of the taxes necessary to repay it.

We will face the utter collapse of our foreign markets in a war-exhausted and bankrupt world.

We will face the rapid release of an army of soldiers, and the sudden loss of war work of many millions of civilians who may be walking the streets demanding work and crying for bread.

We will face the most terrible readjustment of world thinking and world economy to a peacetime basis ever conceived by man. The jealousies and hatreds and fears generated by the bloody conflicts going on today will not have been healed. They simply will have been rendered impotent for the time being by exhaustion. The terrible economic readjustment which will be necessary will have to be accomplished in the welter of those hates and prejudices and fears.

The productive capacity and the purchasing power of nearly every other country on the globe outside of America will have been all but destroyed by war. They will begin the drive to persuade the people of this country to put all the rest of the world on American relief rolls. That is coming and if we have any foresight left at all we must get set for it.

We will face an exhausted agriculture, weighed down by taxation, bereft of its foreign markets, suddenly faced by the impairment of its home markets through the discharge of these millions of soldiers and civilians who will be out of jobs and hard up.

We will be faced, thus situated, with our incalculable national debt; with a world which can offer us no markets but which will be demanding that we will restore all the shattered nations and feed all the war-stricken peoples while we are trying to rebuild their economies; with our vast unemployment at home; with taxation the extent of which cannot now even be guessed.

Under such conditions can any sensible person escape the conclusion there will arise among us Communists and Fascists who will propagandize the Nation to repudiate its debt, abandon its form of government and the Bill of Rights, yield to the economic confusion which will be rampant—and embrace some form of dictatorship?

I do not want to appear here today to be an apostle of gloom. Neither do I, fellow citizens, want to see this Nation walk blindly up to the edge of that economic and social abyss and go over and down into the deepest, darkest pit of economic depression and social desperation possible to imagine, without raising my voice to warn of the danger.

If we believe we have seen agitation by the enemies of our American form of Government—by the Communists and the Fascists—let me say we haven't seen anything yet. Under the conditions of chaos, confusion, exhaustion, gigantic public debt, discontent, grief—and the hatreds and agonies left as the awful aftermath of the wars, the Communists and the Fascists will have fertile fields in which to plant their propaganda for debt repudiation, property confiscation, abolition of the Constitution, and the establishment of a dictatorship of the Stalin type or of the Mussolini or Hitler type.

I warn you, my fellow citizens, there will come a vast danger that we in America, in that terrible time, may lose those four freedoms we hear talked about so much and which we are supposed to carry to all the peoples everywhere in the world.

The first World War caught us with a national debt of less than $3,000,000,000. The present war has caught us with a national debt of more than $43,000,000,000. The debt is rising so fast that any figure I might give you here today could not be said to be good for 24 hours.

Thus we can see clearly that when we enter the inevitable after-war depression and economic disruption which is coming we will be entering upon a new depression with a debt so gigantic we cannot even imagine it.

That will be, as I said a moment ago, the opportunity for Communists, Fascists, and other enemies of our Constitution, our Bill of Rights, and our form of government to advocate repudiation, inflation, overthrow of our constitutional forms, and the establishment of a dictatorship.

We must begin now to plan what we shall do when this time comes. We must have a strong agricultural program ready for agriculture will be our national mainstay. We must have a strong industrial and commercial confidence because industry and commerce must furnish management and the jobs to keep discharged soldiers and civilians whose war work has ended from walking the streets and rioting for bread.

In that time of peril to the Nation the great test will come for us in trying to maintain our American way of bi-party government. Make no mistake about it, there are those who today would like to see a political monopoly set up in this country. There are those who are blind enough and selfish enough to

want to see constitutional government by-laws superseded by a political government of men. There are those whose lust for power and profits is greater than their love of country or of liberty.

I want to warn you that in the day—if it ever comes—when the American bi-party system of government is destroyed or abandoned in this Nation the Bill of Rights will be a dead letter; the liberties of the individual will be gone; oppression of minorities will be the order and the greatest experiment in civilization and freedom ever conceived will have been destroyed by our own blind, stupid indifference.

This is a pretty gloomy picture that I have presented to you. But it is far from being a remote possibility unless we are awake to the danger and take steps now to prevent it. I do not believe this picture will be fulfilled because I have faith in the common sense of the American people. I believe that once they fully understand the dangers ahead they will act to protect our beloved liberties and our economic system. To sound the alarm has been my purpose today, but with all my heart I repeat that unless we take seriously the danger, these things will come to pass.

The American people, the liberty-loving, order-loving law-loving American people must organize now to meet this time when the very principles of free government and free educational and religious and political thought will be assailed by the Communists and the Fascists.

The spending and the wasting by the vast political bureaucracy at Washington over 8 years has given us a gigantic national debt that cannot now be avoided. The requirements of national preparedness will add still another gigantic debt on top of the present one. That cannot now be avoided.

Therefore it becomes vitally necessary that we, since we cannot avoid the confusion which will result from the cessation of the wars and the ending of the preparedness effort, and since we cannot now avoid the vast debt which will bear so heavily upon us, and since we cannot avoid the sudden termination at some time in the future of the work of soldiers and civilians in war activities or preparedness efforts, we must—if this Nation is to stand—we must prepare to meet those shocks and survive them.

We Republicans have the greatest task in our history to get ready for that day of national trial.

Make no mistake, fellow Republicans. When the toll of blood and taxation begins to reach the people if we get into this war, or if we do not, the revulsion of feeling will be such that those in this Nation responsible—or held responsible by the people—will be repudiated. The reaction from all this will do one of two things: It will either cause the people to go back to sound Republican principles of government—in which case we will have a vast task to perform to save the Nation—or they will go to some form of dictatorship—which is what those who have brought about the present conditions will have to try to do.

In thus warning you I am not making reference to individuals as such. I am making reference to policies as such, and to developments as such which are driving us toward the time and the conditions I have outlined.

In the name of liberty we must prepare to preserve ourselves and our Government in that time. In the name of humanity we must prepare to preserve freedom, orderly government, and human values in that time.

We must begin to prepare now.

The American people have the resourcefulness, the courage, the intelligence to meet this trial and surmount it. They need but to be told how to prepare; what to do; they need to be warned of what is to come and they will get ready.

The Nation must be unified under a leadership which will single-mindedly and wholeheartedly devote itself to this task. We must unite the whole Nation behind preparations for preservation of our Government, our security, our lives, and our property, our very civilization.

God grant we may have that leadership—and have it before it is too late. God grant that men may rise above lust for power, political greed, and selfishness to the inspiration of national leaders bent upon saving our Nation, our economy, our civilization. As Americans, as well as Republicans, we must be ready to give our utmost support, and counsel, to that end. The welfare of America is, of course, our first concern.

We must prepare now.

Extension of Military Service of Selectees

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. SPRINGER. Mr. Speaker, much has been said regarding the subject of keeping the selectees, now in the training camps, in the service during the duration of this emergency, and I wish to add my voice of protest against this proposed plan. When the boys were inducted into the service they were then assured by the President, and by every one in authority, that they were being taken into the service for "1 year for training purposes," and that at the expiration of that period they would be returned to their homes and their businesses, but to be held in reserve and subject to call in case of war, and that other selectees would then take their places for their year of training. Some have urged that to permit the boys to return home would demoralize the Army. Just a very few weeks ago the President again assured the boys that at the expiration of their 1 year of training they would be returned to their homes and the new selectees would take their places. But now the President has changed his view on this highly important subject, and he wants to keep the boys in the service regardless of his former assurances to them. Of course, this is a breach of faith with the boys, and it is a breach of faith with their fathers and mothers, and with the people generally.

Mr. Speaker, we will remember the boys were not all inducted into the service at one time, but they were staggered into the service over the entire period of the emergency; if the boys are permitted to return home, and to remain in the Reserve, subject to call in case of war, but a very negligible part of them would leave the camps in any one month. The new selectees would be inducted and take their places, and would train with the already well-drilled and trained troops in camp and this would be of great advantage to the new and inexperienced men. My experience in the last World War on this subject leads me to the aforesaid conclusion. The men who have had their 1 year of training would, with their training and experience, be subject to call in case of war—and they would be ready to respond in the defense of their country.

What would be our situation in the camps in our country if all of the boys now in the service should be retained, and the new selectees in the vast number as now proposed should be inducted into the service and taken into the camps? We would not have accommodations available for them, and we would not have the training equipment necessary for their use. In the final analysis, if the President's plan should be followed—that is, his present plan—it would be necessary to increase the size of the camps. More buildings would have to be added; more clothing, shoes, bedding, and equipment would be called for. The expenditure of money required under that recent plan would be enormous. It would call for more officers, more transportation, and more facilities of every nature. Our finances will not permit of such a plan—when we are facing a debt of almost $100,000,000,000—and at a time when we are not in war.

Germany has never kept her trained soldiers in the army constantly; she has trained her soldiers and sent them home—that they might engage in their occupation, but subject to call in case of war. When she became involved in war the reserves were called and they were ready for service. When that call came those reserves took their places in the ranks of her army because they were ready for action. They were trained soldiers.

Our boys who have not yet received any training are entitled to secure that training. The boys who have had 1 year of training are entitled to go home, as they were assured that they would be sent home, subject to call in the future for active service in case of war. I am convinced this plan would aid materially in increasing the morale of our Army. I am convinced the plan, first conceived, would aid in building our armed forces in this country.

Mr. Speaker, a well written editorial appeared in the Times-Herald, of date August 1, 1941, on this highly important subject. I ask unanimous consent to extend my own remarks in the Appendix of the RECORD, and to include therein the editorial, aforesaid, which is very enlightening on this subject, which editorial follows:

[From the Washington Times-Herald of August 1, 1941]

HOLD THE BOYS FOR THE DURATION?

Senate debate has begun on the administration's proposal to drop the 12-month time limit on actice service of draftees, National Guard, and Reserve officers. Administration spokesmen are telling us, with shudders you can almost hear, that the peril is greater than ever before; the opposition is pooh-poohing this thesis.

In which connection, it seems worth while to cast a rapid glance over the war situation as it appears at this writing.

Harry L. Hopkins has flown to Moscow, had an interview with Pal Joey Stalin, promised Pal Joey all the war supplies we can send

him, and discussed other matters of undisclosed nature. It's anybody's guess whether Hopkins has committed us to going all-out against Japan in case Japan stabs at Stalin on his Siberian front or tries to interrupt United States shipments to Vladivostok.

Some Japanese bombs fell day before yesterday on the United States gunboat *Tutuila* (pronounced too-tweela) during an air raid on Chungking. The war party's hearts leaped up momentarily, but then sank because the Japanese apologized almost before the bombs stopped falling. Any boat berthing at much-bombed Chungking is asking for trouble, anyway; and anyway, "remember the *Tutuila*" wouldn't be nearly as rooty-tooty a war slogan as "remember the *Maine*."

British Foreign Secretary Anthony Eden appears to be getting ready to pull a 1931 on the United States. It was in 1931 that the British needled Henry L. Stimson, then our Secretary of State, to thunder against Japan's invasion of Manchuria; after which the British stepped gracefully back and left Stimson out on a long, shaky limb. Mr. Eden is now putting it about London that the United States will have to take the lead in any further measures against Japan on account of its move into Indochina. He intimates that these measures will most likely have to involve shooting. If we shoot, so will Britain, but Britain will not shoot first.

The British have bombed their former friend Finland's Arctic port of Petsamo, presumably to show Russia that Mr. Churchill really is Pal Joey's Pal Winnie. Since the British admit loss of 16 planes, it must have been a big and businesslike raid, not just a token performance.

News from the eastern front continues conflicting. But this much seems sure: That Hitler's blitz is not proceeding as per timetable, and that the Russians are taking big packages of men, tanks, planes, and guns out of the Germans. Further, it is now reported by a reputable American correspondent at Moscow that the biggest part of the Russian wheat crop has been harvested and rushed far back from the war theaters, with the rest of the crop ripe.

To us, this adds up to two conclusions: (1) That the administration is anxious to get us into this war all the way and on all fronts; but (2) that there is little urgency for us to jump in right now to save the British Empire.

WHAT'S ALL THE RUSH?

The British seem to us to be doing fine at the moment. Their cause seems to be getting enormous help from Pal Joey in the East, as well as from what Mr. Churchill calls the "gigantic scale" of United States lease-lend shipments. The Empire is territorially undented as yet; has, indeed, added Ethiopia, Italian Somaliland, Syria, and Lebanon unto itself.

We're glad of that. But why all the rush to order all 1,450,000 of our soldiers to stay on active duty for the duration, meanwhile adding to the Army without limit?

As Senator TAFT, of Ohio, inquires, how about the Reserve? We still need to build up a big, young Reserve of men who could be called to active duty in a hurry.

Why, then, not forget about this draft time-extension proposal? Or why, at least, not work out some sensible compromise, whereby key men would not be released in excessive numbers at any one time, while a regulated flow of trained men would keep feeding into the Reserve and adequate numbers of draftees would keep feeding into the Army?

We believe such a compromise can be worked out, and should be. With most Americans still unconvinced of the immediacy of our peril, there is danger to both civilian and soldier morale if this flat, 100 percent, time-extension plan is railroaded through Congress.

Reduction of Automobile Output

EXTENSION OF REMARKS
OF
HON. OSCAR YOUNGDAHL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

LETTER WRITTEN BY WILLIAM H. ZIEGLER

Mr. YOUNGDAHL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter:

MINNEAPOLIS, MINN.,
July 29, 1941.

To the Honorable OSCAR YOUNGDAHL,
House of Representatives,
Washington, D. C.

DEAR SIR: The Construction Equipment Distributors of the United States have a national association of some 300 members and about 100 allied members who are manufacturers of construction equipment. This association is known as the Associated Equipment Distributors, with an office in Washington and a secretary in charge. There are over 1,000 manufacturers of construction machinery of all kinds who work closely with the distributors. One distributor will represent a number of manufacturers in a given area, generally a State, which the manufacturers have found very much cheaper in marketing their products than to maintain salesmen or branch offices. Probably the outstanding example is the Caterpillar Tractor Co., who manufacture and sell between fifty and eighty million dollars worth of their products both in the United States and abroad, all through distributors, not having any salesmen of their own. This industry handles its products much the same as the automobile industry.

Our national office in Washington was recently informed by an official of the O. P. M. who was discussing the automobile reduction, that many distributors, jobbers, and wholesalers would be put out of business when the present plans were put into effect. He added that the same thing was true of the construction machinery distributors and their industry as well as many others. The automobile retail industry, we believe, is in most States, according to the census, the largest retail industry we have, considering all of its branches—gas, oil, tires, garages, service, etc.

If the plan is carried out as stated you will have vacant buildings, Main Street will be deserted, taxes will go unpaid, unemployment such as we have never known, and whole industries disorganized and destroyed. There are some 460,000 people in the retail automobile industry, sales, service, etc., plus probably three times as many in the other accessory industries, and corresponding proportion in the construction and similar industries. When all of these people are out of employment, grocery stores, department stores, banks, and every other industry will feel the effect. A few of the pepole in our industry are fitted for defense work, many can be with retraining, but many would never be suited to that work. It takes many years to train even salesmen for our industry, parts men, service men, etc. Inasmuch as Minnesota and neighboring States have little or no defense work to reemploy these people, it would require their moving to other sections of the United States.

Suppose we finish the job we have undertaken for aiding any nation we choose and even winning the battle but destroy our own country by destroying and disorganizing business. Then when this emergency is over we will have to rebuild and retrain and reorganize whole industries, because firms like ours would be gone and thousands of other firms. There are, we believe, some 300,000 small business concerns in the United States like our own, many of which will be put out of business with the program as planned. They do not have the resources to weather any such storm as we are told is ahead of us. This looks a good deal like the operation which the doctor said was successful but the patient died.

Are we more interested in the welfare of our own people, our own mode of living, of doing business, and our form of government than we are in anything else that may occur on the face of the globe? We are faced with answering that question. Is there no medium ground where we can render a certain maximum service to others and yet realize that above all we must preserve ourselves? One gives to charity but not to the point of self-destruction.

While this picture may seem black, we question whether it even indicates what may be ahead. Hugh Johnson's article in last evening's Times Tribune covers the same subject, Shortage Threatens Little Business, and goes even further than some of these statements. This is not a question that can be decided by a few smart college professors or any other one man or group of men, however wise. The import of this terrific disturbance should first be brought to the attention of those who are issuing such orders and then the public should be distinctly and quickly informed what disorganization, what ruin, probably riots and revolution will be ahead if any such plan goes into effect.

Yours very truly,

W. H. ZIEGLER.

Joint Tax Returns

EXTENSION OF REMARKS
OF
HON. EUGENE WORLEY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

EDITORIAL FROM THE CHILDRESS COUNTY NEWS

Mr. WORLEY. Mr. Speaker, I take pleasure in presenting for the consideration of the membership of the House an editorial written by Mr. Kenneth Fink, owner and publisher of the Childress County News, which is very timely and represents the views of many citizens in the Panhandle of Texas:

SHALL WE PENALIZE MARRIAGE?

To a very large extent, it is the white-collar class of citizens who are "taking a beating" nowadays. Most of them will not share in the wage increases which are being given industrial workers. But they will be forced to pay like all the rest of us as the cost of living rises. It is also these people who will have to bear a large proportion of the increases in taxes. The pending tax bill hits hardest in the middle income brackets.

On top of that, one provision which has been tentatively approved for inclusion in the bill would still further increase the burden for business and professional workers.

This is the provision which would prohibit separate tax returns for husband and wife, even where the wife has a separate income which is earned by her alone. In thousands upon thousands of white-collar families, both husband and wife have jobs and earnings. The income of one is in no way dependent upon the other. To force these families to lump their incomes in one return, and thus pay a higher tax, is a manifest injustice.

Even more important, in the long view, is the patent fact that this provision, if included in the tax bill, would amount to placing an economic penalty upon the institution of marriage. It would place a premium upon divorce. That would be an ironical step indeed for a Nation whose very foundation is the strength of the home and the family.

Observations on Taxation

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

LETTER FROM P. H. KUYPER, PRESIDENT OF THE ROLSCREEN CO.

Mr. CUNNINGHAM. Mr. Speaker, under permission granted by the House, I place in the RECORD a very interesting and thoughtful letter from Mr. P. H. Kuyper, president of the Rolscreen Co. of Pella, Iowa, which is most pertinent to the subject now before Congress, taxation.

The letter follows:

ROLSCREEN CO.,
Pella, Iowa, July 30, 1941.

The Honorable PAUL CUNNINGHAM,
House of Representatives,
Washington, D. C.

P. H. Kuyper, general manager, writing

I have, of course, noted quite a number of newspaper comments on the new tax bill, but not until today have I had an opportunity to go over a complete copy of the bill as it was drafted by the House Ways and Means Committee. When I came to the office this morning I made the comment, "I wonder what it will be that will knock my ears down today." And I'll admit that this copy of this tax bill certainly did.

If all of this money were to be judiciously spent for defense, I could almost say that I would be happy about it, because I feel that we must pay our way as we go as much as possible. But it is this reckless squandering of hard-earned money that is causing worry to all of us taxpayers. This three billion five hundred and twenty-nine million two hundred thousand that Congress is undertaking to raise is exactly the same kind of money that we are all taking down to the grocery store and spending for bread and butter and meat and clothes and gasoline. And in dealing with these astronomical figures all of us are beginning to lose sight of that.

I have made the remark several times that if Congress were to be fair to the taxpayers, ordinary expenses of government should be cut down by $1 for every dollar of additional tax raised, and I still feel it is well within the realm of possibility to cut this additional tax bill in half on that basis. In other words, I feel an objective of Congress should be to reduce ordinary Government expense by $1,750,000,000 and on that same basis increase taxes by $1,750,000,000.

A little comment I read the other day stopped me. Representative SIMPSON, of Pennsylvania, is quoted as saying that the Federal Government now carries a direct monthly pay roll exclusive of the military forces somewhat larger than the weekly pay roll of all of the manufacturing industries in the United States combined.

I note that about 3 days are to be allocated to debating this new tax bill in the House. I feel that 3 days should also be allocated to debating the minority report, with which you are undoubtedly familiar. But we all know that this minority report is already pigeonholed.

The future implications of this tax bill are indeed serious, especially for smaller corporations like the Rolscreen Co. This company has been built up by ploughing back every dollar of profits after paying taxes and by reinvesting every dollar of dividends after paying taxes into the business. Through the good years of 1928 and 1929 we followed that same policy and conserved every dollar of reserve we could. But by 1934 and 1935 we scraped bottom and almost sprung a leak. Building up reserves now under this tax bill becomes practically impossible with an effective rate of in excess of 50 percent of corporation profits and additional personal income-tax rates on dividends which we pay out and which we have always been reinvesting as personal-income taxes. I shudder to think what is going to happen to the thousands and thousands of little corporations all over the country when we go into the unavoidable tail spin after this present emergency. Because there won't be any reserves to tide us over like there were before.

Even at that, I would still take this tax bill with a smile if we could have a semblance of good management in this defense program and eliminate the tremendous amount of waste and graft. I make a motion right now that we turn loose the vast army of Federal revenue agents who check us every year to find that last dollar of income and sic them on to these contractors in these Army camps. Where they will find dollars of additional income among small corporations, they will find tens of thousands of dollars in these Army contracts. Daily newspaper accounts are enough evidence of that.

Personally I think the joint return feature of this bill is most despicable. It doesn't affect me personally to any extent but I know a number of folks around town where husband and wife each work hard and run separate businesses and they surely are entitled to making separate income-tax returns. It looks to me like this is the first step toward communism.

The story books tell us of man and wife being one, but we all know that's a fairy tale—at least I have found that most women still have ideas considerably different from their husbands. And they are still separate entities.

If this feature of this tax bill becomes law, the next step will undoubtedly be to combine incomes of husband and wife and sons and daughters. And when that well is pumped dry, it is just as logical to include the grandchildren—all direct descendants of a so-called head of a family.

Again I must say that I could take this entire tax program gracefully and with a smile if this present administration would make some effort to cut down ordinary expenses of Government. It can be done. Canada is doing it and we can too if our Senators and Representatives would only face these issues fairly and honestly.

There is just one ray of sunshine that I can see in this whole thing—gradually the financial situation of our Government is just going to get so bad that the citizens are going to be aroused to the point where Washington will really hear the voice of the people who are willing to work and to build a strong national economy.

Thank you.

ROLSCREEN CO.,
P. H. KUYPER.

Unity Lacking in Defense Program

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

ADDRESS BY HON. JOHN TABER, OF NEW YORK

Mr. TABER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech which I made last Saturday night:

In these troubled times one can tell little of what is going to happen next. It is a time where our national existence is impaired. It is a time that calls for unity on the part of the people of the United States—unity in preparing our country to defend itself and to protect our liberties. It is a time when partisan conditions should be laid aside. It is a time when even the President of the United States should be expected to cooperate in a defense program and to forget for the time being those advanced communistic ideas which he has endeavored to saddle upon the country.

It is time for the President to place the procurement of things needed for defense in the hands of one man where we can have some efficiency and some planning upon the production. It is a time when patriotic considerations alone should move the President of the United States and those in Congress, and yet what is the situation resulting?

First. The President has now sent to the Senate the nomination of Rexford Guy Tugwell, famous as the head of the Communistic Resettlement Administration in the early days of the administration, to be Governor of Puerto Rico, where he is expected to follow up the efforts to establish a communistic state on the island of Puerto Rico which have so far resulted in failure and the loss of nearly $100,000,000 in relief funds. It is manifest that it is a part of an attempt to establish communism throughout the Caribbean area and that the President is still catering to that group.

Second. It is prophesied by Pearson and Allen, the alleged columnists who are tools of the White House clique, that Tommy Corcoran, a notorious communistic advocate who has long been closely associated with the White House and who has within the last 6 months been reputed to have made over a million dollars in lobbying in departments in Washington, is to be the next Attorney General of the United States—the prize lobbyist and prize Communist to be Attorney General!

Third. The President has placed Harry Hopkins, who was a total failure as administrator of relief and the W. P. A. and who did nothing but promote the cheapest kind of political racketeering, in charge of the administration of the expenditure of the $7,000,000,000 of lease-lend appropriations.

If this lease-lend proposition were an important item, it was important enough so that a competent man who would know how to let contracts, and let them efficiently, and follow up production should be appointed, and not a total failure. Tremendous bottlenecks are resulting from Mr. Hopkins' incapacity and a waste of at least 40 percent of the entire appropriation is to be expected with this kind of management. The appointment of Mr. Hopkins to this position is an absolute breach of faith with the Congress and the American people. The Congress was pledged that he would not be placed in this position.

Fourth. The President so far has steadily refused to give Mr. Knudsen authority over defense production. He has allowed Leon Henderson to interfere with his operations. He has allowed Sidney Hillman to interfere with Mr. Knudsen's operations and he has absolutely failed to put defense production on any kind of honest or efficient basis. It is scattered all over. It is working against a tremendous handicap, and national defense lags as a result.

The camps for which we have drafted 600,000 boys, inducted into service 500,000 National Guard men, and enlisted 450,000 more of the young men of our country into the Regular Army, are without tanks, guns, planes, or other proper equipment for training. In most of the aviation schools no bombing training is available. In almost all of the camps no antiaircraft practice is available, and as far as the production of tanks is concerned, that is lagging.

The President today has the power to order those who have been drafted for service into the Army Reserve upon the expiration of their term of service, and then he has the power to order that Reserve to active duty, so absolutely no legislation is required to bring about the extension of service of these men. And yet the President comes to Congress to ask that this term be extended.

Why does he do this? We should have unity. The President of the United States should show the way to unity by cooperating with the defense program himself. He cannot hope for unity so long as he proceeds along the line of developing a communistic set-up either here or abroad, or so long as he refuses and neglects to apply efficiency toward our defense production.

It is the most serious situation that this country faces today. We are never going to be prepared to defend ourselves in any way so long as the President continues to promote disunity by his own operations.

In these times and these days the young Republicans are showing a great spirit of patriotism in the efforts they are making to bring these facts before the country. They are sounding the battle cry of freedom.

Joint Income-Tax Returns

EXTENSION OF REMARKS

OF

HON. WARD JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. JOHNSON of California. Mr. Speaker, some mention has been made that the provision requiring joint income-tax returns by husband and wife in the proposed 1941 tax bill is unconstitutional in that it is contrary to the due process of the law as guaranteed by the fourteenth amendment to the Constitution.

At all times since the enactment of the Federal Income Tax Act in 1913, married taxpayers have had the right, at their option, of either filing separate returns or joint returns. It is now proposed to deny married taxpayers the right to file separte returns. Under the proposal the tax on the incomes of married persons will be computed on the joint aggregate income of both husband and wife, rather than separately on the separate income of each, as heretofore. The proposal will not affect the taxes payable by single persons or by married persons whose spouses have no income. But in the innumerable cases where husband and wife each have income, combining the income into one return for the purpose of computing the tax will force the income into higher-rate brackets and accordingly will result in greater taxes than would be imposed if the taxes of each were computed as at present on his or her own income. Thus, under the proposal, a person would be required to pay a greater tax on his income simply because of the fortuitous circumstances of being married to a person who also has income. It is submitted that the Constitution does not permit such arbitrary discrimination.

In the case of *Hoeper* v. *Tax Commission* (284 U. S. 206; 76 L. ed. 248) the Supreme Court had occasion to consider an attempt by the State of Wisconsin to increase revenues in a manner substantially similar to that now proposed. The Wisconsin law provided that in the case of married persons living together the income of the wife should be added to the income of the husband, and that the tax should be computed and assessed against the husband on the combined income. That this scheme is substantially the same as the present proposal is apparent from the following description of it by the Court:

> What Wisconsin has done is to tax as a joint income that which under its law is owned separately, and thus to secure a higher tax than would be the sum of the taxes on the separate incomes (76 L. ed. at 251).

In holding the Wisconsin law invalid, the Court made the following declaration:

> We have no doubt that, because of the fundamental conceptions which underlie our system, any attempt by a State to measure the tax on one person's property or income by reference to the property or income of another is contrary to due process of law as guaranteed by the fourteenth amendment (76 L. Ed., at 251).

And on page 216:

> The effort to tax B for A's property or income does not make B the owner of that property or income, and whether the State has power to effect such a change of ownership in a particular case is wholly irrelevant when no such effort has been made. Under the law of Wisconsin the income of the wife does not at any moment or to any extent become the property of the husband. He never has any title to it or controls any part of it. That income remains hers until the tax is paid, and what is left continues to be hers after that payment. The State merely levies a tax upon it. What Wisconsin has done is to tax as a joint income that which under its law is owned separately, and thus to secure a higher tax than would be the sum of the taxes on the separate incomes.

Preceding these quotations the court had compared the status of the wife at common law with her status in Wisconsin in the year 1927, reaching the conclusion that certain rights of the husband, present at common law, had been lost to the wife since that time. The conclusion that the wife had all the rights in her separate property which she would have had as an unmarried person led logically to the ruling that the husband's tax might not be measured with reference to the wife's, since he had no control over, or possession of, her property. The wife's rights to her separate property have not changed since that time; and, if those rights are to be maintained, her independence must continue to be recognized.

In his dissent Justice Holmes took the position that the nature of the family relationship was such that the husband had considerable control over the separate property of the wife by virtue of his position as head of the family; and further, that a wife's separate income of necessity affected the husband, since, to the extent of the wife's income, the husband's own life was made easier. Thus, the husband's tax might properly be measured by his wife's separate property. Notwithstanding the existence of these facts the husband still does not have final command or control over his wife's separate properties. She may dispose of them in toto of her own will. Indeed, so long as the husband is able to provide a living subsistence for his family, there is no legal obligation on the wife to render support; the husband is primarily liable and the wife's liability arises only after the husband's has been exhausted. If the husband is not legally privileged to share with his wife rights to her separate property, he should not be burdened with the duties which are incident to that property, and consequently he should not be taxed on the income arising from these properties.

It is clear from the Hoeper case that the States may not impose an income tax on one spouse measured by the income of the other spouse. Congress is likewise without power to tax one person on the income of another. Just as the tax laws of the States must be reasonable and must conform to the requirements of the due-process clause of the fourteenth amendment to the Constitution, so must the tax laws of Congress likewise be reasonable and must conform to the requirements of the due-process clause of the fifth amendment to the Constitution. That the court saw no difference in this respect between the powers of the States and Congress is fully indicated by the fact that the court in the Hoeper case quoted the following statement from *Knowlton* v. *Moore* (178 U. S. 41, 77, 44 L. Ed. 969, 984):

> "It may be doubted by some, aside from express constitutional restrictions, whether the taxation by Congress of the property of

one person, accompanied with an arbitrary provision that the rate of tax shall be fixed with reference to the sum of the property of another, thus bringing about the profound inequality which we have noticed, would not transcend the limitations arising from those fundamental conceptions of free government which underlie all constitutional systems" (76 L. Ed. at 251).

The proponents of the present scheme seek to avoid the clear-cut decision of the Hoeper case by a stratagem. Instead of providing, as Wisconsin did, that the tax on the combined income of husband and wife should be assessed to the husband, it is proposed that each should pay a tax on his or her own income, but that the tax of each should be that proportion of the tax computed on the combined income which the income of each bears to the combined income. This is an obvious subterfuge. The resulting tax under this method of computation is exactly the same as it would be if the tax were openly and directly assessed on the combined income. The language employed fails to obscure the simple fact that the amount of tax imposed upon a married person depends upon and varies with the income of the husband and wife. The plan, accordingly, still falls within the prohibition of the Hoeper case against measuring the tax on one person's income by reference to the income of another. Even though it should be conceded that as a matter of technical statutory phraseology the proposed scheme cannot be objected to on the grounds that it imposes a tax on one spouse measured by the income of another, the proposal would nevertheless still be invalid.

In *National Life Insurance Co.* v. *United States* (277 U. S. 516, 72 L. Ed. 968), Congress attempted indirectly to impose a tax on income from tax-exempt sources which could not be taxed directly, by the clever device of granting a deduction to taxpayers having no tax-exempt income, which was denied to taxpayers having tax-exempt income. The effect of this attempt, if valid, would have been to impose a greater tax on taxpayers having tax-exempt income than would have been imposed if they had no such income. The Court held the attempt invalid and emphatically declared that:

> One may not be subjected to greater burdens upon his taxable property solely because he owns some that is free. No device or form of words can deprive him of the exemption (277 L. Ed. at 971).

The principle of this case is directly applicable to the present proposal. Just as it is clear from the Hoeper case that a taxpayer enjoys a constitutional exemption from being taxed on another's income, so it is likewise clear from the National Life Insurance Co. case that the taxes on a taxpayer's taxable income cannot be increased because of income of another person on which the taxpayer cannot be taxed. No device or form of words can change this result.

The Joint Committee on Internal Revenue Taxation has prepared for the House Ways and Means Committee a short brief in support of the proposal, considering the possible constitutional objections to the proposed change.

Four of the points advanced by the Government in this brief will be considered here and shown to be inapplicable or inconsequential:

(1) The Government contends the case of *Hoeper* v. *Tax Commissioner* ((1931) 284 U. S. 206), which held unconstitutional a Wisconsin statute requiring a joint return of husband and wife, is no longer good law. This case has not been overruled and the objection to compulsory joint returns has never been met.

(2) The Government maintains that the proposed change is distinguishable from the statute which was held invalid in the Hoeper case, as here one spouse may limit his own liability to that proportion of the total tax which is represented by the relationship between the sum of taxes he and his spouse would have to pay if filing separate returns, and his own tax if filing separately. The minimum for which he is liable exceeds, however, his liability if single. Further, a tax which is measured by the income of one other than the taxpayer is specifically prohibited by the Hoeper case.

(3) The Government believes that a proper classification has been made in recognizing the family as a tax unit, distinct from individual persons; but there is no case authority to support such a classification.

(4) The Government relies on recent cases in which the Supreme Court has held that an individual is liable for an income tax so long as he owns and controls the properties which produce the income, even though the income goes absolutely to someone other than the taxpayer. But a husband neither owns nor directly controls his wife's separate property; and a wife has never at any time had control or dominion over her husband's separate property.

1. HOEPER AGAINST TAX COMMISSIONER

This case involved the Wisconsin income-tax law, which in 1927 provided in section 71.05 (2) (d) that the income of the wife and of each child under 18 years of age should be added to that of the husband or father, assuming the family were living together, and that the taxes levied on the total amount should be payable by the husband or head of the family, but if not paid by him could be enforced against any person whose income was included in the tax computation. There was no limitation on the amount of this secondary liability.

The appellant husband in this case paid his tax under protest, and then, by virtue of the Supreme Court decision, was successful in his suit to recover that amount of the tax which exceeded the total tax computed on his separate income. According to Justice Roberts, who wrote the majority opinion, the question here was whether the State might properly measure the husband's tax by reference to his wife's income from her separate property. At page 215, he said:

> Since, then, in law and in fact, the wife's income is in the fullest degree her separate property and in no sense that of her husband, the question presented is whether the State has power by an income-tax law to measure his tax not by his own income but, in part, by that of another.

Answering this question, on the same page:

> "We have no doubt that, because of the fundamental conceptions which underlie our system, any attempt by a State to measure the tax on one person's property or income by reference to the property or income of another is contrary to due process of law as guaranteed by the fourteenth amendment. That which is not in fact the taxpayer's income cannot be made such by calling it income." (Compare *Nichols* v. *Coolidge*, 274 U. S. 531, 540.)

Since Justice Holmes' dissent was joined in by Mr. Justice Brandeis and Mr. Justice Stone, it is possible that should the Court be presented today with the same factual situation, a result would be reached contrary to that in the Hoeper case. However, the argument in Justice Roberts' majority opinion has not been rebutted, and in no tax case which has come down since the Hoeper case was tax liability supported, where the taxpayer's control was as tenuous, uncertain, and devoid of legal sanctions as is the husband's today over the separate property of his wife. For this reason the Hoeper case should not be overruled.

2. JOINT AND SEVERAL LIABILITY TO BE OPTIONAL

The proposed section 111 (a) (b) reads in part: "Liability with respect to the tax so computed; (1) shall be joint and several; or (2) at the election of either spouse" in such proportion to the total tax as the tax computed on the separate income of the spouse bears to the sum of the separate taxes. Apparently the Government places considerable reliance on this optional feature. How the election is to be made has not yet been stated, other than that the Commissioner, with the approval of the Secretary, shall prescribe rules and regulations therefor. In the absence of any other information we must assume that a valid procedure will be set up.

Because of this provision the Government reasons that one spouse will not be jointly and severally liable for the tax on the other spouse's properties, and that a major objection to the Wisconsin tax held invalid in the Hoeper case will thereby have been eliminated. This conclusion does not follow. Although under the proposed provisions one spouse might relieve himself of liability for the actual tax on the separate property of the other spouse, he is nevertheless liable for the full amount of his own tax, and, to the extent that this last amount exceeds his tax liability if he were single, his tax as a married man is being measured by his wife's income, contrary to the express language of the Hoeper case.

And, of course, a wife would be in an exactly similar position. Consequently, the same argument is applicable in her case.

3. CLASSIFICATION

In the Government's briefs some stress is laid upon certain recent cases approving classifications which it is claimed are analogous to the classification contemplated under the present provision, i. e., the taxation of the incomes of the husband and wife as a unit. With the exception of the dissent in Hoeper against Tax Commissioner, no case has been discovered bearing a factual situation close enough to our own to serve as authority on this point. It is believed that the cases cited by the Government in support of this point are so different as to represent no more than a possible tendency on the part of the court.

In *Flint* v. *Stone Tracy Co.* ((1910), 220 U. S. 107), the claim was made that a tax

operating on the income from a corporation was unconstitutional because the classification which subjected such income to taxation and yet left untaxable the income from a similar business, organized as a partnership, discriminated unfairly between the two types of units. Reference is made to this case because it is one so often cited on the subject of classification. Its factual situation bears no particular similarity to our own; it is not authority for upholding the compulsory joint return. Denying the claim which has just been stated, the court said at page 158:

> But it is insisted, this taxation is so unequal and arbitrary in the fact that it taxes a business when carried on by a corporation and exempts a similar business when carried on by a partnership or private individual as to place it beyond the authority conferred upon Congress. As we have seen, the only limitation upon the authority conferred is uniformity in laying the tax, and uniformity does not require the equal application of the tax to all persons or corporations who may come within its operation, but is limited to geographical uniformity throughout the United States. * * *
>
> In levying excise taxes the most ample authority has been recognized from the beginning to select some and omit other possible subjects of taxation, to select one calling and omit another, to tax one class of property and to forbear to tax another.

Helvering v. *City Bank Co.* ((1935) 296 U. S. 85). In this case the taxpayer claimed that the provision of the Revenue Act of 1926 which held the corpus of a revocable trust subject to a tax upon the death of the trustor was invalid since the classification was not proper. The court denied this claim and then went on to mention the extremes beyond the bounds of proper classification. Mr. Justice Roberts, who wrote the opinion in this case as well as the opinion in the Hoeper case, said, at page 92:

> There are, however, limits to the power of Congress to create a fictitious status under the guise of supposed necessity. Thus it has been held that an act creating a conclusive presumption that a gift made within 2 years prior to death was made by the donor in contemplation of death, and requiring the value of the gift to be included in computing the estate of the decedent subject to transfer tax, is so grossly unreasonable as to violate the due process clause of the fifth amendment (*Heiner* v. *Donnan* (285 U. S. 312). Compare *Schlesinger* v. *Wisconsin* (270 U. S. 230)). In the same category falls a statute seeking to tax the separate income of a wife as income of her husband (*Hoeper* v. *Tax Commissioner* (284 U. S. 206)).

This case on its facts is distinguishable from the Government's; it is not authority for the Government's contention.

United States v. *Hudson* ((1936) 299 U. S. 498). This case involved the validity of a tax of 50 percent of the profit made on the sale of future contracts for the delivery of silver under the Silver Purchase Act of June 19, 1934. The Court reasoned that this taxing provision, which referred exclusively to the sale of silver, was a proper classification, saying, at page 500:

> The taxing provision does not impose a tax in respect of all transfers, but only in respect of such as yield a profit over cost and allowed expenses. If there be no profit there is to be no tax. If there be a profit the tax is to be 50 percent of it. Thus, a profit is made the occasion for the tax, and also the measure of it. Because of this, counsel for the Government contend that the tax is a special income tax; and we think the contention is sound.
>
> It is not material that such profit is taxes, along with other gains, under the general income-tax law, for Congress has power to impose an increased or additional tax if satisfied there is need therefor. *Patton* v. *Brady* (184 U. S. 608, 620–622).

This case is mentioned in the Government's brief, but from what has already been said it is obvious that it could carry little weight in a contest involving the validity of the joint tax return.

Heiner v. *Donnan* ((1931), 285 U. S. 312). Involved here was the constitutionality of a classification affecting inter vivos gifts made within 2 years prior to the donor's death. The statute in question stated that such a gift was conclusively presumed to have been made in contemplation of death. The court held that this classification was improper. Mr. Justice Stone and Mr. Justice Brandeis dissented. Referring to the previous cases Mr. Justice Sutherland, in the majority opinion, said at page 327:

> Plainly, this is to measure the tax on A's property by imputing to it in part the value of the property of B, a result which both the Schlesinger and Hoeper cases condemn as arbitrary and a denial of due process of law. Such an exaction is not taxation but spoliation.

In *Helvering* v. *Northwestern Steel Rolling Mills* ((1940), 85 L. Ed. (Advance Opinions) 21), was involved the validity of a classification making subject to excess-profits taxes all undistributed profits of corporations, unless by written contract the corporation was prohibited from making a distribution. A taxpayer contended that the term "written contract" included State laws, by virtue of the fact that corporate charters were contracts between the State of its incorporation and the corporation. The greater part of Mr. Justice Black's opinion is devoted to a construction of this provision. He reached the conclusion that on its face the provision was not intended to include State laws. The contention was then made that the statute was contrary to the due process clause of the fifth amendment, because a tax was imposed where oral contracts or the laws of a State prohibited distribution, but not where written contracts prohibited distribution. The Court said at page 26:

> This contention is without merit. It is not necessary to point out the many obvious reasons that might underlie the distinctions here drawn in granting special deductions from a generally imposed tax.

It will be seen that the Government can draw little support from this case, since the classification at issue involves the measurement of one tax by reference to the income of a third party. There is no question as to the propriety of taxing the income of the husband.

Madden v. *Kentucky* ((1940) 309 U. S. 78). This case was cited by the Government in support of its contention that a tax upon the family as a unit is a proper classification under the revenue laws. Here was involved the validity of a Kentucky tax upon bank deposits. On deposits of Kentucky residents located within the State the tax was 10 cents per $100, and on deposits located outside the State it was 50 cents per $100. The contention was made that such a classification was improper. Two points were discussed in this case by Mr. Justice Reed; one being the propriety of the classification, the second being the applicability of the privileges and immunities clause. At the conclusion of the discussion on the latter point, *Colgate* v. *Harvey* (286 U. S. 404) was overruled. On the classification point the court said nothing which is pertinent to our discussion. The case is mentioned only so that recognition may be given to the fact that it bears no analogy to our own situation and that the factual situation is far removed from our own.

In order to uphold the claim that the husband has such control over the separate property of his wife that his income tax properly may be measured by reference to his wife's income the Government apparently relies on a number of the recent trust cases in which taxpayers have attempted, through legal devices, to make available to designated beneficiaries the income from their assets without losing all control of the corpus or principal from which the income is derived. The theory which supposedly makes these cases applicable is that the taxpayer controls the distribution of the properties in the so-called trust cases in a way which is similar to his control over his wife's separate property. Recently the court has been going out beyond the limits of pure legal control and basing its holdings on the tenuous connections which spring from the family relationship. But the present joint-return situation is distinguishable from the great majority of these trust cases, and the fact that this line of cases has, as just indicated, been greatly broadened in the last few years, does not justify the Government in relying for support on the line as a whole. It would have to maintain its stand on a few general statements, and these are of little consequence since they were made in situations where the trustor, besides having control as the family head or manager, held also the legal incidents of control which are specifically relied upon by the court in the earlier cases.

Lucas v. *Earl*, 1930 (281 U. S. 111). The opinion in this case is less than two pages and was written by Justice Holmes. The contest revolved around the propriety of an agreement between husband and wife that the latter should receive one-half of the husband's salary outright. The taxpayer claimed that this arrangement sufficiently deprived him of the income in question so that he was not liable to the Federal Government for an income tax. The Court denied this contention, recognizing, however, the argument made by the taxpayer's counsel at page 114:

> A very forcible argument is presented to the effect that the statute seeks to tax only income beneficially received, and that taking the question more technically the salary and fees became the joint property of Earl and his wife on the very first instant on which they were received. We well might hesitate upon the latter proposition, because however the matter might stand between husband

and wife he was the only party to the contracts by which the salary and fees were earned, and it is somewhat hard to say that the last step in the performance of those contracts could be taken by anyone but himself alone. But this case is not to be decided by attenuated subtleties. It turns on the import and reasonable construction of the taxing act. There is no doubt that the statute could tax salaries to those who earned them and provide that the tax could not be escaped by anticipatory arrangements and contracts however skillfully devised to prevent the salary when paid from vesting even for a second in the man who earned it. That seems to us the import of the statute before us, and we think that no distinction can be taken according to the motives leading to the arrangement by which the fruits are attributed to a different tree from that on which they grew.

Here the Court squarely based its decision on the control which was necessarily retained by the taxpayer, even after he had entered into a binding contract with his wife. Obviously, if the taxpayer was unable to perform the services for which the consideration was to be paid his wife, she would not receive any consideration. Whether those services could or should be performed was entirely within the control of the taxpayer. The husband has no such control of his wife's separate property, and should not be taxed for a control or ownership he does not possess.

Corliss v. *Bowers* ((1929) 281 U. S. 376). This was another decision by Justice Holmes, involving the validity of a tax assessed against the trustor of a revocable trust. In the familiar language of the eminent jurist, we find on page 378:

> But taxation is not so much concerned with the refinements of title as it is with actual command over the property taxed—the actual benefit for which the tax is paid.

The "actual command" to which reference is made does not include the husband's control over the separate property of his wife.

Burnet v. *Leininger* ((1932) 285 U. S. 136). This case involved the validity of a taxpayer's attempt to escape income-tax liability on one-half of his share in a partnership, which one-half he had assigned to his wife. Referring to the Hoeper case, the Court makes clear the distinction, which has already been pointed out, between property the "actual command" of which is retained in the husband, and property the "actual command" of which the husband never does obtain.

Burnet v. *Wells* (1933, 289 U. S. 670). Here a trust was set up to pay the annual premiums upon a policy of insurance upon the life of the grantor. The Court held in a 5 to 4 decision that the income from this trust was taxable to the trustor, reasoning that it was used to meet one of the common expenses of everyday life. The Court, again emphasizing the retention of control, said at page 682:

> The relation between the parties, the tendency of the transfer to give relief from obligations that are recognized as binding by normal men and women, will be facts to be considered. Cf. *Reinecke* v. *Smith*, *supra*, distinguishing *Hoeper* v. *Tax Commission* (284 U. S. 206). We do not go into their bearing now. Here the use to be made of the income of the trust was subject, from first to last, to the will of the grantor announced at the beginning. A particular expense, which for millions of men and women has become a fixed charge, as it doubtless was for Wells, an expense which would have to be continued if he was to preserve a contract right, was to be met in a particular way.

Helvering v. *Clifford* ((1940) 309 U. S. 331). This case involved the validity of a short-term—5-year—trust which the settlor had set up, with the income for that time being held for the exclusive benefit of his wife. On termination the corpus was to go to trustor. During the term the trustor retained voting powers incident to the stocks forming the corpus of the trust, the power to sell, exchange, mortgage, and deed the pledged securities, the power to invest, the power to collect the income, to compromise claims, and to hold property in the trust estate. The Government contended that during the term the income was taxable to the trustor, and the Court, through Mr. Justice Douglas, upheld the Government's claim. It is here that we find the Court referring to "the family group" as "one income unit." At page 335 the Court said:

> And where the grantor is the trustee and the beneficiaries are members of his family group, special scrutiny of the arrangement is necessary lest what is in reality but one economic unit be multiplied into two or more by devices which, though valid under State law, are not conclusive so far as section 22 (a) is concerned.

The meaning of this language is very substantially modified, however, when read, as it should be, with the following paragraphs. It appears that the trustor retained the all-important control of the corpus. (The Court said at pp. 335–336):

> In this case we cannot conclude as a matter of law that respondent ceased to be the owner of the corpus after the trust was created. Rather, the short duration of the trust, the fact that the wife was the beneficiary, and the retention of control over the corpus by respondent all lead irresistibly to the conclusion that respondent continued to be the owner for purposes of section 22 (a).

In *Hormel* v. *Helvering* ((1941) 85 L. Ed. (Advance Opinions) 651), the Court, through Justice Black, reaffirmed its opinion in the Clifford case. This case involved the attempt of the taxpayer to escape income taxes by setting up a trust in favor of his children, the income from which was to be paid to his wife as their guardian. As in the Clifford case, the factual situation here is distinguishable from our own.

Helvering v. *Horst* ((1940) 85 L. Ed. (Advance Opinions) 99). Here the taxpayer attempted to escape a tax on the income derived from bonds held in his name, by transferring interest coupons, prior to their maturity, to a named donee. In holding this income still taxable to the transferor Mr. Justice Stone referred again to the ultimate source of control, saying at page 101:

> Underlying the reasoning in these cases is the thought that income is "realized" by the assignor because he, who owns or controls the source of the income, also controls the disposition of that which he could have received himself and diverts the payment from himself to others as the means of procuring the satisfaction of his wants. The taxpayer has equally enjoyed the fruits of his labor or investment and obtained the satisfaction of his desires whether he collects and uses the income to procure those satisfactions, or whether he disposes of his right to collect it as the means of procuring them. (Cf. *Burnet* v. *Wells*, 289 U. S. 670, 77 L. Ed. 1439, 58 S. Ct. 760, supra.)

And again at page 103:

> When, by the gift of the coupons, he has separated his right to interest payments from his investment and procured the payment of the interest to his donee, he has enjoyed the economic benefits of the income in the same manner and to the same extent as though the transfer were of earnings and in both cases the import of the statute is that the fruit is not to be attributed to a different tree from that on which it grew. See *Lucas* v. *Earl*, supra (281 U. S. 115, 74 L. Ed. 733, 50 S. Ct. 241).

A similar situation was involved in *Helvering* v. *Eubanks* (1940, 85 L. Ed. (Advance Opinions) 104), which was an assignment by a general life insurance agent of certain renewal commissions.

Another similar situation was *Harrison* v. *Schaffner* (1941, 85 L. Ed. (Advance Opinions) 694), where there was involved the anticipatory assignment of trust income instead of interest, dividends, and rents. The Court reached the same conclusion in the case. Again it will appear that none of these cases presents a situation so closely analogous to our own that it could properly serve as authority for the present proposition. If the husband's control is to be held sufficient to justify compulsory joint returns, the Court will have no more than general authority for that conclusion; there will be no direct authority for such a decision.

Of course, no person has even suggested that a wife has a control over her husband's separate property comparable to his over hers, and yet under the present proposal the wife will be liable for an increase in her tax due to marriage in the same way as her husband is. As to her, it would not seem that the Government could even pretend an answer. Clearly the proposed tax will deprive her of her property in violation of the fifth amendment of the Constitution.

The Tax Bill

EXTENSION OF REMARKS

OF

HON. JOHN W. BOEHNE, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

CORRESPONDENCE OF THE PRESIDENT, THE SECRETARY OF THE TREASURY, AND HON. ROBERT L. DOUGHTON, OF NORTH CAROLINA, CHAIRMAN OF WAYS AND MEANS COMMITTEE

Mr. BOEHNE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

THE WHITE HOUSE,
Washington, July 31, 1941.

MY DEAR BOB: Because of some uncertainties which seem to have developed in regard

to the position of the Treasury Department in regard to some provisions in the tax bill as reported out by the Ways and Means Committee, I asked the Treasury Department for a clarifying letter, and I think it is only fair to send this to you. I enclose a copy of Secretary Morgenthau's letter to me and also an appendix showing examples of corporations which would largely escape excess-profits taxes under the bill.

I am sure that I make it clear that the Treasury Department does not approve of mandatory joint tax returns except on the condition of granting substantial relief to earned income of the husband and wife. In this I heartily concur. But the committee draft leaves out the proviso altogether.

You and JERE COOPER have talked over the problem of the excess-profits tax in its relationship to the omission in the bill of application of this tax to certain types of corporations. These corporations may be making 20 or 30 or 50 percent on their equity capital. It is my definite opinion that they ought to contribute to the cost of our great defense program far more heavily this year than last year or the year before. But just because they happened to have made equally large profits in recent years, they are called on to contribute no more to the national defense under the proposed bill than they did before. That seems to me clearly a discrimination in their favor.

There is one other subject which I did not have a chance to talk with you about. It relates to lowering the exemptions in the lower brackets. I know that very few tax experts agree with me, but I still think that some way ought to be found by which the exemption of a single person should be reduced to $750, with a provision for a straight simple payment of some small contribution to the national tax income through some simple agency and on some simple form.

In the same way I think that the married exemption should be reduced to $1,500, again with a simple method of paying the tax through a simple agency and on a simple form.

Further, I am convinced that the overwhelming majority of our citizens want to contribute something directly to our defense, and that most of them would rather do it with their eyes open than do it through a general sales tax or through a multiplication of what we have known as nuisance taxes. In other words, most Americans who are in the lowest income brackets are willing and proud to chip in directly, even if their individual contributions are very small in terms of dollars. After all, the majority of all Americans are in these lowest brackets.

One other thought: Perhaps your committee will think it worth while to study the filing of low-income returns through the machinery of the post offices. This will undoubtedly save a good deal of the cost of collection under the present system. These simple returns could be sworn to before the local postmaster, who, of course, would have to be authorized to administer the necessary oath.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

HON. ROBERT L. DOUGHTON,
Chairman, Ways and Means Committee, House of Representatives, Washington, D. C.

THE SECRETARY OF THE TREASURY,
Washington, July 31, 1941.

MY DEAR MR. PRESIDENT: You have asked me to indicate the position taken by the Treasury Department during the consideration of the present tax bill with regard to (1) the mandatory joint-tax-returns provision, and (2) the excess-profits-tax provision.

1. Mandatory joint-tax returns: The Treasury indicated to the Ways and Means Committee its conditional approval of mandatory joint-tax returns, the condition being that substantial relief is simultaneously granted to earned income of both husband and wife. No substantial relief is afforded by the provisions of the pending bill from the resulting increased tax in those cases where husband and wife contribute through their labor to the family income. Therefore, in this important respect the pending bill is inconsistent with the Treasury's suggestion.

2. Excess-profits tax: The Treasury has consistently adhered to the position that the excess-profits tax should apply to profits in excess of a reasonable return on invested capital. Many corporations between 1936 and 1939 (the base period) earned average profits far in excess of a reasonable normal return. Nevertheless, the pending bill exempts all such earnings from excess-profits taxation unless they are more than 95 percent of the average profits earned in the 1936 to 1939 period. Therefore, in another important respect the pending bill is inconsistent with the Treasury's clearly announced purpose.

Some of the reasons for the Treasury's position are:

(a) The highly prosperous, well-established corporation which has been making 30, 40, 50 percent or more on its invested capital has a greater ability to pay taxes than a corporation which has been earning only 3, 4, or 5 percent on its invested capital, even though the dollar incomes of the two companies are the same. Congress has established the principle of taxation in accordance with ability to pay so far as individual income, estate, and gift taxes are concerned. The Treasury advocates the application of this principle to corporations as well as to individuals. Taxation of corporations in accordance with ability to pay calls for higher taxes on the profits of those corporations which have the higher rates of return on invested capital.

(b) The corporation which has been making a high rate of return in the period from 1936 to 1939 is given, by the existing law, a competitive advantage over newly organized concerns or those struggling to establish themselves. The older corporations which have been earning high profits are given a much greater rate of return free of excess-profits tax than are their newer competitors. The effect is to confirm monopolies and to protect well-established prosperous businesses against competition.

(c) If we are to expect all classes of society, including laborers and farmers, to accept the sacrifices of the emergency period and not to press for every possible dollar of advantage, they must be convinced that burdens are being distributed according to ability to bear them and that no one is making unreasonably large profits. The imposition and enforcement of a true excess-profits tax will thus help to prevent inflation.

Faithfully yours,

HENRY MORGENTHAU, JR.,
Secretary of the Treasury.

THE PRESIDENT, *The White House.*

EXAMPLES OF CORPORATIONS ESCAPING EXCESS-PROFITS TAXES

The way in which the present law and the committee's tentative plan leave exempt large amounts of excess profits is illustrated by the following actual examples:

A. After paying all taxes an automobile company made during the base-period years of 1936 through 1939 approximately 25 percent. Practically all (95 percent) of this amount can be earned and yet be free from excess-profits tax under the present law and under the committee plan. In 1940 the earnings of this concern, after the payment of taxes, will be approximately 26 percent of its invested capital under the present law.

B. The earnings of a manufacturer of tractors with nearly $50,000,000 of invested capital averaged, after all taxes, approximately 18 percent of invested capital during 1936-39, which amount will be free of excess-profits tax under the present law and the committee's tentative plan.

C. Similarly, a company which has practically a monopoly on one of the important defense materials had earnings, after taxes, during the base period years averaging approximately 19 percent of its 1940 invested capital, which it can continue to earn free of excess-profits tax.

D. A large manufacturer of beverages can continue to earn free of excess-profits tax over 25 percent of its 1940 reported equity capital.

Thus large amounts of the kind of profits which are commonly defined as excess profits and were taxed as such under the 1918 act are free from excess-profits tax under the present law and the committee plan.

JULY 30, 1941.

COMMITTEE ON WAYS AND MEANS,
HOUSE OF REPRESENTATIVES,
Washington, D. C., August 2, 1941.

MY DEAR MR. PRESIDENT: I was very greatly surprised to receive your letter of July 31, criticizing certain features of the pending tax bill, which our committee has recently reported to the House after more than 3 months of most careful deliberation and study. The matters discussed in your letter have all received our most careful consideration.

After receiving your letter I called a meeting of the committee for 10 o'clock this morning, and at that time I laid before it the contents of your letter. Each of the three items mentioned by you were again discussed. Then by decisive majorities the committee voted to reaffirm the action previously taken with respect to each of them and instructed me to so advise you with the reasons therefor.

As to mandatory joint returns, we are pleased to learn that you, as well as the Treasury, approve of it in principle. Our whole desire was to place the family upon an equitable basis from a tax standpoint and remove the admitted evil of tax avoidance. The existing law permits a rank discrimination in levying different taxes upon two married couples enjoying equal incomes merely because in one case the income belonged wholly to one spouse and in the other to both. This has been recognized by the Treasury as an evil for many years, and mandatory joint returns have been suggested by the Treasury on many occasions without qualification to remedy this situation.

While the Treasury gave belated approval to mandatory joint returns in the pending bill, such approval was qualified upon the condition that we continue this inequitable feature of existing law as to earned income. After careful consideration of the Treasury qualification, the committee was unable to see any logic in favoring a family in which both spouses earned the income as against a family where one spouse earned the entire amount for the support of the family. That was the controlling reason why the committee almost unanimously rejected the Treasury qualification. It was against extending special earned-income relief to a family in which both spouses contributed to the income. I would be surprised if anyone would be in favor of penalizing the family in which the husband is the sole breadwinner in favor of the family where the wife also draws a salary. Yet this is exactly what the Treasury qualification would have accomplished if we had permitted it to be incorporated in our bill. The mandatory joint-return proposal of the pending bill will not only remove the inequities and close some of the most glaring income-tax loopholes of existing law, which are especially pronounced in the community-property States, but it will also result in the Government securing additional revenue of more than $300,000,000, which, in our judgment, could not be raised from any other source with so little burden or hardship.

Referring to the excess-profits-tax proposal of your letter, our committee recognized that there are differences of opinion as to the proper base for measuring excess profits. This question was thoroughly discussed before the excess-profits tax was enacted last year by the Committee on Ways and Means, the Committee on Finance, and the Congress. It was again fully discussed this year, when the Treasury urged the same proposal which the Congress had decisively rejected in 1940, and extensive hearings were again held on this subject. Following the hearings our committee again refused to adopt this proposal of the Treasury. As a result of your recent conference with Mr. COOPER and myself, I again brought the matter before the committee. After carefully reviewing the subject in the light of our discussion with you, which was fully reported by us to our colleagues, the committee again overwhelmingly rejected the Treasury proposal.

While a corporation's return on invested capital may seem large in some instances, and this is especially true in the case of a business, which has grown from a humble beginning, it does not follow that such a corporation has realized excess profits. The difficulty is that experience has shown that invested capital is not a proper base for measuring excess profits in many cases. Our studies and the overwhelming testimony of witnesses before our committee has convinced us of the undesirability and inequity of measuring excess profits by the sole standard of invested capital. The experience of this method in the last World War and its abandonment by foreign countries show that it does not determine the excessiveness of profits even reasonably well.

The major objections to this form of taxation are set forth on pages 23 and 24 of our committee report.

I feel that no one would be inclined to favor the corporation which had retained its earnings over a long period of time, as against the corporation which distributed its earnings and thereby permitted the Government to secure the individual normal and surtaxes on such earnings. Or to favor the company which by chance was incorporated in a year of high values, as compared with a company organized in a year of low values. Or to conclude that the present shareholders of a corporation have realized an excess profits on what the original shareholders paid for their stock. Or not to give recognition to factors of personal efficiency as well as capital in determining the measure of excess profits. Yet it was demonstrated to our committee that not only these but other inequities existed under a straight invested-capital method, which would prevent such an excess-profits tax from operating fairly on the basis of ability to pay. To punish the small corporation in favor of the heavy or overcapitalized corporations would punish conservative corporation finance and reward stock watering. It would put a penalty on brains, energy, and enterprise, and confirm old ventures in their monopolies.

Our committee believes that the excess-profits tax plan in the pending bill is the fairest which could be devised. Under the existing law, the excess-profits tax was estimated to yield for the calendar year 1941 the amount of $1,026,400,000. An additional amount of $1,198,300,000 is estimated from this source under the bill, making a total yield of $2,224,700,000 from the excess-profits tax. When it is considered that this is the first year in which the defense program has been in full operation, it is believed that we have provided a very effective excess-profits tax for preventing the retention of unreasonable profits from the defense program. In fact, if we had followed the original recommendations of the Treasury, we would have secured only $400,000,000 additional revenue from the excess-profits tax, and if we had followed their revised proposal, we would have secured only $716,800,000 from the excess-profits tax.

In regard to personal exemptions, there were several members of the committee, including myself, who were inclined to look with favor on broadening the tax base by reducing the personal exemptions allowed single and married persons However, the Treasury representatives in their appearance before our committee were strenuously opposed to any reduction in personal exemptions, citing the rising cost of living and the burden of hidden taxes on persons in the low-income groups to justify their view. Undoubtedly, this position of the Treasury had some influence upon our action. I am surprised to learn that your views are antagonistic to those expressed so emphatically by the Treasury as the representative of the administration. The committee at times found it impossible during the course of its hearings to reconcile the testimony of different officials representing the administration.

With respect to that part of your letter relating to hidden taxes, the committee bill more nearly conforms to the views expressed by you than the recommendation made by the Treasury Department to our committee.

The Treasury recommended that the committee levy $1,248,900,000 from this source. The bill, as reported by our committee, recommends only $880,100,000 be collected from excises and other miscellaneous sources, and $160,200,000 of that amount can in no way be termed or classed as a hidden tax.

I submit to you, Mr. President, the record of our committee, as well as that of myself, for the past 8 years as evidence of our desire to cooperate with you and the representatives of your administration to the fullest extent consistent with the proper discharge of our solemn obligations.

Nothing in this letter is intended as a defense of or an apology for the action which we have taken, but only as an explanation, so that you and the country may understand some of the reasons for our conclusions.

With great respect, I am

Sincerely yours,

R. L. DOUGHTON.

THE PRESIDENT,
The White House.

What a Farmer Is Up Against

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. BURDICK. Mr. Speaker, in 30 minutes' time on this floor I do not think that I could convey a better picture of the plight of the farmer who is in debt and whose crops have been ruined than the letter just received from Mr. Erick Nordeng, of Schafer, N. Dak. The letter follows:

SCHAFER, N. DAK., *July 30, 1941.*

Hon. USHER L. BURDICK, M. C.,
Washington, D. C.

DEAR MR. BURDICK: I am in receipt of a letter from the Farm Credit Administration reminding me of the fact that about 7 years ago this office loaned you money, and it seems that now they want it all, or at least full payment of this loan by November 1, 1941, will be expected, and that sounds to me as if they would not refuse a full settlement sometime this fall regardless of the fact that hailstones fell on almost every acre of crop I had in this year.

Perhaps I should state right now that I do not expect you to be able to pay this loan for me, likewise I can hardly expect you to shoot the entire F. C. A. set-up, so they cannot collect, but I am sure that you will be especially glad to learn of their nice attitude, especially to people who can harvest ice cubes from wheat fields. Do you suppose they ever thought it might be hard for a farmer to clean up in 1 year, all of the old bills he ran during the last dozen years? Doesn't this F. C. A. outfit live near enough to the United States to read an occasional American paper and learn that the Government came in here and bought up all of the cattle that the Government had feed loans against—do they expect to foreclose their mortgage now when they bought the cows 5 years ago—just what is the score?

Out here at our farm we get a little old farm paper, and when it hails so hard we don't dare go outside we sit inside and read that paper, and from what we see in that paper it seems that our own Government is looking all over for foreign governments who might be interested in receiving something for nothing—if they won't take it as an outright gift maybe we'll lease-lend it, or figure out something else equally smart. If the Government is so eager to lease-lend why don't they just leave these old loans alone for a while? They already have it loaned—why take it away from us who do not have it to give to others?

Why wouldn't it be a good idea to introduce a resolution to leave the farmers alone during this so-called emergency when it is out of the question to get help on a farm—all of the men have left here to go into the Army or take other emergency positions, and the farmer can whistle and pay back old lend-lease stuff.

Very truly yours,

ERICK NORDENG.

Tax on Radio Broadcasting and Outdoor Advertising

EXTENSION OF REMARKS
OF
HON. OSCAR YOUNGDAHL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

LETTER FROM JOHN BENSON, PRESIDENT, AMERICAN ASSOCIATION OF ADVERTISING AGENCIES

Mr. YOUNGDAHL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

AUGUST 1, 1941.

Hon. ROBERT L. DOUGHTON,
Chairman, Committee on Ways and Means, House of Representatives, Washington, D. C.

DEAR MR. DOUGHTON: The American Association of Advertising Agencies respectfully protests against the imposition of a special

tax on the radio broadcasting and the outdoor advertising media, as recommended by the Ways and Means Committee of the House in the revenue bill of 1941, title VI, section 601, now before the House for enactment.

In fact, it deeply deplores such a tax for reasons brought out in the following statement:

This association is the national body of advertising agencies in this country, handling two-thirds of the total national advertising, and its members practice advertising in a scientific and professional way. They have no bias in favor of one advertising medium over any other, using all of them as required by the advertising or marketing problem to be solved for a given client. They have no financial interest in any media they use; that would be a breach of our ethical code.

Hence we hold no brief for the radio or the outdoor medium, as such, in making this protest. What we deplore about the proposed tax is the burden it imposes upon advertising itself, and hence upon the cost of distribution of consumer goods in this country. Advertising is but one of several forms of selling and is often used to facilitate personal sales effort. All advertising is selling, but not all selling is advertising. A manufacturer uses advertising when he thinks it is cheaper than any other form of selling or wants to economize the time and effort of his salesmen.

If his selling depends upon creating goodwill or a conviction about his product in the minds of millions of consumers, he will find it cheaper to put an advertisement costing several thousand dollars in a publication, on billboards or over the air, reachng several million consumers, than to hire an army of salesmen to call on these consumers and tell them his story personally, or even write them a letter about it.

When you increase the cost of distribution by burdening it with taxes, you at the same time do one or more of the four following things injurious to national defense and to public welfare:

1. You slow down civilian production and nondefense employment—a bad thing for labor. Printing labor is not benefited by a discriminatory tax like this one. Its employment depends upon successful advertising, on the whole, and a lot of it—whatever the media used. Then one medium feeds another, as so often happens, in the widespread campaigns run by successful advertisers.

2. Or, you deprive business of volume and reduce net profit on which taxes are paid at an upward moving rate.

3. Or, you reduce the margin between selling price and cost of distributing goods which might or could be used in increasing wages to labor, or improving the product.

4. Or, when you raise the cost of selling, you add to the upward spiral of prices with its dangerous trend toward inflation and public discontent.

One of the most important services that advertising renders to distribution is to save time, money, and effort. Cost of the media used is a big factor, of course, in the economy of the advertising operation. It does not matter how effective the advertising appeal may be, to increase the cost of the channel used to reach a market will lower the efficiency just that much, with the results above referred to.

The plea has been made that this special radio tax is not imposed on advertising, which is a part of the work of selling, but on entertainment. This is fallacious indeed. Tax on entertainment is imposed on admissions and usually paid by the public. This radio tax will be imposed on the commercial or advertising portion of the broadcasting, and not upon the noncommercial entertainment of sustaining programs. Time sales are entirely for commercial use. They are distinctly advertising, just as much as advertising in publications; both being a commercial message surrounded by entertainment and editorial features. Both need adequate advertising revenues to pay for the best talent in speaking, music, and in writing, which are furnished to the public for nothing in radio and for a very small price in publications, of immense importance to public morale and enlightenment in this country. There is nothing parallel to it anywhere else in the civilized world.

In closing may I say a word about the special public service rendered by advertising during the defense emergency, and why it should not be burdened or handicapped in rendering that service.

Advertising is a definite aid against inflation and higher prices. It does not stimulate desire for more civilian goods than can be produced. It does not encourage indiscriminate demand by the public. It promotes good will for a definite product or service but does not stimulate its immediate sale unless it is available in supply or can be adequately produced. Arousing desire for products which conflict with defense production would not result in sufficient sales to pay for the advertising, and would also cause ill will instead of good will among customers.

Advertising thus diverts public attention and desire away from such goods and toward those which can be made in abundance, and in this area of production builds up volume to satisfy popular need and absorb the expanded purchasing power of the masses employed in national defense. No better hedge against inflation and rising prices could be devised.

As the President has pointed out, the Nation needs all the economic activity it is possible to have, for the welfare of its people and for financing the war effort, and advertising is an effective spur in the right direction.

The cost of it is all-important. When you tax advertising or any medium of advertising, whether outdoor, radio, or printed space, you slow down the movement of goods upon which wages and profits depend and from which taxes can be derived. It is so much more economic to tax wealth and net income than the means of producing them. To do the latter is like consuming seed corn instead of planting it and producing abundant crops for consumption.

Respectfully submitted.

JOHN BENSON, *President.*

Metallic Magnesium Can Now Be Produced at Low Cost and in Great Amount

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

Mr. LEAVY. Mr. Speaker, in 1937 I visited Washington State College at Pullman, Wash., for the purpose of familiarizing myself with the work being done there in connection with reducing magnesite ore and converting it into metallic magnesium.

This work was being done by a cooperative agreement between the United States Bureau of Mines and the State of Washington at the State college in its mining division. Under the direction of H. A. Doerner, representative of the United States Bureau of Mines, assisted by Dwight L. Harris, of the State college, and in the department presided over by A. E. Drucker, dean of the school of mines, laboratory experiments were carried on demonstrating to a certainty that a new electrothermic method had been discovered, by which the crude ore was being converted into metallic magnesium. The problem immediately presented was to prove that this laboratory method could be carried over into commericial production. To prove this fact it was necessary that the Federal Government appropriate approximately $75,000 to construct a small pilot plant.

Upon my return to Washington I contacted the then Director of the Bureau of Mines and other Government officials, urging that they submit an estimate to the Bureau of the Budget sufficient to carry on pilot plant work in connection with this wonder metal. An estimate was submitted to the Bureau of the Budget but was promptly turned down. When the supply bill for the Interior Department came before the subcommittee of which I am a member, I again presented the facts fully and in spite of Budget Bureau rejection was able to secure an initial appropriation for $40,000, and subsequently additional appropriations have been made.

It has been a long fight, but has finally resulted in success. In order to arouse an interest here in Washington in this matter, I presented it in detail to President Roosevelt, and furnished him with samples of the material that had been produced in the laboratory at Pullman, Wash. I took it up with Secretary Ickes and later with Mr. E. R. Stettinius when the National Emergency Defense Council was first established. I repeatedly brought it to the attention of my colleagues in the House, as the CONGRESSIONAL RECORD will show, and when Dr. R. R. Sayers became Director of the Bureau of Mines, he actively supported the work.

It is indeed gratifying that these experimental steps, taken with so many handicaps, have now resulted in an accomplished fact, and within the last 30 days the pilot plant at Pullman, Wash., has been producing in quantity, enough of this metal so vital to our national defense as to demonstrate the commercial possibilities.

It is now planned by the Government to build a large plant at Spokane, Wash., using Grand Coulee electrical energy and magnesite ores from Stevens County to produce metallic magnesium of exceptionally high purity.

The story of this development, together with a statement of what it will mean to our national defense, has recently been written by Dan D. Markel, and published in the Seattle Post Intelligencer in the issue of July 27, and I take pleasure in herewith submitting that exceptional and interesting statement, which is entitled to the thoughtful consideration of every person in America because of the great part this metal will play in our national-defense program as well as our future peacetime development.

The statement follows:

[From the Seattle (Wash.) Post Intelligencer of July 27, 1941]

MAGNESIUM KEY FOUND AT WASHINGTON STATE COLLEGE—GROTESQUE DEVICE TRANSFORMS ORE INTO METAL

(By Dan B. Markel)

PULLMAN, WASH., July 26.—Cramped in makeshift quarters of one of Washington State College's red brick buildings is the weird cradle of what both Senators and scientists believe will become one of the Nation's vital defense industries.

A grotesque monstrosity of coils and vats, wires, gages, and tubing, it appears to be either the materialization of an engineer's nightmare or what H. A. Doerner, its creator and nursemaid, more simply describes as "Rube Goldberg stuff."

PECULIAR ORE

But it does things. It does things nobody believed possible 2 or 3 years back. It takes a peculiar concentrated ore from the Huckleberry Mountains, of Stevens County, and transforms the whitish powder into a thick black mud and then changes it again into silvery, feather-light metal.

That metal is magnesium. Germans use a lot of it in airplanes. They use it because it is a third lighter than aluminum but just as strong. They have their own process, but they are keeping their process very secret.

American plane manufacturers haven't used much of the metal because little is available. That little is produced from brines and sea water and the cost is 28 cents per pound.

Magnesium from Washington magnesite can be produced by the process developed at Pullman for 10 cents a pound, it has been demonstrated by Doerner and A. E. Drucker, dean of the school of mines.

Drucker visions a $12,000,000 magnesium plant in Washington before long. Only 6 to 7 months would be required for its construction, he asserts, and it would produce 24,000,000 pounds of magnesium in a year.

That is twice as much magnesium as is now produced in the entire United States, where only 1 pound of the metal is now manufactured to 33 pounds of aluminum.

Incidentally, patents to the process developed at Pullman have been assigned to the Washington State College Research Foundation.

Oddly, experiments at the college laboratory did not commence with magnesium. They were begun on manganese and on alumina clays when the college received its first funds for research back in 1937. Only 2 years ago did the work on magnesium get actually under way.

EXPERTS LOOK WEST

Now defense chiefs, officials of the Office of Production Management in Washington, D. C., War Department experts, scientists, and Government engineers have their eyes turned across the country to the magnesium pilot plant on the Pullman campus. The reason is that that pale metal with a moonlight sheen is the dream material for airplanes.

Government officials gave Doerner, Drucker, and their aides 3 years to work on magnesium. A year ahead of that deadline they have assured its completion and success.

And at the same time they have worked on other problems vital to Washington's industrial progress, also with success. They have produced dry ice as a byproduct of the magnesium process. They have produced alumina from Washington clays.

CHROMITE ORES WORKED

They have worked the chromite ores of Whatcom and Okanogan Counties. They have produced muscovite mica, high-grade silica and aluminum sulfate from certain western Washington clays.

But their principal fame rests with magnesium because it is a No. 1 defense item and is vitally needed right now.

"We know our process will work, because it is working," Dean Drucker commented today.

"Our major problem has been with the design of electric furnaces and many automatic parts. Our work had to start from the ground up, because we couldn't borrow anything from Germany's process, which they kept a military secret.

"First we made small furnaces. They were failures. We made them over and over. We ran into all sorts of bugs. But now we have conquered them. We are producing now in our pilot plant 3-pound high-purity magnesium metal ingots."

Scientific "bugs" were not the only ones the scientists encountered. There were many statements and much propaganda advanced against magnesium it was necessary to overcome.

Here are some of them and Drucker's answers:

1. Existing industries are producing all the magnesium the market requires.

Answer. This was true of the past but not of the immediate future and the present preparedness program for our country. Germany, England, Japan, Italy, and Russia have been most progressive in the use of this ultra-light metal for structural shapes, sheet, and castings for airplane manufacture.

America has been asleep and very backward in using this metal. Not until recent years has magnesium had any real use as a structural metal. At the present time about 400,000,000 pounds of aluminum is produced in this country, against only 12,000,000 of magnesium metal. Magnesium is superior to aluminum in a number of ways for airplane construction.

2. You do not know what it would cost to produce magnesium metal.

Answer. We know approximately the cost of open-pit mining, tramming, flotation milling, calcining, direct-carbon reduction, distilling, and casting the high-purity magnesium metal into ingots for the market.

On a basis of 400 to 800 tons per day of Washington low-grade magnesite ore—15 to 25 percent—it will not cost more than 10 cents per pound for magnesium metal. On a basis of that comparable with the present yearly production of aluminum in America it would cost less, possibly 8 cents per pound.

Lead and zinc are produced for about 4 to 5 cents per pound and copper for about 8 to 10 cents with more complicated mining methods, smelting, and refining processes for magnesium.

3. The statement of the large deposits of magnesite in the State of Washington is disputed by the statement that there is a nominal amount of probably six or seven million tons of ore that might be available if needed.

Answer. It has been estimated by the United States Geological Survey that there are 7,000,000 tons of high-grade magnesium in the Stevens County district "and there may be more." Other magnesite deposits have been described by engineers.

VAST FIGURES GIVEN

If you take 5,000,000 tons of ore assaying 26.7 percent magnesium metal, this will contain 1,335,000 tons of magnesium and with an 80-percent extraction by the new process will give 968,000 tons of the metal.

This is equal to 1,936,000,000 pounds of magnesium. The present rate of production is 12,000,000 pounds per year, and this would require 161 years to completely exhaust this reserve of magnesite ore.

Next year the production of magnesium metal will be doubled or 24,000,000 pounds, and at that rate it would require 80 years to exhaust the 5,000,000 tons.

Now with the Doerner-Harris flotation process we have made possible great reserves of the low-grade magnesite ore, assaying 14 to 25 percent. That means we have in Stevens County ample ore reserves for many years to come. We have developed our processes for these vast deposits of low-grade ores, and we need not fear of running out of ore in hundreds of years to come.

Then was added significantly:

"The aluminum bauxite ores will be exhausted in this country long before the deposits of magnesite. The sea water has plenty of magnesium and gold, but it is in a very small percentage, about 2 pounds of magnesium per ton, while magnesite concentrate from the Stevens County low-grade magnesite ores contains over 540 pounds per ton of the lightest structural metal known to industry."

Drucker is particularly pleased that the process patent has been assigned to the State college for research work.

"As royalties revert back to the foundation they will provide funds to support research that will in turn bring new industries in this State.

"It will all go to create successful Washington industries and put our people to work."

Drucker feels that the flotation plant and the "dead burning calcine" plant should be located near the ore body. Fabricating plants could be constructed in other parts of the State.

Chief requirement in the manufacture of magnesium metal by the new process is electric power, but power requirements are not quite as great as that for aluminum.

"Aluminum requires 10 to 12 kilowatt-hours per pound of metal," he observed. "Nine to ten kilowatt-hours will be required per pound of metal magnesium by the process developed here."

Both Drucker and Doerner pointed out that in some respects the process to be employed by the Henry J. Kaiser interests in producing magnesium in a plant being constructed in California and using Nevada magnesite.

There are many minor differences, however, and one major one. Magnesium manufacture requires quick cooling during the process.

Hydrogen gas will be used for cooling in the Kaiser plant.

Oil is used at Pullman.

There is much natural hydrogen gas available in California, none in Washington. On the other side of the ledger is the fact that there is a tremendous amount of low-cost electric energy here which nullifies the expense of using oil here.

And it isn't such a great expense as that for the oil can be used and reused many times.

Hydrogen gas has grave disadvantages also. It is highly inflammable and explosive. In Austria a plant using it blew up. In Korea and England where they also used hydrogen for cooling they likewise had trouble.

Doerner, reticent and engrossed in his task, described the birth of the process thus:

"Five years ago all magnesium metal was made from salts obtained from brine. Previous attempts to make it from magnesite had failed to compete with the brine method.

"The prospect of large amounts of power in the Columbia River developed, but the question arose of markets for this power. It appeared that the most feasible market would be the metallurgical industries which could utilize local raw materials.

"The production of magnesium metal from magnesite appeared the most attractive possibility in spite of the fact that no economically feasible method was known.

"Now a process has been developed through the laboratory stage and is being tested out on a larger scale with highly encouraging results.

"The program was originally intended to cover a 3-year period. Two years have been used. Under normal conditions we would expect to work on another year before announcing our conclusion and expecting the results to be utilized industrially, but due

to the critical situation in the production of magnesium metal we are making every effort to speed up the program."

Doerner reached into the pilot plant and pulled out a magnesium ingot while his coworkers grinned. He looked at it critically. Then he grinned too, with shy satisfaction.

Here is, in unscientific language, roughly how the pilot plant works:

First. The ore is reduced into a crude concentrate and mixed with powdered coal. A hydraulic ram pounds it continuously into an electric furnace, the heat of which vaporizes the magnesium.

The magesium vapor had a temperature in excess of 4,000 degrees Fahrenheit, and would reoxidize were it not chilled instantaneously.

This is done by a spray of hydrocarbon oil as the vapor emerges from the furnace port. The chilled material now appears as a thick, jet-black, slightly oily mud.

The mud is centrifugally scrubbed. The hydrocarbons pass through the scrubber as a vapor and is collected in a refrigerated condenser. Then the oil and magnesium are distilled separately in a two-stage still operating at atmospheric pressure.

The cooling oils are recovered for repeated use.

Pure magnesium is produced.

Dwight L. Harris has been Doerner's principal assistant in developing the process and is a copatentee.

Here are the comparative densities of magnesium, aluminum, and iron compared with water: Magnesium 1.74, aluminum 2.70, and iron 7.86. Present comparative costs are: Magnesium, 28 cents per pound; aluminum, 20 cents; and iron, 1 cent.

"A ton of high-grade magnesite ore can be quarried for not exceeding $6, yet its magnesium content, if reduced to metal, has a market price of about $150," Doerner has stated.

"Such a huge difference between the cost of an ore and the value of the metal that may be extracted is a challenge to metallurgists. The Metallurgical Division of the Bureau of Mines has undertaken to meet that challenge."

Doerner is assigned to Washington State College by the Bureau.

Arms Priorities for Russia

REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

Mr. ANDERSON of California. Mr. Speaker, the headlines in the local newspapers make interesting reading this morning—

United States gives "reds" arms priority—The United States last night opened its arsenals to Russia.

What strange bedfellows the present international crisis has created. After a long struggle we succeeded in removing David Lasser from the national W. P. A., and now Harry Hopkins has gone to Moscow and put Joe Stalin on the international W. P. A.

A strange three-cornered fight has developed in northern Europe with gallant Finland being attacked by Russia on the one hand and Britain on the other, while the United States finances all three belligerents.

A tremendous majority of the American people want to see Hitler defeated. I believe they are willing to furnish the tools in order to insure the fact that this job will be done. I cannot believe, however, that any substantial portion of our population has any desire to ally the United States too closely with the godless and soulless group of international brigands that are represented by Joseph Stalin and his henchmen.

In this connection I believe that the following resolution recently adopted by the California Elks Association is worthy of consideration:

Whereas the Benevolent and Protective Order of Elks has been active in its opposition to communism and the infiltration of communism into our communities, State and Nation; and

Whereas we believe that the Communist Party in California and in other States of this Nation does not represent a party but a form of government, whose avowed purpose is the overthrow of our Government by force and violence, and whose party objectives are contrary to and opposed to fundamental principles and laws of the Republic: Now, therefore, be it

Resolved, That the California Elks Association in convention assembled at Santa Cruz, Calif., do hereby petition the Congress of the United States of America and the Legislature of the State of California to enact such law or laws as may be necessary to outlaw the Communist Party as a political party in this State and Nation and to prohibit it from appearing upon any ballot in this State or in the United States of America; be it further

Resolved, That a copy of this resolution be forwarded forthwith to the senators and members of the Assembly of the State of California and to the United States Senators and Representatives from California, and be forwarded to the Grand Lodge of the Benevolent and Protective Order of Elks for its consideration at the next session of the Grand Lodge.

Resolution of the Clan-na-Gael

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

RESOLUTION ADOPTED AT NATIONAL CONVENTION

Mr. SWEENEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following resolution of the Clan-na-Gael organization adopted at its recent national convention:

Acting on an order of its national convention, the Clan-na-Gael has released for publication the following statement of policy and declaration of principles:

"1. As the preservation of the free institutions of the United States should be the first and chief concern of our National Government, we exhort the executive department of that Government and the Congress, the law-making body, to be guided in these perilous times, when issues are enveloped in a fog of propaganda, by the warning of the immortal Washington against the dangers of foreign intrigues and foreign entanglements.

"2. We believe in and wholeheartedly support the policy of adequate preparations for the defense of the United States in the United States against the encroachment or aggression of any other nation. Americans standing on their own ground and observing, as our first President advised, "good faith and justice toward all nations," and as he also counseled, "excluding permanent, inveterate antipathies against particular nations and passionate attachment for others," can without difficulty preserve their free institutions and give, as the cardinal archbishop of Boston has suggested, "an example of peace and religious justice" to the belligerent nations of Europe. We believe that America for her own sake must not be exposed to the dangers which would inevitably assail her if she were to become a partner and participant in the oft-recurring squabbles of Old World nations, which are fighting for balances of power, colonies, control of the seas, trade routes, military outposts, or for the retention of territory acquired by conquest and aggression in the past. No American issue is involved, and no American interest is at stake in the war now being fought in the Old World between two rival groups of nations for the political mastery and economic control of Europe with all the other peoples of that Continent only pawns in the game of power politics.

"3. We assert that American citizens, the majority of whom are opposed to this country's entry into another foreign war, have not only the right but the duty to insist that the pledge against involvement in this war given by the leaders of both the major political parties before the last national election must be kept. If the elected representatives of the American people disregard the wishes of their constituents and fail to keep the solemn pledge made to them, the foundation of popular government here will be sapped, the confidence of the people, so necessary for success in government, will be lost and the great principle enunciated when this Nation was founded—the principle that 'governments derive their just powers from the consent of the governed'—will be violated. Such a betrayal of trust would imperil and perhaps destroy the governmental system which Lincoln described and held intact—'government of the people, for the people, by the people.'

"4. We again denounce the dismemberment of Ireland by English statecraft in 1921, when 6 counties in northeast Ulster were separated from the other 26 Irish counties and placed under a separate puppet government for the malignant purpose of keeping religious bigotry alive in that area, in pursuance of the old imperialist policy of "divide and conquer.' We arraign the government of northern Ireland, which has been aided from its inception by subcidies from the English Imperial Treasury, for having functioned tyrannically and for having deprived people of our blood and race in the occupied part of Ireland over which it exercises control of practically every civic right and for having, as an independent English commission, which investigated conditions in northeast Ulster, reported, 'abrogated the rule of law and justice.' We demand the abolition of the boundary set around those 6 Irish counties, where no natural boundary exists, and the restoration of this territory to the Irish Nation, of which it has been a part since the beginning of time.

"5. We congratulate the people of Ireland on their decision to remain neutral in a war which was not of their making, and we approve their refusal to surrender Irish ports and air fields to England, or any other belligerent, for war bases and their determination to defend their territory and neutrality against any aggressor nation. We assert that they have a perfect right to make their own

decisions on all matters involving their peace and security, and we assure them of our continued support, consistent with our duty as American citizens, in their efforts to establish full freedom for all Ireland."

Let Us Use Cotton To Manufacture Parachutes

REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. WICKERSHAM. Mr. Speaker, some are advocating that the entire silk supply be diverted to the manufacture of parachutes and that no more silk be used for ladies' hose and other clothing. I am recommending to you Members of the House and various Government agencies that we use the large cotton surplus for the manufacture of parachutes. It can be used as effectively with safety and at the same time it will insure our farmers a greater return for their cotton.

The Morale of Democracy

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

BOOK REVIEW FROM THE HARTFORD TIMES

Mr. OLIVER. Mr. Speaker, under unanimous permission granted to me to extend my remarks, I am pleased to incorporate herewith a statement in the form of a book review of the book, The Morale of Democracy, recently published by our respected colleague, Representative H. JERRY VOORHIS of California. It is a matter of great personal pleasure for me thus to recognize the observations which he has made therein, and it is also a matter of great satisfaction for me to know that keen interest on the part of many Members of this House is now being evidenced in the cooperative movement.

It is my opinion, Mr. Speaker, that the basic problem which this great Nation of ours must solve is the lack of productive activity, particularly in those communities and States which are located at the extremities, geographically speaking, of our country. Such lack of productive activity can best be remedied, in my opinion, through the organization of cooperative community efforts based on the natural resources of each community in each and every State so located.

Cooperation of our thinking citizens in these communities will go far in meeting this problem of the lack of productivity. Such cooperation, financed through the medium of local credit pools and reservoirs which would result from the organization and operation of cooperative community credit unions, will develop America constructively and will constitute the very essence of democracy itself.

It is my opinion that this sincere and able work of JERRY VOORHIS is decidedly timely and most valuable in the light of our present-day confusion.

The review follows:

[From the Hartford Times, July 5, 1941]

JERRY VOORHIS SEES BEST HOPE IN COOPERATIVES—RECORDS GROWTH AS INTERNATIONAL DILEMMA SOLUTION.

(The Morale of Democracy, by JERRY VOORHIS. Reviewed by M. M.)

No one in his senses can deny that we have in this country only a potential democracy, not yet a true one. Yet only totalitarian sympathizers will deny that democracy offers the greatest hope of the human race and that we can have one that will work if we only want it badly enough and are willing to work and sacrifice for it.

Francis Williams has analyzed clearly the dilemma of democracy. Laski, Williams, Agar, all of our great liberals insist that we must establish now a real concept of the kind of world we and other freedom-loving peoples want to live in if we are to have an effective force with which to fight the reactionary ideology of totalitarian piracy.

ANSWER IN COOPERATIVES

Democracy, they say, must be international and achieved by all peoples working together, trusting and honoring one another and standing firm on their own integrity. Mr. VOORHIS, leader of the progressive bloc in Congress, finds the most effective means is in cooperatives.

In this little volume he gives the history of United States manufacturing, merchandising, and consumer cooperatives, tells how they work, what they have accomplished, and what we may hope for from them. To him they are the true expression of decency, honesty, faith in and love of one's fellow men, the opponents of short-sighted greed, the way of moral, political, and economic security. Wallace J. Campbell, assistant secretary of the Cooperative League of the United States of America, contributes an introduction that sums up what has been done in other countries. Dr. J. P. Warbasse, founder of the cooperative league, appends an epilogue on Cooperation in the World Crisis, in which he admits that some form of collectivism is inevitable everywhere, and expresses his belief that the form taken by the cooperative may fill the void when totalitarianism collapses, and save the world from chaos. He believes it will find increasing favor in the United States because it stands for private property, private business, and free competition, while preventing the expansion of the state in business.

MANY SURPRISES

Most persons know about Sweden's Middle Way, but they will find many surprises in this book. For example, in pre-Nazi Germany, 15,000,000 persons did $300,000,000 worth of business through retail cooperatives. In Great Britain last year they did a billion and a half dollars' worth. In the United States in 1940 more than 2,000,000 persons purchased $600,000,000 worth of goods through them.

The story of the way various ones have won out despite pressure and trickery by opponents is a dramatic one. The number of successful organizations and the variety of fields they cover is amazing.

Mr. VOORHIS expresses his fundamental belief thus: That the most important single need of the world today is "for one people somewhere in the world to give all mankind a living proof and demonstration that they can, without loss of liberty and without resort to governmental compulsion, solve the economic problems of this power age, end poverty in the midst of plenty, and make the machine the servant of man and not his master." All men need food, safety and security, and freedom of spirit. Those needs he believes we are beginning to solve by cooperatives. He hopes and believes it may be the destiny of America to become the rallying point of a hope for an American New World. Here is a way of working together, for ourselves and our fellow men everywhere, through the most Christian of business institutions.

Not a bad idea to look into it.

Facing the Facts

EXTENSION OF REMARKS
OF
HON. LELAND M. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

EDITORIAL FROM THE AMERICAN FEDERATION OF LABOR WEEKLY NEWS SERVICE

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the American Federation of Labor Weekly News Service of July 29, 1941:

[From the American Federation of Labor Weekly News Service of July 29, 1941]

FACING THE FACTS WITH PHILIP PEARL

If there is one thing the Communists lack it's a sense of humor. They're so deadly serious all the time that they provoke a comic as well as an indignant reaction.

All of which is by way of explaining our present hilarity over the latest bit of undercover Communist propaganda which has come to our attention. We were burned up at first. But then, when we got to thinking it over, the ridiculousness of the whole thing hit us and we're still chuckling.

It seems that the Communists have now discovered that Edwin S. Smith, member of the National Labor Relations Board, is "a swell guy" and "honest as they come" and should be reappointed when his term expires on August 27.

We have this startling information on authority of Federated Press, one of the slickest transmission belts in the party's elaborate American set-up. This organization, masking as a labor news service, was exposed years ago by the American Federation of Labor as a Communist propaganda agency. It is still living up to its old standards.

Henry Zon, an obscure fellow-traveler who serves as Washington correspondent for Federated Press, writes about Edwin S. Smith in the July 25 issue of the propaganda service.

TOOL OF THE COMMUNISTS

"A number of labor and other organizations," says Mr. Zon, "are preparing to go into battle on his behalf. Labor enters this one (battle) lustily and with full knowledge that it battles for one of its true friends."

Well, if that isn't a laugh, we give up. If that isn't a dead give-away, there never was one. "A number of labor and other organizations," says Mr. Zon. What labor organizations outside of the Communist-dominated C. I. O., we ask? And we also want to inquire,

What are the other organizations? Is the Communist Party included among them?

It should be, if it isn't. Mr. Edwin S. Smith has been a faithful tool of the Communists. While on the pay roll of Uncle Sam, he went to Mexico City a few years ago with John L. Lewis and was hailed as a friend and fellow traveler by Toledano, the Mexican "red" leader, in a bull ring festooned with "red" flags.

In every decision he has assisted in rendering as a member of the National Labor Relations Board, Mr. Smith has lent aid and comfort to the Communists. The peak point of his career was the decision turning over hundreds of faithful American Federation of Labor members to the clutches of Harry Bridges in the notorious West Coast Longshoremen's case, which has since been reversed by the N. L. R. B. over Mr. Smith's vehement objections.

In his recent public speeches, Mr. Smith has been even more direct and frank. He has protested discrimination against Communists in national-defense plants, and he has upheld Communist strikes in key plants.

HEADED FOR THE ASHCAN

Fortunately for the Nation Mr. Smith and his views no longer control the National Labor Relations Board. There was a time, however, when he was the fair-haired boy. That was when J. Warren Madden and the other Smith boy, whose front handle we've already forgotten, served with him. They almost succeeded in killing all respect for the National Labor Relations Act with their tortured and unfair administration of the law.

Since then, however, the efforts of the American Federation of Labor for a housecleaning of the Board have borne fruit. Madden and the other Smith have been displaced and the changes have proved healthy and constructive. Now it is the turn of Edwin S. Smith. His term expires on August 27. Despite the efforts of the Communist Party and the C. I. O., we venture to predict that on August 28 Edwin S. Smith will be in the ashcan. There is not the faintest possibility of his reappointment.

A word in conclusion about Federated Press. This should be of particular interest to the labor press loyal to the American Federation of Labor. We know, because its representatives have tried to tell us so, that Federated Press claims to be impartial as between the A. F. of L. and the C. I. O. We know from reading the propaganda issued by Federated Press that it is completely biased and inimical to the A. F. of L. We could give a hundred instances of this bias. There isn't the slightest doubt about it, Federated Press tries in every way, even by stretching the truth, to embarrass the American Federation of Labor and propagandize for the C. I. O. at all times. And no wonder. Its staff is honeycombed with "reds" and fellow travelers. One of its chief executives, Carl Haessler, is on the pay roll of the C. I. O. Auto Workers Union on the side. Enough said.

Letter From William J. Conlon, of Binghamton, N. Y.

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

BINGHAMTON, N. Y., *July 31, 1941.*

Hon. EDWIN A. HALL,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: On two or three occasions I have had the honor of addressing you on matters that I consider of the utmost importance to all your constituents, no matter what political party they were affiliated with. To all of my messages you replied promptly. From your replies it seems to me that you have a faculty of knowing just what the people back home want in the way of legislation.

Your stand on keeping us out of war—keeping our boys at home—is what the people want, regardless of what the newspapers in this district say editorially. You have the people with you, and I for one want the people to raise their voices in your behalf for the work you already have done since you have been in Congress. Keep up the good work—fight for peace—fight to keep our boys at home to defend our own country.

It has been my pleasure to watch your actions since you first entered our city council. You did a good job there, and I know you will repeat this performance in the Congress of the United States.

While I have been associated with the Democratic Party ever since my first vote 50 years ago, I have always considered myself an independent voter. There are thousands of others just like me who will always cast their ballot for an unbossed candidate, no matter what party the candidate may represent. You, Congressman HALL, are not obligated to any boss. It is my belief that as long as you care to represent this district you can carry it against all opponents.

A few evenings ago I had a very nice chat with a young acquaintance of mine. He told me that he had spent the past week in Washington, and during his stay he had a pleasant visit with you. From his observations he gave me a detailed description of the immense amount of work you perform daily, with no week-end vacations to the shore or mountains. This is all right, but don't overdo; we need you to keep a close check on the people's interest in Washington.

Respectfully yours,

WILLIAM J. CONLON.

Re House Joint Resolution 225

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

Mr. DICKSTEIN. Mr. Speaker, this resolution contemplates the observance, with appropriate ceremonies, of the fifty-fifth anniversary of the dedication of the Statue of Liberty in New York Harbor.

This Statue of Liberty was the first public structure visible from ships which entered the harbor of New York, the harbor which is the gateway to America, and the door to which this country is entered from the east.

When, 55 years ago, the French Government, as a gesture of good will and friendship, sent to this country this beautiful statue, ceremonies were held dedicated to the cause of freedom and liberty which at that time all of us believed would forever be the goal to which mankind would aspire. Now France herself lies prostrate under the heel of a ruthless dictator, and all of Europe is engulfed in a bloody conflict, to determine whether or not this ideal of freedom shall long endure. Europe hopes and prays that the day is not far when mankind again will enjoy the blessings of liberty and peace.

It is on occasions like these that we become aware of our own liberty and freedom and become conscious of the part which we have to play to preserve our precious heritage—liberty and justice.

A few days ago I called the attention of the House of Representatives to the fact that this was the ninety-second anniversary of the birth of Emma Lazarus, an American poetess who died in the city of New York, the city of her birth, at the untimely age of 38. It was Miss Lazarus, whose famous poem, The Golden Door, so fittingly adorns the Statue of Liberty and which reads as follows:

Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore,
Send these, the homeless, tempest-tost, to me,
I lift my lamp beside the golden door.

Let us hope that this country will forever remain the one haven in the world in which the land of freedom will forever be reached beside the golden door of its entrance.

This resolution has for its object our rededication to the cause of liberty and democracy. It will call upon the President of the United States to proclaim this day as Liberty Day, where the flag shall be raised on every Government, State, and public building throughout the country with appropriate ceremonies signifying the liberty which we enjoy in our country and institutions.

Economy in Nondefense Expenditures of the Government

EXTENSION OF REMARKS

OF

HON. LE ROY D. DOWNS

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

RESOLUTION OF THE BOARD OF DIRECTORS OF THE NORWALK (CONN.) CHAMBER OF COMMERCE

Mr. DOWNS. Mr. Speaker, under permission granted, I wish to insert the following resolution calling for rigid economy in nondefense expenditures of the Government by the board of directors of the Norwalk, Conn., Chamber of Commerce:

A RESOLUTION CALLING FOR RIGID ECONOMY IN NONDEFENSE EXPENDITURES OF THE GOVERNMENT BY THE BOARD OF DIRECTORS OF THE NORWALK, CONN., CHAMBER OF COMMERCE

The board of directors of the Norwalk, Conn., Chamber of Commerce, unanimously

urges that in view of the magnitude of the appropriations necessary for national defense, and with the utmost being demanded of our economic and financial resources, Congress and the administration pursue the most rigid economy in nonmandatory expenditures.

The Nation has readily undertaken the greatest tax burden in its history, placing the national defense before all else, and properly all costs other than defense costs now should be kept closely in hand. With steadily rising employment, the decreasing need for public assistance should be taken into account and certainly subsidy programs should be greatly curtailed. Public works and work-relief projects should be examined in the light on nonmandatory expenditures, especially in those many cases where the projects are in direct competition as regards construction labor and materials with vital defense production.

The public debt has increased from $16,800,000,000 in 1931 to $49,000,000,000 on June 30, 1941, and will reach $58,000,000,000 by June 30, 1942. Interest charges alone on the public debt will be $1,250,000,000 in the fiscal year 1942. With tremendous defense expenditures ahead, it is imperative that effective steps be taken by the administration and the Congress to reduce every expenditure not required for defense or essential Government.

The board of directors of the Norwalk, Conn., Chamber of Commerce urges that governmental spending be curtailed in all nondefense fields during this period of emergency, and that nonessential expenditures be deferred until the Nation again enters a normal period of peacetime activity.

The Denationalization of the United States and the Sinister Commitments of the United States to Homicidal, Communistic Soviet Russia

---

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of August 2, 1941:

[From the Saturday Evening Post of August 2, 1941]

THE FOREIGN MALADY

One effect of Hitler's murderous assault upon his Russian partner in aggressor crime was to make vivid in this country certain extreme and ugly symptoms of the foreign malady. We think no American could ponder what was thereby revealed without a sense of foreboding and sickness of heart.

The news broke on Saturday night, after the Sunday newspapers had gone to press, and for many hours radio was the only means of dissemination.

Two thoughts were immediately present.

The first was to ask whether the Soviet Government, with its hands still foul from the rape of Finland on its own account and the synical murder of Poland in joint account with Hitler, would now be received among the defenders of freedom and have access to the arsenal of democracy.

The second was satirical. Now the sabotage strikes in American defense industries would cease by a new Communist Party line.

The question that came first was answered Sunday afternoon, not by the American Government but by the British Government. Winston Churchill came on the radio, saying any hand against Hitler was welcome, even the hand of Stalin, although, as he himself had often said and would not unsay, this was the hideous hand of a slayer of freedom. "It follows," he said, "that we will give whatever help we can to Russia and the Russian people. * * * It is not for me to speak of the action of the United States, but this I will say: If Hitler imagines that his attack on Soviet Russia will cause the slightest division of aims or slackening of effort in the great democracies who are resolved upon his doom he is woefully mistaken."

This was the British Government pledging to the Soviet Government indirect access to the American arsenal of democracy. And why not? It may do what it likes with the weapons and munitions it receives from that arsenal under the lend-lease law; it may use them itself or lend them to others.

After the Churchill broadcast which, of course, was directed at the American people, there could be no intelligent doubt about the policy of the American Government. Promptly on Monday the State Department restated the Churchill statement and presented it as its own to a "realistic America."

And the satirical thought—that, too, was very soon confirmed. On Sunday afternoon, from the office of the Communist Daily Worker, that had gone to press Saturday night praying for the Stalin-Hitler pact and breathing sabotage against the American armament program, the Communist Party issued a manifesto, saying the Soviet Government was fighting not for itself alone but for the freedom of all people, including the American people—the American farmer, the American worker, the American Negro, and then, for good measure, even the hated middle class. Therefore, down with Hitler. All out for the American effort to destroy him—and save the Soviet Union.

Then something happened in the honorable stomach of the Committee to Defend America by Aiding the Allies. The New York chapter changed its name. We understand that.

One of the sinister effects of the foreign malady is to make Americans suspect one another and impugn one another's patriotism. Many Americans were moved by both reason and deep feeling to say the Battle of Britain was our battle, too. But to the voices of these were added alien voices saying the same thing in the same words; and their evangel for war was supported by an organized alien propaganda that could not have been thinking, and should not have been thinking, of America first.

Many more Americans—a great majority, we think—were equally moved by reason and feeling to say this country should jealously mind its own defense and stay out of the war, let Europe commit suicide if it would. That is the side we were on. But on that side, too, were alien voices saying the same thing in the same words. After a year it had become a habit, on opening the editorial mail, to glance first at the opening sentence of a letter, and if it was with us against going to war, to look then at the signature; and if it was a German name or any name we knew bearing the taint of communism, we shuddered. Our answer was to wish those who might agree with us for wrong reasons to hold their peace.

The America First Committee made the same rejection; nevertheless, alien voices continued to embarrass its meetings, and Americans on the other side, together with their alien friends, made smear matter of it. Now the problem is theirs—how to repudiate the unwelcome support of the Communist.

Exercises in realistic thinking, now recommended by the American Government were novel for a people who had just been brought to a crusade for the four freedoms in the wide world. Owing partly to the novelty, they were exciting and jammed all the channels of the air, alien voices intervening helpfully; but they were not easy, after all.

The Government was going to hit Hitler in the back with everything we had, by sending it faster and faster to Great Britain, and at the same time it was going to aid Stalin with everything that was left over after we had sent everything to Great Britain; and if that was not clear, you had not yet learned to think in a realistic manner.

In the New York Times, Arthur Krock cynically resolved the difficulty of treating the Stalin dictatorship as a democracy for purposes of aid under the lend-lease law by calling attention to the fact that Greece was not a democracy, nor China, except in a way of speaking.

In the House of Representatives, a Member rose to ask why he should vote for a law forbidding any of the money the Congress was then appropriating to be used by the Government to pay the salaries of Communists employed in its various executive bureaus, some of them mentioned by name. What was the point?

We have produced this view of the formless national behavior only to prepare a question. Where in that view, or in any view you may construct for yourself out of the current materials, do you see America itself, or any true symbol of it?

In all this confusion of thought and feeling and idea, where is the American core?

Russian communism is an international snake, treacherous even to itself, knowing only venomous and deadly enmity to any other kind of social organism. Nevertheless, the New Deal nested it. The White House made a fashion of petting it. Then just when the horrible awakening from this singular ophiolatry seemed about to take place—troops having been sent to dislodge the coil that had been trying to strangle the aircraft industry—a violent turn of events in Europe brings the Soviet Government under the American tent of the four freedoms, and the short-wave listeners in a New York studio hear the Moscow radio playing Columbia, the Gem of the Ocean and other patriotic American and Scottish songs.

Nazi-ism is a similar reptile. Happily, now the Government is killing that one; and yet, even as to this well-doing, our satisfaction must be offset by the reflection that as the American Government puts down one kind of foreign propaganda it favors another kind, and does now itself collaborate with a foreign government in ways of acting upon mass opinion in the United States. And this, we suppose, is so far the extreme phase of the foreign malady among us, all the more critical because it is so little resented.

For more than 100 years this American Republic was the world fountain of political innovation, giving forth ideas to whoever could use them and could make them work as they worked for us. Now we export arms and import ideas.

For more than 100 years there was something we knew for sure about ourselves without thinking of it, which was fixed, and to which all alien isms and all problems of foreign relationship were instinctively referred—an American ethos, that is to say, a characteristic spirit of the Nation.

There was an American ideology, though we did not know it and had not that word for it. That baneful word was taken out of the Communist book of dialectics, along with the proletarian man, a lot of other political jargon, and all the slogans of class struggle. The class consciousness of American labor was cultivated here by liberals and

intellectuals, from foreign seed. Marxian anticapitalism was imported in the same way by those who could not distinguish between the feudal capitalism of the Old World and American capitalism.

Every important idea of the New Deal was borrowed from Europe, out of Harold J. Laski's exquisitely revolutionary mind, or from J. Maynard Keynes' brilliantly insolvent economics, and all of that beautifully printed literature of an aristocratically decadent British radicalism—foremostly of all, the idea of deficit government spending as a way to redistribute the national wealth without pain of vulgar revolution.

What have we been debating with rising fever during the last few years in this country? Foreign ideologies and how they might be adapted and suited to us; or why we should take the side of one to destroy another, lest the other should come and devour us.

Among the principal political ideas now in controversy among us, we can think of but one that could lay even doubtful claim to American origin. That one is the idea of a Federal Union World, called also Union Now and Union Now With Britain, and its proposal is to surrender American sovereignty to a world government and denationalize the United States of America.

Where is this United States of America that would sacrifice its birthright for the sake of the world and give its substance to be spread for an international feast? It is a strange land; and if it is ours, we are strangers in it. But we disbelieve in its existence. Nor do we believe the national totem is extinct. It is only sick.

Gratifying Recognition of Industrial Miracle

EXTENSION OF REMARKS

OF

HON. PHILIP A. TRAYNOR

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

EDITORIAL FROM THE WILMINGTON (DEL.) STAR

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilmington (Del.) Star of August 3, 1941:

[From the Wilmington (Del.) Star of August 3, 1941]

GRATIFYING RECOGNITION OF INDUSTRIAL MIRACLE

It is not difficult to understand how even one of the world's greatest industrial giants—such as the Du Pont Co. can be thrilled to receive so signal a recognition of splendid service as the award of the Navy Department Bureau of Ordnance flag and official "E" pennant to the company's management and men for what Secretary of the Navy Knox describes as "a miracle of industrial production."

After all, corporations, no matter how huge, are owned and operated by men and women, and those men and women are naturally gratified when some job which they are performing by supreme exertion of brains and nerves and muscles meets with impressive acclaim and commendation.

On Tuesday afternoon the award of the flag and pennant will be formally made to the Carney's Point plant of the Du Pont Co. by Rear Admiral W. H. P. Blandy, Chief of Ordnance, who attended Delaware College from 1906 to 1909, when he was appointed to the Naval Academy by Col. Henry A. Du Pont, then United States Senator.

Award of the flag and pennant carries with it the right for each employee of the Carney's Point plant to wear the Navy's famous "E" button for excellent service to the Nation.

People of Wilmington and Delaware appreciate very much that so signal and well-deserved a recognition of the Nation's approval should be conferred on the Du Pont Co., whose services to the United States have covered much more than a century.

Wheat Quotas

REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

Mr. McGREGOR. Mr. Speaker, approximately 2 weeks ago the House passed the bill H. R. 5300, which is known as the wheat quota bill. It went to the Senate, and that body incorporated by an amendment the right for the farmers to feed their excess wheat. The bill came back to the House about a week ago, and today for the first time the chairman of the conferees is calling that body together to consider the Senate amendment.

The Senate amendment allows the farmer to feed his excess wheat the same as was allowed in a bill H. R. 5303, introduced by me on July 14. I trust that each and every Member of this body will contact the conferees and insist on the Senate amendment allowing the farmers to feed their excess wheat and bring them at least some degree of assistance. May I read to you a letter from the National Grange, over the signature of Fred Brenckman, Washington representative, in which he endorses the Senate amendment:

THE NATIONAL GRANGE,
Washington, D. C., August 4, 1941.

To the Members of the House:

We are writing to express the hope that the amendment to H. R. 5300, adopted by the Senate, which would permit the farmer to feed his "excess" wheat to livestock and poultry on his own farm, or to use it for seed, may be approved by the House.

As a matter of fundamental justice, it does not seem fair to us that the farmer who sowed his wheat last fall or this spring, as the case may be, when the penalty for excess marketing was 15 cents a bushel, should now be asked to pay a penalty of 49 cents a bushel, besides being denied the right to feed his "excess" wheat to his own livestock or poultry. The whole proposition is undoubtedly in violation of that wise and reasonable provision of the Constitution which declares that no ex post facto law shall be passed.

With the Government urging the farmers of the country to increase the production of dairy and poultry products as a matter of patriotic duty, and in view of the situation with which we are faced, the Senate amendment to H. R. 5300 appears to offer an ideal solution to the questions raised by the 49-cent penalty on "excess" wheat.

Trusting that you may see your way clear to support the Senate amendment in this connection, when it comes to a vote in the House, we are,

Sincerely yours,
THE NATIONAL GRANGE,
By FRED BRENCKMAN,
Washington Representative.

Mr. Speaker, I hope all true friends of the farmers will be present when the conference report comes so, if necessary, we will have full power to insist that the Senate amendments remain in the bill which will allow the farmer to feed his excess wheat.

Independence Day Objectives 165 Years Ago Brought up to Date

EXTENSION OF REMARKS

OF

HON. GUY L. MOSER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 7, 1941

THE INDEPENDENCE DAY ADDRESS OF THE HONORABLE ROBERT H. JACKSON, ATTORNEY GENERAL OF THE UNITED STATES

Mr. MOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Independence Day address of the Honorable Robert H. Jackson, Attorney General, now Supreme Court Justice of the United States:

For nearly 2 years now many of us have been bewildered by the headlong course of events in Europe, and not a few of us have been confused as to the course of wisdom at home. We have seen a nation which 20 years ago had been vanquished, rise up with a ferocity seldom seen in the history of mankind. We have seen vaunted armies smashed as if they were so much paper. We have seen Europe overrun and England placed in grave danger. We have seen the dictator idea spread in the world. At first its two principal proponents, communism and fascism, appeared to be mortal enemies. Then, one day, they turned up as partners. Now they battle each other.

For nearly 2 years Americans have been asking each other which way safety and security lie. We have pondered the problem, weighing risk against risk and danger against danger. Now at last, on this Fourth of July in 1941, the truth of our situation is coming home with increasing clarity to all Americans. We are learning the overwhelming fact that now, as in 1776, our Nation together with our sister republics on this hemisphere, faces a preponderantly hostile and undemocratic world. Now, as in 1776, we can turn to the Declaration of Independence for the principles which should guide our action.

You are lifted and inspired, like generations before you, by the majestic cadence of the boldest, the noblest, and best known of all

American writings. The Declaration of Independence speaks strong doctrine in plain words. It is the world's master indictment of oppression. The fervor of its denunciation haunts and challenges dictators everywhere and in every field of life.

But the Declaration of Independence does not stop with mere denials and negations. It sets forth great affirmations as to the permissible foundations of power and political leadership among free men. It lays down a fighting faith in the rights of man—merely as man—a faith to die by if need be, or even more bravely to live by. It impresses upon all political power the high obligation of trusteeship. It established an accountability by the governing few to the governed many. That is why men abroad who wield dictatorial powers over subject peoples would silence the reading of the Declaration of Independence, would tear all mention of it from the record, and torture all recollection of it out of the minds of men. Even at home there are some who hope it will not be read too loudly.

But the masses of warm-hearted people are reared on its strong doctrines of equality and human rights. It has exceeded every other modern pronouncement in its profound influence upon our lives, our culture, and our relations to the world. When the Constitution of the United States was adopted, its foundations were laid in the democratic idealism of the Declaration. It has been the inspiration for every later recognition of broadened human rights and for the extension of justice and security to all men. We do not claim to have reached a perfect fulfillment of its high principles. But we have achieved the nearest approach among all the nations to a classless society, to equality of rights, and to a fair distribution of opportunity and prosperity. Whenever we reproach our own imperfections, as we ought often to do, we must not forget that our shortcomings are visible only when measured against our ideals, never when put beside the practical living conditions of the rest of the world. We have, by Constitution, by legislation, and by judicial decision, translated the Declaration out of the language of abstract philosophy into the idiom of everyday living. We have validated democratic principles by our success.

America's position in the society of nations is unavoidably that of a champion of the freedoms. The reason is aptly stated by Carl Becker, who says:

"In the Declaration the foundation of the United States is indissolubly associated with a theory of politics, a philosophy of human rights, which is valid, if at all, not for Americans only, but for all men."

When our national success demonstrated that freedom is an attainable goal, we made it the ultimate goal of all peoples everywhere. The four freedoms are not local or transient incidents, they are universal and timeless principles if they are valid at all. A blow against their existence in Europe is a blow at their validity everywhere. On the other hand, the example of a great and powerful people governed by their own consent through lawmakers of their free choice is a standing incitement to overturn tyranny anywhere. Malevolent conquests by dictators are silently undermined by our confession of faith in democracy as stated in the Declaration. That carries hope to subject peoples in whom there would otherwise be a noble, but unavailing, fortitude. Overridden countries find a bid to insurrection in its assertion of the right of the people to alter or abolish an existing government that is destructive of life, liberty, and happiness. They read words of invitation in its statement of their right to "institute new government, laying its foundations on such principles and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness." No wonder the Declaration of Independence is the nightmare of conquerors.

Some will say that the decision faced by the patriots of 1776 was an easier one than ours, since they had nothing to lose but their intolerable situation. Our task, some will argue, is to protect rather than to win our freedom and that for that reason we should be cautious.

But if the patriots of 1776 risked little by action, we risk much by indifference. Today we risk the loss of a physical, cultural, and spiritual heritage of freedom far beyond the most inspired visions of the leaders of 1776. And the more of the world that ceases to be democratic, the greater our risk will be. We do not need to be imprudent or foolhardy, but we should recognize that no amount of cautious behavior, no amount of polite talk will earn for us the friendship and good will of dictator systems. Ultimately we must come to the day when we shall face their threats and their enmity for no other reason than that we persist in living the kind of life we live.

One fact emerges clear above all others. We Americans cannot cease to be the kind of people we are, we cannot cease to live the kind of life we live. We are not the kind of people the dictators will ever want in the world. They will never have any use for our kind of life, nor we for theirs.

Every American knows now, as he knew it in 1776, that there is nothing for him in that way of life.

There are those who shrink from the risks of standing for a forthright, practical application of democracy. They point to the striking power and efficiency of foes abroad. But the enemies of American democracy today cannot begin to assemble a force so relatively powerful and so encircling as were its foes that day when the signers of the Declaration pledged their lives, their fortunes, and their sacred honor in its support. The most strategic points in our own country were then in possession of the King's armies. Canada was a base for his operations. Florida, Cuba, Puerto Rico, and the mouth of the Mississippi were occupied by forces of Spanish monarchy—no lover of democracy. And the unsolved problem of the colonies along their whole precarious frontier was the Indian. American democracy then had no Navy, only an empty treasury. Its Army was composed of untrained volunteer backwoodsmen who could not get shoes, clothing, or substantial arms to fight the invading British Regulars. There was no national unity. There were cabals against Washington, a "fifth column" of Royalists was powerful and respectable, and the States were jealous rivals who did not act, nor even think, as a unit. But in such an hour our forefathers who believed in freedom did not fear to stand alone and to become, as they continued for many years to be, the world's only real democracy. But the American forces had power—the unseen power of the earnest individual—the individual with what Mr. Justice Holmes called "fire in his belly." Only when these fires go out need we fear the lawless forces of dictatorship. Democracy's strength is in man-to-man measure. None other draws such initiative from its way of life, none invents, and none has so generally and fully mastered in its daily life the technique of handling modern machine transport and production. And we dwell among resources as incredible as acres of diamonds.

But there is at home and abroad an antidemocratic influence, even more cynical and sinister and dangerous than Hitler, Mussolini, and Stalin combined. I refer to those who think democracy is a fair-weather ideal—to guide us in soft times—but that when the going is tough we cannot save it without losing it. This doctrine has every base quality of fascism without either its candor or courage. Let us in America never forget that liberties trampled by conquest may be regained, but liberties abandoned by an indifferent people are never recovered. Nor are they deserved.

Let us not forget the example of our forefathers. They, too, heard the argument that time of external danger was no time to advance freedoms. But their answer was to give liberty a new birth not only in the midst of a war but in the very darkest hours of that war, because they knew that what wins struggles are the last ounces of endurance and the reserves of power that come to the common run of men on fire for a cause. Such men do not count costs nor watch the clock. We must keep our freedoms, keep them in face of foreign dangers ever more tenaciously and jealously than in calmer times—keep them because it is our liberty that lifts our cause above material ends and anchors our efforts in timeless things. We know that in the unfolding book of destiny, just as in the closed book of history, it is written that tyranny and oppression bring forth their own downfall and that the irresistible moral forces of the world march always on the side of resolute men when freedom is their goal. We know that the spiritual strength and the moral power of our democratic tradition, authenticated by a century and a half of progress, will not long yield the field anywhere in the world despite the temporary devastations by enemies of the fundamental philosophy of our Declaration of Independence. As Kipling said:

"Though all we knew depart,
The old commandments stand:
'In courage keep your heart,
In strength lift up your hand.'"

My Answer to Hitler's War Song, The Watch on the Rhine

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

POEM BY A CONSTITUENT

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem, written by one of my constituents:

MY ANSWER TO HITLER'S WAR SONG, THE WATCH ON THE RHINE

From over sea there came a call
For bombing planes and cannon balls;
And Uncle Sam he heard the cry
And send this message through the sky:
"This is the land of free and brave,
Americans will not be slaves!"

There is a land "over there" called "Low"
In Flanders' fields where poppies grow;
And there's a graveyard of the dead—
Our sons who fought there once and bled!
Our doughboys like to greet these graves
When marching by and freedom save!
This is the land of free and brave—
Americans will not be slaves!

—*J. Stinebaugh,*
Farmersville, Tex.
Fourth Congressional District.

Who Created the Emergency?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 4, 1941

Mr. HOFFMAN. Mr. Speaker, each day this country is on the verge of sending a million or more American men to aid Britain in restoring the rulers of the countries which have been overrun in Europe to their former positions of power. If we are able to aid Russia in preserving its communistic government, the manner in which we have been brought into the present position is made plain by an editorial from the Sunday, August 3, issue of the Chicago Tribune. It is as follows:

[From the Chicago Tribune of August 3, 1941]

It is easy to reconstruct the steps which led Mr. Roosevelt and the country into the present predicament. In 1937 it was apparent that all his economic experiments had failed. Although he had been reelected, he was facing the responsibility of continued failure. Time was running against him, and the situation was an unpleasant one. He had overreached himself in trying to pack the Supreme Court, and his prestige had suffered from his defeat in the Senate.

Then, again, in dealing with the Court, he stepped on a loose board when he appointed Black to the Supreme Bench and discovered he had named a man who had joined the Ku Klux Klan. That appointment met universal censure. The Alabama Senator was already justly disliked for his arrogant conduct of an investigating committee, with agents known as the Black Hundreds.

It was time for Mr. Roosevelt to do something to divert the public attention, and he did so in October at the Chicago bridge ceremony. He startled the country by exploding a war speech when America couldn't see the possibility of a war cloud over it. He assailed the bandit nations abroad and demanded that they be quarantined for the protection of the peacable world from their plagues. This speech had the effect of taking Mr. Black off the front pages for awhile. The country had reason to be startled, but could not at the time appreciate how grave those reasons were. Mr. Roosevelt was actually on his way to war, but people couldn't even suspect all his intentions. Most of them thought that he was doing the old trick of pointing to trouble abroad when he had trouble on his hands at home.

What else was behind this speech may be revealed in time. The French and British Governments were beginning to be alarmed by the consequences of some of their mistakes. They had been playing the international game badly. The Treaty of Versailles was falling to pieces. They began to suspect that they had made a terrible blunder in dealing with Herr Hitler. The British must assume more responsibility for this than the French. The Vichy government now says the French would have stopped the Nazis when they went into the Rhineland, but the British wouldn't support them. World opinion might have been against them if they had seemed to deny the German right to remilitarize German territory.

The British and the French turned to Mr. Roosevelt, seeking to scare Hitler, Mussolini, and Japan by shoving the United States to the front. Although they welcomed the diversion in their favor, they appeared to give Mr. Roosevelt cold support when he responded.

It was, however, more than coincidental that his speech was exactly timed with the decision of the Council of the League of Nations to refer the question of Japanese aggression in China to the powers which had signed the pact guaranteeing China's territorial integrity. The people here didn't know that action had been taken when Mr. Roosevelt denounced the bandits. He did know it.

It became perfectly apparent that the purpose was not to do anything for China, because the Brussels conference was a fiasco before it got started. The purpose was to get the United States involved in foreign complications. Those tactics were successful. Mr. Roosevelt has been in the forefront of European power politics ever since. His new rôle was pleasing to him because it was pleasing to the aristocratic governments whose policies he was adopting.

As the tension increased abroad and as coming events became more predictable, more pressure was put upon Mr. Roosevelt. The climax which topped it off was the visit of King George and Queen Elizabeth to Hyde Park. Mr. Roosevelt was thus approached on his most susceptible side. He fed hot dogs and beer to their majesties and, although that was intended to impress the American people and show them how the top royalty of the earth could be introduced to the American way of life, Mr. Roosevelt's sensations were those of one elevated to importance in the monarchical system. The royal ruler unbent and the republican ruler was flattered. Hyde Park was the scene of an agreement which has been unfolding ever since.

Mr. Roosevelt believed in common with everybody else that the French Army was better than the German and that the British Navy was supreme at sea. He plunged into the game of politics in Europe, undoubtedly convinced that he was playing with the more powerful side and that his proclamations and declarations and his warnings to the disturbing nations would be backed up by a superior force. The open record discloses enough of what he did to frighten one side and encourage the other. The unopen record some time will show more of this.

He probably thought with others that Poland, although deserted and betrayed by Russia, would be able at least to soften the German Army before being overwhelmed and that in allying himself with France and Great Britain he was with the ultimate victors and would be at the peace table with them, adding his dictate to the others. When the disasters in western Europe began with the allied failures in Norway and extended all over the Low Countries and into Flanders, Mr. Roosevelt was in the war as far as he personally could get, openly promising all aid to France and Britain.

In the Battle of Flanders he advised that French troops be moved from the frontier of Italy, which had not yet delivered its stab. Reynaud, the then Premier of collapsing France, appealed to him for the aid to continue resistance, and he promised everything but an expeditionary force. France was urged to keep up the fight and retire to its overseas empire, if necessary. After France capitulated, Mr. Roosevelt urged Mr. Churchill to fight on. He urged Greece and Yugoslavia to resist and promised aid. Constant promises of aid were given China.

Every military reverse in the war in which Mr. Roosevelt had involved himself got him deeper into it. He had now been a party to so much havoc that he could not see where he could stop.

He has thrown everything he could of American resources, money, and material, without stint, into the conflict with which he identified himself 4 years ago, and he has wanted to throw men. He wanted to throw men into the fighting in Serbia and Greece. He has wanted to send them to Africa. He is told by British generals and British ministers that the war cannot be won without American manpower. That is the next step in his program, and he is poised to take it.

Mr. Speaker, there is much talk in Washington of unity. Consistently we are told by the administration's mouthpieces and by professors who will take no part in the war, by bankers and businessmen who will profit by a continuance of the war, that England is fighting our battle.

The polls all show that from 75 to 80 percent of the American people are opposed to becoming involved in this war, and if the President and the warmongers want unity, they should abide by the will of the majority, who were promised by Roosevelt when he sought election, that he would use every possible means to keep us out of the war.

The tail can no more wag the dog than can this small war-seeking minority drag enthusiastic support out of the American people for the President's war program.

The Lawyers of America Meet at Habana

EXTENSION OF REMARKS

OF

HON. FOSTER STEARNS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

REPORT OF CONFERENCE OF INTER-AMERICAN BAR ASSOCIATION

Mr. STEARNS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of the first conference of the Inter-American Bar Association held at Habana last March:

[From the Bulletin of the Pan American Union for July 1941]

THE LAWYERS OF AMERICA MEET AT HABANA

(William Roy Vallance, Secretary General, Inter-American Bar Association; Assistant Legal Adviser, Department of State of the United States)

An historic event occurred at Habana, Cuba, on March 24, 1941, when the first conference of the Inter-American Bar Association was opened with stirring addresses by members of the bar in the hall of the House of Representatives in the Cuban national capitol. When Dr. Gustavo Cuervo Rubio, Vice President of Cuba, called the meeting to order, there were over 600 delegates, observers, and guests representing 46 member bar associations from 16 countries. As these representatives stood when the roll of members was called by the secretary general, a thrill of enthusiasm swept over the audience with the realization that this new association, organized only 9 months previously at the close of the Eighth American Scientific Congress at Washington, D. C., on May 16, 1940, had already achieved hemispheric proportions and included members from Canada on the far north to Chile and Argentina in the south.

Cordial words of welcome were expressed by the Honorable Raúl G. Menocal, mayor

of Habana, by the Honorable José Manuel Cortina, Secretary of State, on behalf of the Cuban Government, and by Dr. Natalio Chediak for the Colegio de Abogados de la Habana. In responding for the visiting lawyers, the secretary general referred to the great contribution that Cuban statesmen and jurists have made to the organization of a better world, and evoked prolonged applause when he paid tribute, particularly, to Dr. Antonio Sánchez de Bustamante y Sirvén for his monumental code of private international law and for his service as a member of the Permanent Court of International Justice at The Hague. Gratitude was also expressed for the vision, courage, and indomitable will of the great liberators, Martí, Simón Bolívar, San Martín, Hidalgo, George Washington, and other great leaders in the struggle for freedom under law. The spirit of cooperation among our nations was stated to represent no temporary sporadic effort, but a constant and continuous interest reflected in the creation of a permanent organization, namely, the Pan American Union, and in periodic meetings.

In his Presidential address, Dr. Manuel Fernández Supervielle, of Cuba, set forth the goal of the association in part as follows:

"The work of the association in this respect may also be guided toward the unification of the provisions of law that regulate a large number of specific questions that do not raise great difficulties and that would lead to very important advantages of different kinds. For instance, the uniformity of the law on the subject of negotiable instruments (principally the bill of exchange and the check); of commercial associations (corporations and partnerships) and taxes on transmission of property by inheritance (in order to prevent double taxation); and in connection with the protection of commercial trade-marks, of factory brands, patents of invention and copyrights; the condemnation of property for causes of social utility; the requisites for powers of attorney for lawsuits; the collecting of commercial credits; the execution of judgments handed down by foreign courts; the proof of foreign law in lawsuits. While such uniformity would facilitate the realization of the juridical purpose and the judicial function, it would also tend to increase economic relations between the different countries, promoting the investment of capital in the needed channels, and would invigorate international commercial credit."

The sessions of the conference consisted of plenary meetings with principal addresses followed by round tables on subjects of especial interest to particular groups of delegates. Some of the addresses and round-table sessions were of unusual interest. Dr. Enrique Gil, a delegate from Argentina and president of the Buenos Aires Bar Association, contributed a strong note of solidarity when he expressed the desire of Argentine lawyers to make the association a practical force for improving the administration of law and justice in this hemisphere. Great interest was manifested throughout the conference in the subject of hemisphere defense as evidenced by the fact that 13 papers were presented on the topic of The Role of the Lawyer in the Defense of the Americas. President Jacob M. Lashly, of the American Bar Association, stressed the fundamental and strategic value of law in an active and progressive society. He said that law accompanies the businessman to his desk, the statesman to his assembly, the worker to his bench, the banker to his vaults, even the doctor to his patient, the musician to his platform, and the priest to his altar. He further pointed out that "there is no difference in the ultimate aims and goals of the two systems of jurisprudence," and said, "Here Las Siete Partidas of the Spanish republics reach across the channel of the centuries to clasp the hand of Magna Carta." Dr. Dantès Bellegarde, of Haiti, stressed the significance of the presence of the representatives of the Canadian Bar Association. He discussed the importance of laws for the economic defense of the Americas. These discussions led to the adoption of the following resolution:

"The first conference of the Inter-American Bar Association declares:

"First. Its unreserved devotion to the democratic principles on which the American republics were founded.

"Second. Its desire for the strengthening of the cordial relations existing between the countries of America.

"Third. Its allegiance to the principles of international law and the precepts of international conduct as set forth in the treaties and resolutions approved by the International Conferences of American States.

"Fourth. Its determination to cooperate effectively in the defense of the foregoing principles and precepts."

Judge Herbert F. Goodrich and Dr. William Draper Lewis presented papers on the work of the American Law Institute in compiling the restatement of the common law of the United States. On motion of Dr. Luis Anderson of Costa Rica, a resolution recommending the translation of the restatement into the other languages of the American republics so that lawyers there might more easily become acquainted with the laws of the United States was adopted as follows:

"The first conference of the Inter-American Bar Association

"*Resolves:*

"First To endorse the resolution approved by the Eighth American Scientific Conference, in May 1940, recommending the translation, into the other languages of the American republics, of the restatement of the law of the United States of America formulated by the American Law Institute.

"Second. To recommend that the translation contain, in addition to copious explanatory footnotes, brief historical and analytical introductions on the origin and nature of the corresponding Latin American and Anglo-American legal concepts, principles, and institutions.

"Third. To express the opinion that the result of this work should greatly advance and facilitate the successful completion of the important tasks relative to the unification of commercial and civil law and uniformity and unification of legislation entrusted to official agencies by the International Conference of American States.

"Fourth. To recommend that once the volume relative to conflict of laws of the American Law Institute has been translated, official and private legal agencies and organizations cooperate in a detailed comparative study thereof with the Bustamante Code of Private International Law, for the purpose of examining the extent to which the two systems may be reconciled."

Aviation law received careful consideration at a round table under the chairmanship of Dr. J. Blanco Uztáriz, of Venezuela. Howard S. LeRoy, of Washington, D. C., discussed Trends of International Aeronautical Law and Dr. Antonio Sánchez de Bustamante, after discussing the Constitution of International Committees on Aviation, brought about the adoption of the following resolution:

"The first conference of the Inter-American Bar Association

"*Resolves:*

"First. That the President of this conference officially request, in the name of the association, all the governments of America to organize immediately the National Commissions of Aviation recommended by the first Pan-American Conference of Aviation, at Lima, in 1937.

"Second. That he also request the said governments to arrange to have their national committees collaborate with the national societies known as the Inter-American Aviation Squadrons.

"Third. That he communicate this resolution to the Pan American Union with a request that it urge the national committees to undertake the work assigned to them, and that the permanent Pan-American Aeronautical Commission be organized as soon as possible.

"Fourth. That he undertake all the measures of publicity that he may consider necessary and desirable for the achievement of the foregoing objectives, and that he report on the result thereof to the second conference of the Inter-American Bar Association."

Dr. Alberto Ulloa, former Minister of Foreign Affairs of Peru and now professor of law at the University of San Marcos, presented some interesting views in his address on the subject Observations on the Present Condition of the Law. President D. L. McCarthy, of the Canadian Bar Association, spoke about the method whereby Canada has coordinated the development of the common law in the Canadian Provinces with the civil law in the French-speaking Province of Quebec.

Legal education was discussed at a round table led by James Oliver Murdock, professor of international law at George Washington University. Prof. Philip C. Jessup, of Columbia University, spoke on the subject The Importance of International and Comparative Law Studies to Inter-American Cooperation; and Mr. George A. Finch, of the Carnegie Endowment for International Peace made a very interesting address on the subject Materials for the Study of International Law. A highly significant address was delivered by Dr. Germán Riesco, delegate of the Chilean Bar Association, regarding the importance of high ethical standards in the legal profession. His address was in part as follows:

"Among the objectives of our association as laid down in its constitution there is one that, in my opinion, is as urgent as, and certainly easier than, to spread a knowledge of the laws of the various American countries and strive for their uniformity. I refer to upholding the honor of the profession and promoting cordial relations among the jurists of the Western Hemisphere. * * *

"How shall we learn to know each other better? Something—indeed much—is accomplished by meeting here, by becoming acquainted socially in this beautiful natural environment, welcomed by the cultivated and cordial Cubans.

"Something is accomplished also by reading papers here and by telling each other what we think; but we should progress more rapidly and plumb greater depths if we could also show each other what we are doing in the exercise of our profession. Theory, constructive thought, sometimes is a blinding light that compels our admiration; but what attracts and captivates us is another's way of life, his spontaneous actions and generous deeds.

"I recognize that it is difficult to see each other as we really are. But nothing hinders us from telling each other how we live—for example, what ethical education each country tries to give to a young lawyer, how he is taught that our profession is not simply a means of earning money, but also a ministry, a priesthood that has inherent obligations toward the society in which he lives. Those of us who believe that our countries are doing something in this direction might learn that others are doing more; and doubtless we should all have something to learn."

A resolution reading in part as follows was adopted:

"The first conference of the Inter-American Bar Association

"*Resolves:*

* * * * *

"Second. To encourage the establishment, within the law schools of each country, of courses on legal ethics.

"Third To express the hope that the law schools of the Americas shall prescribe, as a

condition of entry and as a requisite for a law degree or of a doctorate in jurisprudence, the satisfaction of high moral standards.

"Fourth. The executive committee shall encourage discussion among bar associations of America on the subject of the formulation of a code of professional ethics, the results of which shall be submitted to the association at the next conference."

Also on the recommendation of the legal education group a resolution of great importance providing for the establishment of an academy of comparative and international law at Habana was adopted on the motion of Dr. Ernesto Dihigo.

The need for new material with which to find the law was strongly emphasized at the round table on inter-American legal documentation, at which Dr. John T. Vance, law librarian of the Library of Congress, presided. These discussions resulted in resolutions recommending the establishment of a journal for the association; the establishment of a legal center in each nation for a collection of books on the laws of the various countries; the compilation of legal bibliographies; and uniformity in the material and standardization in the production of lawbooks.

The urgent need of further protection of intellectual and industrial property was considered at a round table under the chairmanship of Dr. Camilo de Brigard Silva, of Colombia. Stephen P. Ladis, of New York, read an important paper on the status of copyright protection in America. Resolutions were adopted recommending greater copyright protection for the works of authors and a study of the patent laws of the various countries.

The historic fact that the constitutions of the pan-American countries were drafted with the Constitution of the United States as a model was brought out in an address by Frederic R. Coudert, of New York, on the subject of comparative constitutional law. It was further developed in a paper prepared by Prof. Noel T. Dowling, of Columbia University, concerning a comparative study made of over 400 decisions of the courts of Argentina interpreting its constitution. The Honorable William S. Culbertson, former Ambassador to Chile, discussed The Reign of Law.

Dr. Lawrence D. Egbert, of the United States Tariff Commission, read a paper on the subject Latin-American Commercial Treaties, and referred to a Handbook of Latin-American Commercial Treaties which he had recently prepared for the Commission. (Copies are now available to persons desiring them.) He pointed out some of the problems encountered in the negotiation of commercial treaties. A resolution requesting the executive committee to study the desirability of organizing a section of customs laws and commercial treaties was adopted.

The climax of the meeting occurred on March 27 at the closing plenary session, when 8 stirring addresses were delivered in the hall of the house of representatives and 22 resolutions were unanimously adopted, after having been presented by Dr. William Sanders, Chief of the Juridical Section of the Pan American Union, who served efficiently as reporter general for the conference.

The timely address of the Honorable Robert H. Jackson, Attorney General of the United States, read in his absence by the Honorable George S. Messersmith, American Ambassador to Cuba, stirred the delegates to a realization of the legal grounds supporting the strong action taken by the United States in providing aid to the democracies in order to prevent their conquest by the Axis Powers. In part of his paper, Mr. Jackson discussed the advances made by the Treaty for the Renunciation of War and the Argentine Antiwar Treaty, and set forth the implementation of self-defense which began at the first meeting of ministers of foreign affairs of the American republics in 1939 and was developed in relation to the law of neutrality by the inter-American neutrality committee at Rio de Janeiro, as endorsed by the second meeting of foreign ministers at Habana in 1940. In closing his address he said:

"The only sanction that seems available in our time is the freedom of the right-thinking states of the world, particularly the states of the Western Hemisphere, to give a material implementation to their moral and nationally official judgments as to the justice of a war. The American States have done this officially with respect to the invasion of Belgium, Holland, and Luxemburg. A public opinion which can express itself only in sermons is not likely to restrain the aggressive propensities of any powerful state. If, however, that opinion may command measures short of war that are likely to prevent the success of aggression, it is certain to have some deference even from the ruthless. Short-of-war measures which enlightened opinion may invoke include all forms of moral censure and diplomatic disapproval, discriminatory embargoes or boycotts, as well as financial credits and furnishing of supplies and material, weapons, and ships. These speak a language understandable to those deaf to the precepts alike of Christian civilization and of legal obligation and scholarship.

"It is upon these considerations that I have advised my Government in the hope that its course may strengthen the sanction against aggression and contribute to the realization of our aspiration for an international order under law."

Dr. Edmundo Miranda Jordao, president-elect of the Instituto da Ordem dos Advogados Brasileiros, pledged the support of the lawyers of Brazil to the principles of democracy and said:

"The 21 American republics can boast to the civilized world of their unique and incomparable condition in the present state of the world; they are free from any fear of mutual aggression, thanks to the sacred principles of American solidarity, in contrast to the nations of the other four continents, which are suffering directly or indirectly the horrors and consequences of the terrible war of extermination and conquest provoked by the madness of some and the unrestrained ambitions of others.

"At the end of the eighteenth century and the beginning of the nineteenth, the aura of liberty pervading America was so strong and compelling that the former European colonies, one after another, broke their humiliating chains and won their freedom, becoming sovereign nations and, invoking force, proclaimed their own political independence. And from that moment until now, by force of law and to the glory of America, not one of them has returned to its former status as a subject nation, a fact due to the spirit of democracy that has ever imbued the peoples of this continent.

"A noteworthy affirmation of that historical phenomenon occurred, curiously enough, in Brazil, which then (1821) was under the regency of Prince Pedro, the favorite son of King João VI. The latter had returned the seat of government to Portugal after having transplanted it to Rio de Janeiro because of the Napoleonic invasion.

"The prince of the royal blood, unable to escape the democratic spirit of the Brazilians and inspired by José Bonifacio, the apostle and later the patriarch of our independence, disobeyed the orders of his own father and issued from his palace in Rio de Janeiro a decree stating that, unless previous consent had been given, any and all troops sent to Brazil from Portugal or elsewhere on any pretext whatsoever would be considered as enemies, as well as all the crews of vessels and marines, if they tried to land; and, in case said troops should dare attempt a landing, they would be repelled with arms by the military forces of the first and second line, and even by the people, using all possible means, if necessary, to burn the vessels and sink their small boats."

The enthusiasm of the delegates was raised to a high pitch by Dr. Victor Vega Ceballos, of Cuba, through his address reviewing the contribution of the law in maintaining justice and democracy in this hemisphere. It is regretted that the full text of his address cannot be reproduced. The following brief extract is of exceptional interest:

"The lawyers have done well in organizing this Inter-American Federation which gathers, as in a temple, followers of their admirable profession, and, at a time of profound disturbances such as the present, endeavors to remove the little legal differences which might in any way constitute an obstacle to the forward march of inter-American relations.

"From early colonial times the study of law in our land has had a firm foundation and its practice veritable apostles, from Don Juan de Aréchaga y Casas, who in 1671 held the post of president of the Royal Audiencia of Mexico and wrote a celebrated commentary on civil law serving the attorneys of that era as a work of reference, on down to Antonio Sánchez de Bustamante, that famous savant who has become so great that he has ceased to be ours and has become a citizen of the world—a source of honor to the university, prestige to the bar, and pride to the country. * * *

"Of the two categories into which destiny has divided men—the one extolling the power of material things and force as the only creative elements, and the other considering the power of the spiritual an incontrovertible tenet and holding it the only means of creation and preservation—it has been our good fortune to fall into the latter. Strange to say, our slave-holding and privileged society gave the world forceful champions of equality and ardent defenders of human dignity. * * *

"For some time we have noted a certain uneasiness in our countries and, in spite of the power of spiritual absorption which characterizes us and which causes the foreigner among us to assimilate our ideas and customs more or less completely, certain propaganda of a well known type began to be disseminated, tending to weaken the spirit of unity which always bound us together. Men of America, with their eyes and ears open, perceived a future full of danger and heard unwholesome doctrines intended to undermine their institutions being noised about. To combat these symptoms of possible disintegration we have taken the measures that seemed advisable at the time. Sometimes governments, farsighted and determined, discerned the certain danger and called such meetings as the Conference for the Maintenance of Peace at Buenos Aires and the Meetings of the Ministers of Foreign Affairs at Panama and Habana. At the latter meetings declarations were made creating a neutrality zone to protect us against belligerent maritime activities on the part of nations engaged in the present war, and obligating the American republics to combat all propaganda contrary to democracy in the Americas. In other gatherings outstanding men, as in the present conference, made suggestions, planned orientations, and drew up programs which, designed to bring into harmony the private law of the American nations, tried also to insure protection for and maintenance of the political institutions common to us all.

"The Cuban Government has not been indifferent to the latest events which are stirring European nations and, although it recognizes their right to the kind of government

that pleases them, on the other hand it believes that it cannot permit ideas, methods, or forms of political organization foreign to our psychology and to our constitutional institutions to be transferred to our territory, to the detriment of our sovereignty and to the grave danger of the standards of living on which we have traditionally based our happiness and welfare. The Cuban Government, with profound respect for the opinions of others, but with full awareness of its best interests and needs, as well as the interests and aspirations of its people, has promulgated a decree on national defense, which is a reaffirmation of Cuban spirit and Americanism and constitutes a solid obstacle to the propagandizing of all doctrines tending to undermine the democracy which our Constitution guarantees."

The famous hospitality of the Cubans was well exemplified in the many social events arranged for the delegates. I can mention only the enjoyable reception given by the President of Cuba and Señora de Batista, the delightful reception offered by the Honorable Juan F. Edelmann, the Chief Justice of the Supreme Court of Cuba, the dinner given by the Attorney General of Cuba at the Miramar Yacht Club and the dinner and dance arranged by the Habana Bar Association. On the last-mentioned occasion, Dr. Victor Lascano, Minister of Argentina at Habana, and chief of its delegation, made an interesting address expressing the hope that the next meeting would be held in Buenos Aires and this invitation was gratefully accepted. It is accordingly anticipated that the next conference will be held in Buenos Aires under the sponsorship of the Colegio de Abogados de Argentina, about September 1942.

Assurance was given that the next conference would be equally successful. The Honorable J. Honorio Silgueira, president of the host association, in Argentina, was elected president of the Inter-American Bar Association, the other officers being the following:

Secretary general: William Roy Vallance, United States.

Assistant secretaries general: Raúl Herrera-Arango, Cuba; Walter Villegas, Argentina; Curtis Shears, United States; Dantès Bellegarde, Haiti; Alberto Ulloa, Peru; Camilo de Brigard Silva, Colombia.

Treasurer: William Cattron Rigby.

Assistant treasurer: Howard S. LeRoy.

Executive secretary: Lawrence D. Egbert.

Executive committee: J. Honorio Silgueira, president; William Roy Vallance, secretary general; William Cattron Rigby, treasurer and chairman; James Oliver Murdock; D. L. McCarthy; Luis Anderson; Manuel Fernández Supervielle; Germán Riesco; Edmundo de Miranda Jordao.

Vice presidents: Enrique Gil, Argentina; Tomás Manuel Elío, Bolivia; Edmundo de Miranda Jordao, Brazil; D. L. McCarthy, Canada; Oscar Dávila, Chile; P. Alejandro Gómez Naranjo, Colombia; Lic. D. Alberto Echandi, Costa Rica; Gastón Godoy y Loret de Mola, Cuba; Manuel R. Balarezo, Ecuador; Féliz Magloire, Haiti; Esteban Guardiola, Honduras; Miguel S. Macedo, Mexico; Pedro Moreno Correa, Panama; Manuel C. Gallagher, Peru; Jacob M. Lashly, United States; Arturo Puigbo Ronso, Venezuela.

An executive council consisting of the following persons was also elected:

Enrique Gil, Walter Villegas, Argentina; José Philadelpho de Darros Azevedo, Edmundo de Miranda Jordão, Brazil; Lucien Moraud, D. L. McCarthy, Canada; Germán Riesco, Carlos Estévez, Chile; Camilo de Brigard Silva, Miguel Moreno Jaramillo, Colombia; Luis Anderson, Antonio Picado, Costa Rica, Manuel Fernández Supervielle, Natalio Chediak, Cuba; José Luis Tamayo, Eduardo Salazar, Ecuador; Dantès Bellegarde, Haiti; Antonio S. Bustamante, Honduras; Miguel S. Macedo, Emilio Portes Gil, Mexico; Juan Bautista de Lavalle, Alberto Ulloa, Peru; James Oliver Murdock, John H. Wigmore, George M. Morris, John T. Vance, William S. Culbertson, John P. Bullington, W. E. Stanley, Frederic R. Coudert, Emilio del Toro, William Draper Lewis, United States; Cristóbal Mendoza, J. Blanco Uztáriz, Venezuela.

In conclusion the hope is expressed that the harmony and the spirit of cooperation that pervaded all of the proceedings at the Habana Conference may constitute a significant prophecy as to the future progress and expansion of this important inter-American institution.

Kinda Strange

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

EDITORIAL FROM THE STORY CITY (IOWA) HERALD

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Story City (Iowa) Herald:

KINDA STRANGE

Congress is being asked to extend the service of enlisted men to 2 years—after they were definitely assured they were being drafted for 1 year. The argument is "we are in more danger now than a year ago." If that is true, then some high administration officials ought to be hung, as they must have bungled the job of preparedness terribly. If we aren't getting stronger every minute on sea, land, and air, as compared with Germany, it must be our own fault. And, too, right now Hitler seems to be having his hands full fighting Russia, which a year ago was practically his ally. Reminds us that the other day David Lawrence, most experienced of Washington commentators, said: "This administration is the poorest one we ever had for getting the economics of the Nation organized for war."

Editorial Tribute to Senator Wheeler

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, August 6 (legislative day of Monday, July 28), 1941

EDITORIAL FROM SPRINGFIELD (MASS.) FREE PRESS

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Springfield (Mass.) Free Press, one of the leading Democratic newspapers of Massachusetts. The editorial is entitled "Wheeler Keeps United States Out of War."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Springfield (Mass.) Free Press of August 2, 1941]

WHEELER KEEPS UNITED STATES OUT OF WAR

Senator BURTON K. WHEELER, of Montana has been called every villifying name of any consequence in the world today. The warminded press and the war-minded administration have hit him from every possible angle in the concerted effort to discredit him. And yet he has persevered in his battle to keep America at peace. He has taken the smear campaign on the chin and continued to expend his full energy in a cause which he and millions of Americans with him consider of vital importance to the preservation of our national welfare.

At first Senator WHEELER was merely labeled an appeaser by the warmongers. When the American people failed to fall in line with this false claim, however, administration spokesmen resorted to more deprecating names. Secretary Stimson, no doubt with full support of the administration, publicly named WHEELER a traitor. But this was too much. Stimson and his associates hung themselves with their own rope. It became obvious to all that the war cabinet was conducting nothing more than a smear campaign.

Secretary Stimson, spokesman for Secretary Knox and others on this occasion, hung himself through asserting that the Senator had committed treason by urging Army selectees to object to being kept in the service longer than the prescribed year. Twelve Senators, some of whom actually differed with WHEELER on the question of America's participation in the war, immediately rallied to the defense of the Montanan. They pointed out that the franked post cards mailed by WHEELER and bearing an appeal for public expression against the proposed extension of the draft service were not dumped into the Army camps, as Secretary Stimson had intimated. Only three soldiers in the entire country are known to have received the cards. Perhaps Stimson foresaw an opportunity to bring formal charges of treason against the America First Senator, but the uproar in Congress this week gave full proof that no treason proceedings could get to first base among the Senator's colleagues. Stimson's smear campaign has boomeranged. He acknowledged this when he apologized publicly to WHEELER this week for misjudging him.

Senator WHEELER is a big thorn in the side of the warmongers. Almost alone he has dared to defy the administration. With the great body of the press against him, he has courageously scored the efforts of a few strong men to get this country into war. He is a big thorn in the side of the warmongers because his arguments make sense with the American people and because there is increasing evidence that the American people are waking up to the vicious interventionist course in which the Nation is being led.

One thing which Senator WHEELER doesn't believe in is keeping secrets from the American people. It was this firm conviction which led him to expose the Teapot Dome scandal of years back. Nor does he believe that the Government should keep the country in ignorance as to the manner in which the future of the country is being gambled. Those who said that the Teapot Dome affair was no business of the public now declare that international diplomacy involving the lives of American soldiers is also no business of the public. But WHEELER pulls no punches. He sees the administration trying to lead us to war, and he is determined that the American people be informed in this respect and be allowed a voice. He epitomized his democratic attitude a short time ago when he said in the Senate:

"Certain spokesmen for the Government are saying that we ought to leave the question of whether we have war or peace up to the administration. But the Government on many occasions has shown that it does not think the American people are to be trusted with information vitally affecting the question of whether their lives or the lives of their sons are to be sacrificed upon the battlefields of Europe, Asia, or Africa. For instance, I am informed that the administration knows all about the Hess peace proposals to Great Britain. But the Government does not tell the people that they include preserving the British Navy and the British Empire. If England and the British Navy are our first line of defense, wouldn't it be to our interest that our people should know the facts before they are asked to sacrifice their money and their sons to defend something which can be accomplished without such sacrifices?"

And the Cornerstone Is Faith

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 6 (legislative day of Monday, July 28), 1941

ARTICLE BY WILL WHITTENBURG

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix an article by Will Whittenburg entitled "And the Cornerstone Is Faith," published in This Week magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From This Week Magazine]

AND THE CORNERSTONE IS FAITH

(By Will Whittenburg)

Last month the girl said "Yes." Today the home-loan department of the bank said "Yes." Next week work will begin on our new home.

But:

"I still do not advise it," my uncle said. "Building costs are rising."

"There is a war coming and you might have to go," someone else warned.

"You are wrapping your whole future up in one package. Your marriage, your financial success, everything will go if you put your savings into the down payment on a house and then lose it. Travel lightly in these times, my boy; excess baggage might drag you down."

Perhaps we should be afraid. Undoubtedly there is wisdom in this advice—but not enough wisdom to hinder the determination of a typical young American working couple who are willing to stake everything they have on the future of their country.

Not that we are plunging blindly. We decided to go ahead with our building plans only after seriously taking inventory of our own future and of the Nation's future.

After all, we are merely youth, risking today against tomorrow. Our tomorrow depends upon America as a whole. It depends upon the man who works beside me every day and upon the girls who work as stenographers in the office with my fiancée. It depends upon the men who sit at desks and plan ahead. It depends upon us all—everyone.

So we shall risk our savings in a down payment on our home. We shall do it willingly and with high hope. Because I have faith in the men who work with me, because my fiancée and I have faith in our leaders to steer America straight, we will take a chance. We stake our future on America. And, in turn, we feel that America stakes her future on us, on our not being afraid.

We know that uncertainty produced by world events vitally affects even such small atoms as us. But is this reason enough for us to scurry like rabbits into some dark hole of fear? We are not totally without fear in the face of the world crisis, but our hope is a greater thing than fear. It was the same with the American pioneers.

And what of other working people like us who have already built their rows and rows of homes along the streets of America? Is not their risk as great as ours?

Shall they stop making the payments on their homes? Shall they refuse to buy the refrigerator, the stove, the new furniture they really need because people across the ocean are dropping bombs upon each other?

Not to our way of thinking.

Just what, then are we being advised against? As we see, it is merely against starting. If our home were already finished no one would advise us to stop making the monthly payments. They would tell us to fight to keep making them. So we shall fight to get our home started.

This is not recklessness. It is the faith and courage upon which American institutions were founded, and upon which our way of life depends. We are merely responding to the spirit of America—the spirit that spurns security when security means compromise with hope, ambition, and faith.

The bank will say to my neighbors—the painters, the carpenters, brickmasons, electricians, and plasterers: "Here is a job for you to do, a job for a young couple who have confidence in you and in the future; we must—and do—have confidence in their future."

Thus, in building this home, we in our small way help others to gain confidence; we give them work in the same way that the owners and employees of local business and factories create a job for us.

In the next few weeks, Americans will look with satisfaction at the progress of the National Defense Commission. During that time we shall look at a newly placed joist in our home and experience the same kind of satisfaction. We, too, are preserving civilization. We are erecting another solid rock at the base of democracy—a home.

Already, the very thought of a home has kindled new flames of ambition. We beat the starting whistle by a wider margin when we go to work mornings now. Zest for work during the day has increased. If depressions do come, if war, sickness, and other misfortunes visit us, we shall have more courage to fight them.

Such small things as the pride of accomplishment in having planted a new piece of shrubbery in front of our house; the expected joy of puttering about a kitchen of our own; the satisfaction of the final payment on a favorite piece of furniture—these are the things that spur us on to building a home of our own.

Pessimists, free advisers, and negative critics we shall have with us always. But unless we get started we may never have the one thing so vastly important to us and to the Nation—a home of our own!

Public Services of Senator O'Mahoney

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 6 (legislative day of Monday, July 28), 1941

EDITORIAL FROM SIOUX CITY TRIBUNE

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Sioux City Tribune referring in a very complimentary way to the very excellent work being done by the senior Senator from Wyoming [Mr. O'MAHONEY] in his subcommittee of the Committee on Public Lands and Surveys.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sioux City Tribune]

MORE POWER TO O'MAHONEY

Of transcendent importance to the future development and welfare of the United States is a hearing now in progress in Washington which is being conducted by the Senate Public Lands Committee, headed by Senator O'MAHONEY, of Wyoming.

The purpose of this hearing is to set forth for the benefit of Government and the understanding of the citizenry a comprehensive picture of the untapped natural resources of the United States. It is not generally understood, we believe, that title to approximately half the land area lying west of Nebraska and Kansas still is vested in the United States Government.

O'MAHONEY'S committee intends to emphasize the magnitude of the unexploited wealth these public lands contain. These public lands are especially rich in minerals, coal, oil, iron, manganese, tungsten, tin, mercury, molybdenum, mica, nickel, aluminum, lead, zinc, copper, antimony—"a vast storehouse of the very minerals to seize which Hitler has thrown his army against the continental front of Russia," as O'MAHONEY explains it.

The Public Lands Committee will set forth some interesting facts about population trends, industrial trends, and the disproportion of war contracts and the intrinsic unsoundness of putting so many of the national-security eggs in so few baskets. It will emphasize the danger of drawing so much of the western labor supply to eastern industrial centers and the folly of depending upon foreign sources of supply for so many items that could be produced in our own country.

One of the most convincing witnesses to appear before this committee was W. M. Jeffers, president of the Union Pacific Railroad. J. M. Lamson, of the Burlington Lines, shocked members of the committee when he told them that the Germans, in their thorough way, made a quiet survey of these western American resources 20 years ago. Senator O'MAHONEY advanced the thought that Germany wanted to know what these resources were—for the future.

It is a matter of statistical record that agricultural imports during the last year of

which we have a record exceeded in value the total agricultural production of Montana, Wyoming, Colorado, Idaho, Utah, Nevada, New Mexico, and Arizona. That fact should be brought out by the Senate Public Lands Committee in this hearing. There could be no better refutation of the wisdom of the policy our Government has practiced in trying to stimulate international commerce.

It is a common saying around Washington that "the last frontier has vanished." That is too broad a generalization. Granted that little desirable farm land remains to be brought under cultivation, that is just part of the story. The mineral wealth and power potentialities of our public domain affords a frontier that is definitely worth developing.

Wasteful, reckless, selfish exploitation of these resources must be avoided. But there is a difference between exploitation and development. Sound development practices are not inconsistent with sound conservation policies. That is especially true in mining. Proper development makes it possible to utilize vast deposits of low-grade ores which otherwise have little or no value.

Russia as an Ally

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, August 6 (legislative day of Monday, July 28), 1941

EDITORIAL FROM NEW YORK TIMES

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial from the New York Times of today entitled "Russia as an Ally."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of August 6, 1941]

RUSSIA AS AN ALLY

Our State Department has informed the Russian Ambassador in Washington that we will give the Soviet Union all practicable economic assistance and grant unlimited licenses for the export to Russia of a wide variety of articles and materials, presumably including weapons. We will do this because, in the words of Acting Secretary Welles, it is "in the interest of the national defense of the United States" to strengthen Russian resistance to German aggression. To the statement conveying this information, Ambassador Oumansky replies that he wishes "to emphasize the correctness of the view" that, by invading Russia, Germany "is threatening the security and independence of all freedom-loving nations, and that this threat naturally creates a community of interest of national defense of those nations." It is more than a little too bad that Mr. Oumansky's government is just now discovering the community of interest of the freedom-loving nations. Where was Stalin in the summer of 1939, when the war began, if not playing ball with Hitler? And where was Stalin in the winter of 1940-41, if not across his own border making war in Finland?

There are certain points about our new relationship with Russia which ought to be reasonably clear. In the first place, Mr. Welles is unquestionably right when he says that we have an interest in Russian resistance. The longer Russia fights and the more German equipment she can destroy the better it will be for us. It is also clear that it is Hitler and not Russia that constitutes the immediate threat to us. But at the same time it must be clear that our primary interest is not in helping Russia but in stopping Hitler. And in the matter of stopping Hitler there are certain facts which cannot be ignored: (1) Our supplies of planes and guns and ammunition are severely limited; at this moment we cannot send even to Britain one-twentieth as many bombers as we ought to send. (2) By the only route available to us—across the Pacific and then across the whole length of Siberia—it is enormously farther from the United States to Smolensk than it is from the United States to London. We cannot ignore either the distance factor or the time factor, especially when all available information indicates that the decisive phase of the Russian campaign will come within the next 6 weeks. (3) Nor can we ignore the factor of ultimate good faith. Stalin is on our side today. Where will he be tomorrow? In the light of his record no one can say that he will not switch sides again, make a sudden treacherous peace with Germany, and become, in effect, Hitler's gauleiter in the east. We should be in a fine state of affairs if we succeeded in landing a hundred bombers on Russian soil just in time for this reconciliation.

The moral is clear enough. Particularly at a time when we are so hard pressed for war material we ought to make certain that our weapons go into the hands of proved friends. There are two such friends, both of whom have given superb evidence of their courage, their tenacity, and their trustworthiness. These friends are Britain and China. We ought now to be doubling and redoubling our aid to them. We ought to be stripping our own supplies and throwing into the war on their side every bomber, every fighter, and every pursuit plane that can possibly be spared from our own Army. We ought to be using our Navy to make certain that these supplies reach their destination.

The effect of such a policy on our part would not be to let Russia "go it alone." On the contrary, every American bomber that can be sent to China will help to prevent, or to make less effective, a Japanese attack on Russia in the east. And every American bomber that can be sent to Britain, for use either in the air over Germany or against German troops in Africa, will force Hitler to deflect all-important air power from the eastern front, and thereby weaken the force of his attack on Russia.

In following this policy we would be recognizing the realities of time and distance, keeping our supplies in reliable hands, and conserving our full strength for our main objective—stopping Hitler.

We Still Like Finland

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 6 (legislative day of Monday, July 28), 1941

EDITORIAL FROM COLLIER'S WEEKLY

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD a very able and worth-while editorial entitled "We Still Like Finland," by the editor of Collier's Weekly, published in the issue of August 2, 1941.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Collier's Weekly of August 2, 1941]

WE STILL LIKE FINLAND

We yield to nobody in our dislike for Hitler, or in our hope to see him some day, somehow, kicked up some convenient blind alley for good. Nevertheless, we have to stretch our imaginations strenuously in order to picture ourselves hating Finland.

In the winter of 1939-40, the Finlanders under Field Marshall Mannerheim put up the most heroic struggle against overwhelming odds that the world had witnessed since the Dutch fought off the Spaniards in the sixteenth century.

For one reason or another, neither Britain nor France sent the Finns any aid to amount to anything, though there were loud shouts of "Go it, boys; we're all for you." Could the Finns have held out a little longer, substantial Allied aid would have arrived; but they couldn't, and it didn't. Finland had to quit.

The dauntless little nation was robbed of the best one-tenth of its territory by Russia, and went on semistarvation rations while it strove to rebuild. It gradually moved into the German orbit, as happened during the previous war, and presently the British were blockading Finland. Britain was no doubt justified in doing that, under the rules of war as practiced nowadays; but the effect on the Finns personally was that they got hungrier than ever.

Then came Hitler's decision to leap for Stalin's throat. Rumania, another nation from which Stalin had grabbed territory while the grabbing was good for him, went all the way with Hitler. Finland gagged for a few days but finally also sided with Hitler.

To repeat, we don't blame Finland. We expect never to forget the epic of the Mannerheim Line, or that other epic of little Finland's paying on its American debt year after year. We hope for Hitler's eventual immolation. But we also hope that Finland may somehow come out of this fight stronger, better protected and happier than it ever was before.

Taxes and Inflation

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, August 6 (legislative day of Monday, July 28), 1941

EDITORIAL FROM BALTIMORE SUN

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Baltimore Sun of today entitled "Taxes and Inflation."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of August 6, 1941]

TAXES AND INFLATION

There are two main questions about the new tax bill which passed the House on

Monday, after the elimination of the provisions requiring joint income-tax returns for husbands and wives. One of these questions concerns the amount of revenue which the bill in its present form will raise. The second concerns the efficacy of the bill as a device for checking inflation. Many other questions of detail suggest themselves, but these are the two main points, and on both there are grounds for misgiving.

The question of revenue may best be understood by referring to Secretary Morgenthau's original recommendation that the bill be designed to raise Federal taxes to the point at which the Government could pay two-thirds of its expenses during the emergency on a current basis. That seemed a sensible and prudent goal. Even in its original form the House tax bill fell considerably short of the two-thirds ideal, however. It was designed to raise $3,500,000,000 a year, but the official estimates indicated that in the fiscal year ending June 30, 1942—the year on which Mr. Morgenthau's proposals were based—the return over and above the yield of existing taxes was to be only $1,900,000,000.

In the meantime, the original Budget estimates for the fiscal year 1942 had been revised. Under the revised estimates, it is now indicated that ependitures will be at least $22,169,000,000, and that revenues from existing tax laws will come to but $9,400,000,000. Add the $1,900,000,000 which the new tax bill was expected to raise in the fisca. year 1942, and the total revenue in sight would be $11,300,000,000, which is only a little more than half of the indicated expenditure. In a word, the committee reported a bill which, instead of meeting two-thirds of the Government's Budget in the emergency, promised to meet only a little more than half.

That was bad, but that does not tell the whole story. Among the provisions of the bill as the House received it was one requiring husbands and wives to file joint income-tax returns. Many wives owning property in their own right, or earning incomes through their own efforts, now file separate individual returns, and thus obtain the benefit of lower surtax rates than would be applicable if the income of husband and wife were added together. Moreover, there are nine "community property" States in which the wife has a vested interest in one-half of the family income without regard to her own separate property, if any. Many wives in these States have in the past filed separate returns and thus obtained the benefit of lower surtaxes.

The Ways and Means Committee felt that the privilege of filing separate returns ought to be ended: It therefore included the requirement as to joint returns, expecting that this provision alone would result in an increase of revenue amounting to $323,000,000 a year, of which at least $162,000,000 would have accrued in the fiscal year 1942. Now, in principle the requirement as to joint returns is objectionable. It runs counter to all the prevailing American ideas about a woman's right to own and manage her own property as an individual, whether she be married or single. Its adoption would have been justifiable only by reference to the imperative needs of the Federal Government for revenue in the emergency, and then only after all other expedients to obtain the needed revenue had failed.

Many other expedients might have been tried. The broadening of the base repeatedly urged in the past and suggested by the President in his eleventh-hour letter last week to Chairman DOUGHTON was one of them. The case for the mandatory joint return was, therefore, very weak. The need for revenue, however, was urgent. Yet, though the House rejected the mandatory joint return on principle, it turned its back firmly on all alternative devices for raising money, so that the bill as finally passed promises to yield not $3,500,000,000 a year, but only $3,200,000,000 a year. For the 12-month fiscal year which ends with next June the total Federal return will not be $11,300,000,000 but only $11,138,000,000, which is just barely 50 percent of the estimated expenditures.

Behind these percentages lie issues of much more than academic interest, and here we come to the question of inflation. The less the Government collects in taxes during the defense emergency, the more it will have to borrow. And every dollar that is borrowed and spent for public purposes will add to the inflationary pressure tending to drive prices upward. Had the House bill sought to increase Federal revenues to the point at which the Government would have to borrow only one-third of its outlays during the current fiscal year, the total borrowings would have been only about $7,333,000,000. As it is, the bill leaves a gap which will require $11,031,000,000 of borrowing.

There is a tremendous difference between the two sums when it comes to inflation. If prices rise, consumers will pay out this additional money, anyway, but it will accrue to private firms. If it were collected in taxes, it would accrue to the Treasury and would cut down materially the future burdens of the Government.

A consideration of the excise-tax section of the bill underscores these general misgivings in a particular way. The House bill as drafted by the Ways and Means Committee and as finally passed lays a multitude of excises. But it treats alike articles such as automobiles and refrigerators, which compete with defense production, and articles which do not compete with defense production. This is a serious shortcoming. Heavy excises ought to be laid on articles whose makers compete with defense industries for men, materials, and machine tools. The production of such articles must be curtailed in any event. Otherwise the idea of giving priority to defense production collapses at the very start.

With production curtailed and demand undiminished, there will be a mad scramble for such articles on the part of consumers. Only by laying excises heavy enough to discourage demand will it be possible to prevent an inflationary price rise. Failure of the House to lay such excises threatens, unless corrected in the Senate, to make the task of Mr. Leon Henderson (or whoever is price administrator under the proposed new bill) far more onerous than it should be. It threatens also to lay on consumers price burdens far greater than the additional tax levies themselves.

The Senate, to which the bill now goes, has a chance, by reconsidering these aspects of the measure along with many questions of detail, to throw up a truly effective barrier against the inflationary forces the restraint of which ought to be a first concern of those who wish to minimize the impact of the emergency on our standards of living.

American Foreign Policy

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, August 6 (legislative day of Monday, July 28), 1941

EDITORIAL FROM CHICAGO TRIBUNE

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Chicago Tribune.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Tribune]

THE STEALTHY BETRAYAL OF THIS COUNTRY

Senator BONE, of Washington, and Senator LUCAS, of Illinois, both Democrats, have made a demand that British troops be withdrawn from Iceland in accordance with Mr. Roosevelt's treaty with the Government of that little country. Mr Roosevelt and Mr. Churchill apparently haven't the same understanding in the matter. When Mr. Roosevelt told the Senate what he had done—without its advice or consent—he said the American force would supplant the British in occupation there. Mr. Churchill told Parliament that the British Government intended to retain its army of occupation.

The Senators, who were allowed no part in the negotiations with the Icelandic Government, point to the fact that the situation provided for in Mr. Roosevelt's agreement is quite different from that created by Mr. Churchill's policy. Iceland, garrisoned by British troops, is not only in the war zone, but it is a military objective which the Nazis would attack if they were able, and will if they can. So far as they are concerned it is another Crete.

If the British troops remain there, the Americans actually go into battle position with them and would sustain any attack which might be made. There couldn't be much pretense that this was merely an outpost of defense for the hemisphere when British and American forces were on one of the battle fronts of the European war. Of course, it is Mr. Roosevelt's purpose that the expeditionary force should be on the battle front. That's one place where the shooting may begin.

Very likely Mr. Roosevelt would pay no more attention to any demand the Senate may make than Mr. Churchill will. Together they have created a situation highly satisfactory to them and in part their gains would be lost if the British were withdrawn and the contact of the expeditions broken. So long as the British and American forces are operating together, they're in the war together, and that is what is desired, both in Washington and in London. It has been brought about by Mr. Roosevelt over a trail of broken promises. His promises are bothering him very little and his apologists say that the trend of events since last fall has made his pledges obsolete.

This country is in the damnedest train of governmental double dealing and deceit it ever experienced. It is a national misfortune that whenever Mr. Roosevelt publicly announces he will not do a thing he is at that moment preparing to do it. The European artists in perfidy swear falsely to deceive other peoples they intend to attack. The American Government swears falsely to delude its own people, whom it proposes to lead, contrary to their will, contrary to their expressed determination, into a war into which they have been promised time and again, with the utmost solemnity, that they would not be led.

They are completely deceived. They are kept in the dark as to events. They learn by leaks in the official censorship that a destroyer has attacked a German submarine. They discover that Americans, with American materials, are building a base of some sort in northern Ireland. They don't know whether these men are working for the British Government or the American. All they find out is that the people of northern Ireland are rejoicing in the presence of Americans whom they regard as allies.

Americans must feel that forces over which they have lost control are driving them re-

morselessly and steadily into war and that the checks supposed to be contained in their system of government are paralyzed. Their own common sense and their good judgment warn them against all this. They dread the consequences of a European war, both for the present and for the future, and every day they realize that Mr. Roosevelt is closer to the shooting.

Triple A and Wheat

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, August 6 (legislative day of Monday, July 28), 1941

ARTICLE BY MARK SULLIVAN

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mark Sullivan entitled "Triple A and Wheat," which is a pretty good account of some of the things going on under the triple A in this country.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRIPLE A AND WHEAT

(By Mark Sullivan)

A PERSONAL STORY

This is about a lady who owns a farm in Warren County, Pa.; her name is Miss Esther Newbold. What is here narrated is based upon letters written to me by Miss Newbold, together with an accumulation of formidable documents and official letters which have descended upon her from Washington during the past 3 months, including also visits to her farm by divers Government officials, one of them bearing a title hitherto unknown to me—unknown, I think, to anybody in America until the New Deal and A. A. A.—a "farm checker."

Last October Miss Newbold planted 37 acres of wheat. In that part of the country wheat is planted in the fall. She planted as much as she thought suitable to her farm. Nobody told her to plant more or plant less. She had never had any contact with triple A. She had never been what they call a participating farmer. She had never "signed up," as they say. She had never received any "farm benefits," which is triple-A's term for cash gifts from the United States Treasury, given to those farmers who do what triple A tells them to. Miss Newbold supposed she was, as she rather plaintively says in her letter, an independent American, free to plant what she deemed best and as much as she deemed wise.

She planted in October. Seven months passed. Come May, as they say in the movies. Her wheat was about half grown; it would be ripe for harvesting about July 1.

On May 12, Miss Newbold received a letter from a local agent of triple A. The letter told her that she might be subject to a penalty. Might be, not necessarily would be. It would not be decided until May 31, when there would be a referendum on whether allotments (quotas) should be applied to the 1941 wheat crop. Meanwhile, the triple-A letter explained to Miss Newbold how she might, as a precaution, safeguard herself against the possible penalty. The letter told her that her allotment was 20 acres—which would put her 17 acres in excess of her allotment. The letter, in a spirit of helpful suggestion, said:

"Those who have planted in excess * * * may get into compliance by plowing down, or otherwise utilizing for soil-building purposes by clipping and leaving on the land the wheat on the excess acres. This must be done by May 25."

Here, then, was the lady farmer's situation: She had planted 37 acres—and had a perfect right to. Even under triple-A theory, she had a perfect right, for the allotment (quota) system was not in effect on wheat at the time Miss Newbold planted, last October.

Then, on May 12 she was told that the allotment system might be put in force—the decision would not be made until May 31. Meanwhile, if Miss Newbold wished to guard against the possibility of penalty, she might plow under 17 acres of her wheat, or cut it down and let it lie on the ground. (She could, if she chose, plant some other crop on the 17 acres after they were denuded of wheat.) But she must do this by May 25—and she would not know whether her sacrifice was necessary until 6 days later, May 31, when decision would be made about applying the allotment system to wheat.

Miss Newbold was disturbed. She wrote to Pennsylvania Senator DAVIS. Senator DAVIS turned her letter over to triple-A headquarters at Washington. From triple-A headquarters Miss Newbold received voluminous letters. But they gave Miss Newbold no consolation—only confirmation of what she had previously been told.

Miss Newbold did not plow under or mow down any of her wheat. She let it all stand, harvested the whole 37 acres. The wheat from 20 of the acres, triple A permitted her to sell freely. But as to her 17 excess acres, she must do one of four things. The four were carefully made clear to her in a letter from triple A:

1. She could pay a penalty of 49 cents per bushel and then sell the wheat. (The penalty, 49 cents a bushel, is about half the price—it is about a 50-percent penalty.)

2 and 3. These are hardly ways out. She could put her wheat in storage, under seal, and under regulations of triple A. She could leave the wheat in storage for a year. Then, next planting season, she could accept a different kind of penalty. She could conform to triple-A rules, accept the quota imposed on her, and plant less than the quota—as much less as would be equal to her old wheat in storage.

4. She could make a present of her excess to triple A—just give it to them without any return.

Miss Newbold, in her letter to me, says plaintively that she is "an American supposed to belong to a glorious democracy." She thinks that what has been done to her is "unjust and arbitrary." She thinks that the allotment—imposed on May 31, on wheat planted the previous October—is a "retroactive law."

Certainly it seems to be either a retroactive law or a retroactive regulation. It would seem to be what the Constitution forbids: "No ex-post-facto law shall be passed." Maybe, if Miss Newbold or someone else will take a case up with the Supreme Court, we may find out how the new majority on the Court interprets the Constitution, when the Constitution inconveniences triple A.

A Minimum-Wage Law for Farm Labor

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 6 (legislative day of Monday, July 28), 1941

RADIO ADDRESS BY H. L. MITCHELL

Mr. LANGER. Mr. President, on July 18, 1941, a radio address was delivered from station WMC, Memphis, Tenn., entitled "A Minimum-Wage Law for Farm Labor." The address was made by Mr. H. L. Mitchell, secretary of the Southern Tenant Farmers Union, whose headquarters are at 2527 Broad Street, Memphis.

Mr. Mitchell's organization is composed of 40,000 small farmers, tenants, sharecroppers, and farm laborers, organized in local units in the cotton-growing States of Arkansas, Missouri, Mississippi, Alabama, Texas, and Oklahoma. This organization was founded some 7 years ago near the little town of Tyronza, Ark., by a group of farm people seeking to protect their mutual interests under the New Deal in agriculture. The Southern Tenant Farmers Union has stood the test of time. It has put up a struggle for the right of all farm people to security on the land. Its fundamental principle is to restore to the land the landless, and to preserve the independence of the small farmer of the South who still clings to his plot of soil in this changing world.

In regard to this union, I wish to say that no believer in democracy need have any qualms about supporting it fully. Once peace has returned to a war-torn world, every true American will feel grateful for the orderly, intelligent, and realistic program this organization seeks to achieve.

Because of its timeliness, I ask unanimous consent to have this radio address on the subject of a minimum-wage law for farm labor printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We all realize that the complicated problems of southern agriculture are by no means approaching solution despite signif.cant progress made in the last few years. That there have been changes in methods of farm operation which have affected adversely the little man at the bottom of the agricultural ladder cannot be denied. The increased use of tractors and other improved farm machinery, widely put into use during the last few years on the cotton farms of the South, has created a serious problem. In many areas, particularly along the Mississippi River and on the plains of Texas and Oklahoma, tenant farmers and sharecroppers have lost their place on the land and have become migratory laborers roaming the highways of

the Nation in search of employment. However, not all of the surplus farm population has had either the means or the inclination to join in the trek to the west coast as did the "Okies" of whom John Steinbeck wrote in The Grapes of Wrath. In reality, these migrant workers are the aristocrats of the dispossessed. For one who is seeking employment, traveling from place to place in a battered jalopy, there are 10 others who remain within a few miles of their former homes. Living in the slum sections of the crowded towns and cities of the South are tens of thousands of farm people for whom there is no place on the land. They depend on seasonal day labor in the fields for their main source of income. There are others who are still sharecroppers and tenant farmers who may have a small crop and a house in which to live, but who also depend on wages earned in cultivating and harvesting the cotton grown on tracts of land worked by machinery.

Having these things in mind, the Southern Tenant Farmers Union is sponsoring in the Congress of the United States a measure, being S. 1435, which was introduced in the Senate by Senator WILLIAM LANGER, of North Dakota, May 2, 1941. I quote: "A bill to prohibit child labor and provide minimum wages as a condition for agricultural benefit payments.

"*Be it enacted, etc.*, That no payments, grants, loans, or other benefits shall be made, renewed, or extended with respect to any farm, pursuant to the provisions of the Soil Conservation and Domestic Allotment Act, as amended, the Agricultural Adjustment Act of 1938, as amended, the Federal Crop Insurance Act, as amended, the Federal Farm Loan Act, as amended, the Emergency Farm Mortgage Act of 1933, as amended, or any other law providing for any form of grant, payment, loan, or other benefit, except upon the following conditions:

"(a) That no child under the age of 14 years shall have been employed or permitted to work on the farm, whether for gain to such child or any other person, except a member of the immediate family of a person who was the legal owner of not less than 40 percent of the crops to be produced on such farm at the time such work was performed.

"(b) That all persons employed on the farm in the production, cultivation, or harvesting of any crops or in the performance of any other farm work shall be paid in full for all such work, and shall be paid wages therefor at rates not less than those that may be determined by the Secretary of Agriculture to be fair and reasonable after investigation, due notice, and opportunity for public hearing."

This bill is modeled on the Sugar Division of the Agricultural Adjustment Act of 1938 wherein the Secretary of Agriculture sets wage rates for workers in the sugarcane and beet fields. The method has proven successful and has demonstrated its usefulness to the purposes of the farm program in this field. Legislation similar to this is in effect now in Great Britain where, following the last World War, Parliament enacted a law to provide minimum wages for farm labor. In each English county, a wage board sets rates of pay and determines other working conditions. The National Agricultural Workers Union of Great Britain has played an important part in making the law effective. Though bombs may be falling, the journal published by this organization in England still comes through, reaching my office each month. It is filled with material demonstrating that democracy does work even though its life is at stake in a world in flames.

On May 17, 1941, there appeared in a southern newspaper, the Age-Herald, of Birmingham, Alabama, an editorial entitled "Worthy of His Hire." I quote:

"One of the most crying scandals in our democracy is, as he himself would express it, the 'fix' the agricultural laborer is in. Whether he be a migrant or a casual 'hand' attached to some particular farm, his wages are the lowest in the Nation, his hours the longest, and he enjoys an absolute minimum of legislative protection.

"We now learn that a bill has been introduced in Congress by Senator LANGER, of North Dakota, which would prohibit child labor on farms—exempting the operator's own children if he desired to employ them—and would require the payment of fair minimum wages to laborers, the provisions of the bill to apply to all producers sharing in Government benefit payments. This bill seems a proper complement to the bill just passed by Congress which substantially increases Government loans on major crops.

"It has been alleged, often justifiably, by landowners that they could not afford to pay their laborers American wages because of the depressed prices of their products. Now, with the greatly enhanced values of these products in view, it is only just to devise some Federal machinery which will operate to assure the laborer of his fair share of the value which he has helped to create."

In addition to sponsoring legislation of this type, the Southern Tenant Farmers Union supports fully the program of the Farm Security Administration for rehabilitation and reestablishing farm people on the land. We also realize that the greatest need of this class of farm people is education. Study classes are held in every local with group discussion of day-to-day problems. Use is made of pamphlets and bulletins issued by the various Government agencies, particularly material furnished by the Department of Agriculture.

The Southern Tenant Farmers Union is an independent and unaffiliated organization of tenants, sharecroppers, and farm laborers, having characteristics of both a regular trade-union and an association of farmers.

A committee composed of outstanding American citizens each year conducts what is known as National Sharecroppers Week, usually held during the month of March. Through mass meetings in various cities, radio broadcasts, and special literature, the public is acquainted with the problems of the 11,000,000 southern farm families and the work of the union. During the past 3 years Mayor LaGuardia, of New York City, and Mrs. Eleanor Roosevelt have been sponsors of the Sharecroppers Week.

In this time of crisis, when the life of democracy is threatened, an organization such as the Southern Tenant Farmers Union is more necessary than ever before. The strengthening of democratic institutions by legislation such as has been introduced by Senator LANGER to provide minimum wages for all farm labor north, south, east, and west is a definite step in that direction.

Price-Control Bill

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

EDITORIAL FROM THE ST. LOUIS POST-DISPATCH

Mr. COCHRAN. Mr. Speaker, I can conceive of no more important legislation that is needed at the present time than the price-control bill. I know the committee is giving the attention to the matter that it deserves, but I hope there will be no delay in bringing the subject to the floor of the House.

Tanks, planes, warships, and guns are destructive, but inflation would prove equally destructive. We are faced with a condition that requires that we should approach this subject like statesmen. Let the bill come along, thoroughly debated, and perfected on the floor if amendments are necessary.

As part of my remarks I include a timely editorial from the St. Louis Post-Dispatch on this subject. The editorial follows:

[From the St. Louis Post-Dispatch]

NINE GOOD REASONS

There are nine good reasons why Congress should pass the price-control bill, on which the House Banking Committee expects to open hearings tomorrow. The reasons are all in title I of the bill:

It is in the interest of the national defense and security—

1. To preserve the value of the national currency against the consequences of price and credit inflation.

2. To stabilize prices and to prevent speculative, unwarranted, and abnormal increases in prices and rents.

3. To prevent economic disturbances, labor disputes, burdens upon commerce, interference with the effective use of the Nation's resources for defense, and impairment of national unity and morale which would result from unwarranted increases in the cost of living.

4. To eliminate and prevent profiteering, hoarding, manipulation, speculation, and other disruptive practices.

5. To prevent prospects of price rises from encouraging the accumulation and withholding of materials needed for national defense.

6. To assure that defense appropriations are not dissipated by excessive prices.

7. To obtain the maximum necessary production without undue profits.

8. To protect persons with relatively fixed and limited incomes, investors, and persons dependent upon life insurance, annuities, and pensions from undue impairment of their standard of living.

9. To prevent a postemergency collapse of values and the reappearance of price and cost disparities for farmers and other primary producers.

As to the administrative aspects of this measure, it should be noted that it is merely permissive. It authorizes the President to establish "ceilings" on the basis of prices and rentals prevailing on July 29. It provides ample latitude for discretion. Further, it provides for speedy appeal for those who may feel aggrieved by any action taken under its authority.

The bill may be less drastic than what was desired by the most ardent of the price controllers, but it does provide a flexibility too valuable to be sacrificed to theorists. It makes it possible to ease inevitable hardships without depriving the Government of vital authority. The law—when it becomes a law—will be just about as good or as bad as its administrators make it. But if they do a bad job, it will not be the fault of the law.

Refinements in the measure are possible. The nature of its administration, whether by an individual or by a board, might be set forth. Its treatment of farm and labor interests is not above criticism.

But the bill should not be sabotaged in the guise of perfecting it. Over the week end, SMITH and a few other Members of the Senate's farm bloc announced that they would insist on incorporating a "floor" for farm prices if the administration insists on a "ceiling."

This does the worst kind of violence to the underlying principle of this legislation. It is not the purpose of the bill to "freeze" all prices rigidly. On the contrary, the measure would permit the free fluctuation of prices below a level deemed dangerous. It would not outlaw free competition, supply and demand and the whole American business philosophy; it would merely authorize certain limitations lest our system be swept away by the whirlwind of inflation.

However many questions of this nature may be raised during the debate, there is one thing Congress should not forget: In the fight against inflation time is of utmost importance.

Complete the Bonneville and Grand Coulee Power Plants, Add Umatilla Rapids, in Aid of Defense Program

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

EDITORIAL FROM THE OREGON JOURNAL

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

[From the Oregon Journal of August 2, 1941]

COMPLETE THE BONNEVILLE AND GRAND COULEE POWER PLANTS, ADD UMATILLA RAPIDS, IN AID OF DEFENSE PROGRAM

David Lawrence quite logically concludes that power will win the battle of production with Nazi Europe—American power. In that event, neither the Federal Power Commission, which advocates spending another $1,000,000,000 a year for generating capacity, nor the United States Bureau of Reclamation, which urges a 25-percent increase, nationally, in the next 5 years, goes far enough—not half far enough.

If the United States, now devoting 15 percent of its electrical energy to armament, and spending at the rate of $1,000,000,000 a month, reaches its goal of devoting $3,000,000,000 a month to armaments, it must devote at least 50 percent of its power to military production and must increase its productive capacity by 50 percent, or some 20,000,000 kilowatts.

For these reasons, the Journal supports Administrator Raver's request for another $30,000,000 to speed completion of both Bonneville and Grand Coulee, thus adding a total of approximately 2,400,000 kilowatts, or about 3,500,000 horsepower, to the Nation's power resources.

For these reasons the Journal also supports the Bureau of Reclamation's recommendation to start immediately on Umatilla Rapids, where 850,000 kilowatts could be developed, and to undertake, as rapidly as feasible and necessary, work on Priest Rapids and Celilo Falls on the Columbia and Z Canyon and Cabinet Gorge in Idaho, which could add 650,000, 420,000, 200,000, and 100,000 kilowatts, respectively, in the next 5 years.

Such a vast program—vast in terms of peace, but very conservative in the war crisis—also calls for restatement of the Journal's power policy:

1. Rapid completion of all 10 units at Bonneville and all 18 units at Grand Coulee, to answer the necessities of war and the industrial and agricultural requirements of the peace that will follow.

2. Immediate construction of a third dam on the Columbia, at Umatilla Rapids, to supply power needed for national defense and to improve navigation on the Columbia, and the construction, as needed, of the fourth and fifth dams on the Columbia at Priest Rapids and Celilo Falls, and of Z Canyon and Cabinet Gorge projects in Idaho.

3. Passage of a Columbia River Authority bill that will provide a maximum of regional autonomy and a minimum of bureaucratic control, setting up the machinery for acquiring privately owned systems as and if the people desire it, but deferring such a program until after the war emergency.

4. Complete elimination of disruptive power politics, by Federal and local public power agencies and the private companies, until the national crisis is past.

5. Appointment of a Pacific Northwest regional power defense council, made up of representatives of the Federal Power Commission, the Bonneville-Coulee Administration, the State utility commissions, and the private companies to encourage further power pooling and the complete integration of public and private systems for national-defense purposes.

Carl Smith, the Journal's Washington correspondent, estimates that one industry, aluminum, will soon require 2,500,000 kilowatts of firm power. That's slightly more than both Grand Coulee and Bonneville can produce when completed. And that makes no provision for other electro-chemical and electro-metallurgical industries, and for shipbuilding and aircraft construction, much of which now is and must be in the Pacific Northwest.

The five Northwestern States have about 7 percent of the Nation's installed capacity now, hydro and steam. No other region in America can double its capacity as rapidly or as economically as this one. To that end work should begin now. Speed is the essence of victory.

Aluminum—A Case Study in Defense

EXTENSION OF REMARKS

OF

HON. HARVE TIBBOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

Mr. TIBBOTT. Mr. Speaker, aluminum is an exceedingly important metal in our defense program. The need for aluminum for national-defense purposes has been grossly underestimated and those persons responsible for expanding production to meet such needs were exceedingly dilatory in taking such steps as would facilitate the needed plant expansion. This story of aluminum is one of the best devices that I could choose to illustrate the many defects in the defense program and what can be done to remedy such defects. I intend to demonstrate that the New Deal has not thoroughly envisaged the defense program that it confronted; that the machinery set up for the direction and guidance of the defense effort has been poorly organized; that many governmental agencies are working at cross purposes; and that the defense effort has lacked a single guiding responsible head.

Our knowledge of the aluminum situation is derived primarily from the hearings conducted by the Senate Select Committee on National Defense and from a report of the House Committee on Military Affairs. As a consequence of these two investigations into the subject, certain steps have been taken belatedly by the Government to remedy the deplorable situation. This will constitute a fine example of what results can be expected from sound and informed criticism of defense failures. It clearly indicates that the smug complacency concerning the defense program is ill-founded, and that one of the best ways to get results in attaining our common objective is through informed criticism.

To survey the failures of the New Deal relative to aluminum and to assess the blame for such failures it is necessary first to consider the estimates of the need of the country for aluminum and secondly to consider the potential supply of this material. Aluminum at the present time plays a very important role in the national-defense program. For example, approximately one-half of the weight of all airplanes is aluminum. If we are then to have any informed estimates of the amount of aluminum that will be required for our defense program, we must have some idea of what that defense program is to be. The President himself apparently has never clearly envisaged how extensive was to be the defense program nor how much material it would require. Let me recall to you that in May and early June of 1940 President Roosevelt believed the defense program during the next few years would cost a total of only $4,500,000,000 more than the normal expenditures for the Army and Navy. But during the course of the summer of 1940 we appropriated over $10,000,000,000 in direct appropriations and in contract authorizations for defense. By the time the President submitted his Budget for 1942 the estimates of the cost of the defense program had increased to $29,000,000,000. Then came the lend-lease bill with an additional appropriation of $7,000,000,000, and at the present time appropriations and contract authorizations for national defense total approximately $45,000,000,000. Thus the failure of the administration to fully grasp the implications of the extent of the program for national defense is evident. If the Chief Executive of this country, who is also the Commander in Chief of the Army and Navy, did not realize the total undertaking required, and present it to his subordinate governmental officials, it is most evident that it would be difficult for such subordinate governmental officials to make adequate estimates of the need for defense material.

Of course, the President asserted in his message of May 16, 1940, that it is desirable to produce 50,000 airplanes within the next 2 years. By the end of the summer the aviation program as finally revised provided for about 18,000 planes for the Army and Navy by the middle of 1942, and this meant that we would have an annual productive capacity of approximately the same number. Subsequently a request was received for 3,600

additional bombers. On May 27, 1940, the President asked Congress for a further increase in the aviation program. This additional program, presented 2 months ago, would ultimately involve 13,000 additional planes. Thus, with these constant increases in the estimates of aircraft requirements, it is difficult for anyone to set forth any informed estimates of what we would require in the way of aluminum.

Mr. W. L. Batt, of the Office of Production Management, testified before the Senate Committee on National Defense on May 12, 1941, that in May 1940 the total demand for aluminum had reached 30,000,000 pounds per month, and that by the middle of 1941 the need would be 50,000,000 pounds per month, one-half of which would be used for civilian purposes. The inadequacy of these estimates was patent by May of this year, for by that time the consumption of aluminum for defense alone had increased from 25,000,000 pounds to more than 50,000,000 pounds per month. In May 1940 the original estimates of the need for aluminum for aviation were 17,000,000 pounds, but by May 1941 the actual consumption was 27,000,000 pounds for this purpose. Subsequently the O. P. M. revised the estimates of the requirements for aluminum to 65,000,000 pounds per month by the end of 1942 and 70,000,000 pounds per month by the spring of 1943. The production of 70,000,000 pounds per month would amount to 840,000,000 pounds per year. With the passage of the Lease-Lend Act the estimates of the need for aluminum were increased by 200,000,000 pounds. In addition, the new heavy-bomber program that was presented to Congress by the President in May 1941 increased the further demands for aluminum by at least 200,000,000 pounds per year. Mr. Batt testified that according to present estimates, the ultimate demand for aluminum for aircraft will be at the rate of 900,000,000 pounds per year, and other direct military needs will be at least 300,000,000 pounds more. Thus the total estimate for defense would be at least 1,200,000,000 pounds per year by 1943. But in the hearings of the Senate Appropriations Committee on an appropriation for the Tennessee Valley Authority Mr. Batt testified late in June 1941 that the actual needs for aluminum for next year would be in the neighborhood of 1,700,000,000 pounds. These estimates do not include any allowance for aluminum for civilian needs. They are in reality nothing but minimum estimates, and will probably have to be revised upward.

Now, let us see what is the supply of aluminum. As we all know, previous to May 1941 all aluminum produced in this country was manufactured by the Aluminum Co. of America. This corporation has greatly increased the production of aluminum during recent years. In 1938 the aluminum produced by the Aluminum Co. of America amounted to 286,888,000 pounds; in 1939 this had increased to 327,000,000 pounds; in 1940 the actual production was 412,500,000 pounds; the estimate of production for 1941 is 585,000,000, and in 1942 the company estimates it will produce 756,000,000. The corporation testified that in the last 2 years it has invested more than $200,000,000 of its own funds in enlarging its plant capacity. The O. P. M. and its predecessor, the National Defense Advisory Commission, repeatedly asked the Aluminum Co. to increase its production still further.

But there is one crucial element that limits the capacity of the Aluminum Co. to expand its production and that one element is electric power. It should be pointed out that to manufacture 1 pound of aluminum from bauxite ore requires 10 kilowatt-hours of electricity. The use of one installed kilowatt of generating capacity for 1 year will produce about 1,000 pounds of aluminum. Mr. L. W. Wilson, vice president in charge of operations of the aluminum corporation, testified before the Senate committee that the O. P. M. asked the corporation in October 1940 to increase its proposed plant-expansion program by 100,000,000 pounds—that is to increase its production from 750,000,000 pounds to 850,000,000 pounds. The corporation submitted plans to the O. P. M. on how this could be carried out and it has informed the O. P. M. that if it could secure for the corporation the necessary electric power the company could increase production by such further amounts as the Government desires. But by the middle of June 1941 the O. P. M. had not been able to secure the needed power for the corporation. There are several different places where this additional power could be obtained. One is at Fontana in western North Carolina on the Little Tennessee River. Here the requested 100,000,000 pounds of aluminum could be produced, but a controversy with the Federal Power Commission has been holding up this development. Further, the company could produce about 100,000,000 pounds per year in the Bonneville area where there is a large amount of power from Bonneville Dam not contracted for. However, Secretary Ickes, who is in charge of the administration of the Bonneville project, refuses to sell additional power to the Aluminum Co. of America. Another possibility for the production of aluminum is that 100,000,000 pounds could be produced from power generated by the Niagara River by the diversion of about 5,500 cubic feet per second of additional water. But there are difficulties with Canada in securing this diversion. Officials of the corporation also testified that there is unused capacity at its plant at Massena, N. Y., that would produce 70,000,000 pounds a year. There is a lack of power here. There is apparently sufficient power across the river in Ontario, but the Canadian Government will not export it.

In addition to the Aluminum Co. of America, there is one other company that has been producing aluminum since May 1941. This is the Reynolds Metals Co., headed by R. F. Reynolds. In August 1940 this corporation received a loan from the R. F. C. for the construction of plants for the production of aluminum. The original loan was for $15,800,000 and would provide for plant capacity for the production of 60,000,000 pounds of aluminum per year. The loan was subsequently increased to $20,000,000, which would provide plant capacity for the production of 120,000,000 pounds per year. Thus by 1942 the total production of aluminum in this country will be about 870,000,000 pounds, 750,000,000 of which will come from the Aluminum Co. of America and 120,000,000 from the Reynolds Metals Co. Thus there would still be a tremendous deficiency in the production of aluminum in 1942 if the present plans were carried out, for the present estimate of requirements is approximately 1,700,000,000 pounds. As a consequence, we would be producing in 1942, according to present programs, only 50 percent of our requirements. This in itself is a most deplorable situation, and unless drastic steps are taken this deficiency in aluminum will greatly retard our defense program.

Now, let us see upon whose head rests the blame for the failure to make arrangements for aluminum production. There are a number of places where blame can well be placed for the failure to anticipate the need for aluminum and to plan for an adequate supply. Among these are: (1) The President, (2) the Army and Navy, (3) the Office of Production Management, (4) the Aluminum Co. of America, (5) the Federal Power Commission, (6) the Tennessee Valley Authority, and (7) the Department of the Interior.

The President is to blame on several counts. He apparently did not clearly envisage the total ramifications of the defense program. As was previously pointed out he viewed it as being a much smaller undertaking than it really is. He was quite unwilling for many months to take any steps that would upset the philosophy of "business as usual." He was a strong adherent of the "guns and butter" idea until long after it was outmoded. He has presented the program for aircraft construction to the Office of Production Management and to Congress in such a manner that no one could really see what it amounted to and what it would call for. Thus the report of the House Committee on Military Affairs declares:

> Increased sizes of aircraft, especially of bombers, and the rapid destruction of them in the World War have made of necessity a constant revision upward of the requirements for our aircraft program. No one could foresee a year or more ago when early estimates were made that this Nation would be called upon for the enormous amounts of arms equipment which is now being voted by the Congress.

It would appear that neither the Army nor the Navy knew exactly what they would require for defense purposes. To some extent this failure was justified because they were not informed as to what they would have to defend. They did not know exactly the quantity of defense materials that they would require nor the quantity of raw materials that would be needed. The Army had plans for materials and supplies that would be re-

quired for an army of 1,200,000 men, an army of 2,800,000, and one of 4,000,000 men. But apparently these plans were not very accurate as to the requirements for raw materials. Mr. Stacy May, head of the Division of Research and Statistics of the Office of Production Management, testified before the Senate Committee that the Army estimates of requirements were not very accurate. The House Committee on Military Affairs reached a similar conclusion:

It was impossible, however, to obtain adequate estimates of the requirements of fabricated aluminum for military purposes from the Army and Navy.

The Office of Production Management must certainly assume a very large portion of the blame for the failure to adequately envisage the needs for aluminum and to plan to secure supplies sufficient to meet these needs. It did not seem to realize the acuteness of the present situation. It was continually holding out false hopes concerning adequate supplies for the future. Thus although during the last half of 1940 the Aluminum Co. of America was not able to supply all the civilian needs of its customers and at the same time supply all of the defense requirements of the United States and England, nevertheless the National Defense Advisory Commission issued a press release on November 28, 1940, assuring the people that there was then and that there would continue to be adequate supplies of aluminum for all defense and civilian needs. One month later, December 29, 1940, it issued a similar reassuring press statement.

The office of the consultant on aluminum for the Defense Commission and for its successor, the Office of Production Management, has been manned by men who have not had any great experience with aluminum. The first man in charge of this office was Mr. Folsom, treasurer of the Eastman Kodak Co. I suppose such an important position in this great industrial concern engaged in the manufacture of photographic and optical equipment qualifies a man to be an expert in aluminum. In December 1940 he was succeeded by Mr. Granville Holden. Previous to 1939 Mr. Holden had been a graduate student in economics at Harvard University. From September 1939, to the spring of 1940 he had been employed by the Eastman Kodak Co. From the spring of 1940 on he was employed in the office of the consultant of aluminum at the Defense Commission. When Mr. Folsom returned to the Eastman Kodak Co. in the autumn of 1940, Mr. Holden took up his duties. Mr. Holden did not give a very good account of himself and his abilities in the hearings before the Senate committee investigating national defense. He demonstrated his lack of knowledge of aluminum, and there is overwhelming evidence indicating his partiality toward the Aluminum Co. of America. Several witnesses testified before the Senate committee that Mr. Holden had informed them that the O. P. M. was not interested in any proposals for the development of aluminum production other than those that might come from the Aluminum Co. of America. As late as April 1941 despite the quite apparent shortage in aluminum and the unwillingness of the Aluminum Co. of America to invest additional funds in the production of aluminum, Mr. Holden was declaring that the O. P. M. was not interested in any aluminum expansion program that would require Government financing. Finally, by May 1941, Mr. Holden was beginning to see the need for Government loans to assist in the financing of the expansion of aluminum production.

The Senate Committee Investigating National Defense said in its report that the Secretary of the Interior had been willing for weeks to hold conferences with the O. P. M. concerning the expansion of aluminum production, but that the O. P. M. had been unwilling to attend such meetings:

The Secretary of the Interior has testified that at least part of the power necessary to produce additional aluminum is available and that for nearly 6 weeks he has been ready to discuss its application with the Office of Production Management. The Office of Production Management admits that it has no real plans for the production of the 600,000,000 pounds for which it has admitted a need and ascribes that failure to its efforts to survey the power situation.

Likewise, the Senate committee found that the Reconstruction Finance Corporation was willing to lend $250,000,000 for plant expansion for the production of aluminum but that the O. P. M. had no plan for such expansion. Thus, the committee said:

The Reconstruction Finance Corporation has indicated a willingness to provide $250,000,000 for the construction of facilities to make aluminum available. The Office of Production Management has made no plans for the erection of such facilities, ascribing as the reason their lack of knowledge as to the power sites to be used and the quantities of power which will be available.

Now we come to the Aluminum Co. of America and its part in the failure to plan for adequate plant expansion. There is, of course, some possibility that the Aluminum Co. might be somewhat to blame for the deficiency that now exists in aluminum production. It should be recalled that Alcoa has stated that it has invested over $200,000,000 of its own funds in the last 2 years in plant expansion. It has also borrowed $24,000,000 in long-term credit to finance such work, but inasmuch as there is now pending in the United States District Court for the Southern District of New York an antitrust suit against the company, it is difficult for it to float long-term loans.

I have previously shown that the corporation has more than doubled its productive capacity for aluminum. In the autumn of 1940 the Defense Commission asked Alcoa to expand its productive facilities by at least another 100,000,000 pounds per year. In order to carry out this request the company proposed to build a plant at Fontana, N. C., on the headwaters of the Little Tennessee River. This site was 20 miles above the head of navigation on the river. Between this site and the head of navigation Alcoa had already built two generating plants. Concerning these two plants the Federal Power Commission had ruled that the river was not navigable and consequently it needed no Federal license for their construction. But when Alcoa made application to the Power Commission in October 1940 to determine whether it needed a license for the Fontana site, the Commission ruled that the Little Tennessee River was navigable at that point, although it had previously held that it was not navigable at points farther downstream. The Aluminum Co. of America refused to construct a plant at Fontana if it would require a license. Its reasons for such refusal were several. One was that if the facilities for generating power were built at Fontana under license from the Federal Government, they would be subject to recapture by the Federal Government in 50 years and the price to be paid for the property would be determined at that time. Another reason was that if the plant at Fontana should be recaptured by the Federal Government, that authority, by regulating the flow of water at Fontana, could destroy the utility of the two plants farther downstream. Further, it should be remembered that this plant at Fontana would cost about $45,000,000 and the corporation has had a difficult time raising additional long-term credits because of the antitrust suit. In February 1941 the company once more was interested in developing the Fontana project and presented certain possibilities to the O. P. M. as to what kind of Federal loan might be advantageous to help finance the project. But until late June 1941 the O. P. M. was not able to make up its mind whether there should be a direct R. F. C. loan for this project or whether it should be built by the Government under a plant facilities contract. Until the O. P. M. made up its mind it was impossible for the R. F. C. to make any kind of a loan. In addition the Tennessee Valley Authority had certain objections to the building of such a project with Government funds if it were to be operated by the Aluminum Co. of America. Further, it would appear that the corporation did not know exactly what kind of a loan it desired from the Government.

The failure of the Aluminum Co. of America to undertake the Fontana project under a license from the Federal Power Commission certainly has contributed to delay in securing adequate facilities for the production of aluminum. But it should not be forgotten that the corporation was not entirely to blame for these delays. The Federal Power Commission apparently reversed its previous line of reasoning. The Tennessee Valley Authority has offered certain objections and the Office of Production Management was not able to make up its mind on financing.

Next we come to the Federal Power Commission. Most of the problem relative to this Commission has just been set forth. Exactly what motivated the F. P. C. to change its line of reasoning relative to plants on the Little Tennessee River is far from clear. Certainly its decision on this point was previous to the decision of the Supreme Court in the

New River case and could not, therefore, have been motivated by it.

The Tennessee Valley Authority claimed that the Fontana project, on the Little Tennessee River, is really within its jurisdiction, for the Little Tennessee River ultimately flows into the Tennessee River, which is under the jurisdiction of the T. V. A. Mr. J. A. Krug, then power manager of the T. V. A., testified before the Senate committee that the Tennessee Valley Authority takes the position that it would oppose the use of any Federal funds, either directly or as a loan, for the development of the Fontana project unless the project is developed by the T. V. A. itself. It should be remembered that the land on which the dam and reservoir of Fontana would be built is owned by the Aluminum Co. and not by the T. V. A. Apparently the T. V. A. is very interested in expanding its own jurisdiction and power and not really interested in securing the development of this project.

Finally we come to Secretary of the Interior Harold Ickes. As was previously pointed out there is a very large bloc of firm power at Bonneville Dam that has not been disposed of. The dam at Bonneville is under the jurisdiction of the Secretary of the Interior. The Aluminum Co. of America on several occasions has signified its desire to buy additional power from Bonneville, but Mr. Ickes has refused to sell any additional power to the corporation. Apparently on several occasions, since February 1941, Mr. Ickes has been requested by the O. P. M. to sell additional power to the Aluminum Co. On two occasions the O. P. M. requested the Secretary to sell at least 65,000 kilowatts to the corporation. But the only request he has ever granted was one for 20,000 kilowatts. Mr. Ickes has testified before the Senate committee that he believes the Aluminum Co. to be a monopoly and consequently he will not sell any more power to it:

> In March when we complied with a request by O. P. M. officials that we give Alcoa another 20,000 kilowatts for operating its pots at Vancouver beyond their normally rated capacity, we were told that this would be enough power in that area for Alcoa.
>
> A month later we were again asked to allot 65,000 kilowatts of additional power for the Aluminum Co. of America. This was to be included in a program of 200,000,000 pounds additional. At this time it was obvious that the plans provided for an amount far short of what would be needed, and I replied that we would insist that new requirements be met by plants built by the Government. It was evident that unless this were done we would continue to be at the mercy of the Aluminum Co.'s apparent purpose to continue expansion on a piecemeal basis.

Despite the fact that Mr. Ickes testifies he will not sell power to Alcoa because it is a monopoly, he asserted as follows:

> Well, when the story of this war comes to be written, it may have to be written that it was lost because of the recalcitrance of the Aluminum Co. of America. It is just as serious as that, and they are just as helpful and cooperative as that, too.

Thus the Secretary testifies that he will not sell the Aluminum Co. electric power. Electric power is essential for the production of aluminum. But yet the Secretary asserts that if the war is lost it will be lost for the lack of aluminum, and the Aluminum Co. will be to blame. Certainly it is not the company that refuses to buy from Mr. Ickes, but it is Mr. Ickes who has refused to sell power to the company. The House Committee on Military Affairs criticizes this attitude of Mr. Ickes in the following well-chosen language:

> The aluminum industry relies on power—electric power. The unwillingness of some Government officials to provide hydroelectric energy from Government dams in such an emergency as exists today is at least short-sighted.
>
> Whatever may be the merits of any controversy between these so-called monopolies and the administration, it is the sense of this committee that a squabble at this time on the subject of monopoly is a tragic and sorry spectacle indeed.

Thus, by way of summary, it is quite apparent that no one clearly foresaw what would be the demands for aluminum for the defense program. At the same time adequate steps have not been taken to secure an adequate supply of aluminum. The blame can be allocated to many branches of the Government—the President, the Army and Navy, the Federal Power Commission, the Tennessee Valley Authority, the Office of Production Management, and the Department of the Interior. The Aluminum Co. of America is not without some blame, but in the last resort the greater part of the blame must be placed upon the President, for he has refused to take any strong position for the coordination of defense activities. As long as there is no head to the defense program other than the President himself, interdepartmental and establishment bickering will continue to hold up the production of aluminum for national-defense purposes.

The Senate Committee on National Defense filed its report on aluminum on June 26, and the House Committee on Military Affairs filed a report criticizing the aluminum program, among other things, on June 28. These reports criticizing the failure to provide for an adequate supply of aluminum have had a remarkable effect upon securing approval of plans for the expansion of aluminum production. On June 27 the Office of Production Management let it be known that it had sent to the Secretary of War a program for plant expansion for aluminum production, and that after his approval the Plant Financing Corporation would be in a position to make loans to make possible such expanded production. This plant-expansion program would provide for the production of approximately 600,000,000 pounds of aluminum a year. According to a statement of July 15 these plants are to be owned by the United States Government and operated by certain specified companies. The Aluminum Co. of America is to operate three plants, with a total productive capacity of 340,000,000 pounds per year; the Union Carbide & Carbon Co. is to operate a plant producing 60,000,000 pounds a year; the Reynolds Metals Corporation will operate a plant producing 100,000,000 pounds a year; Bohn Aluminum & Brass Co., a plant producing 70,000,000 pounds a year; and Olin Corporation a plant producing 30,000,000 pounds a year. The Aluminum Co. of America has agreed to design and supervise construction of these plants without cost to the Government.

Further, according to the New York Times for July 5, 1941, an agreement has been worked out between the T. V. A. and Alcoa whereby the plant at Fontana will be constructed with Government funds at a cost of $45,000,000. Mr. Knudsen wrote a letter to Senator TRUMAN about this; but from the letter it is not clear who is to construct the generating facilities:

> While we understand that no definitive contract has been executed, I am sure the T. V. A. and the company will be glad to furnish a detailed outline of this agreement should your committee be interested. In order that the work on the project may be commenced at the earliest feasible date, we have urged the Authority and the company to embody their understanding in a contract with all possible speed, and they have assured us that this will be done.

On July 2, 1941, the Metals Reserve Corporation announced that it had contracted to import from Canada 616,000,000 pounds of aluminum at the rate of about 200,000,000 pounds a year. This aluminum will be produced by the Aluminum Co. of Canada. Apparently this corporation is not a subsidiary of the Aluminum Co. of America, but it is exceedingly closely connected with it.

With the additional 600,000,000 pounds of plant capacity, the importation of 200,000,000 pounds a year from Canada, and the domestic production next year of 860,000,000 pounds, it is evident that we might finally anticipate a total supply of 1,600,000,000 pounds of aluminum per year. This will just about meet the defense requirements according to current estimates. Apparently, in order to get this program formulated, the exposures made in the reports of the Senate and House committees were needed. It brought to the attention of the American people that we were not planning to secure an adequate production of aluminum. One major reason for this failure is the inability of the divers Government departments and establishments dealing with the program to get together and agree upon a plan. It was only due to this informed criticism by congressional committees that the administration was forced to adopt a farsighted aluminum program designed to meet adequately the defense needs that are confronting the country. It is quite possible that if there had been a single-headed administration of the defense program, a long delay in formulating such plans might never have occurred.

How an Ohio Farmer and His Wife Feel About America's Participation in the War

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

LETTER FROM CONSTITUENTS

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter directed to the Congress from two of my constituents, Mr. and Mrs. Boyd H. Blackburn, of Sycamore, Ohio. They are typical farm folks and have stated their reaction to the administration's foreign policy and other current national issues. I think it would be well for each Member of this House to take note of their expression.

The letter follows:

SYCAMORE, OHIO, *July 22, 1941.*

To the Congress of the United States of America:

HONORABLE SIRS: We are opposed to sending our American boys to fight in foreign wars.

We are also opposed to breaking faith with these boys and their parents by keeping them in camp longer than the time originally specified. Let them volunteer if they will, but do not compel them. If our Government will not keep its promises, it is not worth fighting for. England should not expect more from the United States than from Canada, and Canadians do not have to go overseas unless they volunteer to go.

We are opposed to the occupation of Iceland and the eliminating hemispherical lines. If Hitler had done this instead of President Roosevelt, what a howl there would have been.

We are opposed to the proposed union with England or any other so-called democracy.

We believe Washington's advice about entangling alliances is as timely today as it was in his day.

We are opposed to aid for Russia. We believe we should conserve our resources for our own defense if and when we should need them, and not weaken ourselves materially and financially by giving too much to other countries.

We believe that England has expected the United States to finance her war from the beginning, and that she would have found a way to end it long ago if she had not thought we Americans such big fools that we would give all we had, even our sons, as we did before. And not even expect her thanks in return.

We are opposed to Congress granting any more power to the President. Why should we fight dictatorship abroad while creating one at home? And why should we help one dictator to conquer another? We cannot see where Stalin's regime is more virtuous than Hitler's.

Sincerely,

Mr. and Mrs. BOYD H. BLACKBURN,

An Ohio farmer and wife.

The Sword of Damocles

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

EDITORIAL FROM THE AERO DIGEST

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the August 1941 issue of the Aero Digest:

[From the Aero Digest of August 1941]

THE SWORD OF DAMOCLES

There resided in Syracuse, on the island of Sicily, some 23 centuries ago under the reign of the tyrant Dionysius, one Damocles. He was Dionysius' courtier, dependent upon that stern tyrant for his living; nay, for his life. Naturally, he never said a word that might give offense to his lord and master. On the contrary, he leaned over backward, as we moderns say, mak'ng remarks he hoped were pleasing to the tyrant.

However, according to Cicero and to Horace, historians of those times, this boy from Syracuse sometimes leaned over too far in extravagant praise of the tyrant—giving rise to a suspicion in Dionysius' mind that Damocles protested too much, and didn't mean half of what he said. On one occasion, when he had spoken in especially extravagant terms of the happiness of his sovereign, Dionysius invited him to a sumptuous banquet, at which he found himself seated under a naked sword suspended by a single hair. This was interpreted by the historians, and undoubtedly also by Damocles, to mean that at all times Damocles had better back up what he had said—or else.

Now it happens that Damocles has many modern counterparts in the Army and the Navy of the United States of America, where all men are free to speak their minds and to express their honest opinions, if they care to pay the price. The trouble is that in the Army and Navy the price is somewhat high. So, few care to pay it. One did; the late Gen. Billy Mitchell. And what happened to him is a matter of record. The sword descended. Later aviation dependents of the Army and Navy were quick to take the hint, and no more derogatory remarks about the Army's and Navy's handling of aviation have been heard from those over whose head the sword of official displeasure is suspended. And it is suspended, no doubt of it, over the head of every aviation officer in the Army and Navy. They will tell you so, privately, and the record of what has happened to a few with "guts" fully bears it out.

WHAT CAN YOU EXPECT?

Therefore, when a congressional committee, seeking light on the need for a United States air force coequal with the Army and Navy, asks one of these dependent officers what he thinks of the idea, just what do you expect him to answer? Remember, all of these officers of rank have reached that nonindependent status of fathers. They are simple, home-loving, family-loving fathers like you and like me. There is, we will say, in each of these families a boy or two now going to college, a girl going to finishing school.

Now, just what do you expect these officers to do when they are asked to damn the General Staff and its handling of aviation, or the Navy high command and its inability to see that in addition to auxiliary naval aviation the United States needs also a strong land-based air force, divorced from hampering, old-style Army control? Do you expect a bunch of martyrs? Do you expect these Army and Navy aviation officers to sacrifice their careers, to incur official displeasure, perhaps court martial? If you do, then you don't understand human nature, or fathers.

Therefore, to save all this mess, aviation officers in the Army and Navy simply cannot come out for an independent air force. And whenever they are called upon to testify, you might bear this in mind and pay no attention to what they may have to say. The truth is in them; but the welfare of their wives and their children, not to mention their own careers, will not let it come out.

Lost Your Job? Why?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

Mr. HOFFMAN. Mr. Speaker, yesterday's press told us that President Roosevelt had agreed that Russia should have priority on all materials necessary to supply her with munitions of war. The morning paper informs us in flaming headlines that the United States is to aid the Far East "red" Army and that this country, as an outstanding feature of its program to aid Rusia, will be a major source of supplies for the Soviet far eastern army.

An Associated Press dispatch of August 2 advises that 175,000 employees will be thrown out of work because the New Deal was preparing to close the doors on the Nation's $250,000,000 silk and hosiery industry.

Nineteen Hundred Corporation, located in St. Joseph, in the Fourth Michigan Congressional District, which makes 1,300 electric washing machines a day, has been advised through the newspapers that it must cut its production 30 percent. This order, if and when it comes down, means that several hundred men will be thrown out of work. Just what are they to do? And who is to take care of them and their families while they are idle?

In the same city the Cooper-Wells Co. will be affected by the order which results in depriving it of its supply of silk, for approximately 75 percent of the firm's output is silk hosiery. Four hundred and seventy-five persons are employed at the St. Joseph plant, while approximately 350 work at the Decatur, Ala., plant.

The silk-freezing order will have a direct effect on the Warren Featherbone factory at Three Oaks, Berrien County, also in the Fourth Congressional District of Michigan, where silk is used in the manufacture of blanket bindings, braids, and a number of other items.

Day before yesterday we passed a tax bill which will add more than $3,000,000,000 to the burden of the already overburdened taxpayer. In a few months there will be another tax bill calling for like, or even greater, payments.

LOST YOUR JOB? WHY?

The effect of the Government's policy in granting priority orders for all material which it wants to manufacture into munitions of war to give to Britain, China, and Russia, and, for that matter, to any other country which may ask, is to close thousands of small manufacturing plants throughout the country and to throw hundreds of thousands of men and women out of work.

Only a fool would believe it possible to impose and collect additional taxes while drying up the source from which those taxes must be collected. Who pays the taxes which Congress imposes? Corporations engaged in industrial production, businessmen, workingmen.

We all know that the effect of the administration's present program of giving away billions upon billions of dollars' worth of material, of depriving industrial plants of the raw material necessary to enable them to operate, makes it absolutely impossible for those industrial concerns to continue in business and to pay a tax; and the billions of dollars which are imposed and which are paid in hidden taxes by the workingmen cannot be paid if the men are unemployed.

No one having at heart and keeping in mind the continued existence of this Government would pursue such a ruinous policy. Can it be that the administration, not satisfied with bankrupting the Nation, intends to drive our people until, in desperation, they revolt?

Factory after factory is on the verge of being forced to close its doors. There are hundreds of men, businessmen and representatives of small concerns, here in Washington, begging of bureaucrats, who never had a constructive idea in their whole lives, for material to enable them to continue in existence—to give employment to the people of their home towns. But in all too many instances they are told that the needs of Britain, of China, of Russia must be supplied first.

Is our whole industrial system to be bogged down, our people to be unemployed and finally to suffer want and hunger, in order that the war machines of Europe may continue to grind out the lives of those who are being used by Europe's war lords to carry on their campaigns of aggression?

Is it not time that this Congress shakes itself together; gets a few constructive ideas looking toward the preservation of our own Nation, the welfare of our own people; calls a halt to the administration's insane policy of involving us in the European conflict at the expense not only of our material welfare but of our freedom as well?

I call upon the majority party—the leadership of the majority party—to take some active steps which will enable the small industries throughout the Nation to continue in existence—to give employment to the millions of people who live and heretofore have worked in those communities.

Defense Planning

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

LETTER OF MAJ. GEN. WILLIAM C. RIVERS

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of Maj. Gen. William C. Rivers, retired, which was published in the New York Times of July 27, 1941:

[From the New York Times of July 27, 1941]

DEFENSE PLANNING—CREATION OF NEW CABINET POST VIEWED AS NEED

To the EDITOR OF THE NEW YORK TIMES:

Your recent editorial, "Defense Needs Planning," is timely and important. You enumerate a number of deficiencies in our national-defense program—deficiencies pointed out by your military reporter, Hanson W. Baldwin. Among these are that after a year of expansion and preparation the United States is still months away from adequate combat efficiency; that not a single division is yet ready for war; we are still training for a 1917 war; that practically nothing has been done to weed out the senior officers who are wedded to ancient concepts or who are unfit for positions of responsibility. Also, that there is still excessive emphasis on the foot soldier, bayonet fighting, and grenade throwing, and not enough on the tank and the collaboration of planes and tanks.

You also mention the voluminous report submitted by the House Military Affairs Committee, which complains of a series of major failures and delays. You state the War Department has asked Congress to authorize a purge of unfit Army officers. Your own opinion is that "lack of proper planning is the result of lack of proper organization to do that planning. Where the country lacks proper defense organization is at the very top. There is still vital need of a board whose individual members are not tied down by pressing routine duties and who can view the defense picture as a single whole."

PLANNING BOARD OPPOSED

Your recommendation is for an advisory War Planning Board to contain the best strategical brains of the Army, Navy, and air forces, as well as civilian industrial and economic experts and first-rate nonspecial minds. Boards are useful as policy-making instruments but are not as a rule so effective as executives. We have long had many boards in our defense services, principally to coordinate various activities. Coordination involves, or at least invites, compromise and delay.

Much experience with boards during my long service in the Army causes me to doubt the wisdom of your recommendation for an advisory War Planning Board. Prompt and effective action demands the employment of individuals in important positions. Their responsibility is personal and clear. What we require at this important time is an additional Cabinet officer—a Cabinet Minister of Defense.

Such an official should aid the President in inspecting and supervising the efficiency and relative progress of three coequal armed branches—the Navy, the Army, and the Air Corps—as is done in Britain, Germany, and 20 other countries. A small national-defense college should be created under the Minister of Defense. The students would be a limited number of officers of the three services, with a few civilians from some of the other Government departments.

SMALL STAFF NEEDED

The minister would require but a small staff. The three civilians at the head of the three armed services would each have large staffs as at present. Unity of command would be assured because the portions of the Air Corps which go to war with the Navy and with the Army would be all the time in peace actually with and under the orders of these respective branches—for training and indoctrination. A reserve force of the Air Corps would be retained by the Chief of the Air Corps, subject to the disposition of the minister of defense. We need a single homogeneous United States Air Corps with its own laws for pay, promotion, and retirement.

Such an organization would result in great improvement in operations and in great savings of public funds.

As to our having in the Army some officers who are not competent, this is natural, because we lack any system of selection in the promotion of Army officers in the grades up to that of colonel. All the navies of all nations have such a system and all the important armies save only ours also use the system of selection in promoting Army officers. Therefore, we are now doing much the same thing we have done when an emergency appears. We are experimenting with some of our Army officers in order to compare their relative efficiency, when this should have been done carefully in peacetime.

COMPETITION FAVORED

This experimenting with the assignments of some of our higher officers has in the past produced almost unbelievable results. It inevitably delays and mars the early training of some of the new forces. The history of administration indicates that no bureau in which the officials have a life tenure of office will ever retire or discharge in a thorough manner the less competent persons. An automatic system, such as selection, insures the competition which is effective.

The question of air power and the proper organization for our defense forces must now be viewed after study of the capture of Crete. The capture of Crete in a few days was an epoch-making event in warfare. The British were in possession of Crete. They had an army there, with defended positions, artillery, tanks, and other heavy equipment. The Germans carried to Crete thousands of infantry soldiers in transport planes and in gliders. The Germans captured Crete without tanks and artillery and special equipment. The airplanes not only brought the German troops to Crete but the dive bombers acted in the place of tanks and artillery in battle to aid in defeating the British forces on the island. We now see that airplanes can be the principal instruments both in seizing and in holding positions. The Air Corps is not, therefore, as many have claimed, merely an auxiliary force in war.

WILLIAM C. RIVERS,
Major General, United States Army, Retired.
NEW YORK, *July 24, 1941.*

Too Many Dollar-a-Year Men—Corporate Connections and Biases of Business Representatives Now Functioning in the O. P. M.

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

ARTICLE IN THE AUGUST PEOPLE'S LOBBY BULLETIN

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appears in the current issue of the Bulletin of the People's Lobby, Inc., and which was prepared by that nonprofit corporation for educational and constructive purposes. It was thought advisable to advise the people of affiliations of certain people now identified with public agencies. The article is as follows:

WHO'S WHO IN WALL STREET'S WAR IN WASHINGTON—TWO BILLIONS OF WAR CONTRACTS TO BUSINESS REPRESENTATIVES IN GOVERNMENT

At least $2,000,000,000 of war contracts, up to the first week in June, had gone to concerns with controlling officers in the Government making the contracts, an investigation the People's Lobby has had made shows.

Specific contracts amount to $1,126,020,978, exclusive of contracts for fuel, supplies, construction, and expansion, and of contracts to subsidiaries, subcontracting, and corporations to cover up, controlled by these corporations. These include:

American Brass Corporation: James H. Madden and James T. Kemp, both in Office of Production Management, $6,857,101.

Bethlehem Steel Co.: George F. Hocker, O. P. M., $71,449,442.

Chrysler Corporation: Edmund S. Chapman, Chief Light Ordnance Unit, O. P. M., $34,179,529.

Colorado Fuel and Iron Corporation: George M. Kirk, O. P. M., $4,587,200.

Crucible Steel Co.: Frank E. Spencer, O. P. M., $14,184,446.

Dravo Co.: Alex W. Dann, Office of Transportation, $10,830,481.

General Electric Co.: F. B. Cliffe, Carl M. Lynge, O. P. M., $106,754,743.

General Motors Corporation: William Knudsen, O. P. M.; Frederick C. Horner, Office of Transportation; and E. F. Johnson, Benson A. Waderlow, Bayard B. Kunkle, and John L. Pratt, all O. P. M., $324,403,069.

International Harvester Co.: Richard E. Evans, $9,368,738.

Lukens Steel Co.: A. J. O'Leary, O. P. M., $8,000,719.

Murray Corporation of America: Clarence W. Avery, O. P. M., $3,079,680.

Procter & Gamble: Rich R. Deupree, O. P. M., $24,720,000.

United Aircraft and Transportation: George J. Mead, O. P. M., $186,439,438.

United States Steel Corporation: E. R. Stettinius, O. P. M., $5,548,143.

Western Electric Co.: J. F. McKermann, O. P. M., $22,017,520.

Westinghouse Electric Manufacturing Co.: E. C. Brandt, O. P. M., $37,747,430.

Available records do not reveal whether contracts were open bidding or cost plus.

The 6 months' delay in the armaments program, due to quibbling over taxes and payments, with corporation officials' acting in a dual capacity as Government and as economic royalist representatives, has imperiled the safety of all of America's armed forces.

DU PONT AND CARNEGIE STEEL

Du Pont contracts amount to $170,329,955, and Carnegie Illinois Steel to $65,191,582, but perhaps since the Du Ponts have married into the Roosevelt family, Du Ponts are no longer "economic royalists." Du Pont is controlled by General Motors, whose president, William S. Knudsen, is Director, Office of Production Management, and Frederick P. Keppel, president of Carnegie Steel, is in Nelson Rockefeller's division.

LIGHT ON SLEEPING SICKNESS OF DEFENSE PROGRAM—ORGANIZATION OF DEFENSE PROGRAM

The organization of the defense program has brought to Washington scores of men from the ranks of business—primarily big business. It is in the defense organizations that business influence in Government administration and policy has reached its peak.

From the beginning of the defense program much of the administration and a major share of the determination of policy has been in the hands of men who have been and still are connected with business.

A number of men from the ranks of big business are today the most important administrators of the defense program: William S. Knudsen, president of General Motors Corporation since 1937, now in charge of the Office of Production Management; Edward R. Stettinius, Jr., chairman of the board of United States Steel Corporation and an old associate of Mr. Knudsen in General Motors, now director, Priorities Division of the O. P. M.; John David Biggers, president, Libbey-Owens-Ford Glass Co., another experienced automobile man, now director of production of O. P. M.; Roy Jackson, formerly associated with Ford Motor Co., 1928–31, General Motors Export Co. 1931–34, and United States Steel Export Co. 1938 to date, now administrative officer of the O. P. M.; Ralph Budd, president, Chicago, Burlington & Quincy Railroad Co., now Commissioner of the Office of Transportation of the O. E. M.

Business influence on policy and administration consists of much more than the presence of men such as those mentioned. To these must be added the dollar-a-year men and those who serve W. O C.—without compensation. Shake-ups in the defense organization have not changed this. Big business has not lost its influence.

DOLLAR-A-YEAR MEN DOMINATE

In the second week in June there were approximately 265 dollar-a-year men serving in the various defense agencies.

There were 11 in the Office of Transportation, 22 in the Defense Mediation Board; 31 in the Office of the Coordination of Commercial and Cultural Relations Between the American Republics (Mr. Rockefeller reported 36 dollar-a-year men to the House Committee on Appropriations, but the Office for Emergency Management has released the names of only 31); 7 in the Office of Price Administration and Civilian Supply; 5 serving the Advisory Commission to the Council of National Defense; 186 in the Office of Production Management—Production 92, Priorities 22, Labor 37, Purchase 35. (Donald Nelson, director of the Purchase Division, reported 40 to the House Committee on Appropriations, but the O. E. M. has released the names of only 35.)

Of this number, at least 42 are presidents of corporations. The majority of these are major corporations such as General Motors, Dravo Corporation, Atlantic Greyhound Corporation, American Airlines, Inc., American Coffee Corporation, Carnegie Corporation, Libbey-Owens-Ford Glass Co., Procter & Gamble Co., etc.

At least 8 of these men have been associated in a direct capacity with investment or banking concerns. Well over half have been involved in the immediate management of business concerns.

Of the total, only about 42 are technicians, engineers, or professional men.

Spread through all of the defense agencies are to be found 17 men connected with trade associations and business institutes.

In O. P. M. a majority of dollar-a-year men have been active administrators.

These men are the economic royalists made famous by the President's denunciations in the early years of the New Deal. Many of their connections extend to more than one corporation and to countries throughout the world, including Germany.

PROTECTING PROFITS

In the field of production the influence of the dollar-a-year men has been against any proposal to reorganize industry for greater efficiency if it would interfere with their profit position.

The arms program and the domestic economy are now suffering from shortages of certain raw materials and finished products. One of the major jobs in the early days of the arms program was to estimate the amount of raw materials and the productive capacity needed to provide production of goods for the civilian and military economy. The degree of influence of business on the early decisions of the defense agencies can be traced item by item to dollar-a-year men in the defense set-up. This applies to aluminum, steel, automobiles, rail transportation, and electricity.

GOVERNMENT MUST TAKE INDUSTRIES TO DEFEND AMERICA

The Federal Government must at once:

1. Take over every major industry, as well as every defense industry, including transportation and the banking and credit system, on the basis of a fair, instead of a fictitious capitalization, and put technicians and production engineers in charge—to insure production.

2. Create a representative commission to plan for arms and civilian needs, with an executive with plenary powers to order planned production.

Prompt and complete mechanization will reduce the dangers of America's defenders in uniform.

Such mechanization, and the provision of munitions and equipment, cannot be obtained promptly, and civilian needs met, under private ownership, or private control.

Better Get Ready

EXTENSION OF REMARKS
OF
HON. JOHN M. HOUSTON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

EDITORIAL FROM THE NEWTON (KANS.) EVENING KANSAN-REPUBLICAN

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following timely editorial from the Newton (Kans.) Evening Kansan-Republican of July 30, 1941:

[From the Newton (Kans.) Evening Kansan-Republican of July 30, 1941]

BETTER GET READY

The continual pounding on the national-defense program, the enormous appropriations of money by Congress, incidents such as the appeal for old aluminum, are gradually bringing the people nearer to the war area. Almost every day the United States draws a step nearer to actual participation in the war. We are already in the war zones. Maybe it is now only up to Hitler or Japan to strike the first blow and we shall be in up to our ears.

Perhaps we on the sidelines cannot always see as clearly as the team manager sitting on the players' bench. Maybe the Commander in Chief and the expert advisers in Washington, from the close-up seats, are seeing things that the ordinary spectator cannot discern. Maybe they think it is necessary to take all of these warlike steps and take chances of overstepping what is considered our rights as a neutral nation.

This much seems certain to all concerned in this country, that we had better hurry up our program of preparedness if we are going to continue knocking chips off the shoulders of other people.

In that connection, and whether we like it or not, and whether it is treating fair with the soldiers, the ominous conditions that now prevail make it seem advisable to hold all the armed forces we have at our command in service and add to them as rapidly as new men can be absorbed and trained.

It is probably almost universally felt by United States people that getting into the war is practically inevitable. We do not want to wake up in the middle of the night and find that we are in and have no inadequate defense force to do the actual fighting. It begins to look like everybody, both citizen and soldier, had better get into training for whatever tasks participation in war may entail.

The Sugar Problem

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

LETTERS FROM AMERICAN SUGAR CANE LEAGUE AND THE NATIONAL SUGAR REFINING CO.

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

AMERICAN SUGAR CANE LEAGUE OF THE UNITED STATES OF AMERICA, INC.,
New Orleans, July 2, 1941.

Hon. HALE BOGGS,
House Office Building,
Washington, D. C.

DEAR MR. BOGGS: I notice during the debates in the Senate on bill S. 937 at page 4596 of the CONGRESSIONAL RECORD for June 2 that Senator GEORGE was under the impression that the sugar producers of this country are afforded protection to the extent of $47 per ton, this being $37 per ton protection furnished by tariff and $10 per ton afforded by reason of the processing taxes.

If we applied these figures to the 1940 consumption, we would have to multiply 6,865,402 tons by $47 and as a result, we would get $322,673,894 protection allegedly given the sugar producers of this country. This, as you know, is ridiculous. The actual protection afforded the sugar producers of this country for 1940 should be arrived at as follows: At the full-duty rate of 1.875 cents per pound, they were afforded $37.50 per ton on the 24,177 tons of full-duty sugar; at the preferential rate of 0.9 cent per pound, they were afforded $18 per ton protection on the 1,311,356 tons of sugar from Cuba. Thus we see that the domestic sugar producers were afforded a total of $24,511,045.50 protection as against the alleged $322,673,894, or an actual difference of $298,162,848.50. It is erroneous to figure the $10 per ton processing tax as protection of the domestic producers as against foreign producers, because this tax is paid by all producers, whether continental, domestic, or foreign.

The figure which Senator GEORGE used is one of the pets of certain administrative officials of the United States Department of Agriculture and was originally thought up in 1936 in a statement which was issued by the then Secretary of Agriculture, Mr. HENRY A. WALLACE. In this statement, Mr. WALLACE said: "The total cost to American consumers of sugar purchased under the quota system during the calendar year 1936 has been estimated (without allowance for the revenue of approximately $40,000,000 the United States Treasury received from import duties on sugar, or for the possible increase in world price that might have resulted from changed conditions) at approximately $350,000,000 in excess of the depressed prices that prevailed in the world market."

You will notice how closely this figure which Mr. WALLACE used in 1936 approximates the figure that I arrived at by multiplying the total consumption for 1940 by $47 per ton.

You will also notice that even in 1936 Mr. WALLACE limited his statement to the calendar year 1936, and he also made the statement that his $350,000,000 estimate did not include $40,000,000 which had been received by the Treasury from import duties on sugar, nor did it include "the possible increase in world price that might have resulted from changed conditions." This last quote is really the bug in the rug.

A great deal has been said about the difference between the world price and the cost of sugar to the American consumer. It must be remembered that for practical purposes the world price only affects a very small amount of sugar in this hemisphere because the only sugar that is sold at the world price here in any volume is that part of the distressed sugars in the West Indies, which are usually sold to Great Britain, and the full duties brought into this country from San Domingo and Peru. That is what Mr. WALLACE meant by "the possible increase in the world price that might have resulted from changed conditions." He was saying, in other words, that if a large purchaser, like the American consumer, went into the world market for any volume of sugar, the world market would not stay at its then low figure, but would approximate the American price within a very short time.

When we consider that in 1940, out of a total of 6,865,402 tons of sugar there was only approximately 24,000 tons of so-called world-price sugar sold in this country, we are still letting the tail wag the dog if we try to make a direct comparison between the American price and the world price insofar as it affects the American consumer.

A parallel could be drawn by finding some distressed farmer who would sell about 3,000 bales of cotton at one-half the prevailing price and then proclaiming to the world that this was the price of cotton throughout the United States.

I believe that the information I have given you above is a much more fair picture of the protection situation insofar as it affects sugar than that given you by other informants.

While I am on the subject, I would like to take a little more of your time to show just why we feel that the sugar people in Louisiana are not being given the full protection that they have earned. In going over the books of several of the Louisiana sugar-producing companies I find that they each pay all of the following taxes:

Federal income tax, State income tax, Louisiana corporation franchise tax, Federal capital-stock tax, Federal miscellaneous-processing tax, Federal sugar-processing tax, Federal unjust-enrichment tax, Federal documentary-stamp tax, business license tax, store license tax, store permit tax, truck and auto license, Louisiana public-welfare sales and use tax, social-security tax, real-estate tax, equipment tax.

One such company with an investment of slightly over a million dollars paid these taxes in the following amounts during the following years: 1936, $68,796; 1937, $71,100; 1938, $59,163; 1939, $40,228; a total of $239,349 for the 4-year period, or more than 25 percent of their total investment paid out in taxes during the 4-year period.

As you know, all of these taxes go to support the cost of government and to support the American standard of living, and I would like for you to ask informed officials from the Department of Agriculture just how many of these taxes, or like taxes, the producers of sugar in Cuba, the Philippines, San Domingo, Peru, and even Puerto Rico, pay toward maintaining the American Government and the American standard of living. I am asking you to ask them how many of these taxes are paid to the American Government, because after all it is our market, the American market, in which they are asking to sell their sugar.

As you well know, in any endeavor the producer of a commodity has to use a certain amount of his productive capacity or he becomes a victim of the law of diminishing returns, and that is what we in Louisiana fear. Let us examine the record for a moment and see just why, under the 1937 Sugar Act, we are justified in fearing this.

Studies conducted by the experimental station of the Louisiana State University, and studies conducted by individual agencies, have definitely stated and proven that when a farm produces sugarcane for sugar, from 65 percent to 75 percent of its total cultivable acreage should be in sugarcane. We here in Louisiana were required to plow up cane in 1939 and in 1940 in order to meet the regulations issued by the Secretary of Agriculture pursuant to his authority under the Sugar Act of 1937. As a result, we had the following acreage conditions during the first 3 years of the operation of the Sugar Act of 1937 on farms which raised sugarcane for sugar:

Year	Cropland on farms producing sugarcane for sugar	Harvested acres for sugar
1937	780,630	254,000
1938	816,860	270,000
1939	819,789	238,000
1940	[1]805,760	225,000

[1] 3-year average.

Thus we see that instead of having the ability to use 65 percent of our cultivable land for cane, we were forced, in order to comply with the 1937 Sugar Act, to only use 32.54 percent in 1937, 42.19 percent in 1938, and 29.03 percent in 1939. The 1940 cropland figures are not yet available, but the percentage for 1940 will be even less than the 1939 percentage. Thus, I believe you can readily understand why we not only fear the law of diminishing returns, but resent the fact that our industry has been called inefficient by the officials of the Department of Agriculture.

It is inefficient only because we are prohibited by Federal law from using our full productive capacity in the production of a crop of which approximately 70 percent of the amount consumed by the American public is imported.

We not only feel, but we know, that if we were allowed to use our full productive capacity, we could and would, put sugar in the hands of the consuming public at a cost below that which they pay for practically any other food. We know that we could and would stand between the American consumer and the exorbitant price that they had to pay for sugar during the one time in recent years when the continental American supply was exhausted, and we were dependent on these low-cost producing countries who, although their cost of production was low, their price was high.

As a specific instance, you will recall that Cuba very generously offered to sell one crop of raw sugar to the United States Government at 18 cents per pound, and at that time sugar did go to a point where housewives were forced to pay 25 cents per pound for it in the refined form.

You might also recall that the only thing that stopped this wild skyrocketing in the price of sugar was another American-produced crop coming on the market. More recently, to be specific, in September 1939, when the price of sugar began to skyrocket, Cuba did not sell in this country one single pound of sugar when the President lifted quotas. In this case again it was the domestic sugar that broke the skyrocketing prices.

As I have stated above, we know that we can produce sugar so that it is one of the cheapest foods that the American public consumes. We know that our farming practices on the acreage which we are allowed to cultivate are efficient because if they were not, we certainly could not produce from 29 to 31 tons of green material per acre of land and do this year after year.

With conditions as they are today, we feel that we should be given a chance to show the Government and the people of the United States that we can and will produce sugar at a very reasonable cost, and at the same time make a living for ourselves and our children.

I feel that the most effective means of allowing the domestic industry to demonstrate its ability would be the passage by Congress of the Coffee bill (H. R. 3582) so that this would then become a part of the 1937 Sugar Act, as amended, in the event that Congress decides to extend the 1937 Sugar Act for another year.

Very truly yours,

CHAS. A. FARWELL,
Chairman, Educational Committee.

THE NATIONAL SUGAR REFINING CO.,
New York, July 28, 1941.

Hon. HALE BOGGS,
House of Representatives,
Washington, D. C.

DEAR MR. BOGGS: I have read with interest your remarks in the House on July 17 about pending sugar legislation. I note on page 6141 of the CONGRESSIONAL RECORD you are quoted as saying:

"The National Sugar Refining Co. and Farr & Co. of New York have known interests in several sugar mills in Cuba."

In the interest of accuracy, I would like to say that the National Sugar Refining Co. has no interest in sugar mills in Cuba or elsewhere. Our activities are confined solely to the refining of raw cane sugar. I know that you would wish to have this for the record.

I might add that I am hopeful that the whole industry—beet, cane, and refining—may be able to work out some joint proposal for future legislation.

Very truly yours,

ELLSWORTH BUNKER,
President.

Uniting America to Produce—For War, for Peace

EXTENSION OF REMARKS
OF
HON. JOHN M. HOUSTON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

EDITORIAL FROM THE AMERICAN LUMBERMAN

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following timely editorial from the July 26, 1941, issue of the American Lumberman:

[From the American Lumberman for July 26, 1941]

UNITING AMERICA TO PRODUCE—FOR WAR, FOR PEACE

Should this be a long war, the decisive weapon is certain to be food control. And when the military phases of the war are over, food will write and underwrite the peace.

Our problem just now is not merely that of raising all we can. World food production, outside the European fighting zone, is enormous; and yet millions are facing starvation. This is due in part to the break-down of transportation; but it is due in part to unbalanced production.

It is our problem to produce not only the amounts but also the kinds of food that will win the war and make the peace. American agriculture, like American industry, is quite certain to be attached to an international economy. At present it is a war economy, but it will change to an international peace economy when the shooting war is over. Agricultural changes are being made now. Admittedly they are as far-reaching as any changes that have come to American farms in a hundred years.

Every European country is rationing food; and no one of these countries is allowing its people the calories needed to maintain normal health.

The British are allowed about 80 percent of the needed amount, the Germans about 70 percent, the Poles 25 percent or less. These are allowed amounts; but few people are able to buy that much, either because they lack money or because markets lack supplies.

Correspondents on the Continent tell us about the increase of pellagra, tuberculosis, and the long list of other diseases caused by malnutrition.

These are grim aspects of the hunger war.

It is against the background of the food race and the starvation in Europe that the American Lumberman offers a suggestion. It is that the United States prepare now to help feed our European neighbors during the period of exhaustion after the war closes and before official control and distribution of food can be started. We know, of course, that the Department of Agriculture is planning big food reserves to be used for diplomatic as well as for humanitarian purposes. But the need will be so great that private and community resources can well be used to supplement the Department's reserves. Our suggestion is to make use of these speecial resources for purely humanitarian purposes.

Such popular methods of food production should not and need not interfere with official projects. But when all such allowances are made, there is still a big supply of land, labor, equipment, and good will. Food so produced ought to be used to feed Europeans without regard to nationality.

Surplus wheat can be fed to poultry, dairy herds, and meat-producing animals. It would not take so much official labor and inspection to insure against upsetting the wheat-production control and to see that food so produced went into the post-war gift warehouses.

In nearly every community there is a canning factory that operates during fairly short periods. Such a plant could be utilized in preserving fruits and vegetables. It has been proved that with simple home equipment vegetables can be tinned that meet professional standards. Four-H Clubs could be enlisted, cooperative projects started.

The idea is that the people of the United States, the people themselves, begin producing and storing vast supplies of food of kinds not subject to spoilage—canned meats, poultry, vegetables and fruits, cheese, powdered milk and eggs, vitamin concentrates.

This would not be charity in the sense that the people make a free gift of their materials and labor. These should be paid for by the Government at moderate, agreed prices; putting the undertaking on a business basis and permitting the unemployed and those with spare time to make some modest earnings. This would cost the Government something; but meanwhile the United States is appropriating billions for munitions and other fighting equipment for our overseas friends, and we look upon these appropriations as virtual gifts. We consider this fighting equipment as gifts to help save our kind of civilization. But civilization depends upon people. The job of saving civilization will not be done until the people themselves are saved.

The purpose would be not to sell these supplies of food but to contribute them to Europe through the Government as an American gift to our needy overseas neighbors.

There would have to be a minimum amount of official supervision to see that no advantages were taken of relaxed agricultural regulations; some professional help, say from the W. P. A.'s food experts, to make sure of standards. But in the main it would be a people's undertaking, managed by the people themselves through their own chosen community, county, and State committees and headed up by a popularly chosen national committee. This is important both in creating morale and in releasing the maximum of popular interest and popular will.

There are plenty of reasons at home and abroad for making America a great food reservoir.

It will save human lives. The United States is better able than is any other country to undertake this humanitarian mission.

It would appeal to American kindliness and generosity; and it would channel the average American's desire to do his personal bit in a great crisis. Home defense is constantly besieged by people asking, "What can I do?" The American people in this practical way can prove that we have a regard for and want to help our neighbors.

Mr. Hoover's feeding of European children after the first war won us more respect and understanding than did all our post-war loans. We lost the loans; but Mr. Hoover and his associates did save the children. It was the lost loans and not the saved children that created animosities.

Our world friends are not numerous. We promised aid to attacked countries and were not able to deliver it. We have taken sides in this war; and for reasons that seem good to us and because of factors we cannot control we express our partisanship in a slowly rising tide of munitions. We need friends, and while we cannot buy them and should not try we can prove that we are worthy of friendship

and have not forgotten. It is an idea in which every successful businessman recognizes merit. Lend a helping hand to your customer when he is in need. When his feet find solid ground again he will be a stanch customer and friend.

Finally, we need unity among ourselves; and one road to national unity is shared work for something larger than ourselves. This is a good-neighbor opportunity.

Taxes on Radio and Outdoor Advertising

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

LETTER FROM THE ADVERTISING FEDERATION OF AMERICA

Mr. MARTIN J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

ADVERTISING FEDERATION OF AMERICA,
New York, N. Y., July 31, 1941.

Hon. ROBERT L. DOUGHTON,
Chairman, Ways and Means Committee,
United States House of Representatives, Washington, D. C.

DEAR SIR: The Advertising Federation of America hereby expresses itself in strenuous opposition to the proposed taxes on radio and outdoor advertising as contained in H. R. 5417.

We consider any tax on advertising, regardless of the media affected, as harmful to the economy of our Nation and detrimental to our well-established system of distributing consumer goods.

The power of advertising as the selling force of industry and as the stimulator and stabilizer of commodity distribution must be protected. This is necessary in supporting the base for emergency taxes, for any impairment in the use of advertising by taxation will in turn affect distribution and the revenues derived therefrom. In our opinion, a tax on advertising will defeat its own purpose.

We are mindful that vast sums of money must be raised by our Government for national defense. This involves the greatest merchandising effort in the history of our country. Hence it is that our merchandising machinery must be keyed up to the highest notch of efficiency.

Business uses advertising to maintain and increase its outlets for goods. Unless such outlets are maintained and increased during the coming years, the expanded income on which taxes are based will not be forthcoming. Nothing should be done, therefore, to cripple the merchandising machine that produces income, and a tax on advertising will bring that very result. Income must be taxed, but to tax the process which creates income is an economic fallacy.

Advertising does not encourage indiscriminate expenditure for civilian goods during the period of national defense. On the contrary, it is used to regulate and stimulate the proper flow of consumer goods based on the products available for nondefense purposes. Advertising will divert public demand to merchandise that can be supplied without harming our defense production and thus keep employment and distribution in nondefense industries at its highest possible level.

As late as May 20, 1941, President Roosevelt, in a letter to our organization, said:

"Advertising has been responsible for many of the good things which citizens of the United States enjoy. It has been a potent force in making available to our citizens the products of American skill and ingenuity. Without it, many present-day necessities would still be luxuries.

"That force needs now to be applied toward the maintenance of our accustomed standards of living and further progress. This may require adjustment but it should mean increased effort."

The advertising business in America is wholeheartedly behind our Government's monumental efforts for national defense. In common with other businesses, it is paying today, and will continue to pay, huge sums in taxes into our National Treasury.

We have offered our services to the Government and will continue to give them willingly, as it is our duty to do.

We strongly urge, however, that a tax on advertising, regardless of its nature, will be a grave economic mistake and harmful to the laudable and patriotic cause to which you, your colleagues, and all other good Americans are firmly dedicated.

Respectfully submitted

ADVERTISING FEDERATION OF AMERICA,
By CHARLES E. MURPHY, *General Counsel.*

Waterways Improved by Germany for Military Preparedness

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

Mr. MANSFIELD. Mr. Speaker, at my request the Chief of Engineers has furnished me with information on waterway improvements by Germany for military preparedness.

While most of the European countries have extensive networks of inland waterways, which have played important parts in all their wars, Germany's waterways system surpasses those of all other European countries in design and improvements for military purposes.

Widespread public recognition, not only of the inherent economy of low cost water-borne transportation for peacetime use, but also of the strategic value of inland waterways in the interest of national defense and as supply routes for the invasion of adjoining countries has long been a basic factor underlying the successful development and growth of German rivers and canal systems. This is demonstrated by the way in which the great natural waterways of Germany have been connected by canals so that water transportation may move to and from the country's frontiers.

The Kiel Canal, probably the greatest military waterway project in the world, connects the North Sea through Germany to the Baltic Sea, thus providing an all-German route between these two seas and permitting Germany's naval vessels to avoid traveling around through the Kattegat and Skagerrak, where they would be exposed to attack from foreign navies. This canal is 335 feet wide and 37 feet deep and can accommodate all but a few of the largest ships afloat. While we read about its being bombed many times, as yet we have not heard of its being blocked. While the Russian Navy is bottled up in the Baltic, German vessels can pass freely from the Baltic to the North Sea and into the Atlantic Ocean.

The Rhine rises in Switzerland, flows along the border of France, then into Germany, and finally turns through The Netherlands into the North Sea. The portion of the Rhine in Germany and The Netherlands is a waterway of considerable capacity. The Ems, Weser, and Elbe flow northwest through Germany into the North Sea. The Oder flows northwest through Germany into the Baltic Sea. These rivers are all improved from their natural state. The opening of the ship elevator at Rothensee, near Nagdeburg, on October 30, 1938, completed the final link in the Midland Canal—Mittellandkanal—which unites the Rhine with the four natural watercourses of the north German plain—the Ems, the Weser, the Elbe, and the Oder Rivers—thus uniting in one system all the rivers of Germany and providing for east and west commerce through central Germany. As a result, the great industrial center of metropolitan Berlin has become one of the most important inland ports in the country.

Among the improvements upon which work has been pushed for military reasons was the Adolf Hitler Canal, from which the first shovelful of earth was dug by Hitler's erstwhile friend, Rudolph Hess. The opening of this canal in December 1939 connected the industrialized Silesian area around Gleiwitz, in extreme eastern Germany, with the Oder River and the central German canal system. The Hohenzollern Canal, which connects Berlin with the Oder River and the great naval shipbuilding city of Stettin, on an estuary of the Baltic, has great military value; and the Dortmund-Ems Canal, which is a link between the Rhine and the northern-central waterway system, has much strategic importance.

Germany's national policy of locating industry at safe distances from her frontiers must necessarily be supplemented by transportation lines capable of carrying heavy tonnages, and inland waterways constitute an ideal strategic lay-out in such a program. Germany's amazingly rapid conquest of the major part of Europe was aided in no small way by her efficient and well-planned transportation system, of which the network of inland waterways is a vital part. Without this efficient system, feeding and supplying the powerfully mechanized armies of Germany undoubtedly would have been much less effective.

The story of German waterways is not complete without including the Danube in southeastern Europe. The Danube rises in Germany, flows through Austria and forms the boundary between Czechoslovakia and Hungary, until it turns southward through central Hungary into Yugoslavia, where it bends eastward again to become the boundary between Rumania on the north and

Yugoslavia and Bulgaria on the south, and finally flows through Rumania to the Black Sea at Sulina. This water-transportation route in southeastern Europe has been in use for a very long time but national jealousies and competitions have prevented its maximum improvement. Germany's pre-war program planned the completion of a Rhine-Main-Danube Canal to provide a continuous water route for vessels, up to 1,500 tons, all the way across Europe from the North Sea to the Black Sea, and when the Nazi Government began to foresee the present war it ordered the rapid completion of this canal as a war measure irrespective of the economics of the project for peacetime use. The Slavs controlled the Danube on the south of the difficult Iron Gate section as well as where the river passes through Yugoslavia so that they could cut off the German waterway connection with the oil and grain of Rumania. This situation undoubtedly tended to provoke the German attack on Yugoslavia, and the first thing the Germans did was to seize the stretch of the Danube passing through Yugoslavia. Now that they have complete control of the Danube, the incentive to complete the Rhine-Danube Canal is greater than ever.

If the intensive improvement and utilization of inland waterways by the Germans is a fair criterion of their value, it is evident that our own inland waterways system can play an important role in the gigantic preparedness program ahead of us. As a result of the careful planning of the past and of the foresight that has been exercised by Congress with respect to authorizations and appropriations, we face the present emergency with our waterways in the United States in pretty fair shape. This status of preparedness is in no small measure due to the fact that our river and harbor improvements are planned, constructed, and administered by our War Department. Although we have done well, we should do better by heeding the transportation developments of waterways for military purposes in foreign countries, and seeing that our waterways are still further improved and developed in the interest of our national defense.

The Telephone Users of the State of Washington Protest Injustices Imposed by the Telephone Monopoly

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

RESOLUTION OF THE BOARD OF COUNTY COMMISSIONERS OF KING COUNTY, WASH.

Mr. COFFEE of Washington. Mr. Speaker, I herewith read in the CONGRESSIONAL RECORD, by unanimous consent of the House of Representatives, a resolution adopted by the Board of County Commissioners of King County of the State of Washington.

King County is the largest county in point of population in the State. Seattle is the county seat and largest city of the Pacific Northwest.

In this resolution, a rank injustice to which telephone users have been subjected is graphically described. The petitioners memorialize Congress for relief through the good offices of the United States Bureau of Standards, and urge the establishment of an adequate service code. I concur in the recommendations of the statement. The resolution is as follows:

Whereas, as in many other States of the Union, the subsidiary of the American Telephone & Telegraph Co., operating in the State of Washington has afforded small demand users of local telephone service optional lower rates through the medium of a central office message-register system, as a preliminary to the inauguration of compulsory central office message-register rates; and

Whereas, in June 1938, the Washington State unit of the American Telephone & Telegraph Co. (the Pacific Telephone & Telegraph Co.) filed compulsory message measured rates combined with multiplying zone areas including time units of varying duration replacing optional flat rates for business service; and

Whereas, associated with the application of compulsory message measured rates, the telephone company proposed the withdrawal of the low flat rate four-party residential service, in certain rate areas of this State, now enjoyed by moderate-income homes, the elimination of which will seriously and adversely affect the social, civic, and economic life of the community; and

Whereas King County, Wash., as one of the large users of the telephone service affected by the new rates, contested the reasonableness of these new rate schedules before the State Department of Public Service, and at public hearings before that body presented conclusive evidence, in brief, as follows:

(a) No standard or recognized code relating to the measurement of local telephone service has been established by low or common usage.

(b) A supervised customer's tally of message use compared with the telephone company's central office message registers, involving 1 month's survey, of 477 subscribers' lines, indicated only 12 (2.5 percent) agreed with the company's central office message counters, 66 (13.84 percent) meters, registered less than subscribers' tally by an average of 23 percent, and 399 (83.66 percent) meters registered more than subscribers' tally by an average of 28 percent. An under charge of 1,442 messages for 66 subscribers and an overcharge of 9,636 for 399 subscribers; and

Whereas an engineering investigation of the causes for such gross variation was made by competent engineers and a demonstration at a hearing before the State department of public service, in the laboratory of the University of Washington, at Seattle, Wash., disclosed the fact that six (6) inherent defects exist in the central-office message-register system, certified as the standard system authorized by the American Telephone & Telegraph Co.; and

Whereas a state of confusion and public distrust now exists in the telephone service rendered to the public in the State of Washington and such distrust will extend into other telephone-rate areas of the American Telephone & Telegraph Co., throughout the United States, and particularly in the areas now served through compulsory message-register rates, estimated at over 6,000,000 subscribers: Now, therefore, be it

Resolved, by the Board of County Commissioners of King County, State of Washington, in regular meeting assembled this 26th day of May 1941, That it does hereby memorialize the Congress of the United States for such aid and relief as may be available through the good offices and facilities of the United States Bureau of Standards in the establishment of an adequate telephone-service code and such other aid in the publication and enforcement of such code as may be in the public interest.

Passed this 26th day of May 1941.

TOM SMITH,
RUSSELL H. FLUENT,
A. E. PHELPS,
Board of County Commissioners, King County, Wash.

Midwestern Agricultural Viewpoint

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

Mr. H. CARL ANDERSEN. Mr. Speaker, Mr. R. A. Trovatten, Commissioner, Department of Agriculture, Dairy and Food of the State of Minnesota, has furnished me with two resolutions dealing with subjects of great importance to agriculture.

The Association of North Central Commissioners of Agriculture, representing many of the greatest agricultural States of our Nation, has condemned in no uncertain terms the proposal to modify the embargo against the importation of dressed meats from Argentina and Uruguay.

The following resolution adopted by this Association of Commissioners of Agriculture should have the close attention of every Member of this House who has the interest of the farmer at heart:

Resolution 1

Foot-and-mouth disease

Whereas, as a result of repeated outbreaks of "foot-and-mouth disease" in these United States prior to 1927, there was enacted in that year a congressional embargo against the importation into this country of dressed meats and meat products from any country where said disease exists; and

Whereas prior to the imposition of this embargo the spread of that disease in this country demoralized the domestic livestock industry, seriously jeopardized the public health and resulted in the expenditure of millions of dollars by Federal and State governments and by the livestock industry for the eradification of that evil; and

Whereas the wisdom of that congressional embargo, embodied in the Smoot-Hawley Tariff Act, has been indubitably justified as attested by the fact that since January 1, 1927, there has been only one minor outbreak of that disease—in the State of California in 1929—which outbreak has since been traced directly to a violation of Federal regulations relating to the unloading of certain materials; and

Whereas there is increasing evidence from authoritative sources that a serious attempt is now under way to influence the President of the United States and Congress to circumvent or remove the embargo upon the importation of dressed meats and meat

products for the benefit of certain foreign nations in which the said livestock disease is prevalent; and

Whereas any modification of that embargo would be inimical to the best interests of this Nation and would cause a recurrence of the evils existing prior to 1927 as enumerated above; and

Whereas the agricultural and livestock industry of this Nation is playing and must continue to play, a vital and indispensable part in the program of national defense and nothing would more seriously affect that burden and the program of national defense than a relaxation of the existing barriers to the importation of infected livestock: Now, therefore, be it

Resolved, That we hereby respectfully and earnestly importune the President of the United States and the Congress of the United States for reasons herein stated, to resist any attempts, and to refrain from any action designed to repeal, circumvent, or modify the Embargo Act of 1927 relating to the importation of dressed meats and meat products from foreign lands in which there is prevalent foot-and-mouth disease, the most dreaded disease known to the livestock industry; be it further"

Resolved, That the Members of the Congress be instructed to use their influence to bring about the defeat of the bill designated as S. 1613 or H. R. 5032, which under section 3 would nullify the sanitary pact.

After thorough discussion, upon motion said resolution was unanimously adopted.

Motion made and seconded that we are unalterably opposed to S. 1613, introduced by Mr. JOHNSON of Colorado (for Mr. REYNOLDS); also H. R. 5032, by Mr. DOUGHTON, to permit the importation of defense articles and commodities duty free or any other bill purporting to accomplish said objectives as being detrimental to our domestic industries engaged in producing said defense articles and capable of producing adequate quantities of such commodities.

Also, Mr. Speaker, this same Association of Commissioners of Agriculture adopted another resolution, herewith quoted, which gives the midwestern viewpoint on the latest price-fixing proposals. I insist, Mr. Speaker, that if maximum prices are to be set on farm products, we are also entitled to a minimum floor for that price structure.

Resolution 2

The North Central Association of Commissioners, Secretaries, and Directors of Agriculture, in session at Deadwood this 19th day of July 1941, unequivocally endorse the statement made by the National Association of Commissioners, Secretaries, and Directors of Agriculture to the Agricultural Committees of the House and Senate of the United States Congress on May 6, 1941, as follows:

"Believing that agriculture is entitled to equal protection as the foundation upon which our national defense must be supported and that it should be assured complete equality with industry and with labor; and

"Believing that the domestic price on these products should be protected by a tariff or excise tax on competing imports to the extent that the landed cost equals parity plus 10 percent; and

"Believing that the surpluses of these products of which we produce more than our domestic requirement be sold in the world markets at world prices, and thus put the American farmer in a position to vigorously compete in the world markets to regain their rightful position to share in the commerce of the world: Now, therefore, be it

"*Resolved*, That we urgently request the Congress to provide the means by which the farmers of the Nation be paid full parity prices on their products consumed in the domestic market.

"*Resolved further*, That a copy of this resolution be forwarded to the President of the United States, the Secretary of Agriculture, the President of the Senate, the Speaker of the House of Representatives, and to each Member of the Senate and House."

Farmers, who make up approximately 24 percent of the population of the Nation, in 1940 received only 6.9 percent of our national income. Whereas during the last World War they received approximately 18 percent of the national income. Since it is proposed through Leon Henderson, Chief of the Office of Production Management and Price Stabilization, to establish a price ceiling over certain farm products, we insist that we are unalterably opposed to such price ceiling being established while prices of the products farmers are compelled to buy and including interest and taxes which they are required to pay are far above parity—the farmer's dollar according to the Bureau of Statistics of the United States Department of Agriculture on June 15 of this year shows the farmer's dollar in terms of things farmers are required to buy, including interest and taxes, stood at only 91 cents.

The American farmer is not being permitted to supply our domestic market to the extent of his ability to do so at prices that would insure to him his fair share of our national income. Imports of agricultural products and substitutes therefor during 1940 were $1,638,000,000. Exports of agricultural products were only $772,329,000; or net imports over exports for the year of $865,000,000. To fix a ceiling on farm-commodity prices on the present basis of price relationship and domestic consumption of domestically produced farm commodities would be not only unfair to the American farmer but manifestly unsound from a national-defense standpoint.

Opinion United States Circuit Court of Appeals, Second Circuit, Decided July 18, 1941

REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

Mr. SWEENEY. Mr. Speaker, the House will recall that on December 23, 1938, there appeared in the Washington Merry Go Round column, written by Drew Pearson and Robert Allen, a false statement charging me in my representative capacity as a Member of Congress in opposing a gentleman for a Federal judgeship in Ohio for the sole reason that he was a Jew and not born in the United States. Shortly after the publication of this article which appeared in several hundred newspapers served by these writers, I wrote Drew Pearson, author of the article, and demanded an apology. I never received an answer to my letter, much less an apology. On May 25, 1939, I placed in the CONGRESSIONAL RECORD the libelous article complained of and my letter to Drew Pearson. Shortly thereafter at my direction my chief counsel, Hon. John J. O'Connor of New York, formerly a Member of Congress, instituted law suits against the authors of the article complained of, the United Features Syndicate, which handles the Merry Go Round column and sells the same to certain newspapers and practically every newspaper large and small that published the article. To date we have secured three settlements and received approximately 100 retractions and apologies from certain newspapers which carried the article in question. In some jurisdictions we have lost cases on the pleadings, the court holding the action not libelous per se. In other jurisdictions courts have arbitrarily dismissed our cases because of the power of the press.

In our case against the Clarksburg Publishing Co., tried to a jury in January 1941 in the District Court of the United States for the Northern District of West Virginia, presided over by the Honorable Harry E. Watkins, a New Deal appointment, we failed of recovery because the judge permitted evidence that was thoroughly incompetent and irrelevant, designed to prejudice the minds of the jury. To illustrate, he permitted the introduction as evidence of a telegram I sent to the King of England while he was a guest at the White House in June 1939 making inquiry of His Majesty's Government on the question of the payment of the war debt of $5,500,000,000 due the United States at that time. The judge permitted evidence to go to the jury that in one of my political campaigns some years back I was a guest speaker at a German-American picnic in Cleveland, Ohio. Despite the fact that the movement led by Rev. Charles E. Coughlin collapsed after the campaign of 1936 and the article complained of was not published until December 23, 1938, Father Coughlin was made the issue throughout the trial.

Not a scintilla of evidence was presented showing that I opposed the individual seeking the judgeship on the grounds that he was a Jew or on any other grounds. The record in this case should be a textbook on evidence in every law school in the country to demonstrate the power of the press and the cowardice of the judiciary in seeking to protect the press and the authors of the article who boast of their close connection to the White House.

Because of the expense involved and the added fact that damage if recovered would not be substantial, and because of the limited circulation of the defendant newspaper, we have abandoned our appeal in this case. In other jurisdictions where the verdict has been adverse our right of appeal has been perfected.

During the course of this litigation we have witnessed a former assistant to the Attorney General of the United States, one whom I once befriended and secured for him his important position in the Department of Justice, absolutely commit perjury in open court.

We nave witnessed an irresponsible, itinerant newspaperman who, for the consideration of a few dollars of "borrowed money" from Drew Pearson, swear falsely to a deposition. The case of the latter is still pending before Edward N. Curran, United States attorney for the District of Columbia. Despite the fact that we have presented evidence sufficient to justify an indictment for perjury against this individual, no action has

been taken for months. Can it be that Messrs. Pearson and Allen have such political strength with the present administration that they are able to thwart the ends of justice? Time alone will tell and we will be watching carefully the action of the district attorney's office.

Because of the interest these cases have aroused among the members of the legal profession, and especially among the Members of Congress, many of whom have been the victims of similar attacks by these brilliant prevaricators, I am including in these remarks the opinion of the United States Circuit Court of Appeals, where the majority opinion holds in our favor that a cause of action has been pleaded, and that the action is libelous per se without proof of special damages.

I trust the lawyers and Members of Congress will also scrutinize the dissenting opinion rendered by another New Deal judge and determine whether or not the cause of tolerance in the United States is promoted by such dictum.

Whenever we lose a case, Pearson and Allen prepare the copy which generally appears on the front page of the newspapers carrying their "goulash," and it is significant that Walter Lipshitz, alias Winchell, also shouts about our losses over the radio on his lotions of mud program. When we win a case or two it is significant that "Pal Joey" is very silent. Hence I am taking this opportunity to publish in the RECORD our success in the United States Circuit Court of Appeals decided July 18, 1941:

[United States Circuit Court of Appeals for the Second Circuit. No. 350—October term, 1940. Argued June 2, 1941. Decided July 18, 1941. *Martin L. Sweeney, plaintiff-appellant* v. *Schenectady Union Publishing Co., defendant-appellee*]

Appeal from an order of the District Court for the Northern District of New York granting defendant's motion to dismiss the complaint in an action for libel on the ground that no cause of action was pleaded.

Before: L. Hand, Chase, and Clark, circuit judges.

Charles G. Fryer, attorney for defendant-appellee.

DeGraff & Foy, attorneys for plaintiff-appellant; John O'Connor, William F. Conway, of counsel.

Chase, circuit judge:

Jurisdiction in this suit for the libelous publication by the defendant of the statements concerning the plaintiff which will presently be set forth rests upon diversity, the plaintiff being a resident of Ohio and the defendant a New York corporation. The appeal is from an order dismissing the complaint on motion after the filing of an answer consisting of a general denial, special matter in mitigation of damages, and the truth of the matter printed, coupled with the right to comment fairly thereon. No special damages were alleged, and the question before us is whether the publication which on this appeal must be taken for granted as having actually been made and having been false, was libelous per se; *O'Connell* v. *Press Publishing Co.* (214 N. Y. 352; 108 N. E. 556).

The complaint alleged that the plaintiff, a Representative in Congress from Ohio and a lawyer by profession, who was a member of the bar in good standing in the State of Ohio, had been "injured in his good name, fame, and reputation, in the conduct and execution of his official duties as a duly elected and chosen representative of the people of the State of Ohio in the Congress of the United States, in pursuance of his profession as a practicing attorney in good standing before the bar in the State of Ohio, in his standing in the community wherein he resides, and in the high regard, respect, confidence, and esteem he has hitherto enjoyed among his associates both in the Congressnity and elsewhere" by the publication by the defendant in a newspaper called the Schenectady Union Star, which is widely circulated and read "in the State of New York and of the United States and in the legal fraterthe States of the United States and among the people thereof" of the following:

"A hot behind-the-scenes fight is raging in Democratic congressional ranks over the effort of Father Coughlin to prevent the appointment of a Jewish judge in Cleveland.

"The proposed appointee is Emerich Burt Freed, United States district attorney in Cleveland and former law partner of Senator Bulkley, who is on the verge of being elevated to the United States district court.

"This has aroused the violent opposition of Representative MARTIN L. SWEENEY, Democrat, of Cleveland, known as the chief congressional spokesman of Father Coughlin.

"Basis of the Sweeny-Coughlin opposition is the fact that Freed is a Jew, and one not born in the United States. Born in Hungary in 1897, Freed was brought to the United States at the age of 13; was naturalized 10 years later.

"Irate, Representative SWEENEY is endeavoring to call a caucus of Ohio Representatives December 28 to protest against his appointment."

The matter so published was received by the defendant for publication from an organization known as United Feature Syndicate, Inc. It was published in much the same form in many other newspapers in this country and the resulting libel suits brought in various courts by this plaintiff have been numerous. In some instances motions to dismiss the complaint on the ground that the publication was not libelous per se have been granted; in some such motions have been denied. Decisions in other jurisdictions, however, are not only conflicting but are for us inconclusive since they have turned on the application of the libel law of States other than New York while here we must be governed by the law of the State of New York; *Erie Railroad Co.* v. *Tompkins* (304 U. S. 64). We are not concerned, however, with any libel upon the plaintiff as a lawyer, since no reference was made in the publication to that profession of his; *Keene* v. *Tribune Association* (76 Hun. 488).

The false statements published concerning him neither separately nor together make him out to be a character more offensive to right-thinking people than he would be as the spokesman in Congress of Father Coughlin; who opposed the appointment of a man named Freed to the office of United States district judge because Freed was a Jew and one not born in the United States; and who was angry about the matter to the point of attempting to have Ohio Congressmen protest in caucus against Freed's appointment.

But, all else aside, they do clearly attribute to him the desire and purpose to try to prevent the appointment of Freed to the office mentioned for the reason that Freed is a Jew who was foreign-born. The context does not fairly permit reading the language as making the foreign birth of Freed the all-sufficient cause of the plaintiff's opposition to his appointment but rather the contrary by stressing the fact that he was a Jew whose foreign birth apparently but gave an additional basis for plaintiff's opposition. And so the decisive question to be determined on this appeal is whether or not the publication of such false and unprivileged statements concerning the plaintiff within the last few years in the places as alleged in the complaint may be said as a matter of law not to have created any liability in the absence of special damages.

The New York law, as stated in *Kimmerle* v. *New York Evening Journal, Inc.* (262 N. Y. 99; 186 N. E. 217), makes libelous per se the publication of "words which tend to expose one to public hatred, shame, obloquy, contumely, odium, contempt, ridicule, aversion, ostracism, degradation, or disgrace, or to induce an evil opinion of one in the minds of right-thinking persons, and to deprive one of their confidence and friendly intercourse in society." To the same effect is *Sydney* v. *MacFadden Newspaper Publishing Corporation* (242 N. Y. 208; 151 N. E. 209). This is in general accord with the definition found in the Restatement of the Law of Torts. See section 559. The test is whether right-thinking persons would be reasonably expected to be induced by the publication to believe that it truthfully represented the plaintiff's attitude on the subject of Freed's appointment and would be likely to regard him as a consequence in such a way that his reputation was injured in one or more of the respects above noted. It is of course, not easy to apply this general test to a case of this nature. Opinions or prejudices concerning the matter in hand might well lead to different conclusions.

Some principles established in New York libel law are especially helpful in arriving at a just decision. One of them is that a false statement need not necessarily charge the violation of any law to be libelous per se; and another is that, when made of a public official, false accusations which may well lead right-thinking people to believe him unworthy of public trust and confidence are libelous per se (*Bennet* v. *Commercial Advertiser Association* (230 N. Y. 125)). And still another is that an unprivileged, published falsehood need not make all, or even a majority, of those who read it think the less of the person defamed. It is enough if a noticeable part of many who read it are made to hate, despise, scorn, or be contemptuous of the person concerning whom the false statements have been published; *Peck* v. *Tribune Co.* (214 U. S. 195; Restatement, Torts, sec. 559 (e)).

And certainly the time and place of publication must be given due weight and effect. This plaintiff, by being accused of trying to deprive a man of an appointment to public office because, presumably both in race and religion, he was Jewish, would, intolerance being what it is, no doubt gain approval and increased respect in some quarters; and in others, where only the hit bird flutters, there would be indifference; but in a country still dedicated to religious and racial freedom, decent, liberty-loving people still are present in great numbers and still are greatly offended by the narrow-minded injustice of the bigots who see individuals only en masse and condemn them merely because their ancestors were of a certain race or they themselves are of a certain religion. Those who hate intolerance are prone to regard the person who believes in and practices acts of intolerance with aversion and contempt. And in these times when it is universal knowledge that one foreign dictator gained his power by practices which included large-scale, unreasonable Jewish prosecutions which have played an important part in making his name an anathema in many parts of this country the publication of statements such as those alleged may well gain for the person falsely accused the scorn and contempt of the right-thinking in appreciable numbers. Freedom of speech is, as it always has been, freedom to tell the truth and comment fairly upon facts and not a license to spread damaging falsehoods in the guise of news gathering and its dissemination.

Moreover, in places where Jews make up a sizable portion of the population, as they are known to do in part of the territory in which it is alleged that the defendant's newspaper circulated when the publication was made, it may be taken for granted that there will be an appreciable number who will hate or hold in contempt one who discriminates

against a Jew merely because he is a Jew, whether born in this country or not. A majority of the court is of the opinion that the complaint is sufficient under the principles above stated and that the defendant should be required to meet it on the merits.

Order reversed and cause remanded for trial.

Clark, circuit judge (dissenting):

The decision herein seems to me not in accordance with New York law, where the right of comment on a public official has been safeguarded in a practical way by "a somewhat different rule" than in ordinary cases and "a clear charge of corruption or gross incompetence holding one up to disgrace and contumely" is required; even an imputation of corrupt or dishonorable motives will be justified as fair comment if it is a reasonable inference from the facts (*Tanzer* v. *Crowley Pub. Corp.*, 240 App. Div. 203, 268 N. Y. S. 620, 622; *Gardner* v. *Home Life Publications, Inc.*, 237 App. Div. 200, 260 N. Y. S. 872, 874; *Hills* v. *Press Co.*, 122 Misc. 212, 202 N. Y. S. 678, 681, affirmed 214 App. Div. 752, 209 N. Y. S. 848). And so the cited cases hold not libelous per se comments on public officers more directly suggesting corrupt motives than does the one here—which charges rather bigotry and prejudice than corruption or impropriety in office. In the Tanzer case the comment attributed dishonorable motives to a mayor in his appointment of a city attorney; in the Hills case the comment charged special favoritism by a city fuel administrator to particular coal dealers and in the prosecution of cases. I think it clear that the charge must go to the extent of definite impropriety in office, as in *Bennet* v. *Commercial Advertiser Ass'n* (230 N. Y. 125, 129 N. E. 343), but clearly not in the present case, before recovery can be had without proof of special damages.

Moreover, this view seems to be general, as shown by the fact that the majority of the many actions brought by this plaintiff against various newspapers based on this same article have been dismissed. Many cases were disposed of without reasoned opinions; of those where the matter is discussed, reference may be made to the persuasive reasoning of the Tennessee Supreme Court, speaking through Chief Justice Green in *Sweeney* v. *Newspaper Printing Corp.* (147 S. W. (2d) 406); of Cavanah, district judge, in *Sweeney* v. *Capital News Pub. Co.* (D. C. Idaho, 37 F. Supp. 355); of the Ohio Court of Appeals, affirming the dismissal below, in *Sweeney* v. *The Beacon Journal Publishing Co.* (9th Dist., No. 3352, decided February 27, 1941; appeal dismissed Ohio Sup., 34 N. E. (2d) 764, May 7, 1941); and of the district court in this case. Of such opinions to the contrary we find only two, both by the same district judge in the northern district of Illinois, apparently unreported, and based upon an interpretation of Illinois law as limiting comment on public officers.

Not only does this seem to me, therefore, new law, at least for New York State, but also definitely disturbing law. It would be a fine world to live in if only tolerance were so usual that a charge of the lack thereof against a public official could be so presumptively untrue that it would seem on its face unfair and libelous. But in our present world we must not take the naive view that what ought to be is, and that whoever suggest the contrary is a slanderer; for if we do so, we shut off all healthy criticism of prejudice and allow bigotry full scope to act with impunity. Even more dangerous is the rationale of the decision that a comment leading an appreciable number of readers to hate or hold in contempt the public official commented on is libelous per se. Its broad sweep would take in comments found day after day in the most conservative newspapers, either in direct statement or as quotations of responsible critics, that a public official, particularly a legislator, is pro- or anti-labor, or pro- or anti-Nazi, or pro or anti this or that race, color, or creed. Minority comment on labor, religious, and political views and activities of politicians becomes, therefore, hazardous. And the making of fine distinctions in rationale is indicated by the implication that a comment suggesting plaintiff's objection to the judicial candidate for his foreign birth alone would have been proper. Of course, the uncertain threat of suit, invited by a rule at once so vague and so extensive, is a restriction on freedom of the press almost as direct as a rule of clear liability.

I do not think it an adequate answer to such a threat against public comment, which seems to me necessary if democratic processes are to function, to say that it applies only to false statements. For this is comment and inference, as the Tanzer case suggests, and hence not a matter of explicit proof or disproof. The public official will always regard himself as not bigoted, and will so testify, sincerely enough. And then the burden of proving the truth of the defense will rest upon the commentator who must sustain the burden of showing his inference true. If he fails in even a minority of the suits against him—as the sporting element in trials to juries susceptible to varying shades of local opinion would make probable—he is taught his lesson, and a serious brake upon free discussion established. But the common-law requirement of proof of special damages gives him the protection he needs, while at the same time it does prevent him from causing really serious injury and loss by false and unfair statements. That should be the rule applied here, as the district court held.

Bonneville Power and Mineral Development in the Northwest

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

STATEMENT BY PAUL J. RAVER, BONNEVILLE POWER ADMINISTRATOR

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Paul J. Raver, Bonneville power administrator, before subcommittee of Senate Committee on Public Lands and Surveys:

In appearing before this committee I will attempt to develop the important part hydroelectric resources of the Western States are playing and will continue to play in the effective development and utilization of the resources of the West. In order to do so I would like to indicate briefly my experience with the problems of mineral development in the Pacific Northwest, and to sketch some of the apparent obstacles to this development.

In the opening statements of Chairman O'MAHONEY and Secretary Ickes are expressed two major ideas which are in accord with my experience as Administrator of the Bonneville-Grand Coulee Power Administration during the last 2 years. One of these has been the control by a few large industries of mineral deposits,[1] of knowledge concerning them, and of processes for their use.[2] The other has been the obvious tendency to treat the West as a colonial dependency of the United States, not only by industry, but unfortunately to some extent by Government itself.[3] The people of the West and certain Federal agencies are making some efforts to overcome these two major handicaps, but we must recognize that only a beginning has been made in this direction and that much more thorough and far-reaching efforts are ultimately necessary.

In my following remarks I want to discuss three sets of problems affecting the mineral development of the public lands of the West:

1. Those problems concerned with our knowledge of the extent, quality, and availability of the mineral deposits;

2. Those problems concerned with the utilization of deposits through the development of technical processes and industries located near the deposits; and

3. Those problems concerned with increasing the power supply which is so important to the industrial utilization of many of the deposits.

INVENTORY FACTORS

In considering our knowledge of mineral deposits we should realize that it is necessary periodically to retake mineral inventories because the value of a mineral changes from time to time. It changes as technology changes, in accordance with the needs of using less accessible and lower-grade deposits. One classic example is our ability to utilize 1-percent copper ore today, due to developments in the flotation process, whereas 40 years ago such low-grade ore was not even considered for the production of copper. Similarly, magnesite, which has been used principally for refractory brick, today, under the pressure of our growing need for magnesium, will become one source of that metal through processes developed in recent years. Another striking illustration concerns aluminum. Our supply of bauxite in the United States admittedly cannot last more than a few years if we use it as the sole source of our annual production of alumina. However, one of our most common minerals, high alumina clays, may become in the near future a new source of aluminum due to processes now in the developmental stage.

This need for continuous reappraisal of our mineral resources calls for more widespread mineral investigations in the West. These should include some of the more common minerals, like iron ore, hitherto neglected because of the abundance of deposits in other sections of the country. Until we know more about the extent and quality of such common minerals as iron ore we will not be able to answer with finality the question as to the economic feasibility of an enlarged iron and steel industry in the West. This is certainly the case with respect to those phases of the iron and steel industry in which electric power is most applicable.

Considering the exhaustive studies made by qualified agencies, including the United States Geological Survey, I am puzzled by the constant opposition that has been voiced in many quarters toward the establishment of an integrated iron and steel industry in the Pacific Northwest. Twenty miles from Portland lies a body of iron ore that has been investigated at different times over a period of 40 years by private companies. Claims are made that there are adequate amounts of ore to support an iron and steel industry of moderate size; counter claims are also made that the amount of ore is negligible. I am curious why no authentic information is accessible either through private or public channels on the true situation. Isn't it about time that

---

[1] Bauxite, magnesite, molybdenum.

[2] Beryllium, bauxite, ferro-alloys (skill control).

[3] I. C. C. freight-rate structure.

this situation be clarified by a responsible agency and that the findings be made available? I am satisfied that similar situations exist with respect to many other common minerals in the West.

Regarding our knowledge of minerals that have hitherto not been commonly used in industry, we are in a similar plight. These minerals include those for the treatment of which new processes are being developed or have almost reached the stage of commercial feasibility. Here I can indicate our experience in the Northwest with alunite and magnesite. In the past few months questions have been repeatedly raised as to how much alunite we have to sustain the new process that has been developed for the production of alumina. Utah, Washington, and the Nation eagerly await the answer to that question. Although the Bureau of Mines recently issued an excellent report of investigations on known alunite deposits in the United States, the question still remains as to what deposits exist which could not possibly have been known to the author of this report. Compared with other minerals, our interest in alunite deposits is relatively recent, having been first concerned with the uses of alunite for potash. Only very recently has our interest extended to its use in the production of aluminum. Consequently it is highly probable that we have only begun to make the necessary investigations of our national deposits of alunite.

A similar situation applies for magnesite as a source of magnesium. Obviously we need much more knowledge about this entire group of mineral deposits in the Western States which have hitherto been used on a restricted scale in industry.

Another factor of great importance restricting the approach to our mineral explorations has been the limited industrial concept of acceptable grades of various types of ore, such as chromium, manganese, tungsten, and antimony. For reasons often cloaked by technological justification the industry at large has effectively prevented the use of competitive domestic sources of various minerals by specifying grades commonly available only through import. For example, chrome ore as commonly used must have 45 to 48 percent chromic oxide content, and this grade has been imported until recently solely from foreign sources. I am puzzled by this situation when I am informed by competent technicians that lower grades of ores found in appreciable quantities in the West can be utilized economically if minor changes in industrial practices are made.

Besides the inadequacy of information on the mineral deposits, the data that are available are uncoordinated, spotty, and incomplete. Information on some of the best western deposits is closely held in the files of the large corporations that control them. There is no public agency in the country, I believe, with the power to investigate all mineral claims and deposits regardless of their ownership and to publicize the findings. Consequently, in the case of such common minerals as copper it is an amazing fact that agreement does not exist among experts as to the extent of the available copper reserves of the United States.

Furthermore, whatever information exists about mineral deposits is rarely available on the basis of what might be called the region of a drainage basin. This is important because the drainage basin is the unit for hydroelectric developments in such areas as the Colorado River Basin and the Columbia River Basin. The effective utilization of the power resources of each drainage basin requires a complete knowledge of its mineral deposits.

This brief analysis of inventory problems leads me to certain conclusions:

1. The United States Bureau of Mines and the United States Geological Survey should annually receive greater appropriations for mineral explorations in the Western States. These appropriations should be flexibly spent in at least two channels—

(a) In reappraisal of previous exploratory work on the basis of present-day concepts of mineral values and industrial processes; and

(b) In expanded field studies of mineral deposits, including systematic examination and cataloging of the nonmetallic as well as the metallic mineral deposits of the Western States.

2. In order to implement those suggestions it may be that the present authority of the United States Geological Survey and Bureau of Mines should be so modified as to permit access by these agencies to any mineral deposits regardless of ownership.

3. In order to make the results of these investigations of the greatest possible benefit they should be widely publicized and distributed. As a necessary corollary, publication of the findings, at least in preliminary form, should be released as soon as possible in order to expedite the development of many deposits.

INDUSTRIAL UTILIZATION FACTORS

Even with an adequate inventory of our western mineral deposits, there would remain the problem of their proper industrial utilization. We could, of course, continue to rely upon eastern industries to use western minerals at the time and place determined by them. This, however, would leave many western mineral developments to arbitrary decisions governed by special interests. On the other hand, the most effective and large-scale development of western minerals would unquestionably be secured through the development of industries in the Western States using those deposits. Such a development would reduce the uneconomic effects of monopolistic restraints exercised by certain large corporations. This would be especially secured through the exploitation by new western enterprises of deposits of lower grade than those heretofore in use. Such industrial development would go far toward emancipating the West from its colonial status.

A major difficulty handicapping industrial development based upon western minerals is the lack of studies of feasibility of individual industries. It is not sufficiently appreciated how much this lack of feasibility studies retards industrial development. Today corporations spend hundreds of thousands of dollars in research on markets and processes in order to determine the feasibility of new investments and plant expansion. The small investor simply does not have the money to spend in the necessary research to acquire such information. He must have pointed out to him the industrial opportunities that lie in the West, because he will never get that information from the large corporations who have it tucked away in their files and who are especially interested in seeing that no new competition develops. This obstacle can be overcome if the Congress will see that proper agencies study the mineral resources of the West, the processes to utilize them, and the related industrial opportunities, and that these agencies will prepare and widely distribute reports on their findings.

The few feasibility studies that have thus far been made by the United States Army Corps of Engineers, the Bonneville Power Administration and various other agencies clearly indicate certain obstacles to western industrial development. One of these consists of arbitrary elements in the freight-rate structure on processed and manufactured goods moving between western and eastern points. This subject has been well studied by the Tennessee Valley Authority, and I need merely refer to the reports that the Authority has already issued. Additional study is necessary with special reference to the West.

A related obstacle is the basing-point system under which the prices of many products produced in the West are based upon shipping centers in the East plus freight. This is especially the case of iron and steel products made on the Pacific coast, as has been pointed out in one hearing of the Temporary National Economic Committee.

Another obstacle is the large amount of investment needed in a number of these mineral-using industries. Studies of the Bonneville Power Administration have shown that from $2,000,000 to $9,000,000 are needed for each plant investment in electro-processing industries using western minerals such as electrolytic chromium, electrolytic manganese, electrolytic zinc, and magnesium. While those sums are not very large for many industries, they effectively prevent the average investor from entering these fields. However, there is no doubt that groups of men could be found who would undertake these investments provided other obstacles did not exist.

Among these other obstacles there is, first, the concentration of the output of some of these industries and their markets in the hands of a few corporations. I need not point out to this committee the implications of such concentration to the freedom of enterprise and new industrial development. The chairman is well aware of the classic example of the restraining effects exercised by the aluminum monopoly. He is also well aware of the practices and agreements of the beryllium producers.

Associated with this obstacle of concentration of production and markets is the concentration of technical knowledge of many of these industries in the staffs of a few enterprises. The stimulation of new investment requires the diffusion of this technical knowledge among additional investors and business managements.

I do not mean to imply that these obstacles are completely blocking today all new channels of enterprise in the West. Fortunately, a few new developments are impending. Alumina very likely will shortly be produced from western alunites by means of a process that has been wholly developed by an independent western group, although I must add that this is being accomplished in spite of the stubborn operation of some of the obstacles I have just discussed. Another impending development is the production of magnesium from western magnesites and brucites.

Perhaps a few other recent developments might be cited, but against these are many more apparently feasible opportunities that have not yet materialized. We certainly must question why they have been so long held back. For example, I am greatly puzzled why new electrolytic zinc capacity has not been added to the Pacific Northwest when it is obviously necessary and feasible on the basis of available concentrates and cheap power. Similarly, I am puzzled by the lack of explosives and munitions plants in the Western States in spite of the fact that the raw materials and the power are available, and that there is an undeniable need for the finished products for the defense of the west coast and our Pacific outposts. The same question can be raised with regard to an integrated fertilizer industry for the Western States, based on the tremendous deposits of phosphates in Idaho, the power for the production of nitrates, and the crying need of fertilizer products for western soils. Another case in point is that of the iron and steel industry which I have already mentioned.

In view of these obstacles certain recommendations must follow:

1. The proper agencies of the Federal Government should expand their investigations of processes using western minerals and particularly they should reappraise the possibility of revisions in established processes. A consequence of this recommendation would be the multiplication of laboratories and pilot plants adapting their studies to local resources, fuels, and facilities. This program would be somewhat similar to that of the Department of Agriculture in its

recently established regional agricultural laboratories.

2. The proper Federal agencies should inaugurate a number of intensive feasibility studies dealing with opportunities in industries that would use western minerals, and dealing with those affiliated industries that would further process and fabricate the initial products made from western minerals, as well as those industries that would furnish the necessary supplies and auxiliary materials of the basic industries. Such investigations should be summarized in widely distributed reports. These reports would cover not only the problems of raw materials and processes, but would also cover such matters as the size of markets, transportation facilities and costs, labor supply, availability and costs of fuels, the character and magnitude of competition, and related problems.

3. In order to reduce monopolistic restraints the Department of Justice should be ever ready to undertake investigations where such practices are suspected in industries related to western minerals.

4. Some Federal action should be taken to facilitate investments in new (even if small) business enterprises. Secretary Ickes has already pointed out to this committee the necessity of "providing cheap credit for the development of those resources which have not been a good financial risk up to the present."

5. Under the defense emergency whenever the Federal Government provides for increased production in industries that utilize western minerals, especially where such production is financed directly or indirectly with Federal funds, the policy should be deliberately to have new managements take over any plants or additional plant capacity. If necessary, such managements should be trained by the managements of established plants. Such a program would help reduce the threat of destruction of some small businesses which for various reasons are not receiving defense contracts.

POWER SUPPLY

Today hydroelectric power is the keystone in both the mineral and industrial development of the West. This is due to four reasons. The first is that electric power is an inseparable part of many industrial processes—major electrometallurgical and electrochemical processes, such as those used exclusively for the manufacture of aluminum, magnesium, certain ferro-alloys and certain heavy chemicals, electrolytic zinc, high-grade iron and steel, and many others. The second is that savings due to extremely low-cost power, such as developed by the Federal projects in the West, permits the absorption of certain other costs, such as transportation, which otherwise would render western manufacturing uneconomic. The third is that extremely large quantities of this power are needed which are not readily available elsewhere in the Nation. The fourth reason involves the utilization of electric power in the treatment of low-grade ores whose products would otherwise be unavailable. In view of the fact that a large proportion of the western ores are low grade, the importance of hydroelectric power in the West is immediately apparent.

To illustrate the amount of power required in certain of these products, the now scheduled production of 400,000,000 pounds of aluminum per year in the Pacific Northwest will absorb over 400,000 kilowatts of capacity at Coulee and Bonneville Dams, enough power to meet the ordinary needs of a city of one and one-half million population.

The Bonneville-Grand Coulee Power Administration has assumed an increasingly important role in supplying the large blocks of low-cost hydroelectric power required in the Northwest, particularly in connection with new mineral and industrial development of the region. This administration is the only immediate source of the supply of power in the Pacific Northwest, at least for the large blocks of power necessary in the development of the new electrochemical and electrometallurgical processes utilizing the natural mineral resources of the region. In fact, at the present time, this agency is the major source of supply in the Nation for additional blocks of low-cost electric power suitable for large-scale industrial purposes; the Pacific Northwest contains, roughly, 40 percent of the Nation's potential hydroelectric power, practically all of which remains to be developed by the Federal Government.

The most pressing problem confronting this administration in this region today is to speed up the development of these great hydroelectric power supplies. The great increase in the production of light metals, chemicals, and other materials that must be obtained to meet the present challenge to our national security calls for the immediate expansion of electric power supplies. It is my opinion that the greatest amount of power in the region and Nation can be developed most quickly by installing generators at dams already built, particularly at Grand Coulee Dam.

We are finding that even our most optimistic estimates of power requirements made a year ago must be discarded and replaced by the new and greatly increased power requirements necessitated by the continual growth of industries in the Northwest. In my opinion, the region may be facing during the next few years a critical shortage of power, which may seriously retard industrial development and as a consequence interfere with the present defense effort. Immediate steps to speed the development of additional generating and transmission capacities in the Federal system are imperative, if we are to avoid a critical power shortage and resulting retardation of industrial capacity, as well as possible curtailment of civilian consumption.

During the past 9 years the construction of necessary additional generating and transmission facilities has not been maintained concurrently with the increased power requirements of the Pacific Northwest, so that under even normal circumstances this region would today be faced with serious power shortages, were it not for the power now available at Bonneville Dam and to be available at Grand Coulee. The rapid expansion of industries, due to the national emergency, has made this power situation critical. During the last year demands for energy have increased at a rate unprecedented in the Northwest, resulting from three major factors: 1. Demands for new industries producing vital materials for national defense. 2. Increased consumption generally of electricity due to the continual lowering of electric rates. 3. Increases in consumption resulting from added employment and higher incomes. Inquiries from potential industrial power consumers for information on economic technological and market factors indicate an increasing interest in the advantages of the industrial-power utilization in this region, and negotiations are now in progress with industries expecting to produce ferrochrome, chlorates, and high-grade and alloy steels, all requiring large blocks of power.

In view of these circumstances we have compiled new estimates of the power requirements of the region and have prepared and submitted to the National Resources Planning Board and the Bureau of the Budget a revised 6-year construction program for the fiscal years 1943–48. The net result of this revised program is to advance the Government's hydroelectric power installations on the Columbia River from 3 to 5 years. I am submitting a copy of this report for the record.

Let me point out the significant conclusions contained in this report: Allowing for expansion of production of vital defense materials, particularly aluminum and magnesium, our best estimate indicates that the Pacific Northwest should be prepared to meet a peak load of 1,628,000 kilowatts in 1941, 2,746,000 kilowatts in 1943, and 3,135,000 kilowatts in 1945. The area's present net assured capacity, after allowing only 162,000 kilowatts for reserve and exclusive of Bonneville and Grand Coulee, is only 1,062,000 kilowatts. Since additional load in the area must be met by the Federal system, we must be prepared to supply 566,000 kilowatts of firm power in 1941, 1,684,000 kilowatts in 1943, and 2,073,000 kilowatts in 1945.

The facts appear even more startling when we realize that the projected increase in load calls for additional capacity by 1943 equal to one and one-half times the present capacity of all the Northwest's developed power resources other than Bonneville and Grand Coulee, and by 1945 this demand will have increased to almost twice the present rated capacities of these systems. Putting it another way, the projected increase in demand in the Northwest by 1945 amounts to approximately four times the rated capacity of Bonneville Dam when it has all of its generators installed. To meet these requirements we must advance the present schedule of installation of generators at Bonneville and Grand Coulee and advance correspondingly the installation of necessary transmission facilities. The new schedule for installation of generators is as follows:

Recommended installation schedule for generators at Bonneville and Grand Coulee (estimate of June 4, 1941)

Anticipated date of installation	Units added		Total installed capacity (kilowatts)		
	Bonneville	Grand Coulee	Bonneville	Grand Coulee	Total
	Numbers	*Numbers*			
Present installation	1 to 4 inclusive.		194,400		194,400
Aug. 1, 1941		L3 [1]	194,400	108,000	302,400
Aug. 18, 1941	5 [1]		248,400	108,000	356,400
Dec. 1, 1941		L [2]	248,400	216,000	464,400
Jan. 1, 1942	6 [1]		302,400	216,000	518,400
Mar. 1, 1942		L1 [1]	302,400	324,000	626,400
January 1943	7 [2]		356,400	324,000	680,400
July 1943	8 [2]	L4 [2] and R1	410,400	540,000	950,000
September 1943	9 [2]	L5 [2] and R2	464,400	756,000	1,220,400
November 1943		L6 [2] and R3	464,400	972,000	1,436,400
December 1943	10 [2]		518,400	972,000	1,490,400
January 1944		L7 and R4	518,400	1,188,000	1,706,400
March 1944		L8	518,400	1,296,000	1,814,400
May 1944		R5	518,400	1,404,000	1,922,400
September 1944		L9	518,400	1,512,000	2,030,400
March 1945		R6	518,400	1,620,000	2,138,400

[1] Under construction.
[2] Funds appropriated and foundations under construction
[3] Now under bid. Other generators at Grand Coulee awaiting congressional action as recommended in this schedule.

NOTE.—Schedule based on best construction and installation information as of date. Subject to revision as conditions warrant.

All of the 10 Bonneville generators have been authorized and are under construction, scheduled for completion by 1943; 4 are now in operation; the fifth unit will be completed in August and the sixth unit in December of this year; and the last 4 units will be completed in 1943. The Army engineers are cooperating with us to advance this schedule as much as possible. Only 6 generators have been authorized at Grand Coulee, the first to be completed in August and the second in December of this year, the third to be completed in March 1942, and the remaining 3 units, not yet scheduled, to be completed in about 2 years. According to our estimates, 9 more units, including construction of the Coulee east powerhouse, should be ordered immediately and completely installed by 1945. We have been informed by the manufacturers that with necessary priorities, additional units at Grand Coulee can be completed to meet the generator schedule recommended in this report.

The report also summarizes the additional transmission lines and substations that should be authorized for construction during the next 6 years in order to meet the area's power requirements. This program, summarized in part II, indicates that construction of transmission facilities totaling $66,463,000 should be authorized for the fiscal year 1943, and that an immediate advance on this program of $30,000,000 be authorized in order to avoid delay in completion of the facilities. In other words, in order to complete these facilities in 1943 it is necessary that we be authorized to order certain materials and prepare our specifications and plans for this construction in advance, because it is becoming increasingly difficult to get materials delivered in time to carry out a program for 1 year unless orders for the materials for that year's program are made in advance of that year. We expect to present this request to the Budget Bureau next month.

Finally, the report recommends the immediate authorization for the development and construction of a dam and power house at Umatilla, or other potential site, for a multi-purpose power project on the Columbia River in order to be prepared to meet additional demands for power.

This represents our current forecast of power demands and our program to meet them.

We must consider also, however, the immediate problem in which the region's power demands are reaching the capabilities of installed hydrogenerators, thus necessitating the use of steam.

The latest survey of the Federal Power Commission indicates that a combination of three moves will meet this situation: (1) Interconnections to obtain full benefit of water and demand diversities, (2) use of steam, (3) curtailment of nonessential uses of power (not now necessary, but if it becomes necessary on a priority basis).

The Bonneville Power Administration has been a consistent advocate of all of these moves where the circumstances warrant. Already we have established interconnections with the cities of Eugene, Centralia, Grays Harbor, Tacoma, Seattle's Skagit plant, Washington Water Power Co., Portland General Electric Co., and Northwestern Electric Co. through the P. G. E. Spilled water was stored with the Washington Water Power Co. and returned partially to Bonneville when it was needed. Recently when a generator at Seattle's Skagit plant failed, P. G. E.'s steam was made available.

When and if it becomes advisable from the point of view of national defense to make additional interconnections, the Bonneville Power Administration will make them.

I should like to point out, however, that the Bonneville-Coulee grid will in itself serve the purpose of interconnection as the load in the region grows because it will supply power to the various sections of the Northwest over and above the capabilities of existing facilities. In other words, our tie lines will become the supply lines to the various parts of the area, and interconnections and interchange as such will become increasingly incidental.

Much has been said and done with reference to power for defense industries. The importance of our meeting this industrial demand cannot be overemphasized, and I believe our 6-year program anticipates providing for these plants as they are built. The region and the Nation can benefit further from these developments as the facilities which are provided for these national-defense needs will also meet the long-range, peacetime requirements of the region.

We believe, however, in the development of such local hydro facilities as will contribute to the defense effort and to the future development of this region. We have in mind particularly such developments as Nisqually, Cedar Falls, the raising of Ross Dam, and the additional generators at Rock Island, all of which can be installed as soon, if not sooner, than equivalent steam. These are recommended to be installed concurrently with our 6-year program.

I believe that the Federal Power Commission, which also has recommended the Nisqually development, will concur with me in my recommendation for these other additional hydro facilities. We do not concur in their recommendations for additional steam installations in our region since the hydro installations can be made more quickly in dams already built, are much less expensive to operate, and fit into plans for the long-range development of the region.

In conclusion, I wish to emphasize that the three programs of mineral development, industrial development, and power development, advancing simultaneously, are indispensable to the sound economic progress of the Western States. If we are to avoid the wide swings of employment and the weaknesses of an economy based largely on the liquidation of minerals, timber, and other raw materials, we must encourage individual enterprise to develop additional western industries. Through this development we will not only strengthen the western economy and release it from its colonial status, but we will also at the same time enhance our ability as a Nation to defend ourselves.

The Nation as a whole will feel more confident, I believe, when a diversified industrial structure in the Western States stands ready to supply defense materials to the East or to the defense bases of the Pacific area.

Discussion of Current Events

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 6, 1941

RADIO ADDRESS BY HON. FRED BRADLEY OF MICHIGAN

Mr. BRADLEY of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address which I delivered over the radio on August 6, 1941:

The pro-war spirit here in Washington seems to have quieted down somewhat during the past week, which is probably attributable to several causes. In the first place, we invariably notice that certain of the war-minded administration spokesmen, and, in fact, Washington warmongers in general seem to quiet down considerably when they are trying to put something across, and, of course, right now the matter under consideration is the very important question of whether or not the draftees and the guardsmen will be retained in service after their year of training is over. You can readily appreciate that if the warmongers were at present active in selling the people on the idea that we are dangerously close to war and that their sons might be shot at, they would then expect a greater clamor from the people against retention of these boys. Secondly, despite their more or less quiet attitude, there has already been such a storm of protest coming from you people back home against further retention of these boys in service and against their continued warlike moves, that the interventionists have thought it best to pull in their horns a bit temporarily.

Now, it is very true that all indications point to an overwhelming sentiment in the Nation against keeping these boys in service after their year of training is over because the people generally believe that we, as a Nation, are in a much safer relative position today than we were a year ago, when these boys were called into training.

Now a year ago remember that Great Britain was living in daily expectation of a land invasion by Hitler's hungry hordes. France and the Low Countries had fallen; Norway had long since been occupied and was a potent air and submarine base for Hitler; and also England's fortunes in Africa were none too bright. Also, it must be remembered that a year ago Russia was then regarded as a possible future open ally of Hitler and as such could, of course, be of considerable help to Japan in the Pacific. Today we find the situation entirely different. England, with our help, is rapidly approaching that point at which she will be equal, if not superior, to Germany in the air and Russia has proven to be a far more formidable foe of Hitler's than most people had imagined and now Mr. Hitler finds himself with a real war on both sides of him. Furthermore, he finds an ever-increasing menace from sabotage and undercover guerrilla resistance in the conquered nations whose people may have been conquered physically but are far from being subdued mentally.

Insofar as we ourselves are concerned, no one can deny that, despite its many disappointing aspects, nevertheless we are considerably improved over a year ago in our defense production set-up and we can expect an ever-increasing amount of war material being sent to our training centers or far-flung outposts. Officers recently back from our camps and training centers, in fact, even General Marshall himself, have told me our enlisted men have absorbed a remarkable amount of training considering the inadequacies of equipment and the alarming need for more officer training in modern warfare. Yes; any possibility of invasion by Hitler in the near future is indeed but a mere possibility. Japan is expected by military experts here to continue to bluff, but they doubt she will actually seek war with the United States and Russia. She seeks to ride a winning horse.

Now, with respect to our own enlisted boys who are in training and whose retention is now sought by a bill recently reported on the floor of the Senate and one which has come to us on the floor of the House from our own Military Affairs Committee. These bills seek to do far more than merely retain these boys in service. If passed as now written, and I suspect that they may be passed, then you will have found that the Congress has given the President the go ahead signal to keep these boys in indefinitely and to send them

overseas or anywhere in the world that the President sees fit. The House bill starts right out by declaring that the Nation is imperiled and that a state of national emergency exists and hence the President, as the Commander in Chief, shall thus be given full authority to send our troops any place he wants and whenever he wants to. Furthermore, greatly added emergency powers will be turned over to the Chief Executive.

I have talked to no one and have heard from no one in or out of the camps, sons or parents, who are not willing to lay down their lives for the defense of our country when they feel that the Nation is in true danger, but on the other hand I do find a greater reluctance than ever to engage in someone else's war, the kind of war which many people in America now feel is for the sole purpose of the maintenance of the British Empire. These sincere people's preparation for our defense is one thing but they suspect we may be training for an offensive war—another A. E. F.—thus a great many of these people are disturbed and alarmed over what we have realized here in Washington for a long while is the fact that we are able to rely much more on reports originating in London regarding our future war moves than we can on reports originating in our own Nation's Capital. In other words, more and more people are realizing that to all intents and purposes our present foreign policy is being more and more definitely dictated by Mr. Winston Churchill at No. 10 Downing Street, London. They are justly alarmed because if you will look back through the factual records of the past 2 years you will find that Mr. Churchill and other British spokesmen have been frequently predicting what we in America would do. Official Washington would deny any such intentions but then in a short time the administration would go right ahead and do exactly what Mr. Churchill had predicted we would do.

So these folks are perhaps justly concerned and alarmed by certain London reports of the past week. They are alarmed because while there is an apparent calm on the part of the warmongers here in Washington, nevertheless Mr. Churchill in London makes a positive, emphatic, and unqualified statement that America "is advancing in rising wrath and conviction to the very verge of war." Either Mr. Churchill is grossly misinformed as to the attitude of you folks back home or else he has inside information that that certain little clique of warmongers here in Washington, and in certain other parts of our Nation, is very shortly going to be able to again stick our manpower into England's war of self-preservation and that they will be able to bring about that certain "attack" upon your boys without which "attack" Mr. Roosevelt assured you last fall, your boys would not be sent into any foreign war. And then, too, it is alarming to learn, for instance, that Gen. Sir Claude Auchinleck, the new Commander in Chief of the British Army in the Middle East, says that American war power will be needed if the war is to be won properly. He is reported to have told correspondents in Cairo, Egypt, that "I always thought the war must be won in Europe, in Germany, on Germany's own soil. Therefore, I see as much need for American manpower in this war as in the last." And then we find also that the general whom he succeeded, the famous Sir Archibald T. Wavell, was of the same opinion. Now it is a fact that neither of these generals has ever fought on Germany's own soil. No British land force has been even close to it and none have been on it as the war rounds out its second year. Hence, we do wonder whether American manpower is destined to be the manpower needed to break into it and to storm Berlin. If so, that will be the most costly expeditionary force in all our history. Again it is alarming to find British statesmen, members of parliament if you please, for instance the Honorable Mr. Wedgwood, coming to this country as a guest of this country and informing us that "we are in this war up to our necks and it is up to we Americans to assume some responsibility for the conduct of the war," and above other things, he said that we should get a more sensible Congress and get going.

Well, possibly the Congress has made some mistakes. Possibly it has made many mistakes, and not the least of which, perhaps, has been our lease-lend bill, under which we find that today, at least, Great Britain does not seem to be playing entirely fair with us. She does not seem to be playing cricket. Repeatedly, stories, properly authenticated stories, come to us here in Washington telling us of numerous instances in which we have shipped war materials to London under the terms of the Lease Lend Act only to find that the same materials have found their way back into the commercial trade routes to our neighbors to the south in Latin America, where these same American materials, which we have given her, are being sold by the British in direct competition with our own same materials at much lower prices. Let me cite but a few typical cases which have come to my attention in the past few days. Tinplate and aluminum, of which we have a scarcity, are bing resold in the Argentine. Precision machine tools, made in Wisconsin and consigned to Coventry, have been resold in Brazil. Steel sash given to aid in rebuilding of Coventry has turned up in Brazil. And as a capper, a certain Member of Congress told me he knew of a Pan-American Clipper plane which had been taken off our own commercial runs and turned over to the task of ferrying bomber pilots had just been acquired by the Argentine. There would be a better spirit of lease-lend and in our general attitude toward Great Britain if she played a little fairer with Uncle Sam.

Thus, perhaps, England seeks to maintain her credit in order that she can continue to pay cash on the barrel head for war materials which she is able to purchase from our good friends up north in Canada. And even in Canada, we find some who do not cooperate too well in our concerted war efforts. My attention was called to an instance in our own district where a contractor, unable to purchase steel in the United States for a non-defense building, was able to secure it in Canada at a lower price than our regular prices. Speaking of our good friends in Canada, for whom I have the greatest admiration and sympathy, may I also remind you that in many of the letters coming to me protesting against the retention of our selectees and guardsmen over a year, they remind me of the fact that Canada still has but a 30-day conscripted military training program and that, also, their overseas duty is strictly on a voluntary basis. So these same people feel that our boys will be discriminated against if we do pass a bill calling for a state of national emergency and thus permit our boys, who have been conscripted, to be put in a position where they can be sent to any part of the world to fight on foreign soil.

So while London's predictions are disquieting, we are also concerned by the unusually bold, and often belligerent, front assumed by some of our own statesmen when in London. For instance, it is disquieting to hear Mr Harry Hopkins make an international broadcast to the entire world over a London radio station in which he proclaimed that United States naval vessels are now "patrolling alongside" and "parallel with" British naval craft. This, despite the fact that within the past 2 weeks our Secretary of Navy, Mr. Knox, specifically denied to a committee of Congress that American naval craft were being used in convoy service along with the British Navy and in getting aid to Britain even though our occupation of Iceland provided the best excuse possible. So, after all, many Congressmen and many of you people back home will want to know the exact truth in the face of these conflicting statements by the Secretary of Navy and Mr. Harry Hopkins who, after all, is the super-lease-lend coordinator and a close bosom friend of the President and now apparently is our official ambassador of good will sent to Moscow to grab, in the spirit of friendship, the bloody hand of Joe Stalin—he who for the past 20 years has been doing his level best to create discord and chaos and, yes, even to bring about an eventual revolution in our own land.

All of these things are very disquieting, and it is also disquieting to know that we recently sent hundreds of our best American Army pilots to England as observers. I was told by one of the pilots who recently carried some of these boys overseas in a United States Army bomber, upon whose side was painted an American flag but which otherwise was completely unarmed, that they were greatly concerned when a German plane suddenly swooped out of the sky far out over the Atlantic and easily overtaking our slower American plane, flew alongside of it for a few moments presumably making necessary identification, and then with a graceful wave of her wings turned off her course to be certain that she was not guilty of having caused that so necessary "attack" on your boys.

Yes, indeed; our Nation may be perilously close to actual involvement in a shooting war, a war of offense, rather than defense, a war that may mean the most costly American expeditionary force in all history in order "to defeat Hitler properly." But, if so, we have ourselves to thank for it because we have permitted ourselves to be gradually dragged closer and closer to actual participation in it and now we have our necks so far out we may have to shoot our way out.

Testimony of John L. Lewis on the St. Lawrence Project

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 5, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, several days ago Mr. John L. Lewis appeared and testified before the Rivers and Harbors Committee on the proposed St. Lawrence project, and I cross-examined him. I brought out the fact that in the coal-producing States electricity can be generated with coal and distributed to everybody in those States at the T. V. A. rates or the Ontario rates without loss on legitimate investments. The same thing can be done in those States that use natural gas.

Not only that, but you can generate and distribute power all over the United States at the T. V. A. rates, and save the American people more than $1,000,000,000 a year on their light and power bills without loss on legitimate investments.

That would improve the standard of living on the farms, in the cities, and in the small towns and communities, and would lift from the commercial consumers, the hotel operators, the filling sta-

tions, and the garage operators, and others who pay commercial rates, overcharges that now amount to more than $380,000,000 a year.

It would lift from the industrial users of electricity the present overcharges amounting to more than $275,000,000 a year.

It would lift from the residential consumers their present overcharges amounting to more than $360,000,000 a year.

You could then electrify every farm home in America at rates the farmers could afford to pay.

That would bring to the people of this country a new day of progress and prosperity for all.

I am inserting some excerpts from the testimony of Mr. John L. Lewis before the Committee on Rivers and Harbors.

TESTIMONY OF JOHN L. LEWIS, PRESIDENT OF UNITED MINE WORKERS OF AMERICA

Mr. RANKIN. Mr. Lewis, you oppose all of these developments of waterways, do you?

Mr. LEWIS. No; we never opposed the T. V. A.

Mr. RANKIN. Mr. CARTER, of California, this morning asked why we didn't use coal instead of developing these water-power projects. Were you opposed to the development of the Central Valley project in California?

Mr. LEWIS. No.

Mr. RANKIN. You were not opposed to the development of Boulder Dam?

Mr. LEWIS. No.

Mr. RANKIN. You were not opposed to the development on the Columbia River projects, Bonneville and Grand Coulee?

Mr. LEWIS. That is right.

Mr. RANKIN. And the Umatilla project?

Mr. LEWIS. That is right.

Mr. RANKIN. You are not opposed to the development of the Florida Ship Canal?

Mr. LEWIS. Which canal?

Mr. RANKIN. The Florida Ship Canal?

Mr. LEWIS. Not for that reason—I am not opposed to the Florida canal at all; I have not expressed any opinion on it.

Mr. RANKIN. Have you expressed any opinion on the opening up of the Tombigbee waterway connecting the Tennessee River with the Gulf?

Mr. LEWIS. I am not familiar with that particular project.

Mr. RANKIN. Now, Mr. Lewis, you are opposed to this project, as I understand it, largely because of its furnishing an inland waterway to the Great Lakes, largely because of the transportation features of it; is that correct?

Mr. LEWIS. No; I am opposed to it because of the tremendous amount of economic effect on this country.

Mr. RANKIN. I understand you mean the economic effect that would occur from opening up the channel into the Great Lakes?

Mr. LEWIS. That is right.

Mr. RANKIN. If that phase of it were eliminated, would you be opposed to the development of the water power on the St. Lawrence?

Mr. LEWIS. Well, that would depend upon how much it would cost the United States taxpayers, and for what purpose the power would be utilized and where it would be utilized. That would be a separate study of itself, and that would require some examination in order to give an intelligent opinion on it.

Mr. RANKIN. You did not oppose the development of the Tennessee Valley Authority?

Mr. LEWIS. No; we did not oppose it.

Mr. RANKIN. You did not oppose that?

Mr. LEWIS. No; we had faith in the Government at that time.

Mr. RANKIN. How is that?

Mr. LEWIS. We had faith in the Government at that time.

Mr. RANKIN. We still have faith.

Now, Mr. Lewis, if this water power on the St. Lawrence can be developed at a cost that will amortize the investment in 50 years, would you oppose the proposition?

Mr. LEWIS. Well, I really would not want to answer a hypothetical question. I am perfectly clear in my mind as to what I oppose, but I am not clear in my mind as to what I might oppose in the future under any different set of facts.

Mr. RANKIN. But you are not opposed to the development of hydroelectric power where it can be economically developed and distributed, are you?

Mr. LEWIS. We have not opposed the development of hydroelectric power where it can be economically developed, but we are opposed to this project.

Mr. RANKIN. This morning in reading your statement, you asked this question: "Why is it that public officials, hell-bent on fighting public utilities, seldom, if ever, think in terms of municipal or Government steam-power generating plants—with coal as the basic fuel—when they launch these sporadic attacks on utility rates?"

I presume I am one of the fellows who has been pretty "hell-bent," as you expressed it, on attacking exorbitant utilities rates.

You contend, as I understand you, that you can develop electricity with coal as cheaply as you can with water power?

Mr. LEWIS. Cheaper in most instances.

Mr. RANKIN. Cheaper in most instances?

Mr. LEWIS. Yes.

Mr. RANKIN. Then are you opposed to compelling the distribution of that power at reasonable rates to the people who use it?

Mr. LEWIS. Am I opposed to the distribution of it?

Mr. RANKIN. Are you opposed to compelling utility companies to distribute that power at reasonable rates?

Mr. LEWIS. No. I am not opposed to reasonable rates for electricity, if that is what you mean.

Mr. RANKIN. I presume I am one of the men who was referred to here as being hell-bent on attacking utility rates.

Mr. LEWIS. I did not know that you were "hell-bent." If you are and want to so designate yourself, it is all right with me.

Mr. RANKIN. I never heard it expressed that way before in public.

Mr. LEWIS. If you want to put yourself in that classification; all right, I do not mind.

Mr. RANKIN. I am pretty strong on forcing electric rates down to the people who have to pay the bills.

What can you lay this coal down for at, we will say, Chicago, Ill.? How much a ton?

Mr. LEWIS. Sir?

Mr. RANKIN. What can bituminous coal be laid down for at, we will say, Chicago, per ton?

Mr. LEWIS. It depends upon from what field it comes.

Mr. RANKIN. Anywhere you can get it; you represent the coal operators or the miners, don't you?

Mr. LEWIS. For $4 a ton for Indiana coal in Chicago, New River coal.

Mr. RANKIN. That includes everything?

Mr. LEWIS. Yes; that includes everything.

Mr. RANKIN. All right; do you know what it costs to generate power with coal, as a rule, what the thumb rule is?

Mr. LEWIS. I do not pose as a technician on these things, or as an expert.

Mr. RANKIN. The testimony we have had here from men who did pose as experts was to the effect that power can be generated with coal for about 1 mill per kilowatt-hour for every dollar a ton paid for that coal. That being the case, they could generate electricity at Chicago for 4 mills per kilowatt-hour, could they not?

Mr. LEWIS. If you say so, I could not recall.

Mr. RANKIN. You could lay down coal, anywhere in Illinois, at about the same rate as you could lay it down in Chicago?

Mr. LEWIS. That is right.

Mr. RANKIN. It does not cost any more to distribute electricity that is generated with coal than electricity generated by water power, does it?

Mr. LEWIS. If you say so. You have drawn your own conclusions.

Mr. RANKIN. You know that much about electricity.

Mr. LEWIS. If you say so, I will accept it. Of course, I do not pose as an expert on that.

Mr. RANKIN. I understand. You would not agree that electricity generated with coal could be distributed at the same rate rate as electricity generated by water power?

Mr. LEWIS. I say, excepting that. Conceivably, that would be a logical assumption.

Mr. RANKIN. A logical assumption?

Mr. LEWIS. A logical assumption; yes.

Mr. RANKIN. Then they ought to be able to distribute this power all over the State of Illinois as cheaply as they distribute it throughout the T. V. A. area, should they not, since they pay more than 4 mills per kilowatt-hour wholesale all over the Tennessee Valley area? Herrin, Ill., is one of your coal fields, or is near one?

Mr. LEWIS. That is right.

Mr. RANKIN. What can you lay the coal down at Herrin, Ill., for, bituminous coal, per ton?

Mr. LEWIS. Probably $2.40 a ton.

Mr. RANKIN. Then they ought to generate power there at not to exceed 3 mills per kilowatt-hour.

But, as a matter of fact, when they distribute electricity to those miners they charge them more than twice as much for what electricity they get as they do to the farmers and others in the Tennessee Valley area. So, do you not think that I am justified in being "hell-bent," as you express it, in demanding that this power be distributed to the people, especially the miners who dig this coal, at reasonable rates?

Mr. LEWIS. You know, I did not know what your attitude was, about being "hell-bent," as you described. I said I could not understand why those people who were so "hell-bent" did not insist that there be erected steam plants for producing electricity as against water-power plants at a greater expenditure and investment on the part of taxpayers.

Mr. RANKIN. I am not criticizing your statement. You went a little strong, but that is all right.

Mr. LEWIS. There is not anything between us, then.

Mr. RANKIN. What is that?

Mr. LEWIS. There is not anything between us on that, because I take no exception to your desire to have cheap rates and honest rates.

Mr. RANKIN. I am not taking exception to your statement. But what I am trying to say is that whether this power is generated with coal, gas, oil, or water, it can be distributed to all the American people at the T. V. A. yardstick rates, without loss.

As I understand, the difference that seems to exist is that you think that instead of demanding the development of this water power, we should be demanding the building of steam plants. That is about the only difference I see, so far as it has been developed, between your views and mine on this subject. As a matter of fact, this St. Lawrence project is a long way from the coal fields. It is a natural resource. It is owned, half of it, by the Federal Government, just as the Tennessee River was wholly owned by the Federal Government.

So here is a natural resource going to waste.

Do you not think that we are justified in developing that power, where the development will bring reductions amounting to several hundred millions of dollars a year to the ultimate consumers in that area?

Mr. LEWIS. Is that power plant going to be erected in the United States or Canada?

Mr. RANKIN. One end of the dam is to be in the United States and one end in Canada. I do not know where the engineers are going to put the generating plants; but it does not make any particular difference, provided we get our portion of the electricity; and I have the figures from an engineer here who is opposing the proposition.

He says that it will cost from 3.4 mills at Buffalo to 4.5 mills at Albany, to generate electricity with coal. That, of course, is firm power. Then he also admits that the firm power at this dam would cost 1.77 mills per kilowatt-hour; that it can be transmitted economically within a radius of 300 miles, and that the ultimate cost of the transmission, including the line losses, would be, for the 300 miles, 1.5 mills per kilowatt-hour.

That would bring the entire cost to about 3¼ mills per kilowatt-hour, which is considerably cheaper than he says it could be developed at these points with coal.

Now, if that is the case, do you not think that we are justified in developing this power and saving this great wealth that is going to waste?

Mr. LEWIS. I do not even know that that is the case, because I do not have any confidence in these preliminary estimates of cost for developing this St. Lawrence project.

Mr. RANKIN. This was from an engineer that gave these figures, one who is opposed to the development. Of course, he is opposed to it for different reasons, probably, than what you express; but if that is the case——

Mr. LEWIS. I beg your pardon. I am not trying to ask you a question. I am rather expressing an opinion myself.

Mr. RANKIN. Yes.

Mr. LEWIS. But, is it not true that we rarely find these great projects can be completed upon the basis of the original estimates of the cost of their engineers?

Mr. RANKIN. Well, sometimes they cost more than the estimated costs; but do you realize that if this power is distributed over this area, do you realize what that yardstick will mean in the reduction of electric rates to the people in that area, just in the fixing of a yardstick at the rates based upon the cost of generation, transmission, and distribution, with a reasonable return on legitimate investment? Do you understand that the chances are that it will break the rates in that area several hundred million dollars a year?

Mr. LEWIS. Again, I ask a question merely to make a point. Is that the only way that Congress can protect the people of this country against excessive rates for electricity, by building the St. Lawrence waterway project?

Mr. RANKIN. Now, Mr. Lewis, you put your finger right on the spot. I will say to you frankly that I have studied this question as much as any man, in the time that I have had, in or out of Congress, I suppose. I have tried to find every way in the world, or any way in the world, to bring these rates down. I have found that there is not a State that depends on a State utilities commission that gets reasonable rates, and I have the figures here from every State in the Union.

The only way we have ever found to bring these rates down is through some public generation, transmission, and distribution, or by the application of a yardstick to various areas that by its very force would compel the private utilities to bring their rates down.

I will give you a glaring example, and it ought to be very impressive to you, because it is right in the center of the coal fields.

Down at Birmingham, Ala., there are two cities that might be termed ordinarily suburbs of Birmingham: Tarrant City and Bessemer. They built a line up to and connected with the Tennessee Valley line, I believe, at Gunthersville; brought this power in and distributed it in those two municipalities at the T. V. A. yardstick rates. It immediately broke the rates in Birmingham a million dollars a year.

That is the effect this would have in New York and Boston and Albany. I know they are going to say what they have always said, that we are selling below the cost of production.

The power at Birmingham is not coming from the Alabama Power Co.—not distributed by the Alabama Power Co., but is distributed by the Birmingham Electric, which is owned by the Electric Bond & Share. They bought that power wholesale from the Alabama Power Co. The Alabama Power Co. is developing this power, generating it at the Gorgas plant with coal; but they sell it to the Birmingham Electric at a fairly reasonable wholesale rate; but when it was distributed to the people of Birmingham, they were overcharged at least a million dollars a year, according to what they are selling it for now, with the result that the laboring people there, as well as all others, were charged such exorbitant rates that they could not use enough electricity to employ those electrical appliances necessary for their homes and for their business establishments. I want to say in this connection, this same Alabama Power Co. shipped its electricity over into my district, in Mississippi, and sold it wholesale for 4 mills a kilowatt-hour in a county that was buying the T. V. A. power at 6 mills a kilowatt-hour, and yet they were selling it retail to the people at about twice what we were selling it for, or what our cooperative association and municipalities were selling it for in the T. V. A. area, in the same county.

Now, do you not think that where these yardsticks can be provided, so as to force these rates down to the ultimate consumers, that that should be done every time there is an opportunity to develop power that is already owned by the Federal Government, as it is in these navigable streams?

Mr. LEWIS. I make no objection to that, sir, providing that can be done on a basis that is economical and will protect the interests of all concerned; but I do object to this St. Lawrence project because of the uneconomic factors that are inherent in the project which will reap inconceivable and almost incalculable damages upon economic America.

Mr. RANKIN. You are speaking of transportation?

Mr. LEWIS. I am speaking of the transportation and the trade impact of the whole thing.

Mr. HALL. Will the gentleman from Mississippi yield?

Mr. RANKIN. I will.

Mr. HALL. You mentioned about this power reaching the people of Boston, and the other day you mentioned it reaching the people in Michigan.

I am just wondering how that can be done under this bill, which provides that it must go first to the New York State Power Authority to be sold by that body. I believe under the act of the legislature creating the Power Authority—I may be wrong—they can only sell it to the people of the State of New York.

Mr. RANKIN. Of course, the Legislature of New York has nothing to do with what I say.

Mr. HALL. This agreement provides that it will be sold to the New York State Power Authority.

Mr. RANKIN. This has not gone through yet, and I think I have announced time after time that when this bill goes through it must not discriminate against other people within the distribution radius.

Now, the gentleman has spoken about my statement the other day. I said that provided we added Niagara Falls to it, Niagara power, that that would reach the State of Michigan; but, of course, the St. Lawrence would be a little too far away.

The reason I said that Niagara power would reach the State of Michigan is because they transmit power from Niagara Falls to Windsor, Canada, which is right across the river from Detroit. It is 238 miles from Niagara Falls.

Mr. HALL. I just wanted to call the gentleman's attention to the fact that as the bill is now constituted——

Mr. RANKIN. I understand.

Mr. HALL. And as it is now written, including the New York Power Authority, this power can only go to the people in New York.

Mr. RANKIN. You understand that this is Federal power, and there must be some change in that provision of the bill to enable us to reach the people within the distribution radius.

Mr. HALL. There is doubt, however, about this, as expressed by the Governor and the Lieutenant Governor as to whether this belongs to the Government.

Mr. BELL. You heard the testimony of the Governor and the Lieutenant Governor say that this power belonged to the State.

Mr. HALL. That is right.

Mr. RANKIN. That statement is not borne out by the Ashwander case and the Appalachian Power Co. case. Personally, I never had any doubt about it.

Mr. HALL. They discussed those cases and said that the United States Supreme Court has never decided it.

Mr. RANKIN. They did say that, but I think that they are mistaken about it, because I heard one decision read, and I have read the other one. I am familiar with both cases.

This power would come under the Ashwander case, and Chief Justice Hughes said that power generated by this falling water in navigable streams was Federal power and belonged to the United States. So the same thing would apply here.

Mr. HALL. I said that the contention of the Governor and the Lieutenant Governor of New York is that this power is owned by New York.

Mr RANKIN Well, New York does not own it. I certainly would not admit that New York owns it.

Now, Mr. Lewis, I looked up the rates here in the State of Illinois. We have gone over that now, and I think I have shown that you can generate power anywhere in the State of Illinois at about the same rates that you can generate it with hydropower.

The CHAIRMAN. If you will permit me for 1 minute, on page 3 of the bill there appears this language:

"In addition, the arrangement shall include provisions protecting the interests of the United States and assuring a widespread, equitable disposition of the power to domestic and rural consumers within economic transmission distances."

Mr. RANKIN. That is right.

The CHAIRMAN. It does not say within the State of New York.

Mr. HALL. Pardon me, Mr. RANKIN. I am talking about the power of our New York State Power Authority under the act of the legislature.

The CHAIRMAN. That applies to your power in New York and does not apply to this.

Mr. HALL. The New York State Power Authority under the act of the legislature by which it is set up, in my opinion, cannot sell power to anyone outside of the State of New York.

Mr. RANKIN. When we make them a Federal authority, they can sell it anywhere.

The CHAIRMAN. I think it depends upon what Congress would do.

Mr. RANKIN. I will say to the gentleman from New York [Mr. HALL] that what we call the power block in the House have a well-defined program that this power shall be generated and distributed to everybody within the distribution radius alike, and we expect to stand on that platform.

Now, getting back to the State of Illinois, Mr. Lewis, I find that last year, according to the Ontario rates, the electric consumers in Illinois were overcharged $92,808,000 for electricity alone. Now, most of that power is generated with coal, is it not? It could have been distributed at Ontario rates.

Then they come back and say Ontario pays no taxes. I looked up the taxes paid in Illinois. The taxes and cash contributions and free services—and the Federal Power Commission tells me that it has changed very little since 1936—in that year taxes, cash contributions, and free services paid or rendered by both private and public electric utilities in Illinois, including both State and Federal income taxes, amounted to only $25,156,865, which, taken from this overcharge last year to the people of Illinois, left a net overcharge of $67,251,474.

Mr. LEWIS. Well, sir——

Mr. RANKIN (continuing) And if you can do it with coal—and I submit that you can do it with coal; not as cheaply as you can with water power, but you can generate power all over the United States with coal, gas, or oil and distribute it at rates that on the present load would save the consumers a billion dollars a year

Now, how are you going to get that done?

Mr LEWIS. Well, my position, in a nutshell, is this, just this: That I strenuously object, as uneconomical to the displacement of coal by water power, where such power can be produced cheaper by steam, simply as a means of circumventing downright incompetence or dishonesty on the part of public-service bodies or local municipal officials.

If it is true that the restraining and regulatory influence of Congress can only be exercised in behalf of the legitimate consumers of this country by going up into Canada and perfecting the St. Lawrence project at an expense of $300,000,000 or a billion dollars, as the case may be, then I think it is just too bad and that the subject needs further consideration by Congress.

Mr RANKIN. You say going up into Canada?

Mr. LEWIS. Yes. The St. Lawrence is all in Canada.

Mr. RANKIN Now, we propose building a project down at Clarks Hill on the Savannah River between South Carolina and Georgia, developing water power there. You would not object to that?

Mr LEWIS. I am talking about the St. Lawrence, which is geographically located, as we know, in Canada.

Mr. RANKIN. I understand, and you spoke of it because it was over in Canada, or a part of it

Mr LEWIS. You know the mouth of the St. Lawrence is only 100 miles from Newfoundland.

Mr. RANKIN. How is that?

Mr. LEWIS. The mouth of the St. Lawrence is only 100 miles from Newfoundland

Mr RANKIN. This is a long way from the mouth of the St. Lawrence.

Mr LEWIS. That is a pretty long way up.

Mr. RANKIN. You would not object, then, to this Arkansas Valley development, would you, to develop water power on the Arkansas?

Mr LEWIS. I want to object, and we do object, to the expenditure of public funds for the development of water-power projects for the production of electricity and power where the expenditure necessary is greater than would be required in steam-produced plants.

Mr RANKIN All right; but this money will come back to the Government; this development is amortized through the sale of power, the sale of power which is produced more cheaply than it could be produced with coal. You would not object to it then, if that were so?

Mr. LEWIS. I would not want to give any blanket assurance on that, because I would want to examine on its merits each project, and that is what we are doing with respect to the St Lawrence project.

Mr. RANKIN That part of the St. Lawrence development which would be charged to power would be amortized, according to all of the testimony we have had—not all of it, but the scientific witnesses who have gone into it, including General Robins. It will be amortized in 50 years at a rate of 1.77 cents per mill per kilowatt-hour for the firm power, or a rate of 1.2 mills per kilowatt-hour for all of the power, firm and secondary

Now, under those circumstances, since it would cost from 3.4 mills at Buffalo to 4.5 mills at Albany to generate this power with coal, do you not think that this project would be economically justified?

Mr. LEWIS. No. I think the St. Lawrence project is fantastic and unjustifiable. I think it constitutes a positive menace to economic America.

Mr. RANKIN. In what way?

Mr. LEWIS. In the way that I have been describing here all day.

Mr. RANKIN. All right. Let me give some economic facts now, since you have gone that far.

The people in the State of New York last year were overcharged $201,000,000 for their electricity, according to Ontario rates. Taxes, cash contributions, and free services, including both State and Federal income taxes—that covered both publicly and privately owned electric utilities in the State of New York—all of those taxes, and cash contributions amounted to $48,000,000, leaving a net overcharge paid by the people of New York last year of $153,000,000, which is more than the United States half of this power development amounts to. Under those conditions, do you not think it would be justified?

Mr. LEWIS. You astound me by those figures.

Mr. RANKIN. They astounded me the first time I looked at them.

Mr. LEWIS. I was under the impression that New York had a progressive State administration which was anxious to protect the welfare of the people of the State.

Mr. RANKIN. Did it astound you when I showed you that the Illinois overcharges, after deducting taxes and cash contributions, were more than $67,000,000 last year; did that astound you?

Mr. LEWIS. Certainly.

Mr. RANKIN. And will it astound you when I tell you that in Pennsylvania they were overcharged $86,000,000?

Mr. LEWIS. Do not our public officials do anything about that?

Mr. RANKIN. Wherever they claim to have the best utility commissions in a State they usually have the highest rates. I have noticed that. Where we get the most favorable publicity on the ability of their utilities commissions we usually find that the people pay the highest rates.

Now, Mr. Lewis, by the development—you are not opposed to rural electrification?

Mr. LEWIS. Opposed to what?

Mr. RANKIN. You are not opposed to rural electrification?

Mr. LEWIS No; I am for it.

Mr. RANKIN. You would not be opposed to that power——

Mr. LEWIS. I am for rural electrification; electrification of those areas where there is no water-power electricity.

Mr. RANKIN. How is that?

Mr. LEWIS. I am also for rural electrification in those areas where there is not available water power for electricity.

Mr. RANKIN. Yes. In other words——

Mr. LEWIS. I am for rural electrification.

Mr. RANKIN. You are for rural electrification, whether from water power or whatever resources you have to develop it with, provided it can be done economically?

Mr LEWIS. I think that the farmers, the rural fellows, outside of the T. V. A. territory, are entitled to the same service as those people are.

Mr. RANKIN. That is right. In other words, you would be in favor of developing electricity by natural gas in Texas?

Mr. LEWIS. No.

Mr. RANKIN. You would not be in favor of that?

Mr. LEWIS. Not natural gas.

Mr. RANKIN. Are you in favor of developing electricity by gas in Louisiana?

Mr. LEWIS. I do not favor the utilization of natural gas and putting coal miners on the W. P. A.

Mr. RANKIN. Then you would let this natural gas go into the thin air and haul in coal from some other State?

Mr. LEWIS. I do not know what they could do with the natural gas or the owners thereof; but I do know that it is not sound public policy to use Federal money to create unemployment.

Mr. RANKIN. But you think——

Mr. LEWIS. For the effect of that I will refer you to Congressman VOORHIS.

Mr. RANKIN. Suppose that this natural gas is there and otherwise wasted——

Mr. LEWIS (interposing). It is there all right.

Mr. RANKIN. And otherwise going to waste.

Mr. LEWIS Some of it has been there for a long time.

Mr. RANKIN. And these cooperative associations and municipal systems want to borrow money to develop that power, or electricity from that gas——

Mr. LEWIS (interposing). If you will pardon me, I think that America's single basic problem is to provide an opportunity for employment for its citizens.

Mr. RANKIN. I understand.

Mr. LEWIS. And I think that the expenditure of public funds in a manner that superinduces unemployment is uneconomic, unsound, morally wrong, and politically unwise.

Mr RANKIN. All right. I will say this. You have never had anyone who has more sympathy for the ill-fed and the ill-clothed and the ill-housed than I have, but I want to see that the man who goes down into the mines and digs coal has the right to just the same living conditions that those men have who are engaged in any other occupation; and unless you give them an abundant supply of cheap electricity, they cannot enjoy those blessings.

Mr. LEWIS. They cannot do what?

Mr. RANKIN. Cannot enjoy the comforts and conveniences modern living should afford and that could be produced even by the very coal that they mine.

Under those conditions, you would be willing to develop this power at the mine, would you not, and distribute it over the States?

Mr. LEWIS. Where that is practicable. Oftentimes it is not practicable because of the absence of water or other conditions

Mr RANKIN I understand; but if this power can be generated at the mine and economically transmitted over, we will say, the whole State of Illinois and supplied at T. V. A. yardstick rates, you would favor that, would you not?

Mr. LEWIS. We would certainly be glad to encourage any meritorious project, but, as I said before, I cannot endorse these hypothetical projects to which you refer.

Mr. RANKIN. I am going to give you some that are not hypothetical; but I want to get back to that proposition.

You would not object to developing this power with coal at the mine and distributing it over the whole distribution radius?

Mr. LEWIS. You are talking about rural electrification?

Mr. RANKIN. I am talking about all kinds—residential, commercial, and industries, rural and urban.

Mr. LEWIS. No; we would not have any objection if the Congress decided that that was essential.

Mr. RANKIN. That would not put any men out of work?

Mr. LEWIS. Sir?

Mr. RANKIN. That would not hurt the miners?

Mr. LEWIS. That is right.

Mr. RANKIN. It would not hurt them; would it?

Mr. LEWIS. That is right; it would not.

Mr. RANKIN. In other words—and this has been my contention all the time—if they will turn over the generation and transmission, and distribution of the power in this country to me, I can take the coal and generate this power at the mines and distribute it over the State of Illinois so as to wipe out that $67,000,000 annual overcharge. I could wipe out that $86,000,000 annual overcharge in Pennsylvania; and the $153,000,000 net annual overcharges in New York; but that would take approximately the same amount of coal that they are now using, would it not? That would not hurt the miners at all, would it?

Mr. LEWIS. The use of coal would never hurt the miners.

Mr. RANKIN. The use of coal, provided you paid them for mining it.

Now, let us see again. Here is another source of power that we have not discussed very much, and that is oil. You are not opposed to generating power with oil, are you?

Mr. LEWIS. If it creates unemployment; yes. I am opposed to the use of public funds to develop power in the United States by the use of oil if it creates unemployment.

Mr. RANKIN. Some of the coal miners came to me the other day and said that they were supposed to be making $7 a day. Is that right?

Mr. LEWIS. That is the new scale.

Mr. RANKIN. One of them said frankly that 75 percent to 90 percent of our miners never see a dollar. I said, "What goes with it?" "Well," he said, "the coal operators"—by the way, I usually find that they are pretty close to the power utilities—"the coal operators own the houses and rent us the houses." Is that correct?

Mr. LEWIS. That is true to a certain degree; yes.

Mr. RANKIN. He said also that they "charge us so much for rent, for coal, for electricity, and for water that we have to use the very minimum and then sometimes are unable to pay the bill."

He said that they also "frequently compel us to buy through commissaries," and one of them told me that he was paying invariably twice as much for his groceries as they were worth. Is that correct?

Mr. LEWIS. I doubt that on the average they are twice as much, although there are many instances where exorbitant charges are made by the company stores.

Mr. RANKIN. One of them made this statement, that a sack of flour which ought to cost 75 or 80 cents, that he himself had seen it sell for $1.50, and he said that they only got about 180 days' work a year. Is that about right?

Mr. LEWIS. Well, in the Appalachian region last year they worked 213 days. It is quite conceivable that in his territory he only worked 180 days.

Mr. RANKIN. He said that by the time they went back to work, invariably they were in debt to the commissary or the operator. He said if this power were generated and distributed at rates based on the cost of generation, transmission, distribution, then they might be permitted to go out and own 4 or 5 or 10 acres of land and not be compelled to live in these company houses.

Then he said, "We could have our gardens, our corn patches, our cow, etc., and live more comfortably and at the same time have something to fall back on when the mine closes down."

Now, do you not think that provisions of that kind would be much preferable to the situation as it now exists; do you not think——

Mr. LEWIS. I do not quite see the objective of your running commentary there. Obviously, of course, the mine workers' union is striving to protect that individual mine worker from these practices and to bring about reforms as we can, both in the living conditions and charges that the coal companies make on rent and doctors and electric lights, etc.

Mr. RANKIN. Well, just leave out the commissary. What I am driving at is to get electricity to everybody in America at what it is worth.

There never could be any slum clearance in New York or any other big city, any slum clearance that would be comparable to giving these people electricity at the T. V. A. rates, or the Ontario rates, or the Tacoma, Wash., rates, and enabling them to buy the appliances that are necessary for the consumption of that electricity.

Mr. LEWIS. Congressman, there is no gainsaying that the fact, as you say, it would be a great boon to the workers in the country and all of the American people if rates for electricity were made on a basis somewhere near actual cost plus a reasonable profit and made more available for the population, it would indeed contribute and greatly improve the standard of living, and there would be a more happy existence. I quite agree with you. And yet, by and large, I do not quite see the application of our discussion to this great project here which involves the building of this great enterprise in Canada, or half way in our own country and half way in Canada, as the case may be.

Mr. RANKIN. Let me make the application: There are the New England States, every one of which is within the distribution radius of this dam. The overcharges for electricity in New England last year amounted to $97,000,000. Their rates were the highest of any section of the country, taken as a whole, and their consumption per capita about the lowest. I have the figures here, but I will not take up the time to read them.

Let us go across the Atlantic Ocean. Of course they are having war conditions there now; but before the war, both Norway and Sweden were not only supplying electricity to all of the people in the towns at reasonable rates, but 90 percent of their farmers had electricity while only 10 percent of ours did, and then they were what we call "town farmers," living around the edges of towns.

It is well known that those people have no coal in New England; they have none in New York; they have no gas; they have no oil.

So, under those conditions, when we can generate this power at about one-half, or at least about two-thirds of the cost per kilowatt-hour that you can generate it with coal, and since this great wealth of power is running to the sea, going to waste, do you not think it economically sound and that we are justified in building this dam and saving that water power and distributing it throughout that area?

Mr. LEWIS. No; I do not think so. I think that the same people you describe can be served by steam plants producing electricity in northern Pennsylvania and western New York and southern New England at a lesser price for the services they will get than it will cost the taxpayers through this project we are discussing here.

Mr. RANKIN. Another thing: This power project will not cost the Government anything. It will amortize itself in 50 years.

Mr. LEWIS. Would not a steam plant amortize itself?

Mr. RANKIN. Yes; I think it would.

Mr. LEWIS. Will not steam plants furnish electricity to New England at a less cost than you can get it from this project?

Mr. RANKIN. Not at these rates. You cannot generate electricity in that area with coal at the present price as cheaply as you can with water power, because as the gentleman testified here it will cost from 3.4 mills a kilowatt-hour at Buffalo to 4 mills at Rochester; 4 mills at Syracuse and 4.5 mills at Albany to generate power with coal, whereas it would cost only 1.77 mills a kilowatt-hour to generate firm power with water at this St. Lawrence dam.

That would amortize this investment in this power development within 50 years, and then the Government would have one of the greatest projects in the world.

Mr. LEWIS. Well, I submit, sir, that regardless of what your mathematics may be with respect to the possible cost of electricity at this St. Lawrence dam, that we are still unalterably opposed to the project, because of the direct and indirect economic results that will obtain to our major industries in this country, and particularly to the coal industry.

Mr. RANKIN. Let me make this observation to you, Mr. Lewis: I have been the victim of about the greatest overcharge for electricity in the United States. I am now the beneficiary of about the cheapest rates in the United States. Where I was paying 12½ cents per kilowatt-hour a few years ago for the same electricity generated at Muscle Shoals, the power company was buying it at 2 mills per kilowatt-hour, transmitting it 100 miles, which cost less than a half mill, then selling it to me at 12½ cents; now, my city is buying the same power wholesale at 5 mills and selling it to me not at 12½ cents, but 2½ cents maximum.

I have seen that spread throughout the country and nothing I have ever seen or gone into in all of my life has had such beneficial effect upon the economic well-being of everybody, and especially upon the little fellow, as the bringing of this electricity down and supplying it to him in abundance at these cheap rates.

I want to give you this, and then I will not bother you any more. Frankly, I do not see very much difference between us on this question, except that you just want electricity generated by coal only.

Mr. LEWIS. No; I am opposed to the St. Lawrence waterway project in all of its ramifications.

Mr. RANKIN. I see. In 1933 only 900 people in my town had electricity in their homes. It is a town of about 8,000 people with one-third of them Negroes. Only 900 homes used electricity. Nineteen percent of those people had electric refrigerators. Today 1,900 homes have electricity and 91 percent of that 1,900 have electric refrigerators in their homes.

Don't you think that that is a great contribution to the economic well-being of the average man?

Mr. LEWIS. I think it is fine to have a refrigerator.

Mr. RANKIN. Do you not think that it is fine to have the cheap electricity and other things that go with it?

Mr. LEWIS. I think one also has to have a little work to keep the refrigerator going, internally and externally.

Mr. RANKIN. But they are doing the same work now they were doing then.

Mr. LEWIS. There is an internal problem connected with a refrigerator.

Mr. RANKIN. I understand that.

Mr. LEWIS. It has to do with some bread and butter.

Mr. RANKIN. I understand, and they save more bread and butter.

Mr. LEWIS. And, you cannot trade away 92,000,000 tons of our coal market in this country and expect the refrigerators in the mining areas in this country to be kept going.

Mr. RANKIN. All right. If you generate this power with coal you can keep the refrigerators going?

Mr. LEWIS. Well, if you take a notion to generate some power with a coal plant, I will be glad to talk with you about it, and glad to help you.

Mr. RANKIN. I am not opposed to generating power with coal; but I favor using whatever source of power we have. Take the State of California. It has no coal, but it has natural gas and water power, and some oil. Would you be in favor of using them to develop electricity?

Mr. LEWIS. Why, I have no objection to the Californians having electricity and refrigerators.

Mr. RANKIN. Even if it is generated with water, gas, or oil?

Mr. LEWIS. If it is economically possible to get it to them under sound economic conditions.

Mr. RANKIN. Take the States of Texas, Louisiana, and Arkansas, where they have an abundance of oil and gas and a superabundance of water power in some of those States, especially in Arkansas. Would you be in favor of generating electricity with gas, oil, or water in those areas where they have no coal?

Mr. LEWIS. We probably would have the same attitude that we did with the Columbia Dam and the Boulder Dam, and the T. V. A. and other projects. Some water-power projects we have opposed because we think they are unsound. We think that they have been promoted here in Washington by men who want to get a fee and make money out of them, regardless of their merits; regardless of the wasting of the public funds. We have to look at these things from the standpoint of the individual merits of the individual proposition. That is what I am looking at with respect to the St. Lawrence waterway.

Mr. RANKIN. Now, as a matter of fact, do they not use more coal in the T. V. A. area than they did before the dams were built?

Mr. LEWIS. Well, I talked about that this morning.

Mr. RANKIN. I know you did, but there was some noise up here near me, and I did not understand exactly what you said.

But, as a matter of fact, do they not use more coal in that area now than they used before the T. V. A. was built?

Mr. LEWIS. I would have to go into that as a special subject.

The use of electrical power, of course, has some ramifications and the purchasing of refrigerators, and supplies, and electrically operated gadgets in the home create employment and sometimes people are employed in that area and they use coal for making steam, and what have you. It has a direct and an indirect effect. It is quite possible that a million or a million and a half more tons of coal are being used right now really in the T. V. A. area than was used before they went in there, but, of course, as against that you have to consider the fluctuation, the shift in production of the industries; the transmigration of industries of all character. I touched on that in that statement. I will not bother reading it again.

Mr RANKIN. If you can generate this power at the mouth of the mine by generating it with coal and distributing it at rates that justify the people in that area in heating their homes with it, you would be in favor of that?

Mr. LEWIS. Quite.

Mr. RANKIN. In other words, my viewpoint is this—I will admit that I am a little ahead of a majority of the men in Congress on my views on electricity—I think that the time is coming when practically every home in America will be heated with electricity, when we generate the power at the dam or at the mouth of the mine and transmit it to the homes over long-distance wires, and distribute it by the communities or municipalities, or cooperative associations and the people heat their homes with it. We are doing that where I live now.

I had this morning a bill from a friend of mine which showed what it cost him to heat his house. One month the thermometer went to 14° below zero. He used 2,030 kilowatt-hours of electricity that month, and it cost him $14.16. Of course, when we were buying through the Commonwealth & Southern 8 years ago that 2,030 kilowatt-hours would have cost $115 instead of $14.16. Now, if this power can be generated with coal—and I am not trying to commit you to water power—if this power could be generated with coal at the mouth of the mine and distributed over we will say the State of Illinois, or the State of Pennsylvania or West Virginia, or any other area at rates that would enable those people to use it for all purposes, including heating their homes, you would be in favor of that?

Mr. LEWIS. Oh, quite. We hold no brief for the exorbitant charges or improper practices of utility companies.

Mr. RANKIN. Here, I am trying to draw this distinction, Mr. Lewis: The railroads' attitude seem to be that they want to keep the raw materials and the finished products as far apart as possible. Their opposition is different from yours. They want to haul coal and other materials and they do not want these transmission lines.

Now, you want to protect the miner who mines this coal, and I do not blame you for that. What I am pointing out is that if you can generate this power at the mouth of the mine and distribute it over the whole country at these T. V. A. rates and enable every home to use all of the appliances necessary and to heat their homes with it, then you would be in favor of that?

Mr. LEWIS. Oh, we are quite in favor of any normal extension of electrical service that won't in itself disturb existing industries or displace manpower.

Mr. RANKIN. The trouble is not in the generation of electricity in this country. It is in two things—the exorbitant overcharges for the distribution and in the manipulation and watered stocks of the power companies, especially the holding companies, the inflating and the watering they do, and then attempting to collect these excessive rates to enable them to pay dividends on that watered stock.

So what I am getting down to here is this: that if we can generate this power at the mine or at the dam and distribute it at reasonable rates, rates based upon cost of generation, transmission, and distribution, with a reasonable return on the legitimate investment, we can put electricity in every home and every business establishment in America at these T. V. A. rates and reduce the present power and light bills of millions of people and improve living conditions and business conditions in every nook and corner of the Republic.

Whenever it is necessary to do this by generating power with coal—and I will certainly be in favor of it; but where we have these water-power projects that can be economically developed and that will bring such benefits to vast numbers of people in a given area, I am in favor of developing the water power.

Midwest Power Conference

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, August 7 (legislative day of Monday, July 28), 1941

ADDRESS BY ROGER B. McWHORTER

Mr. HILL. Mr. President, several days ago I asked unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. Roger B. McWhorter, Chief Engineer of the Federal Power Commission, at the Midwest power conference held in Chicago, his address being on the subject Hydroelectric Power in the National Emergency. The address is longer than the prescribed pages under the rule. The estimate sets forth that printing the address will require three and a third pages of the CONGRESSIONAL RECORD and cost $150. I again ask consent that the address may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HYDROELECTRIC POWER AND THE NATIONAL EMERGENCY

Chairman Elliott, Director Winston, and gentlemen of the conference, Director Winston very kindly invited me to appear before you today and speak on the subject of hydroelectric power and the national emergency. It is with pleasure that I avail myself of this opportunity.

Due in large part to the impetus of the national-defense program, production of electric energy in the United States during the first 3 months of 1941 was 12.5 percent greater than corresponding production during the first quarter of 1940 and 25.3 percent greater than that of 1939. Currently, weekly production of energy is more than 15 percent above corresponding weekly production in 1940. We find this situation to exist soon after the beginning of the defense program, and it may be assumed that the emergency will not be of short duration. The greatest period of industrial activity in the history of the United States is in the offing and, as the national-defense program progresses, demands for electric power will continue to increase. It is too early to speculate on the time when the peak may be reached. Suffice to say that there must be no power shortage if the program is to succeed in fullest measure.

The electric light and power industry of the United States has grown to its present stature in less than threescore years. Prior to 1882 there was not an electric-generating plant anywhere in the world. In 1882, with the genius of Edison ever present, two small generating stations were constructed—the celebrated Pearl Street steam-driven station in New York City and a tiny hydroelectric plant at Appleton, Wis. In the autumn of that year these little plants, the first of the central stations, began serving energy to a few nearby customers for lighting purposes. Here we find the beginnings of the electric light and power industry—an industry of almost inconceivable importance to our people and to all mankind.

Few hydroelectric plants were constructed prior to 1900, but with improvements in electric transmission numerous plants were projected and built during the first two decades of the present century. It was during the decade from 1920 to 1930, however, that truly great progress was first made in the development of the water-power resources of the Nation. The Federal Water Power Act, which became law with the approval of President Wilson on June 10, 1920, gave tremendous impetus to the development of water power. By this act the Congress created the Federal Power Commission and delegated to it authority to license the development of water power on or affecting the navigable waters and lands of the United States. Between 1920 and 1930 hydroelectric plants having aggregate installed capacity of 5,155,000 kilowatts were constructed and placed in operation. Thus, in a single decade, one-eighth of all the electric generating capacity available today was installed in hydroelectric plants. Due to virtual cessation of construction of generating facilities during the long business depression, only 2,600,000 kilowatts of hydro capacity was installed during the decade just ended; but the latter installation, amounting to 6.2 percent of all the electric-gen rating capacity now available, and about 35 percent of all capacity installed during that decade, is not lacking in importance.

INCREASE IN GENERATING FACILITIES AND ENERGY PRODUCTION SINCE 1920

In 1920 the installed capacity for public use in all generating plants of the United States was 14,372,000 kilowatts, of which 3,786,000 kilowatts, or 26.3 percent, was in hydroelectric plants. By 1940 the total installation had increased to 41,576,000 kilowatts, of which approximately 11,550,000 kilowatts, or 27.8 percent, was in hydroelectric plants (table 1).

Production of electric energy for public use in the United States increased from 43,334,000,000 kilowatt-hours in 1920 to 144,965,000,000 kilowatt-hours in 1940, the 1940 production being approximately three and one-third times that of 1920. During the past 10 years hydroelectric plants, with 27.5 percent of the available capacity, have generated 36.4 percent of all the energy produced for public use in the country. In the depression years 1932 and 1933 hydroelectric plants produced slightly more than 40 percent of the total (table 2.)

In taking stock of installed capacity and energy generation, it is of interest to note the relative use made of the available hydroelectric and fuel-electric capacity. In 1932, the year of extreme ebb tide in the business depression, the hydroelectric installation operated at a capacity factor of 39.7 percent, and the steam-electric installation at a capacity factor of 21.2 percent. In the year 1940, when a new record in electric energy production was established, the hydroelectric installation operated at a capacity factor of 47.2 percent, as compared with 36.9 percent for the steam-electric installation. Once hydroelectric capacity is installed, considerations of economy dictate that it shall be used to the practical limit for the production of energy.

NATIONAL EMERGENCY PORTENDS NEED FOR INCREASED POWER SUPPLY

Electric-power requirements invariably increase concurrently with expanding industrial activity. Recent power demands have exceeded expectations of the utility systems, as evidenced by the fact that the December 1940 peak demand was substantially greater than was forecast by the utilities in September. Constantly increasing requirements for power, as compared with requirements in previous years, may reasonably be expected, as the unprecedented industrial activity occasioned by the national-defense program advances to the peak-production stage, probably during the next 2 years. By this statement it is meant to imply that the peak demands of 1941 and 1942 will each establish a new record. Taking the longer range view, power requirements 10 or 15 years hence may quite generally be of the order of twice the present requirements.

DEFENSE POWER WORK OF THE FEDERAL POWER COMMISSION

It may be stated with substantial correctness that the defense power work of the Federal Power Commission is only an intensification of the Commission's normal activities in this field. Voluminous data in the Commission's files, collected periodically from the electric utility systems of the country, show the salient facts relating to practically all generating and transmission facilities and to the generation, transmission, and sale of electric energy, however produced.

In pursuance of instructions issued by the President in June 1940, the Commission, in cooperation with other Federal agencies, particularly the National Power Policy Committee, the Advisory Commission of the Council of National Defense, and the War and Navy Departments, estimates increases in power demands expected to result from the execution of national-defense orders; maintains reliable information on the adequacy of the power supply to meet such demands; keeps records of orders placed with the electrical-equipment industry for additional generating equipment, and ascertains facts as to the ability of the equipment manufacturers to meet such orders with reasonable promptness; engages in planning, in cooperation with the utility industry, to supply power requirements in the most economical manner; and assists the utilities in the protection of power supply against hostile acts.

The Commission obtains and compiles monthly returns from the principal electric utility systems of the country, showing anticipated power loads, existing and planned generating capacity to supply such loads, and reserve capacity required for normal operation. These returns constitute the basis of monthly reports issued by the Commission on the relationship between power requirements and available generating and transmission capacity, in the 48 power supply areas into which the country has been divided. Likewise, the Commission collects information monthly from manufacturers of electrical and hydraulic equipment, showing the amount of steam-electric and hydroelectric equipment on order, scheduled delivery and installation dates, need for additional skilled labor and materials, and other pertinent facts which would be of value in event need for determining priorities for the manufacture of such equipment should arise.

The Commission also obtains and compiles information on the power needs of the many industrial establishments in the country having national-defense orders; receives currently from other Federal agencies concerned with national-defense orders, information as to orders placed, gives consideration to power requirements incident to the execution of such orders, and collates information relative to plans for the expansion of manufacturing capacity.

Every major interruption of electric service is the subject of an investigation and report by the Commission. Investigations of this character are sometimes made at the request of other Federal agencies, but in any event they would be made by the Commission on its own motion.

Much attention has been given by the Commission in the conduct of its power surveys to the advantages to be secured by interconnecting the transmission facilities of different utility systems in the same region and operating the power systems in coordination so far as might be mutually advantageous, thus increasing the available power supply by reducing the reserve capacity which would otherwise be necessary and assuring a more dependable power supply to each of the interconnected systems.

It is of prime importance that planning for power supplies to meet anticipated demands be done on a reasonably long-range basis. The utilities, of course, follow this practice under normal conditions and from time to time modify their programs for the installation of new capacity as prevailing and prospective conditions may seem to justify. In the present situation, however, definite planning to assure an adequate power supply under the assumption of a 5-year emergency seems imperative.

HYDRO PLANTS RENDERING VITALLY IMPORTANT SERVICE

Hydroelectric power from the Niagara Falls and Massena plants in the State of New York, from the T. V. A. plants in the Tennessee Valley, and from the Bonneville and Grand Coulee plants on the Columbia River, is proving to be of special value in furtherance of the national-defense program, particularly as power from each of these sources is used for the manufacture of aluminum. At Alcoa, Tenn., the power demand when aluminum plants are operated to capacity is about 265,000 kilowatts, and a large part of the power so required is supplied by the Tennessee Valley Authority. About 500,000 kilowatts of hydro power is available at Niagara Falls, including power transmitted into New York State from the Canadian side of the Niagara River. The entire output of the Massena plant, supplemented by large importations of hydro power from Canada, is used for the manufacture of aluminum. In the Pacific Northwest 222,500 kilowatts of Bonneville and Grand Coulee power is under contract to the Aluminum Co. of America and the Reynolds Metals Co. for the production of aluminum. All of the larger T. V. A. hydroelectric plants except those at the Hales Bar and Wilson Dams have been constructed during the past 8 years, as have the Bonneville and Grand Coulee plants. Thus hydroelectric power of best quality, which has become available in recent years as a result of the Government's public power program, is now performing a vitally important function.

Additional public power plants, to which more extended reference will soon be made, are now being constructed in various parts of the country, and private interests are constructing two hydroelectric developments in California and two in North Carolina to supply increased power requirements resulting from the national-defense program. A private company is also considering the construction of a hydro plant to utilize the surplus water and head at the Government Bluestone Dam soon to be constructed on the New River in West Virginia.

HYDRO POWER POTENTIALLY AVAILABLE AT PROPOSED MULTIPLE-PURPOSE RESERVOIR PROJECTS

The Federal Power Commission has recently caused studies to be made of power values inherent in some 70 multiple-purpose water-storage projects in various parts of the country which appear to have sufficient merit to warrant their construction in the near future. No projects now under construction, or authorized by the Congress for construction, are included in this group. Preliminary studies indicate that the annual energy output from these projects would be in excess of 7,000,000,000 kilowatt-hours. The capacity to be installed in each plant will, of course, be determined by the economic limit to which additional hydro-peaking and reserve capacity can be utilized to advantage on the loads of the power systems in the region of the project. Obviously the installation, in the aggregate, will be relatively large.

In areas where the need for additional power within the next 4 to 6 years is now rather definitely foreseen, whether for national-defense purposes or by reason of normal load growth consideration should be given to early development of the power potentially available in projects of this type. Where such projects are economically sound, development of the available power will result in a more desirable distribution of orders for power generating equipment, especially during the period of the national-defense effort, among the manufacturers of steam-electric and hydroelectric equipment. Furthermore, the flood-control and navigation benefits to be derived from these projects will be important contributions to the national defense. Destructive floods occurring at any time seriously disrupt the economy of large regions, and their effects would be far more serious during a period of national emergency.

While it is expected that each of the projects in this group will serve two or more purposes, many of them are sufficiently attractive as water-power possibilities to have been given serious consideration by private power interests. In fact, applications for preliminary permit and license have been filed with the Federal Power Commission for several of these projects.

NOTABLE WATER-POWER PROJECTS UNDER CONSTRUCTION—ADDITIONAL INSTALLATION IN EXISTING PLANTS

The Federal Power Commission has recently forecast serious power shortages in several regions of the country where national-defense power requirements are greatest, and it is particularly gratifying at this time that large hydroelectric plants are under construction

in these regions. In the Southeast the Tennessee Valley Authority is now constructing the Watts Bar and Fort Loudoun projects on the Tennessee River between Chattanooga and Knoxville, and the Cherokee project on the Holston River. The aggregate initial installation in these three projects will be in excess of 200,000 kilowatts. The initial installation at Cherokee, a project with large storage, will be 90,000 kilowatts, and as a result of the flow regulation provided by this headwater reservoir, both the quality and quantity of the power output from downstream plants will be substantially improved. It is of interest to note the leverage the Cherokee project has as a part of a coordinated basin development plan: A large amount of power is developed at the site, and the runoff from the drainage area above the dam is substantially, if not completely, regulated for the benefit of navigation and control of floods on the Tennessee, Ohio, and Mississippi Rivers; and the regulated flow is utilized through nine hydroelectric plants on the Tennessee River before it passes into the Ohio River.

The Authority is now installing, or has definite plans immediately to install, additional generating units, having aggregate capacity of 236,000 kilowatts, in its constructed Wheeler, Wilson, and Pickwick plants on the Tennessee River. The Kentucky project on the Tennessee River, the lowermost and largest of the T. V. A. main river projects, is also under construction, and will be completed, doubtless with a power installation, by 1945.

The Nantahala Power & Light Co., a subsidiary of the Aluminum Co. of America, is now rushing to completion its Nantahala and Glenville projects on the headwaters of the Little Tennessee River in western North Carolina. These two projects will provide 200,000 acre-feet of usable storage and have a combined installation of about 64,000 kilowatts. In October 1940 this company, foreseeing the need for greatly increasing its power supply for the production of aluminum, filed with the Federal Power Commission a declaration of intention to construct the 225,000-kilowatt Fontana project well downstream on the Little Tennessee River, a navigable water of the United States. The Commission promptly made a careful investigation of the project, including a review of all authoritative records, as required by law, and made a finding, the effect of which was to require the company to obtain a Federal license. Thereafter the company, after requesting and obtaining a rehearing, decided not to construct the project. Presumably the company contemplates obtaining additional power from the Tennessee Valley Authority for the production of aluminum.

The Santee-Cooper project in South Carolina, now being constructed by a State agency, is scheduled for completion by January 1, 1942. The initial installation in this project will be about 130,000 kilowatts, and the annual primary energy output about 450,000,000 kilowatt-hours.

In the Pacific Northwest, the mammoth Grand Coulee project on the Columbia River, with about 5,000,000 acre-feet of usable storage, is nearing completion. Ultimately this project will have an installation consisting of eighteen 105,000-kilowatt units. Three of these main units are to be installed as quickly as possibly, and it is expected that the first of them will be ready for operation by August 1941, the second by November 1941, and the third by March 1942.

At the constructed Bonneville project, also on the Columbia River, two new 54,000-kilowatt units, in addition to the original installation of 86,400 kilowatts, have just been installed and are in operation; and the fifth and sixth 54,000-kilowatt units are to be installed immediately. Installation of the four remaining units, bringing the total to 518,000 kilowatts, is definitely contemplated.

In California, where the power load is increasing rapidly, the Bureau of Reclamation is constructing the Shasta project on the Sacramento River, and is making special effort to have the power plant completed and in operation well in advance of the completion date fixed in the original construction schedule. It is now expected that Shasta power will be available in 1944. This project will have installed capacity of 375,000 kilowatts. At the Keswick reregulating dam on the Sacramento River a short distance below Shasta Dam, the power installation will be 75,000 kilowatts.

The Federal Power Commission recently authorized construction, by the Pacific Gas & Electric Co., of the Cresta and Pulga projects on the North Fork of the Feather River, Calif. The installation at Cresta will be 68,000 kilowatts and at Pulga 80,000 kilowatts. These projects are scheduled for completion in 1943. They were authorized by the Commission after its defense power studies had clearly indicated the approaching need for a larger power supply in that region. It will be noted that the output from the Cresta and Pulga plants will be available to meet increasing power requirements before the Shasta project can possibly be completed.

The Pensacola project on the Grand River in Oklahoma, with an initial installation of 56,000 kilowatts, has just been completed, and the Kingsley Reservoir on the North Platte River, Nebr., which will regulate flow for use in downstream power plants having installed capacity of about 75,000 kilowatts, is well advanced toward completion.

The Bureau of Reclamation is installing three additional 82,500-kilowatt units in the Boulder Dam plant, two this year and the third in 1942. At the Parker Dam plant, on the Colorado River below Boulder Dam, four 30,000-kilowatt units will be installed, the first of which will be ready for operation by December 1941 and the last by July 1943.

LARGE WATER-POWER PLANTS CONTEMPLATED FOR EARLY CONSTRUCTION

Active consideration is now being given to construction by the Bureau of Reclamation of the Bull's Head project on the Colorado River between Boulder Dam and Parker Dam. The initial installation will probably be 180,000 kilowatts, and the project could be completed and ready for operation by July 1944. This project will provide usable storage of about 1,600,000 acre-feet.

The War Department now has authority to construct the Bluestone Reservoir project on the New River near Hinton, W. Va. The reservoir will be used in part for the production of power, and it is expected that provision will be made for the ultimate installation of 180,000 kilowatts. The initial installation has not as yet been deteremined. If construction work is commenced soon, as now seems probable, the project will be completed and ready for operation late in 1943 or early in 1944. The annual energy output from the Bluestone plant will be about 400,000,000 kilowatt-hours.

The merit of the Clark Hill project on the Savannah River above Augusta, Ga., has long been recognized, and it may be assumed that its construction will not be long deferred. An initial installation of 140,000 kilowatts at Clark Hill is contemplated, and the energy output therefrom, estimated at 550,000,000 kilowatt-hours annually, will be of very high quality. The contemplated increase in power requirements in that region during the next 3 or 4 years, as forecast by the Federal Power Commission, is greatly in excess of the estimated output of the Clark Hill project. It seems desirable, therefore, that this excellent project be constructed with the least possible delay. Aside from power values, the flow regulation afforded by the Clark Hill Reservoir will be of great benefit to navigation in that the ordinary low-water flow of the Savannah River from Augusta to the sea will be more than trebled. The project will also make the city of Augusta more secure against flood damage.

It seems appropriate also to mention the large Wolf Creek Reservoir project on the Cumberland River, Ky., which is now receiving consideration, and where the power installation would probably be 240,000 kilowatts. The average annual energy output from this project is estimated at 800,000,000 kilowatt-hours. The Wolf Creek project is in reasonably close proximity to the Tennessee Valley, where power requirements have increased phenomenally during the past 8 years. By careful planning and timely construction of new power facilities, the Tennessee Valley Authority has thus far been able to provide a power supply adequate to meet all demands. The Authority is due much credit for this achievement. Action by the Congress placing the Cumberland River Basin under the jurisdiction of the Tennessee Valley Authority would seem logical.

ST. LAWRENCE RIVER POWER

The project for development of the power available in the International Rapids section of the St. Lawrence River is now receiving active consideration. The prospect that this preeminently meritorious project may advance to the construction stage at an early date should be of much satisfaction to the general public. Unfortunately, this country failed to take advantage of a rare opportunity to start construction of this project 6 years ago. It is gratifying, however, that the project now to be constructed will be more desirable as to general design than the one which might have been constructed at that time. It seems probable that provision will be made for the installation of about 860,000 kilowatts in each of the two power plants, one to be located on the United States side and the other on the Canadian side of the international boundary. The energy available annually from each plant will be in excess of 6,000,000,000 kilowatt-hours, and due to the remarkably steady flow of the St. Lawrence River, the output will be of very excellent quality, ideally adapted for use by industries requiring cheap power in large quantities for utilization at high-load factor.

POWER POTENTIALLY AVAILABLE AT AUTHORIZED FLOOD-CONTROL PROJECTS

During the past 5 years the Congress has authorized construction by the War Department of numerous reservoirs in various parts of the country, primarily for the control of floods, but with the requirement that any power values that might be inherent in any such project be investigated; and has conditioned such authorizations upon provision being made for the future development of hydroelectric power at these flood-control projects, when found feasible and recommended by the Federal Power Commission and the Chief of Engineers. Many projects of this character have been investigated by the Commission since enactment of the Flood Control Act of June 28, 1938. In a number of cases it has been found that with a reasonable increase in the project investment, immediate installation of power-generating facilities is justified. In other cases it has been found that by incurring nominal additional cost initially, provision may be made for the development of hydroelectric power in the future, if and when justified by conditions obtaining at any time. As a national policy, protection and conservation of water power, wherever it exists, seems wise beyond question. This observation becomes more impressive with the realization that the country's natural gas reserves may be practically depleted during the next generation, and with the prospect that coal prices will increase with the passing of time.

HYDROELECTRIC POWER IN ELECTRIC UTILITY SYSTEMS

The generating facilities of a great many of the major electric utility systems of the

United States consist of a combination of fuel-electric and hydroelectric plants. It is only in those situations where hydroelectric power cannot be had that such plants are not found in utility systems. The advantage of having hydroelecric plants for operation in combination with other sources of power, for supplying general utility loads, has been abundantly demonstrated by the experience of both the privately owned utilities and public power enterprises. It is not necessary to labor this question. It has long been settled by the best brains in the electric light and power industry.

Hydroelectric plants with considerable storage have unique value in power systems. With their customary large installations in relation to available primary energy, they are ideally adapted to peak-load operation and for emergency and reserve use. In a system emergency such as arises when, for one reason or another, large steam-electric units go out of operation suddenly and unexpectedly, a hydroelectric plant of the type now being discussed can begin delivering its full output capacity to the transmission system in a couple of minutes and continue capacity operation for hours and even days until normal operating conditions have been restored.

Capacity for low load-factor operation can be installed in such plants at moderate cost. As a rule, the characteristics of electric utility loads are such that a large amount of capacity must be kept available for carrying that part of the load represented by the upper portion of the load curve, and such capacity generates relatively few kilowatt-hours. Dependable and otherwise satisfactory capacity for service of this character can be obtained most economically by installing additional units in hydroelectric plants, provided hydro plants of suitable type are available in the system.

The comment just made, calling attention to the capacity value of hydro power, is valid regardless of whether or not sufficient water is available to permit of plant operation at a high capacity factor throughout the year, or even for a substantial part of the year. A certain part of the installation is provided for the express purpose of obtaining dependable capacity, with foreknowledge that such capacity will not produce a substantial amount of energy. It will be understood, however, that many hydro plants of this type are entirely suitable for supplying the power needs of industries which operate at high load factor, as, for example, the aluminum industry, which utilizes hydro power exclusively. In brief, many hydro plants are exceptionally valuable both for their capacity and their energy output, while others may derive their economic justification principally from their capacity value.

It is regrettable that efforts are occasionally made, without discrimination or reflection, to demonstrate that hydro power is uneconomical almost without exception, and that development of water-power resources stems from misinformation or faulty judgment. The bald facts controvert such contentions. Efforts of this kind constitute a disservice to the industry as well as to the general public, and indict the judgment and business sagacity of the ablest power engineers and executives in the country, both in private and public life. Nearly four-fifths of the hydroelectric installation in the country is in private ownership.

ELECTRIC POWER FOR PRODUCTION OF ALUMINUM

An ample supply of aluminum, the principal material required for the manufacture of aircraft, is vitally essential to the success of the national-defense program. The Bureau of Mines reported on February 4 that 412,560,000 pounds of new aluminum was produced in the United States in 1940, as compared with 327,090,000 pounds in 1939; and that, as indicated in a report issued by the Advisory Commission to the Council of National Defense, the rate of annual output of this metal is expected to exceed 690,000,000 pounds by July 1941 and 825,000,000 pounds by July 1942.

Approximately 10 kilowatt-hours of electric energy is consumed in the production of each pound of aluminum. It may be assumed, therefore, that within the next 18 months the aluminum industry will be consuming energy at the rate of about 8,250,000,000 kilowatt-hours annually. It appears certain, moreover, that regardless of the duration of the national emergency, the time is not far distant when the annual energy requirements of the aluminum industry will exceed 10,000,000,000 kilowatt-hours. No future event can be predicted with greater certainty than that the airplane industry, as yet in its youth, will undergo enormous expansion during the next decade. By comparison, aircraft and air transportation are now about at the stage which had been reached by the railroads in 1860 prior to the great period of expansion during the 25 years immediately following the Civil War.

Due to the very heavy energy consumption in the processing of alumina, the unit cost of the metal output is very materially influenced by the cost of power used in its manufacture. In this connection, it is of significance that aluminum is manufactured in the United States only in those localities where an abundant and cheap supply of hydroelectric power is procurable. The power supply of every aluminum plant in the country comes from a hydro source, and new aluminum plants now to be constructed will utilize hydro power exclusively. We may well wonder what the situation as to aluminum supply would be at this critical time had not cheap hydro power been available in quantity during the development stage of this industry.

NEW GENERATING CAPACITY NOW BEING PROVIDED

At present additional generating capacity of about 4,400,000 kilowatts in steam-electric plants and nearly 2,000,000 kilowatts in hydroelectric plants is under construction or definitely planned for immediate construction. It does not appear that there will be much change in the ratio between the country's hydroelectric and steam-electric installations in the immediate future, and perhaps no great change over a longer range of years, although the hydro installation may, and perhaps well might, edge up until it more nearly approaches one-third of the total installation.

OTHER OBSERVATIONS

Hydroelectric energy generated at Niagara Falls is supplied, either directly or in combination with steam-electric energy, to numerous industries which manufacture products essential to the national-defense program, such products including aluminum and steel for aircraft manufacture and general construction; ferroalloys for the production of high-alloy steels; artificial abrasives for cutting and grinding; carbon and graphite electrodes for electric-furnace operation; calcium carbide, from which acetylene gas is derived; chlorine, for water treatment, bleaching, and other purposes; freight cars for the expanding railroad traffic; airplanes for the Army and Navy and for commercial use; and wire and cable for electrical machinery and appliances.

The Tennessee Valley Authority supplies hydro power, either directly or through its wholesale customers, to numerous industrial establishments, large and small, the products of which are of value in the national-defense program. As previously stated, both T. V. A. power and Bonneville-Grand Coulee power will be utilized extensively for the manufacture of aluminum.

The output of the 100,000-kilowatt Hawks Nest plant on New River, W. Va., not previously mentioned, is used exclusively for the manufacture of products of special significance in the national-defense program, and a substantial part of the Santee-Cooper output will be utilized in like manner.

New England is the scene of unusual industrial activity, due in large part to the national-defense program. Nearly all of the electric energy required in the State of Maine is generated in hydroelectric plants within that State, and a substantial part of the energy requirements of other New England States comes from hydro plants on the Connecticut and Deerfield Rivers.

The development of additional feasible water-power resources, as a bulwark to the national security, is unreservedly commended to the consideration of the industry and the public.

Throughout the country hydroelectric power, providing more than one-fourth of the available generating capacity, and supplying, from an inexhaustible resource, from one-third to two-fifths of all the electric energy generated for public use, is patently of prime importance from the viewpoint of our long-range national economy; and there is no gainsaying its value at this momentous time in the life of the Nation.

TABLE 1.—*Installed capacity in electric generating plants in the United States producing energy for public use*

Year	Total	Hydro plants	Fuel plants	Hydro plants, percent of total
	Kilowatts	*Kilowatts*	*Kilowatts*	
1920	14,372,009	3,786,595	10,585,414	26.3
1925	23,512,000	6,158,849	17,353,151	26.2

Mineral, Power, Land, and Water Resources of Idaho

EXTENSION OF REMARKS

OF

HON. JOHN THOMAS

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, August 7 (legislative day of Monday, July 28), 1941

STATEMENT BY E. W. RISING BEFORE SUBCOMMITTEE OF SENATE COMMITTEE ON PUBLIC LANDS AND SURVEYS

Mr. THOMAS of Idaho. Mr. President, I ask permission to have printed in the Appendix of the RECORD a statement in regard to reclamation and mineral development in Idaho made by E. W. Rising, vice president of the Southwestern Idaho Water Conservation Project, Inc., before the Senate subcommittee conducting an investigation of the mineral resources of our public lands.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman, on behalf of my congressional delegation and as the representative of Hon. Chase A. Clark, Governor of Idaho, I desire to present the following statement.

A study of Western resources would be incomplete, particularly a study with emphasis placed on mineral resources, without including data and directing attention to the great mineral, power, land, and water resources of Idaho.

Production of minerals is the oldest economic pursuit in Idaho. Early settlements of the State centered around the famous gold and silver strikes of the sixties. In late years Idaho has been the leading State in the production of lead, with peak production running as high as 400,000,000 pounds in a single year. Zinc, silver, gold, antimony, and tungsten are produced in quantities.

Most of our current production is in the highly developed areas near Coeur d'Alene in northern Idaho and not far distant from Sun Valley in southern part of the State. Between these two points there is a vast stretch of mountains 300 miles in length, that, while known to be highly mineralized, has hardly been scratched, due to lack of transportation facilities and developed power for mining operations.

Increased scope of the European war has brought keen realization to our Nation of her marked dependency upon foreign countries for materials and commodities which we have come to regard as necessary, and many of which are indeed essential to the tremendous defense effort which we are now putting forth.

Elimination of foreign sources of these materials is causing a painstaking and somewhat frantic search of the resources of our own Nation. The importance of some of these items is so great that a scarcity of them will greatly hamper our preparations for defense.

The emergency is forcing us to do something that we should have done years ago, and that is to make a thorough checkup of the Nation's resources and reserves. We don't know what we have, but we are hoping that we have the materials that we need. If we find that we do have these vital materials and that we can get the machinery of production into action in time to prevent a severe shortage, it can be attributed more to blind luck than to good management.

The western part of the United States is an untold mineral treasure house. The resources locked in the bosom of the earth have hardly been touched, even though mining has been one of our leading industries for three-quarters of a century or longer.

I am more familiar with Idaho than any of the other States and I am certain you will pardon me if I refer solely to that State. The mineral potentialities of Idaho are beyond the scope of present-date realization. We know minerals are there in large quantities, but we do not know exactly how much nor can we look into the future and see all the many beneficial uses to which science will eventually put them.

To illustrate my point, let me call attention to the gigantic phosphate beds that lie in the eastern part of the State. Phosphate here is literally on the surface; it can be mined with a power shovel such as is used for ordinary excavation. No one knows how vast it actually is, and the demand has never been sufficient to cause any extensive mining of the rock that is apparent, much less to bring about any worth-while exploration.

There are other instances, even of metals and minerals of strategic importance. A few months ago the Nation received the welcome news that Idaho could supply some tungsten, which was vitally needed because of the war and was becoming scarce for the same reason. The news went out that tungsten was discovered in Idaho.

The report was not exactly true. For years it had been known that tungsten existed in the district that is now producing, but we didn't know how much nor what was the quality. Some judicious and not too costly exploration has turned an unused piece of ground into a tungsten producer.

The same is possible with other minerals. Let us take antimony for an illustration. We know that antimony exists in the central section of the State, but there has never been any exploration worthy of the name nor any production until recently, except largely as a byproduct of other operations.

One might logically ask why has this production lagged? Why has there been no development or operation of known mineral deposits? The reason is simple. Under existing tariff schedules and transportation rates, these products could be laid down at the point of use from foreign sources cheaper than from Idaho. And the result of that was to make us dependent on overseas markets for products which are necessary to our civilization, while American sources lie unused.

There can be but little question that the time when it is obligatory on our Government to make a comprehensive survey of its mineral resources in the West has come. And such a survey should of course be made with a view to productive capacity, which includes power resources as well as mineral deposits.

Idaho is one of the Nation's most highly mineralized States. Gold was the lure that attracted her first citizens, and throughout her history mining has been a leading industry. The Coeur d'Alenes is one of the Nation's foremost producers of lead, silver, and zinc, and during this emergency these great deep mines are straining every energy for utmost production.

The tungsten source previously referred to, at Yellow Pine, has provided to be an operation of vast strategic importance. A large amount of badly needed tungsten will be available from that development. Another tungsten property is reported in the vicinity of May, east of Challis, and the report indicates that production capacity is the only thing holding down the quantity of tungsten from this operation. Low-cost power would be highly beneficial here in increasing production.

Important mercury discoveries have been made and one such property, near Weiser, is new in successful operation. Here again the ore is plentiful and the bottleneck is production capacity. Additional power and increased equipment would mean larger output.

Even on short notice the Idaho mineral districts are already supplying the Nation with badly needed ores, and yet the great heavily mineralized central section of the State has hardly been scratched. We have the word of competent mining engineers and geologists for that.

What can the Government do to help? There are two principal methods by which the Government can help: One is to assist in exploration of known deposits, which is so often a job beyond the financial resources of the ordinary prospector, and the second is to relieve the production-capacity bottleneck. This second item might be a lack of suitable and adequate machinery, it might be a lack of a transportation outlet, and it frequently is a lack of low-cost power.

Let me quote from a statement by Mr. R. R. Sayers, Director of the Bureau of Mines, with regard to the mineral importance of the Yellow Pine district:

"As a result of exploratory work by the Bureau of Mines in the Yellow Pine district during the past year and a half, the potential importance of the district from the standpoint of mineral reserves has been greatly increased. Surface exploration and diamond drilling during the past year and a half have indicated additional bodies of antimonial gold ore and important reserves of antimony ore and more recently deposits of high-grade tungsten ore. * * *

"The proposed road would aid in the exploration and development of mineral deposits in this region and provide year-round access by truck to the productive area. * * * The Bureau's engineers report that the summer road from Land Mark to Yellow Pine is in bad condition, and probably will require extensive repairs and maintenance within a short time to enable even summer hauling by heavy trucks."

Comprehensive cataloging of the mineral resources of the Western States by type, quantity, quality, and location of deposits would undoubtedly be of important industrial benefit as well as give us a concrete idea of the reserves that we could depend on in case of emergencies, such as the one which now exists. Private development could be encouraged by adequate tariff protection or quotas and in meritorious instances governmental assistance in financing. Production can be encouraged and increased by the provision of public facilities of transportation and power.

In the case of the Yellow Pine tungsten operation, referred to above, an adequate road is also badly needed. The present road, which connects the property with a railhead, goes over two high summits, with the result that for some 6 or 7 months out of the year it is impossible to haul any concentrates from this mine because of the deep snow. Construction of an adequate all-weather road to this mine would be of production value. And in this connection it might be interesting to you to know that the extent of this ore body has been proven by diamond drilling and that it has assayed as high as 5 percent tungsten trioxide, according to the Bureau of Mines, which authority goes on to say that ore assaying as little as 0.75 percent tungsten trioxide is regarded as commercial if

occurring in fairly extensive deposits. It might also be interesting to know that there are reliable indications of sizable antimony deposits in the same area. Antimony is, as you know, a strategic material, and I am told that the need was so great during the last war that antimony concentrates were brought out of the Yellow Pine district by dog team at a cost of something like 50 cents per pound. It does not seem reasonable that we would permit ourselves to be caught in the same predicament a second time. Obviously, since the other war we have been patronizing the foreign sources of tungsten and antimony, while our own deposits have lain idle and undeveloped.

ABUNDANCE OF POTENTIAL POWER

One of the first requirements for the successful development of a mining area today is an adequate supply of low-cost power. While the large mineralized zone of central Idaho is now without power-transmission lines, there lies undeveloped one of the greatest power reservoirs in the United States. No complete inventory of the total quantity of power available for development in this region has even been attempted. From the Bureau of Reclamation Report No. 43, in March 1940, I quote the following:

"No estimate is offered of the ultimate possibilities of power production in this area, as they would appear fantastic. A large part of the latent power resources of the United States lies in the basin of the Snake River under consideration. Fourteen major sites * * * will produce 13,000,000,000 kilowatt-hours annually of firm electrical energy for nonirrigation uses * * * permitting extensive development of new uses for electrical energy and export of power to areas adjacent to the basin; westerly to the Pacific coast and southeasterly to Utah, if desired."

Two hundred miles of transmission line running southeasterly from Lewiston, Idaho, will pass through the heart of the mineralized area of central Idaho, picking up en route, when developed, 1,500,000 kilowatts of firm power. The suggested line would make power available for the development of the large deposits of antimony and tungsten in the Yellow Pine district.

LAND RESOURCES

Just south of the highly mineralized area of central Idaho are a half dozen major power sites that will be developed in connection with irrigation projects and will supply another 400,000 kilowatts of power for the crescent-shaped area within the Snake River Valley. In this area there is 4,000,000 acres of land that can be brought under cultivation economically through irrigation. Diversion works and main canals have been constructed to reach 2,800,000 acres of this land; however, a number of storage reservoirs must still be constructed before the entire acreage is under full production. More than 1,000,000 acres of fine land for which no diversion has ever been made is available for irrigation and the resultant production when needed.

The great mineral storehouse of Idaho was tapped in the sixties when the Nation was urgently in need of gold to stabilize its currency. During the first World War huge quantities of lead, zinc, and other minerals and metals were supplied from Idaho's great mines and smelters, and in the emergency antimony was transported from an almost inaccessible region, in central Idaho.

Today Idaho is supplying huge quantities of lead and zinc critically needed for defense purposes, and could, with a little assistance, supply much if not all of the tungsten and antimony needed.

Let us not overlook the fact that from Idaho's irrigated and nonirrigated acres there is flowing a great stream of thousands of carloads of potatoes, onions, wheat, sugar, mutton, beef, dairy products, and other commodities, including wool, all of which are highly important in our all-out defense effort.

WHAT FEDERAL COOPERATION NEEDED

1. Cooperation in the building of 40 miles of access road to the mineralized area near Yellow Pine.

2. An allotment of investigation funds for a comprehensive survey of the mineral resources on the public lands of the State.

3. Construction of power projects and transmission lines into the mineralized area.

4. Construction of additional water-storage reservoirs to provide for the fullest possible production from our irrigated lands.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

STATEMENT OF S. C. LUSH, DEPUTY PRESIDENT, BROTHERHOOD OF RAILROAD TRAINMEN

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of S. C. Lush, deputy president, Brotherhood of Railroad Trainmen, before the Committee on Rivers and Harbors of the House of Representatives in opposition to the proposed St. Lawrence seaway and power project:

Mr. Chairman and members of the committee, my name is Stephen C. Lush, and while my legal residence is in Minneapolis, Minn., I am located in Cleveland, Ohio, at the headquarters of the Grand Lodge of the Brotherhood of Railroad Trainmen, 820 Superior Avenue, West, and am now and have been for the past month handling the affairs of the Brotherhood of Railroad Trainmen in the office of national legislative representative of that organization, located at 10 Independence Avenue SW., Washington, D. C. I have been assigned by President A. F. Whitney, of the Brotherhood of Railroad Trainmen, to appear before this committee and convey to you the position of our organization with regard to H. R. 4927, which would authorize the construction of the St. Lawrence waterway project.

Our organization has a membership of more than 157,000 in the United States and Canada, made up of men engaged in train, yard, and dining-car service upon the railroads of those two countries, and, at the outset, may I say that our organization is not opposed to any waterway improvement which we believe is necessary for defense or for flood control, nor are we opposed to any technological improvements in the science of railroading which benefit the general public, notwithstanding the fact that today approximately 1,000,000 railroad employees are moving the same amount of traffic over the rails as was moved by twice that number a few years ago.

If the deepening of this channel is not necessary for defense—and we do not believe it is—American labor, particularly labor engaged in railroad transportation, is a victim of attack in this bill authorizing construction of the St. Lawrence waterway project.

However harsh this may sound, we believe the facts justify this statement:

First. The fact that construction of the project is, in effect, a subsidy to water transportation that will bring about reduction in hours of employment of railroad workers and workers in allied industries.

Second. The discriminatory character of the project, which will require labor in all sections of the country to contribute to the tax levies constituting the subsidy.

Third. The extent to which labor, particularly railroad labor, is required to finance this tax burden will in effect cause them to contribute to the reduction of man-hours of employment, and therefore reduction of wages in the railroad industry.

Fourth. The fact that labor not immediately affected by the project, in areas far removed from its immediate influence, will by taxation be required directly to contribute to an enterprise that will reduce the earnings of various divisions of labor—workers in transportation, coal mining, ore mining, steel and iron and numerous classifications.

Subsidies invariably work both ways. To the degree they promote the interest of one class or one section, they increase the burden of those who must pay the bill.

In the case of the St. Lawrence project, labor is required not only to pay a great proportion of the bill, but to do so out of reduced earnings in the chief industries of the country, particularly in the transportation industry, and to the members of our organization it will mean that they will be taxed to subsidize a competing transportation agency which will cause many of them to lose their present positions or to have only part-time employment after the present defense program has been finished.

This may be illustrated most graphically by considering the effect of the waterway upon two of our chief industries—transportation and coal mining—which, as it happens, are closely allied in the area traversed by the St. Lawrence waterway.

In that area a very large number of our membership are employed. They work on the railroads serving agricultural States and the Nation's principal industrial areas, and these railroads furnish services which are adequate to meet all demands placed upon them and potential demands of the emergency era, and I submit that these men are the highest type of American labor—home owners and workers who have a stake in the continued prosperity of their community and of the Nation as a whole.

Among other services, these railroads, or many of them, serve the Nation's great ore and mining industries, both of which are threatened by the waterway project. The extent of this threat is dependent upon the degree to which the waterway would be used for export and import traffic.

Proponents of the project do not emphasize the fact that traffic on that waterway would not be one-way traffic. That it will not be should be understood by all of those who will be affected by it.

Testimony before this committee has been introduced to try to convince us that we need not fear foreign ore, grain, coal, etc., as they will be kept out by high tariff, notwithstanding the testimony of Mr. Davis of Boston that for the past 5 or 6 years they have received an average of from 350,000 to 400,000 tons of foreign coal in that port and much of it from Russia.

I am wondering if this is not mere wishful thinking and about as reliable as the testimony which was introduced indicating that 85 ports on the Great Lakes were going to become ocean ports after the waterway was completed, notwithstanding the fact that many of them are similar to the Rocky River port, which we know barely has room enough to provide for the turning of a motor boat and is surrounded by high rock cliffs, or the great number of shipbuilding plants on the Great Lakes, 4 of which were supposed to be on the Cuyahoga River and Congressman BENDER states he could find only one.

Our Government thus far has provided subsidies amounting approximately to $2,-

176,000,000 for inland waterways. They compete for the most part with rail transportation, which employs our members. If we add an additional one-half billion dollars or more to such subsidies—for the ultimate cost of the project will undoubtedly reach or exceed that total—it will be done largely at the expense of labor in taxation, loss of employment and reduced earning capacity.

Right here may I say that I agree with Judge Culkin when he stated a few days ago that if the estimate given by General Robins of approximately $200,000,000 was not the correct cost of the project the people should know about it, and I believe that the people of the country, as well as the members of this committee, should know what this completed project is going to cost before giving the bill further consideration. I believe it is time that the true facts be given the people and not half truths.

I have either heard or read practically all of the testimony of witnesses before this committee and I do not recall one witness who has definitely stated what the cost of this completed project will be, except Mr. Hamlin, who gave an estimate of well over $1,000,000,000.

If a member of this committee were attorney general of a State having a "blue sky" law, I am wondering what action he would take if someone came into his State attempting to sell stock in a proposed railroad to run from Duluth, Minn., to Seattle, Wash. (approximately the same distance as from the sea to Duluth), and told the people of his State that this railroad could be built for $200,000,000 and also told these people that for the $200,000,000 they were going to be able to bring freight to and take freight from each and every town and city through which they were to pass, when in fact this figure only covered the cost of construction of the main line and did NOT take into consideration the fact that ground must be bought in the towns and cities for the purpose of erecting depots, shops, yards, etc., and that these depots, shops, yards, etc., must be built, which might well cost several times the amount necessary to build the main line. Gentlemen, this is exactly what the evidence appears to be which has been submitted to you favoring this project. They tell you the cost of the channel but are silent with regard to the harbors. I have failed to find any definite testimony as to the actual number of ports that will in fact be deepened to 27 feet.

Of course, we know that Judge Culkin has had put into the record the names of 85 lake ports, but no one seriously contends that any great percentage of them will be deepened to receive ocean-going boats, and, in fact, my recollection is that only 10 or 13 ports are suggested to be deepened, and while General Robins has estimated that the cost of deepening these ports will be $10,000,000, he does not state that he has made any study of the actual cost.

The engineer from Buffalo, N. Y., has testified that it will cost more than $45,000,000 to deepen that port alone. Therefore, I would say, gentlemen, that before giving this matter further consideration this committee and the people of the country should be advised of the actual cost necessary to deepen the channel and the ports and to know which ports they will be, as obviously it is economical to buy something at a certain price but uneconomical if it is going to cost several times that amount.

Such persons as Senator WAGNER, on the debate in the Senate on the treaty, said that the harbor improvements would be at least $200,000,000, which certainly does not agree with the $10,000,000 suggested by General Robins. Every dollar spent on water transportation increases competition between rail and water transportation, and this is a form of competition impossible to meet. There can be no comparison of rates between any railroad system and subsidized water carriers.

It is illuminating to study part II of the Department of Commerce report on the St. Lawrence project dealing with shipping service on the St. Lawrence. Aside from the intentions of the authors, the report clearly indicates the deflationary influence the waterway project would have upon labor's stake, their jobs on American railroads. No skill in subterfuge, no dexterity in mathematical calculation, can conceal the primary fact that the waterway will promote a form of competition with existing transportation systems by direct diversion and by splitting of traffic that will react upon labor in the railroad transportation field to the extent of millions of man-hours of employment, and therefore will result in reduced income to many thousands now employed in handling that traffic.

In respect to imports of foreign goods, the waterway would open a 27-foot channel to a rich production and consumption area which now draws its supplies from the industrial East. Foreign ships using the channel to transport bulk cargo to Europe would return laden with ballast cargo—foreign coal, ore, steel, iron, and partly fabricated iron and steel products. Even grains may be dumped in our markets. Such imports are not unknown. Mr. Davis told of the foreign coal at Boston, the mayor of Milwaukee told of iron ore delivered to Milwaukee, even with the present 14-foot channel, and we know of the iron ore now being brought to the east coast as ballast.

Europe will be quick to take advantage of the subsidy we will have granted her exporters. It is not difficult to illustrate the effect of such imports upon American labor and American industry, and particularly our members employed upon the railroads, both in the United States and Canada. The effect of these imports can be well illustrated by considering the effect upon transportation and the coal industry; both employ high-grade labor. At this point let me read to you a letter I received from our Dominion legislative representative, Mr. Kelly:

"Today the railroads transport millions of tons of coal to domestic consumers and to our chief foreign market for coal, Canada. Some 13,000,000 tons of bituminous coal are annually exported to Canada. The railroads have a highly profitable business in carrying bituminous coal to lake ports for transshipment to Canada, and a good proportion of the exports is hauled by rail across the international border line.

"Canada is virtually our sole export market for anthracite coal. Shipments approximate 2,500,000 tons annually. The exact figure in 1940 was 2,643,000 tons. A large proportion is hauled by rail direct to Canada and the balance is shipped to lake ports for transportation by water.

"It is unlikely any project ever proposed constituted so destructive a threat to the coal and transportation industries as the St. Lawrence waterway. By promoting increased imports of foreign coal from Great Britain, Germany, Russia, Indo-China, and other foreign competitors, it would cut into our Canadian export market and cause corresponding reduction in freight hauled by the railroads, with inevitable reduction of employment and wages in transportation and mining, with widespread ill effect upon the general economy.

"It is the opinion of those who have closely studied the St. Lawrence project that the bulk of west-bound cargoes would be coal, although I am not so certain that a considerable amount of the cargoes to the lower lakes might not also be foreign ore."

According to a newspaper article in the Minneapolis Star Journal of July 15, 1941, Governor Stassen, of Minnesota, said that two of the large steel companies, the Bethlehem and Youngstown people, have leased large areas containing low-grade ore and will soon begin large-scale mining, and he further states that the State of Minnesota has 57,000,000,000 tons of this ore and that it will be necessary to use seven times as much manpower to mine this ore as is required with the ore presently being mined. I am wondering how our people in northern Minnesota would expect to compete with the low-paid foreign labor and with transportation rates from Europe so low in some cases as to amount to virtually nothing to the free passage for ore used as ballast. American producers could not mine iron ore and coal and American railroads could not transport it under such competitive conditions.

Mr. O'Brien, chairman of the Port Defense Committee in Buffalo, testified that "some years as high as 158,000,000 bushels of grain are loaded to rail cars at Buffalo for export." These ocean-going bulk cargo boats would naturally not come to this country without ballast, and coal and iron would be the logical cargoes.

Importation of foreign ore and coal is but one example of the effect the St. Lawrence waterway would have upon railroad earnings and wages. Numerous foreign products would be dumped in American markets during those months of the year when climatic conditions would permit use of the waterway. Meanwhile, our members, despite unemployment during the summer months, would be required to stand ready to take up the transportation burden during the 5 months of the year when the St. Lawrence waterway would be ice-blocked.

There is sound opinion that one of the great economic problems of the country is an overabundance of transportation facilities. The development of great highways and motor vehicles has accentuated the problem of a highly competitive field of enterprise. During the period of national emergency, when abnormal industrial production requires increased transportation, this problem will be put in the background, but with the return of normal conditions it will again disturb our economy. To add the St. Lawrence to our already overexpanded transportation industry will merely intensify economic competition.

In 1937 our total ton-miles of transportation amounted to about 589,000,000,000 divided as follows:

Railroads	390,000,000,000
Great Lakes	93,000,000,000
Pipe lines	45,000,000,000
Highways	43,000,000,000
Inland waterways	17,000,000,000
Electric lines	697,000,000
Airways	2,000,000

The total undoubtedly has increased, particularly in highways, air lines, and pipe-line tonnages. All of these methods of transportation are susceptible of growth and immediate expansion to meet any emergency. There appears to be no sound reason for the completion of a waterway which would have the effect not only of cutting into the revenues of existing transportation but would promote foreign competition with the Nation's leading industries to the great disadvantage, in particular, of labor in all of its divisions.

They talk about building boats on the Great Lakes, yet it is admitted that only light cruisers can be built and floated out through the 27-foot channel, in addition to the boats which can now be taken through the 14-foot channel. One would be made to believe that there are a great number of shipyards on the Great Lakes available to build these larger boats. However, Admiral Rock testified that only 5 of the shipyards on the Great Lakes are capable of building light cruisers and that only 2 of those 5 are now large enough to do so.

Ships of this draft can now be built on the Mississippi River at considerable distance from its mouth and you will not have to wait for 3 or 4 years and a lot of luck to get them out, and if built on the

Mississippi they can be taken out at any time, as you will not even have to wait for the ice to go out, as you would if they were built on the Great Lakes, and certinly the 130,000 tons of steel, which would be required to build the seaway, will more than suffice for building the shipyards on the Mississippi.

There has been considerable testimony of the great benefits of cheap hydroelectric power to the people by enormous saving in electric bills, yet when this evidence is analyzed you find that such saving is only going to amount to a few dollars per year for the average person, and it is admitted that a great part of the electric power developed, should the St. Lawrence waterway be completed, will be sold to the aluminum industry, where each worker requires 320,000 kilowatt-hours per year, and I am sure that the members of this committee are not naive enough to think that any part of the power sold to the aluminum industry is going to reflect in the price of aluminum.

From the evidence submitted, it is quite apparent that the aluminum industry is going to be the only real beneficiary of this hydroelectric power, as the evidence has indicated they will get the bulk of it and that the other industries, where the employees only require 5,250 kilowatt-hours per year, will get little, if any. Therefore, we cannot understand the logic of these who contend that labor is going to be greatly benefited by the power developed on this project.

It is fine to talk about saving a few dollars a year for the storekeeper and oil-station man, as well as the laboring man on his electric-light bill, but will those few dollars saved each year by those individuals make it worth while to throw thousands of workers in the transportation industry, as well as other industries such as mining, into the bread lines after this emergency is passed? Will not the people be taxed not only to pay for the St. Lawrence waterway but also to feed those thousands in the bread lines?

Instead of being a defense project, as some of the proponents would have you believe, it is quite clear that the building of this seaway as this time would take thousands of skilled workers sorely needed by defense industries. General Robins testified that of the 10,000 men required to build the St. Lawrence seaway 8,000 would be skilled or semiskilled workers. Where are they to come from?

The New York Times of July 30, 1941, carried an article regarding the meeting of O. P. M. officials, the railroads, and railroad labor, at which meeting the O. P. M. requested the release by the railroads of 100,000 skilled workers to be used by the defense industries. The article states that many of the railroad officials at first said that this was impossible without impairing the operation of the railroads, but that later Mr. Sidney Hillman, Associate Director of O. P. M., had been advised that the railroads and railroad labor will do what they can to help the general defense movements, keeping in mind their first duty to make sure that there is no shortage of railroad transportation during this emergency.

Steam-shovel operators, cranemen, machinists, and many other skilled workers will be required on this work or in the construction of machinery to be used on the project who are now being used on the railroads and other defense industries.

You gentlemen should weigh all of these facts and, if you do, I am sure you can only come to the same conclusion we have reached.

The St. Lawrence waterway is only a dream that looks fine when you look only to the good and close your eyes to the bad, and we urge each and every one of you who have the interest of the workers at heart to vote against this bill.

Steam Versus Hydroelectric Power

EXTENSION OF REMARKS

OF

HON. JOHN THOMAS

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, August 7 (legislative day of Monday, July 28), 1941

STATEMENT BY H. F. McPHAIL BEFORE SUBCOMMITTEE OF SENATE COMMITTEE ON PUBLIC LANDS AND SURVEYS

Mr. THOMAS of Idaho. Mr. President, I ask permission to have printed in the Appendix of the RECORD a statement recently made by H. F. McPhail, Assistant Chief Electrical Engineer of the Bureau of Reclamation, before the Senate subcommittee which has been conducting an investigation of the mineral resources of our public lands.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Let me introduce my discussion of comparative costs of steam and hydroelectric power developments by saying that to me it is obviously absurd to claim that as a general thing hydropower is cheaper than steam power or that steam power is cheaper than hydropower. The experience of both utilities and Government agencies in the development of power has indicated that in practically all cases the maximum benefits are obtained by a combination of the two.

The cost of either hydro or steam power depends entirely upon local factors and is governed by plant designs, cost of fuel delivered at the site, cost of cooling water, cost of dam construction, and the length of transmission lines required to get the power to load centers. In some instances water power will be more economical than steam power, and in others the opposite will be true. Some situations require combination of the two types of power to balance the system. Through loose talk the impression has been gained that the Federal Government in its projects is pioneering water power and that utilities generally construct steam plants. These are erroneous conceptions. Several large utilities in areas where water power is readily obtainable have developed systems almost wholly dependent on hydroelectric power. Many Government systems will need steam power for balancing purposes.

Combination of steam and hydropower have been indicated by the tabulation of potential developments submitted by the Bureau of Reclamation.

In order that the comparative advantages of particular developments may be viewed with some basis for judgment, a study has been made to indicate how much money per kilowatt may be expended for hydroelectric developments without exceeding the cost of equivalent steam developments.

This study required the making of some assumptions. I submit, however, that these assumptions do not give an advantage either to steam or hydro generation. It was assumed that power from a hydro plant would be delivered to a point equivalent to the high-voltage bus of a steam plant and the permissible expenditures for the hydro development would include all necessary transmission-line costs involved to reach that point. It was assumed that the steam plant would be designed to burn coal, which means that under present conditions the plant would cost approximately $125 per kilowatt for an installation of 50,000-kilowatt capacity. The efficiency assumed for the steam plant was 10,800 B. t. u. per kilowatt-hour produced, which is equivalent to the results secured at the Port Washington plant on Lake Michigan, one of the outstandingly efficient steam plants in the United States. The cost of operation, maintenance, etc., also was based on the experience at the Port Washington plant. It was assumed that both the steam and hydro plants would be financed by the Government, and would be amortized in 40 years with interest at 3 percent. Coal for the steam plant was assumed to cost $2 per ton delivered at the plant if the plant were located at the mine and no transportation charges would have to be paid on the coal. The coal was assumed to contain 12,000 B. t. u.'s per pound as received. These conditions might be obtained in the Colorado-Wyoming-Utah area.

On the basis of these assumptions it was found that electric energy at the bus bar of a steam plant might be produced at a cost ranging from about 3.5 mills per kilowatt-hour at 50 percent load factor to 2.7 mills per kilowatt-hour at 75 percent load factor.

These costs, of course, do not represent possible sale prices for this power as the costs of transmission line, substations, and standby must be added before the sale prices can be determined. They form, however, a convenient and logical basis for comparison.

The annual costs connected with the operation of a hydroelectric development regardless of the plant output remain practically constant. Experience has indicated that plants of about 50,000-kilowatt capacity cost about $1 per year per kilowatt of capacity for operation and maintenance. When this cost of operation and maintenance, converted into unit cost per kilowatt-hour of output, is subtracted from the cost per kilowatt-hour of steam-generated power, a figure is obtained which represents the amount available for fixed charges for a competitive hydroelectric development. With $2 coal the study indicates that on a 50-percent load-factor basis, $300 per kilowatt can be expended for the hydroelectric system while on a 75-percent load-factor basis $330 per kilowatt can be expended without exceeding unit costs per kilowatt-hour of steam-generated energy.

If the steam plant was not located at the mine, however, and transportation costs were involved which increase the cost of coal to $3 per ton, the cost of the steam-produced energy would rise to 3.7 mills per kilowatt-hour on a 50-percent load-factor basis and 3 mills per kilowatt-hour on a 75-percent load-factor basis. The permissible expenditure from a competitive standpoint for hydroelectric developments would then be $335 per kilowatt on a 50-percent and $390 per kilowatt on a 75-percent load-factor basis.

When it is remembered that at Boulder Dam all costs represented much less than $200 per kilowatt of installed capacity, it will be readily seen that it is absurd to say that steam power always is the cheaper. When I say that the average costs of hydro plants which were included in the list of potential power developments presented by the Bureau of Reclamation would be less than $300 per kilowatt of installed capacity, even without segregation of costs for multiple purposes, it will be seen that Boulder Dam is not merely an exception, but that there remain many other potential hydro developments that are economically justifiable.

The figures used in working out this illustration took no account of irrigation, flood control, and related benefits which accompany all hydro developments of the Bureau of Reclamation and other Federal agencies. In reality, however, these benefits give an advantage, in many localities, to hydropower.

A steam plant, no matter how big, would not as an incidental of its operation irrigate the 615,000 acres of the Colorado-Big Thompson project in the State of Colorado; nor would it irrigate the 35,000 acres to which the Bureau of Reclamation is building ditches on the Kendrick project in Wyoming; yet hydro plants on these projects in the Big Thompson Canyon and at Seminoe Dam in Wyoming will make these developments possible through sharing costs.

Hydro power can help build the West in more ways than one. It is helping now through establishment of industries, utilization of minerals, irrigation of farms, reclamation of land, and in many other ways.

Just as the figures I used took no account of multiple benefits of hydro plants, they also took no account of the additional cost of transmission of power from the bus bar to market. In many instances, of course, hydroplants must be remotely placed. It does not follow that steam plants can always be located more advantageously, but I believe it is generally true that in most instances it will cost more to carry the hydro power to load center. That is merely another factor which must be considered when the two types of generation are being compared. The allowable expenditures I have indicated for hydroelectric developments include those necessary for transmission to a common delivery point.

Let us look at the situation from another angle. In the present emergency the facilities of all manufacturers of generating equipment are heavily loaded. This is more particularly true, however, of the facilities of those who make steam-generating equipment, which are affected not only by the requirements of power agencies but also by the requirements of the shipbuilding industry.

It is understood that the available facilities for the manufacture of steam equipment will require at least 5 years to make the apparatus now on order. Early priorities, if granted to the steam-power plant equipment ahead of other orders, would result in the delay of deliveries of equipment now on order for the propulsion of ships. Apparently with priorities of the rating of A–1c or higher 3 years or more will be required to secure large turbine generator units. While the manufacturers of hydroelectric equipment are also heavily loaded, their schedule is not nearly so severe and early priorities can be granted without interfering markedly with other defense requirements. With priorities of A–1c or better, apparently such equipment can be obtained within about 2 years.

The foregoing does not indicate that the Bureau of Reclamation is in any way adverse to the development of power by steam equipment. The contrary is true since this Bureau believes that well-balanced power systems designed to supply power in the western half of the United States should eventually have generating equipment of both characters. While no definite criterion can be laid down for the relationship between the two, the general experience of operating utilities in the State of California appears to indicate a relation of about 1 kilowatt of steam to 2 kilowatts of hydro capacity. As economic hydro developments are exhausted, the tendency toward steam will naturally be increased. The exhaustion point in most western regions is not yet approaching.

The long-range benefits from hydroelectric developments in connection with Federal reclamation projects have exerted great influence on the irrigation and settlement of public and other lands in the West. There are at least 10 Federal irrigation projects now in operation which were made feasible by inclusion of hydro features. Without the contribution made by revenues from power toward repayment of project costs great areas of public lands in the States of Arizona, Idaho, Nebraska, Utah, and Wyoming, would probably have remained undeveloped.

The Boulder Canyon project which met critical industrial and agricultural needs in the Pacific Southwest was deemed to be financially solvent by reason of the power produced at Boulder Dam. The over-all cost of Boulder Dam with 1,322,000 kilowatts installed will be $140,000,000, or an average of $106 per kilowatt. Even after including the cost of transmission to Los Angeles, estimated at $40 a kilowatt, the average capital cost of this power delivered at the metropolitan load center, 250 miles distant, is less than $150 per kilowatt.

Power is to pay a substantial part of the construction costs of the Shoshone and Riverton projects in Wyoming. In the case of the Kendrick project in that State more than 80 percent of the cost will be borne by power.

On the Shoshone project, a relatively small plant of 5,600 kilowatts is paying for the segregated cost of the $1,850,000 dam. This is about $330 a kilowatt. The power costs are about 15 percent of the project costs, and power will pay about 25 percent of the investment.

The Kendrick project on the North Platte River in Wyoming, with the Kortes development now planned included, will represent an investment of approximately $400 per kilowatt. The amount the irrigation interests will pay is equivalent to $48 a kilowatt, leaving the net capital costs chargeable to power at about $350 a kilowatt.

With respect to the $54,288,000 Colorado-Big Thompson project, $25,000,000 has been allocated to irrigation; power will pay the rest with interest. The installed capacity will be 181,600 kilowatts. This makes the average cost, without considering the irrigation allocation, about $300 per kilowatt. Considering the irrigation allocation, which is fairly made, the cost will be reduced to less than $160 per kilowatt.

The power features of certain large projects now under construction offer a striking example of the combination and interdependency of power and irrigation. The Columbia Basin project, for example, is estimated to cost $435,000,000 when completed. It will irrigate 1,200,000 acres of land, and will have a power plant of a capacity of 1 974,000 kilowatts. The over-all cost of this power is slightly less than $221 a kilowatt. Without inclusion of the power features, this great development which eventually will add 350,000 people in a new rural section in the State of Washington could not have been undertaken. With the inclusion of the power facilities, we now find Grand Coulee Dam playing a vital role in defense activities.

On the Central Valley project where hydro power will be produced only at the Shasta and Keswick Dams, and steam power is proposed at a plant near Antioch, the over-all cost of the project represents an investment equal to about $440 per kilowatt of capacity. This project serves nearly 2,000,000 acres of land and makes material contribution to flood control, and navigation improvement on the Sacramento River, and will provide a fresh-water supply for municipal and industrial users along the south side of Suisun Bay.

Altogether there are now about 4,500,000 persons in the West dependent for more than half of their power from these Federal multiple-purpose projects. With the full installation of the capacity of the plants, in operation and under construction, more than 9,000,000 persons will be served at least a part of their supply.

Steam and hydropower form a useful team, and certainly hydro power has teamed well with irrigation and other water-conservation activities in the development of the West. There is every reason to believe it will continue to be so in the future with public benefits being spread ever wider.

Bureaucratic Ambitions

EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

Mr. DITTER. Mr. Speaker, the President has returned without his approval the bill passed by the Congress looking toward the construction of highways considered essential to the national defense. I have studied carefully the veto message and have weighed the arguments advanced for and against overriding that veto.

Were I persuaded that the course of the President would result in any real economy and at the same time not endanger our defense efforts, I would join with those who feel that the Presidential disapproval should be sustained. But I have not been able to reach this conclusion. On the contrary, I am fearful that the purposes of the President are based on motives entirely independent of any effort to economize. In coming to this conclusion, it is but natural that I have been influenced to some extent by the course of conduct of the administration in its fiscal affairs.

To select one measure, Mr. Speaker, and to manifest a real concern over expenditures in connection with that program, and at the same time to show an utter disregard of care or caution in the general operations of government, is hardly convincing insofar as an economy effort goes.

It would appear that the chief objection to the legislation is the administrative privileges which the States could exercise were the bill to be enacted. The trend toward the centralization of Government; the effort to make the States impotent; the vesting of ever-increasing discretionary powers in the hands of the executive branch of the Federal Government; have been apparent to all. If Washington bureaucracy were permitted to dictate the program embraced in this measure, I doubt whether any objection would be heard.

I believe that the States could and would cooperate in a program by which the defense purposes would be served, and that the construction of much of the needed highways could be completed with expedition, and at a cost much less than that which will be spent under the operations of a Federal supervised project. We have had more than ample evidence of the excessive costs of construction under W. P. A. No savings can be anticipated in this program with the gigantic Federal machine, loaded as it is with patronage privileges, doing the work. I believe that the State of Pennsylvania, with private contractors directing the operations, will do its part in linking together the units of a defense highway system. As a representative of

the Keystone State, I know that Pennsylvania is a most important factor in the defense program, and that the ultimate security which is intended to be advanced by a highway system will be attained if my State is permitted to do its share rather than have its part determined by the autocratic decision of an already too powerful Federal bureaucracy.

Mr. Speaker, the issue here is not economy. The issue here is bureaucracy. I have been fearful from the earliest days of the administration of the drift toward centralization of power. Alphabetical agencies have appalled me as they have grown day by day. Vanishing States' rights have disturbed me. I cannot reconcile myself to this further effort to implement bureaucratic ambitions.

Mail Handled Under Congressional Frank

REMARKS

OF

HON. JOHN W. BOEHNE, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

Mr. BOEHNE. Mr. Speaker, yesterday, an editorial appeared in the Washington Daily News, which editorial was probably syndicated throughout the United States, a part of which reads, as follows:

Mail handled under congressional frank in the fiscal year 1940—the latest for which figures are available—would have cost $745,992, if postage had been required.

I think the American people would probably be interested in having some additional figures, which the press of the country declines to print, and it is my guess that my statement today will be answered with a lot of sarcastic and derisive remarks, but I will wager that the figures which I will now give to you will not be given the same prominent display on the editorial pages.

The largest loss to the Post Office Department is occasioned by the subsidies granted second-class mail matter, of which the daily newspapers are the largest component part. The following figures are taken from cost ascertainment reports of the Post Office Department for the same year 1940.

Publications exempt from zone rates on advertisement portion, $16,290,550; daily newspapers, $26,909,225; newspapers other than dailies, $12,892,216; all other publications, $22,442,250; free in county, all publications, $7,020,974; total for year 1940, $85,555,224 plus.

The reports further show that in 12 years second-class mail matter has received a subsidy of $1,079,490,416, or an average of about $90,000,000 a year. At the same time for a period of 11 years, the franking privilege for Members of Congress has totaled $6,761,217, or an average during those 11 years of $613,656.

Of course, we have heard the age-old argument about the freedom of the press and all that that implies. But it seems to me that it comes with mighty poor grace on the part of the press of the country to be vociferous in denouncing Members of Congress for the use of the franking privilege on the one hand and being guilty of receiving a huge subsidy on the other.

The Daily News has done a real service in indicating the necessity of an investigation of who is getting free mail service and at what cost.

Recruiting of Men in Civilian Conservation Corps

REMARKS

OF

HON. JOSEPH CLARK BALDWIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

Mr. BALDWIN. Mr. Speaker, I recently received a letter from one of my constituents who is in Maine, including an editorial from the Camden Herald, in which they announce that the C. C. C. is so short of men that they are conducting a recruiting drive.

Last week this House passed a large tax measure for defense. It seems to me high time the burden of nondefense spending should be reduced and taken off the backs of the taxpayers, so that we could really spend money on defense. They are trying to recruit eighty or ninety thousand men for the C. C. C. and cannot do it because they find they are either employed or in the Army. To spend Government money on that kind of effort is an outrage to the citizens of this country.

The letter and editorial are as follows:

CAMDEN, MAINE, *July 25, 1941.*

Hon. J. C. BALDWIN,
House of Representatives,
Washington, D. C.

DEAR MR. BALDWIN: Although in Maine for the summer, I am one of your constituents in New York and should like an explanation of the enclosed clipping. I was under the impression that the Civilian Conservation Corps was one of the relief organizations to take unemployed young men off the streets. I should think the taxpayers might be relieved of 80,000 or 90,000 young men to be supported if they are now in factories or the Army. It seems to me it would be wise to let the Civilian Conservation Corps diminish so that after the armament program is over there will be some place for these young people to go when times again are slack.

Yours sincerely,

HARRIET MUNDY.

[From the Camden (Maine) Herald of July 24, 1941]

CIVILIAN CONSERVATION CORPS IN SLUMP, OPENS DRIVE FOR RECRUITS

Short of men for the first time in its 8 years of existence, the Civilian Conservation Corps has opened an intensified recruiting drive for new enrollees in all nine corps areas of the country, it was announced yesterday.

Permitted to have a total of 300,000 men in the Civilian Conservation Corps, authorities disclosed that there were probably only 210,000 to 220,000 now on the national rolls. Recruiting of new men has been unprecedentedly slow and discouraging, and while the 80,000 to 90,000 shortage in the total enrollment is unusually small for the service, authorities are pessimistic and in many cases frankly puzzled over the problem presented by the failure of additional young men to join the ranks.

In the past, ever since its founding in April 1933 and until the first months of this year, the Civilian Conservation Corps has been one of the most popular branches of Government service, and consequently the recent slump in recruiting has been partly attributed to increased employment activities in defense, although officials expressed the belief that national defense and Army enrollments could not be completely responsible for the sudden loss of popularity.

Teaching of the Spanish Language

EXTENSION OF REMARKS

OF

HON. JOHN C. BUTLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

LETTER FROM ALBERT R. SUTTER

Mr. BUTLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter which I received from the University of Buffalo advising me of their plans to institute a course of study for the people of Buffalo for the purpose of acquainting them with the Spanish language and civilization in conformity with our national policy of South American unity and because of international circumstances. I thought other Members of Congress, after reading the letter, might feel this to be a good plan for colleges in their own districts.

The letter follows:

THE UNIVERSITY OF BUFFALO,
MILLARD FILLMORE COLLEGE,
August 5, 1941.

The Honorable JOHN BUTLER,
Washington, D. C.

DEAR CONGRESSMAN BUTLER: In conformity with our strong national policy of hemispheric unity, and because of international circumstances, the Millard Fillmore College of the University of Buffalo has decided to institute a series of Spanish studies for the people of Buffalo. For long our regular students on the campus have been able to acquaint themselves with the Spanish language and civilization. But to achieve true unity and understanding between ourselves and our good neighbors to the south many more people must be made aware of Hispanic-American culture than the few who have the time and money to pursue regular campus courses. Recognizing this fact, the faculty of Millard Fillmore College has decided to put Spanish within the reach of every working person in Buffalo by organizing our evening classes; we plan to make the Spanish language and the people who speak it not merely a subject for the elite, but a living vital thing for our community, for every citizen of Buffalo who has the desire to promote his

own knowledge and to aid his country in its policy of hemispheric unity and understanding.

Beginning in September the college is offering both elementary and advanced courses in Spanish—that is, courses suitable for everyone. These courses are to be taught with the most up-to-date and interesting methods we can devise; they are to be augmented with instruction in every phase of Latin-American civilization as our students progress. Our instructors, having long devoted themselves to Spanish studies both here and abroad, have not only the learning but the affection for their subject which is necessary to inspire the student. And there is the crux of the matter—our whole aim is to interest and to inspire the student, as well as to teach him, so that each one not only will turn his own attention actively toward the south, but also will become an aggressive promoter of community interest in Pan American culture and unity.

The Millard Fillmore College believes that in establishing this series of Spanish studies it is fulfilling a need in our community as well as its duty toward the national policy. As one of the active designers of our national policies, and as a fellow Buffalonian who has always advanced the best interests of our community, we earnestly ask if our program at the college has your full approval.

Sincerely yours,

ALBERT R. SUTTER,
Instructor in Spanish,
Millard Fillmore College.

A Republican Declaration of Present-Day Policy

EXTENSION OF REMARKS
OF
HON. FRANK CROWTHER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

POLICY ADOPTED AT CONFERENCE OF REPUBLICAN MEMBERS OF CONGRESS

Mr. CROWTHER. Mr. Speaker, under leave to extend my remarks, I take this opportunity to call attention to the following declaration of policy which was adopted at the conference of Republican Members of Congress which was held in this chamber yesterday:

REPUBLICAN DECLARATION OF POLICY

The Republican Members of the House of Representatives, believing that the people of the United States are entitled to a definite expression of our views on national defense and foreign policy, hereby declare:

PARTY PLATFORM PLEDGES MUST BE KEPT

1. We reaffirm the pledge of our 1940 party platform: "The Republican Party is firmly opposed to involving this Nation in foreign war." We approve the restatement of this principle subsequently written into the 1940 Democratic Party platform: "We will not participate in foreign wars, and we will not send our Army, naval, or air forces to fight in foreign lands outside of the Americas, except in case of attack." We demand the fulfillment of these pledges.

CONDEMN EXECUTIVE WAR MOVES

2. We reaffirm the declaration in our party platform: "We condemn all Executive acts and proceedings which might lead to war without the authorization of the Congress of the United States."

INSIST ON STRONG NATIONAL DEFENSE

3. We reaffirm the declaration of our party platform, as follows: "Our national defense must be so strong that no unfriendly power shall ever set foot on American soil. To assure this strength our national economy, the true basis of America's defense, must be free of unwarranted Government interference." We firmly believe in maintaining and upholding the Monroe Doctrine and safeguarding this hemisphere from foreign invasion. We insist that our national defense be strong enough to accomplish these objectives.

LEND-LEASE MUST BE KEPT SHORT OF WAR

4. The lend-lease policy was presented to the American people as a measure short of war. We insist that it be administered as a short-of-war measure.

THE ROAD TO NATIONAL UNITY

We are convinced that this declaration of policy is overwhelmingly supported by American public opinion, and that such a program will assure the greatest possible degree of national unity and security.

Tyranny in Action

EXTENSION OF REMARKS
OF
HON. LELAND M. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

LETTER OF J. A. SMITH, PRESIDENT, INDEPENDENT PETROLEUM AND CONSUMERS ASSOCIATION, AND ARTICLE BY BYRON C. HANNA

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of J. A. Smith, president, Independent Petroleum and Consumers Association, and an article by Byron C. Hanna, entitled "Tyranny in Action":

INDEPENDENT PETROLEUM & CONSUMERS ASSOCIATION,
Los Angeles, Calif., June 12, 1941.

To the Members of the Senate:
To the Members of the House of Representatives:
To the Members of the California Legislature:
To the California Newspaper Publishers:
To the California Oil Producers:

DEAR SIRS: Last Saturday morning oil producers of the State of California were summoned to appear before two youthful officials of the O. P. A. C. S. to justify the recent adjustment in the price of crude oil.

Apart from the question of prices; disregarding the fact that the dictatorial order of the young bureaucrats has since been overruled to give them time for further study, we believe American citizens everywhere will be shocked and alarmed at the high-handed methods appointed officials of the Government are using in attempting to dictate to the California oil industry—an industry which has already shown its ability to produce and supply petroleum products far beyond the greatest conceivable demands of civilian and military needs.

Members of the press were ordered from the room as soon as the two young administrators took their chairs and plopped feet upon the tables.

The story carried by the San Francisco Chronicle is perhaps the best information obtainable—except for a so-called press conference the bureaucrats held after the meeting—the reporters were forced to interview witnesses as they entered or left the room.

Where, we ask, are our President's four freedoms starting with "We will accept only a world consecrated to freedom of speech."

It should start at home.

A reading of Byron C. Hanna's Tyranny in Action (enclosed) should jar us all into concerted action and "exercise unceasing vigilance to prevent our domestic governmental procedure from degenerating into totalitarianism."

This question goes far beyond the interests of the oil companies of the State. The pattern, if not stopped, can be laid down on any industry—any endeavor in the United States—your own business or profession.

Imagine being called to "submit appropriate data * * * since the office contemplates affirmative action." You submit your data and answer the questions emerging from behind the cigarette. Trying to hide his confusion and lack of knowledge, your politico questioner acts amused.

Stalin-like, he has removed the representatives of the press; he has ordered but one set of the minutes of the hearing and, though you do not know it, he already has his orders. His boss in Washington has told him what his conclusions are to be even before he hears your testimony.

He hears your evidence; there are those present who testify that if conditions in your particular enterprise are worsened, they face certain bankruptcy. He offers no rebuttal; but he announces you are wrong.

What is this kind of cooperation our Government is asking?

Such a demonstration proves they demand nothing short of absolutism, complete control, unquestioned acquiescence from all.

How can there be any kind of harmony—any working together for the common good—the common defense of our Nation? Where is the leadership? Where are we to place our trust in the light of these actions?

To not cooperate they would undoubtedly call revolting. To revolt against these circumstances, we insist, is simply to maintain our constitutional rights and freedoms—freedom of expression, the right to worship, freedom from want and terrorism.

Very truly yours,

J. A. SMITH,
President, Independent Petroleum and Consumers Association.

TYRANNY IN ACTION

(By Byron C. Hanna)

CALIFORNIA OIL PRODUCERS VICTIMS OF ARBITRARY ADMINISTRATION

Introduction

Note: This memorandum is written in the hope that it may serve some part in righting a grave injustice done at San Francisco on June 7, 1941, by representatives of the Office of Price Administration and Civilian Supply, to the many thousands of citizens of California interested directly and indirectly in the production of oil.

BYRON C. HANNA.

While engaged in the stupendous undertaking of preparing ourselves to extend a measure of protection to democracy throughout the world, it is of vital importance that we exercise unceasing vigilance to prevent our domestic governmental procedure from degenerating into totalitarian action. The following incident forcefully illustrates the necessity of such vigilance.

The Standard Oil Co. of California occupies such a dominant position in the petroleum industry in this State that prices and policies established by it readily become the prevailing practices in the industry.

In the spring of 1940 the Standard Oil Co. reduced the price of gasoline 1½ cents to 2½

cents per gallon and made substantial reductions in the prices of all grades of crude oil which had theretofore obtained in the State of California for a period of over 4 years. Subsequent experience demonstrated that these price reductions were unjustified and were detrimental to the public interest. During the ensuing period increased consumption of fuel oil (heavy crude oil), due in substantial part to expanded employment of Diesel engines, largely decreased the storage inventories of such oil in the State of California.

To meet this situation, in March 1941 the Standard Oil Co. of California readjusted prices for crude oil, decreasing prices to be paid for the lighter crude oils, and increasing the prices to be paid for heavy crude oils. On April 24, 1941, a further adjustment was made, involving increases in prices for practically all types of crude oils; and on May 23, 1941, a further and additional adjustment was made, involving similar increases.

On April 24, 1941, and again on May 23, 1941, the price of gasoline was increased ½ cent per gallon, a total increase of 1 cent per gallon.

The important point to be observed is that these adjustments and increases fell considerably short of restoring the price levels in effect before the reductions in the spring of 1940, and for more than 4 years prior thereto.

The action

On May 31, 1941, a telegram was forwarded to approximately 30 firms and individuals engaged in the oil industry in the State of California, reading as follows:

"You are requested to have representative your company present early a. m. Room 540, State Building, Civic Center, San Francisco, Saturday, June 7, to confer with representatives this office respecting recent price advances California crude. Please be prepared to submit appropriate data since this office contemplates affirmative action. Will wire specific time later.

"LEON HENDERSON,
"Administrator OPACS."

It will be observed:

(a) That this telegram makes no mention of any inquiry into gasoline prices.

(b) That no suggestion is made of any special formula to be applied in determining the justification for the recent price adjustments.

The hearing

Pursuant to the foregoing telegram, members and representatives of firms and individuals invited, as well as numerous other oil producers, gathered at San Francisco on June 7, 1941, at the conference referred to.

The representatives of the Office of Price Administration and Civilian Supply attending this conference were Dr. J. K. Galbraith and Mr. Quinn Shaughnessy. These representatives are young men, youthful and immature in appearance and obviously devoid of practical experience in commercial or industrial affairs.

The following proceedings are specifically noted:

Item 1: A group of small producers from Kern County, who had found themselves in a desperate condition as a result of the price reduction in the spring of 1940, voluntarily attended the meeting for the purpose of making known the adversity with which they had been afflicted. They were informed that since they had not been invited they would not be permitted to be present. Police were summoned, and they were authoritatively escorted from the room.

Item 2: Although the proceedings of the conference were of great public interest, representatives of the press were excluded from the room.

Item 3: A careful scrutiny was established of the credentials of those applying for admission. Although the hall of the State Building was packed with a vast number of interested citizens, many of whom had come from considerable distances to be present on this occasion, only a few of these obtained access to the conference.

Item 4: The conference had been set to be held at 11:30, but the representatives of the price administrator did not appear until about 11:50.

The hearing proceeded until 1:05 p. m., at which time it was announced that an adjournment of 30 minutes would be taken for lunch.

A mad scramble ensued to get a sandwich and a cup of coffee and return within the brief time limited. Notwithstanding the effort of those in attendance to be punctual, the representatives of the price administrator did not again appear until 1:50.

Item 5: The hearing continued until approximately 5 p. m. Although the time allowed to assemble data had been very brief, a large amount of documentary evidence was presented by those in attendance. This evidence was uncontroverted and conclusively demonstrated the following facts:

(a) That a large portion of oil produced in the State of California comes from approximately 10,000 wells of small production. A large proportion of these wells is owned by various citizens of moderate means, and many thousands of citizens are interested by reason of ownership as land owners, or otherwise, in royalties accruing from the production of these wells.

(b) That the cost of producing oil in practically all of the wells above referred to is in excess of the present partially restored prices for crude oil, and that even large producers cannot operate profitably in the production of oil on the present price basis.

(c) That as a result of the foregoing, incentive for exploration and development of additional oil reserves has been greatly impaired, and such activities have been seriously decreased.

(d) That recent increases in costs of materials, labor costs, and taxes, involved as expense in the production of oil, have been substantial, ranging, according to estimates supplied by different producers, from 12 to 20 percent. (About May 1, 1941, a general increase of 5 percent in wages was made effective in the oil industry in California.)

(e) That intelligent, forward-looking action on the part of the oil industry in California has given that industry the capacity to meet any demands which the present emergency or any conceivable future emergency may make upon it; and that it is now and has been at all times completely and adequately prepared to discharge its responsibilities in the defense program.

Item 6. Let it be especially emphasized that there was not a word or a suggestion of conflicting or dissident evidence introduced. The testimony produced from a large number of different sources, and spontaneously given without opportunity for collaboration, conclusively established the necessity and justification for the recently adjusted prices.

Item 7. Upon the conclusion of the hearing, application was made for permission to obtain a transcript of the evidence introduced, a reporter having been present throughout the proceeding.

In response to this application, it was announced that it was against the policy of the Office of Price Administration and Civilian Supply to permit such transcripts to be obtained, but that further consideration would be given to that subject, and permission might be granted later to obtain such transcript.

The thunderbolt

Upon conclusion of the foregoing, but without examination of the documentary evidence introduced, to the complete and utter amazement of all of those present, Mr. Shaughnessy arose and made the following announcement:

(a) That before this conference a letter had been forwarded to the Standard Oil Co. of California requesting that company to cancel the price adjustment of May 23, 1941. (The letter was received by the Standard Oil Co. after it had sent out its price announcement and at a time when it was too late to alter its commitments.)

(b) That before leaving Washington Dr. Galbraith and Mr. Shaughnessy had been instructed by Mr. Leon Henderson to request the cancelation of the price adjustment of May 23, 1941, unless it should appear that said price adjustments were necessitated by recent increases in costs of operation.

(c) That Dr. Galbraith and Mr. Shaughnessy were primarily interested in the question last referred to, and were not so much concerned with the basic factor that irrespective of recent operating costs the previously existing prices were too low and were inadequate to maintain a healthy condition in the industry.

(d) That the evidence produced had not clearly shown to the satisfaction of Dr. Galbraith and Mr. Shaughnessy that the price adjustment of May 23, 1941, was made necessary by recent increases in cost of operations, and that the data upon that subject were insufficient.

(e) Mr. Shaughnessy thereupon addressed to the Standard Oil Co. of California a specific request to forthwith cancel the price adjustment of May 23, 1941, including the increase in the price of gasoline as of that date, until the Office of Price Administration and Civilian Supply could study the problem further and determine whether to approve of the price adjustment of May 23, 1941.

Comment

The decision thus rendered involved a request to cancel the increase in the price of gasoline of May 23, 1941. No notice had been given of any intention to consider this subject at this conference.

Additionally, the decision was based upon the special formula of confining the subject of consideration to recent increases in the cost of operation, and no notice had been given of the intention to thus limit the deliberation.

The decision rendered was contrary to the overwhelming and conclusive evidence which had been produced in good faith and with considerable effort by those who were invited to the conference.

There was not the slightest basis in the evidence to support even a suspicion that the price adjustments of April and May 23, 1941, were not wholly justified and essentially required to maintain a reasonably healthy condition in the industry.

In this respect the evidence produced was wholly ignored, and the oil producers of California were condemned solely upon the strength of a prevailing and wholly unwarranted prejudice.

While the decision, which was in the form of a request to the Standard Oil Co. of California, may appear somewhat innocuous, there are existing circumstances which invest this request with the character of a peremptory order.

The Standard Oil Co. of California is a party defendant with other oil companies in an antitrust prosecution now pending in the District Court of the United States for the District of Columbia entitled *"United States of America, plaintiff,* v. *American Petroleum Institute et al., defendants,"* being civil action No. 8524. Under date of June 3, 1941, Attorney General Jackson advised Secretary of the Interior Ickes that further negotiations with respect to any consent decree which might be proposed in that case would be submitted to Secretary Ickes.

The existence of this situation is a circumstance which the Standard Oil Co. of California may well consider deprives it of the liberty to act freely in response to this request.

Defense Highway Act of 1941

EXTENSION OF REMARKS
OF
HON. WESLEY E. DISNEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 7, 1941

Mr. DISNEY. Mr. Speaker, President Roosevelt's veto of the $320,000,000 highway bill should be sustained. He said in his veto message:

The critical deficiencies in highways and bridges that may require prompt correction in the interest of our national defense cannot be reasonably related to the population of States or the other factors which enter into ordinary apportionment. The result, therefore, is the necessity for the appropriation of a far larger sum of money to meet immediate requirements than would be necessary if these funds were applied to critical deficiencies without the apportionment method. In fact, it is quite possible that the most critical deficiencies in some areas may not be corrected even with the sum authorized in this bill. I am unable to approve this method of expending money for the immediate national defense and for which I recommended a total of $25,000,000 without apportionment.

The bill really follows the "business as usual" plan for highway construction, in the face of the fact that this was supposed to be an emergency war-defense highway bill for the construction of highways near defense projects to facilitate the movement of supplies, troops, materials, and so forth.

I shall vote to sustain the President's veto because, in effect, the veto cuts out $150,000,000 of nondefense spending.

Somewhere, sometime, a halt must be called to spending. We cannot cut down on expenditures necessary for defense. But the bulk of the projects covered by this highway appropriation, desirable as each separate project may be, are not essential for defense. It will be possible to build all essential military access highways without the enactment of this bill.

Even if we could afford the money for the highways proposed in this bill, they could be constructed only at the cost of delay and weakening of our defense effort. We are learning that we cannot have business as usual. We must economize on gasoline, on new automobiles, on phonographs, on electric washers, on silk stockings, on a growing list of commodities which in ordinary times we consider essential.

Vast new expenditures for defense will soon be asked. In today's press it is predicted that before the end of the year there will not be a jobless man in America. Every man now idle will be drafted into defense industries. Where, then, would we find the men for building these proposed highways, even if we could spare the money and the materials?
